Mr. Edward A. Smith, of New York, has purchased from Mr. Bell the liver-colored cocker spaniel Chestnut, that has won several prizes, for \$100.

The Baltimore show was rife with rumors of war. A well known Irish setter exhibitor will be hauled up before the A. K. C. for insinuation and remarks made on the honesty of a certain judge whose probity is unquestioned. Another well known critic, who, justly or unjustly, is accused of very derogatory remarks in the public press on the judges and management of the Baltimore show, was refused a complimentary pass. Then the Watson-Bell affair did not add to the general good feeling. This must all be stopped. It is childish and hurtful and tends to deter outsiders who may benefit the fancy from coming in and exposing themselves to the same danger.

The bulldog His Lordship was to arrive last Thursday, and will be shown at Boston with White Venn. It is rumored that Mr. Woodiwise, with Dockleaf, is seeking another match with His Lordship. If this is true he can be accommodated and the World's Fair show can be the venue.

Dr. Massamore sold his two pointers Peterkin of Naso and Steve, during the show to Baltimore parties.

Mr. K. E. Hopf sent us an interesting communication last week from the wilds of Idaho, where he is now doing a little pioneering and growing up with the country, as if he were not big enough already. He is at Arangee, Idaho, about fifteen miles from anywhere, and luxuriating in an atmosphere that registers 50° below zero. Charley Hopf, his son, is a deputy sheriff, but we must leave further particulars till next week.

A regular meeting of the National Beagle Club of America will be held at the Astor House, New York city, on Monday, March 20, at 4 P. M.

Mr. W. L. Washington's address is now 226 Western avenue, Allegheny, Pa.

Some fellows don't know when they have a good thing. James Boone, a countryman of Catonsville, Md., came to the M. K. C. office and said he had a bound of some sort he'd like to enter. "Didn't know anything about 'un," and when asked where he should be entered, said put it anywhere. So it was put in the basset division. Show comes along and Mr. James Boone brings out the blue ribbon; judge says best he's seen over here; spectator asks: "What'll you take?" "Any feller fool enough to give me forty dollars he can have him." Change produced, and \$100 offered by another at once. Ring will probably now enter on the duties of a new life and his light is no more hidden under a bushel.

Why were the credentials of Mr. Robert Leslie as delegate to the American Kennel Club for the Massachusetts Kennel Club, of Lynn, referred to a committee? This club is in good standing, Mr. Leslie is a man of reputation and good standing in his town of Lynn, and as such entitled to honorable recognition. Mr. Leslie pursued an independent course when a delegate some time since. Dogmen will watch the course of the special committee, Messrs. Richards, Anthony and Watson, appointed to rule as to whether he shall be allowed to act, or not, with more than passing interest in view of the late unpleasantness in the memorable libel suit.

The Chesterfield Park Kennels bought the beagle bitch Minnehaha from Mr. Pottinger Dorsey during the Baltimore show.

A Plea for Justice.

Editor Forest and Stream:

I ask you is going to judge in this great country? Gentlemen who have judged for some years not unaccompanied with success, or an egotistical rhetorician inebriated with the exuberance of his own verbosity, and always gifted with an unintelligible line of argument to malign his opponents and glorify himself?

CONSOLATION.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

Anent Good Men.

Mr. Wade has misunderstood what I wrote about club members and officers, or else I did not make myself so clear as the subject merited. I did not mean to imply that a gentleman of wealth was by virtue of it good and wholly eligible to any position. A man as a private individual might be most estimable in every way, but when he assumes a club membership there are certain monetary responsibilities which interest the public. Few club members feel the same responsibility in the club's obligations that they do in their own. Club obligations are seldom considered personal. Men of spotless integrity might organize a club, but it would not therefore have the same public confidence which engenders from good name and a guaranteed purse. Mr. Wade took what was intended to be of general application and applied it to particular individuals of well-known public reputation. Comparatively few members of new clubs in this country have a public reputation.

I beg to correct Mr. Wade on a point I think he takes badly; that is, the case of Mr. D. C. Luse. My remarks were confined to it in so far as it had already been publicly discussed many times before, as between Mr. Luse and the American Coursing Club. No reference was made to it in connection with the National Greyhound Club, although such would not have been improper. An appeal does not necessarily clothe a case in sacred garb. There was no attempt to prejudge the case. It was confined to matters of record.

Does Mr. Wade think that when two reporters make a statement of facts which both at the same time and in the same manner learned, that because the statement agreed in the main, it proved or implied collusion? Supposing that they disagreed under the circumstances, it would then, I think, show that some one was wrong.

Mr. Wade has, however, the admirable trait of sticking to the issue. His mental ideas do not grope about in dark and vacant chambers. It is a pleasure to read the writings of one who can stick to his text.

Field Trial Matters.

Mr. J. E. Isgrigg, formerly of Carthage, Mo., has accepted a position in the sporting department of Montgomery Ward & Co. Mr. Isgrigg is well known to sportsmen, particularly those interested in the welfare of the dog, from his writings in the sporting journals, and his participation in field trial matters.

On the question of field trial clubs, Mr. Isgrigg has presented the Western office of FOREST AND STREAM with a most interesting letter, written to him by Mr. Rudolph Schmidt, of St. Louis, Mo. From it I take the following interesting excerpts:

"I noticed your name in connection with a field trial club for Missouri. In regard thereto, I would invite you, as well as your friends, to become members of the St. Louis Kennel Club, of which I have the honor of being president. Our club has been admitted as a member of the American Kennel Club at its last meeting. Our object is the improvement of dogs, and to hold annual bench shows and field trials. Our intention is to sell enough shares, at \$10 per share, to get a capital stock of \$3,000, and as soon as one-half of same is paid in, to incorporate under the laws of the State. Our subscription list is in the neighborhood of \$1,000 at present. Our treasurer, according to our by-laws, will have to give a bond, by some trust company, our corporation to pay the expense for furnishing same. I have this day sent copies of this letter to Mr. Ledbetter, Mr. Rodes, Mr. Waddell and others, and would be glad to add your name to our list of members. I will have a meeting called soon and get ready for a fall field trial, if agreeable to the club."

It is gratifying to note the steady and healthy growth of this branch of sportsmanship, in addition to all others of which the dog is a factor.

B. WATERS.

175 MONROE STREET, Chicago.

The Detroit Show.

DETROIT, Mich., March 13.—*Editor Forest and Stream:* The entries for the City of the Straits first annual bench show, to be held in the Auditorium at Detroit, Mich., on March 21, 22, 23 and 24, closed March 7. Notwithstanding the opposition of the Elmira Kennel Club in securing dates we had claimed in regular form about Dec. 1, no notice of which was served upon us by the A. K. C., and the opposition of the Michigan Kennel Club, we will bench dogs as follows: Mastiffs 12, St. Bernards 25, Great Danes 17, Newfoundlanders 4, deerhounds 4, Russian wolfhounds 4, bloodhounds 2, greyhounds 13, foxhounds 2, pointers 43, setters 95, collies 12, field spaniels 8, Clumber spaniels 4, Irish water spaniels 7, cocker spaniels 32, poodles 2, bulldogs 5, bull-terriers 14, whippets 4, dachshunds 3, beagles 20, fox-terriers 18, Irish terriers 3, Dandy Dinmont terriers 1, Bedlington terriers 5, Skye terriers 4, black and tan terriers 8, Yorkshire and toy terriers 10, King Charles spaniels, pugs, etc., 34; total 420. Having no novice or puppy classes there are no duplicate entries.

The building will be well heated and lighted. Spratts will bench, feed and disinfect, a thoroughly competent veterinary will be in attendance, police and fire protection is arranged for, and our premiums and all other obligations will be promptly paid. The exhibitors have stood by us and we will make them feel that we appreciate it. The City of the Straits Club is a new but hustling organization, and is here to stay.

GUY D. WELTON, Sec'y.

World's Fair Show.

TORONTO, Can.—The committee appointed by the C. K. C. to attend to the details connected with the selection of dogs for the World's Fair met to-night (Saturday). Mr. Stone acted as chairman and Mr. Stewart as secretary, the other members present being Messrs. Brodie and Donovan. It is probable the show will be held in the Armory, a large and suitable building, and proper benching will be erected. The date has been definitely decided on as April 18 and 19, and entries must positively be in superintendent's hands on April 10. No entries will be received after that date. Two classes will be provided for each breed, one for dogs and one for bitches and not more than four entries will be received in one class from one exhibitor. No prizes will be awarded, but large cards marked "Approved for World's Fair" will be attached to the benches of the dogs selected. Prize lists will at once be printed and mailed to all Canadian exhibitors and breeders.

H. B. DONOVAN.

Illindio Kennel Club.

INDIANAPOLIS, Ind., March 13.—*Editor Forest and Stream:* Entries have been coming in at a fair rate and the prospects are very encouraging for our coming show. The kennel prize for mastiffs should be \$20 instead of \$10, as stated in our premium list. Special premiums are coming in and will be evenly distributed. We have asked specialty clubs to donate medals. We are members of the American Kennel Club. Entries close March 21. Those bearing postmark of that date will be received. In case entries are sent from any long distance on that date wire us so that we may provide the necessary place in catalogue and number of benches. We have made a challenge class for barzoi. The Collie Club offers medals. There will be a \$25 special best fox-terrier.

We have communicated direct with Mr. Mortimer to judge certain classes, and also wired the A. K. Club to secure for

us a reply, and have failed up to the present time to hear from either. The classes assigned to Mr. Mortimer will be divided between Mr. Davidson and Mr. Wheeler. We have applied for a rate of a fare and a third for the round trip; as yet have no decision.

We shall consider it a special favor if intending exhibitors will mail us cuts or photos at once for use in daily papers before and during show.

CHAS. K. FARMER, Sec'y.

Boston Show.

THE show committee write: We have provided a class for wire-haired fox-terrier puppies, dogs and bitches.

The English Setter Club offers, open to members of that club only, silver medal for the best English setter, dog or bitch, which has been placed at any public field trial and which shall win vhc. or better at this show. Silver medal to the breeder of the best English setter, dog or bitch, over 12 months, regardless of present ownership, to win vhc. or better at this show.

The Bulldog Club of America offer their silver medals for best American-bred bulldog, also for best American-bred bull bitch, open to members of American Bulldog Club only.

The New England Field Trial Club offers four quart mugs, one each for best pointer dog, best pointer bitch, best setter dog and setter bitch. They also offer four pint mugs, one each for second best pointer dog, pointer bitch, setter dog and setter bitch. The above are open to members of that club only.

A friend of the breed offers silver cup for best Boston terrier, dog or bitch, under 12 months.

The American Fox-Terrier Club offers, open to members only, \$10 each for best fox-terrier in show, best bitch in open class, best brace, best wire hair in show, best wire-haired puppy, best brace wire-hairs. Wire-haired challenge classes divided.

Protection Against Dog Thieves.

Editor Forest and Stream:

DOG owners here having suffered severely by thieving have determined to put a stop to it, and for that purpose met last night at Foster Stevens & Co.'s office for the purpose of forming an association for the detection and prosecution of dog thieves.

L. E. Carroll was made chairman, and W. D. Pugh secretary. A committee consisting of Geo. H. Newell, C. H. Annin and W. D. Pugh was appointed to draft a form of constitution and by-laws, and to report at the next meeting, to be held at L. E. Carroll's office in the City Hall, Friday night, March 10, at 7:30 when a permanent organization will be perfected and officers elected.

It has occurred to us that if similar organizations were perfected elsewhere and connection formed with each other. Much good can be done and more than one fellow believing in the common property of dogs sent over the road.

We shall be pleased to hear from our sister cities and will be pleased to help organize a league.

W. D. PUGH.

GRAND RAPIDS, Mich., March 4.

New England Field Trial Club.

AT a meeting of the Board of Governors of the New England Field Trial Club, in Boston, March 9, working committees were appointed and confirmed, also judges designated, with whom the president is to communicate. It was agreed by the board that the prospects for the success of the trials next fall were better even than had been hoped for, inasmuch as the committee on game was able to report that a great number of quail had wintered on the grounds, and that apparently all the birds turned out last fall were, because of regular feeding, strong and in good condition. The committee also reported that it had in its possession some fifteen dozen Western quail, which would be let out on the grounds of the club in good season. With such a prospect for a good supply of birds, it would seem that field trials in New England should become fixed and successful events.

Reflection Brought Correction.

Editor Forest and Stream:

Can these be the words of the judge of the Scottish terrier class in your issue of the 2d? "In the class for open dogs the decision which placed Kilree over Tice should have been reversed, etc., etc."

Now, why should a judge give credit in the ring to a dog that he carefully judged, and he did take plenty of time, as the best in his class, and then rob him of all honor in the press by saying he is not up to his winning?

I write this not to champion my brother's dogs, but to find out for the future what reasons, if any, there are that make judges change their decisions outside the ring.

EDWARD BROOKS.

HYDE PARK, Mass., March 6.

Grounds for Beagle Field Trials.

Editor Forest and Stream:

In order to enable the National Beagle Club of America to secure the best possible location to hold its field trials for 1893 the secretary was instructed to request, through the kennel press, beagle breeders and the public in general, to suggest proper localities where rabbits are plentiful.

The undersigned, secretary of the National Beagle Club of America, therefore requests all persons interested in the subject to forward to him by mail at an early date such suggestions of suitable places as they may know of where the field trials could be held next fall.

GEORGE LAICK, Sec'y N. B. C. of A.

TARRYTOWN, N. Y.

Appreciation.

FIELD'S CORNER, Boston, March 6.—*Editor Forest and Stream:* Let me congratulate you on the fine cut of shipperke Cople Sophia in the last issue of FOREST AND STREAM. I think it is the best cut I have seen to illustrate their peculiar characteristics, i. e., color, style, intelligence and abundance of life and activity. I thank you for your interest in this truly charming breed.

F. W. CONNOLLY.

DEPARTMENT OF PUBLIC INSTRUCTION, Rochester, N. Y., March 5.—*Editor Forest and Stream:* I wish to congratulate you on the magnificent report of the New York dog show. The FOREST AND STREAM always has the cream of the doggy news.

W. S. BEMIS.

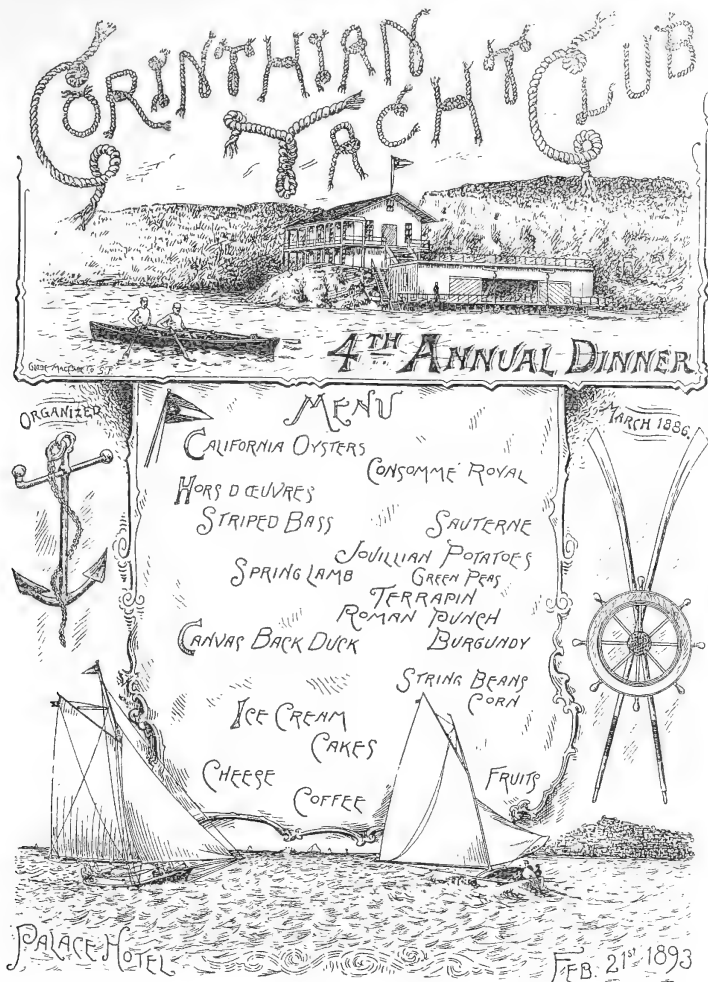

New Advertisements.

Supplies and Equipment: James F. Marsters, C. M. Stafford, Hewitt & Drake, E. Compau. Properties: P. F. Stone, Townsend & Howard, H. B. Sweeney, J. B. Ithamar Howe, C. M. Steffens. Guides, etc.: S. N. Leek. Wants and Exchanges: Jack rabbits; toy dog. For Sale: Shotgun. Bicycle. Yachting: Rushton canoe. Steam Launch.

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the rice of which is \$3).

but for the drag of her screw she would have added a cup to her stock of plate. Lounger is satisfied with having forced Markat to withdraw and the latter is confident that had she not been undermanned her rival would have not been in it with her. Wabun is more than proud, as she has a good right to be, of her phenomenal performance, while Allapatta, so clearly outclassed by the commodore's infant prodigy that no rivalry can exist between them, is as jubilant over her defeat of Nicketti as though she had won all the cups of the season. The latter is convinced in her own mind that if she had not unwisely taken in that reef the odd trick would have been dealt to her. Even Gypsy, having kept up with the procession, while always obliged to maintain a leeward position, is confident that she could have whipped the top-sails off of any class competitor, had one been accommodating enough to show up. Therefore every participant in the sixth annual regatta of the Biscayne Bay Yacht Club is satisfied with the results of its racing, and the following table of times will show what cause some of them, at least, have for contentment.

CLASS B.				
	Start.	Finish.	Elapsed.	Corrected.

On the following day, in a light easterly breeze, two cups given for visiting boats not belonging to any club, were handsomely won by the Key West yacht Wonder, owned by R. W. Southwick and sailed by Mr. Richard Pindar, and by Capt. Kemp's sponging sloop Struggle, the first beating three and the latter four competitors.

COCOANUT GROVE, FLA., Feb. 23. O. K. CHOBEE.

Lateen Rigs on Ice Yachts.

Editor Forest and Stream:

As an old member of the Hudson River Ice Yacht Club I think I voice the general opinion of the club that lateens do not stand much chance against sloops nor do cats either. Under certain conditions the lateen does fairly well, but it is not reliable—rather tricky. That sloops take so much more wind to drive them has not been our experience; the late E. H. Sandford, of our club, a yachtsman of great skill and experience, built a lateen, center timber 49ft., rudder post to center of runner plank 26ft. 7in., beam 26ft. 6in., sail area 635sq. ft. He tried her under various conditions, and she did not fulfill his expectation and he altered her into a sloop. Our worthy commodore owns the Vixen, sail area 335sq. ft., a very able boat, but with no show at all among our sloops, i. e., the flyers. The Low Point boys have a very good lateen, but she was defeated with ridiculous ease by Archie Rogers's Blitz, a second class boat.

Let J. C. M. come up to Poughkeepsie, look at the Jack Frost sloop, 911 sq. ft. of canvas. He will see a boat built without regard to cost all the way through by the late Jake Buckhout, of Poughkeepsie, the greatest ice boat builder in the world. He will see the fastest ice boat in the world to-day.

No lateen has ever done anything very extra on the Hudson River. I have boated continuously on the river for 28 years in the very fastest kind of company. Com. Irving Grinnell, a great boatman, was very partial to cats. He built one with 610 sq. ft. sail area, and boom being 14ft. Archie Rogers had another as large or larger. I owned one 150 sq. ft. area, but like the lateens—they did not work quite as we would wish, and we generally came back to our first loves. I have never heard that the Hudson River I. Y. C. claimed any great originality. They tested lateens and cats regardless of cost, and then returned to the sloop rig.

CAPT. CLAYTON.

Editor Forest and Stream:

The lateen rig over ice boats dates much further back than twenty years, as incidentally stated by "C. L. N." in your issue of Feb. 16. When I was quartered with my regiment in Kingston, Canada West, in 1861, I had many a spin in the ice boats there, and they were rigged precisely as described by "G. P." in your same issue—that is, as far as regards their sails, which were taken, the yards and booms being united by a shackle at the fore end. But the mast was stepped in the ordinary position somewhere in the center fore and aft line.

EXMOUTH, DEVON, ENG., March 5. HENRY E. BATLY.

The Fall River (Mass.) Y. C. has elected the following officers: Com., D. J. Burdick; Vice-Com., H. W. Tinkham; Rear-Com., Jefferson Borden, Jr.; Pres., Geo. A. Ballard; Sec., Wm. E. Blossom; Treas., C. E. D. Pearce; Meas., Peleg E. Borden; Directors—D. J. Burdick, H. W. Tinkham, Wm. B. Edgar, Wm. E. Blossom, Geo. B. Pierce; Regatta Committee—Benj. D. Briggs, A. Y. Nickerson, Fred. B. Durfee, Robt. A. Holt, A. F. McCann; Membership Committee—D. J. Burdick, T. Haggerty, W. J. Hutchinson, J. E. Hathaway, J. R. Durfee; Nominating Committee—Frank Borden, G. R. H. Buftinton, Robt. A. Holt, Wm. F. McCoy, W. C. Wetherell; Auditing Committee—D. J. Burdick, Geo. A. Ballard, Isaac H. Lawton.

Corinthian Y. C. of San Francisco.

The fourth annual dinner of the Corinthian Y. C. of San Francisco, took place on Feb. 21 at the Palace Hotel. Com. John A. Pew presided. Among the guest were Com. Gutte, of the San Francisco Y. C., and George Bromley, of the Bohemian Club. The dinner was accompanied by speeches, songs and stories, the evening passing very pleasantly. The new officers of the club are: Com., J. W. Pew; Vice-Com., M. A. Newell; Sec'y, E. E. Baker; Treas., W. F. Dixey; Port Captain, H. E. Pennell; Meas., H. H. Gorter. Regatta committee: C. R. Wilson, C. A. Graham, H. J. Kelley. Directors: J. W. Pew, M. A. Newell, J. H. Keefe, W. A. Stringer, W. F. Dixey, H. E. Pennell, F. E. Baker.

Measurement Rules.

Editor Forest and Stream:

In my letter sent about a fortnight since, I suggested that the immersed area of mid-section be used in the divisor, the general form being:

$$\text{American rating} = \frac{\text{area of mid-section}}{\text{area of hull}} + \text{constant, and instanced, First, a modified Y. R. A. form, viz.:$$

$$\text{American rating} = \frac{L \times S}{M} + \text{constant} \dots \dots \dots \text{(I)}$$

Second, a modified Seawanhaka form, viz.:

$$\text{American rating} = \frac{(L + \sqrt{S})^3}{M} + \text{constant} \dots \dots \dots \text{(II)}$$

I now write to point out that the following modification of the Seawanhaka rule is simpler than I, and more easily worked out:

$$\text{American rating} = \frac{(L + \sqrt{S} - \sqrt{M})}{M} + \text{constant} \dots \dots \dots \text{(III)}$$

M is the immersed area of mid-section measured internally. . . . a simple method of doing so being to bore two minute pin holes through the yacht's, sides at the waterline mid-section and to stretch a wire across. Then it is easy to measure.

B internal beam at waterline.
H immersed depth of hull (wire to floors).
h immersed depth of hull at 1/4 B.

Then by Simpson's first rule:
$$M = \frac{1}{3} \text{ of } \frac{B}{4} (4h + 2H + 4h) = \frac{B}{6} (H + 4h)$$

And III. may be written:
$$\text{American R} = \frac{L + \sqrt{S} - \sqrt{B(H + 4h)}}{1.7}$$

Formulas I. and II. reduce to the following forms:
$$\text{American R} = \frac{L S}{12 B (H + 4h)} \dots \dots \dots \text{I.}$$

$$\text{American R} = L + \sqrt{S} - \sqrt{12 B (H + 4h)} \dots \dots \dots \text{II.}$$

I will back this rule to carry out the wishes of the New York Y. C. committee better than anything yet proposed, and do so without encountering any difficulties as to measurement.

ITALASSA.

The New Haven Y. C. has arranged to rent from Sargent & Co. sufficient ground at the foot of Hamilton street to accommodate the club house. The club has elected the following officers: Com., H. S. Parmelee; Vice-Com., H. S. Holcomb; Rear-Com., J. D. Welch; Sec'y, W. A. Chamberlin; Treas., G. R. Chamberlin; Meas., F. H. Andrews; Fleet Surgeon, W. W. Hawkes. Board of Trustees—Joseph Porter, J. H. Parish. Regatta Committee—D. M. Goodridge, J. I. Goodrich and S. D. Baker. Mr. P. G. Sanford, owner of the 40ft. sloop Rival, has presented a handsome challenge for that class.

YACHT NEWS NOTES.

The Indian Harbor Y. C. will give a race for special classes on Monday, July 3, and the annual regatta will take place on Saturday, July 29.

The Citizens' Yachting Association, of Detroit, Mich., has decided to hold an open regatta on July 3-4, on Lake St. Clair, with cash prizes and no entrance fees.

Windward, schr., has been sold to E. N. Doll through the Bliven Co., and Florence, cutter, has been purchased by Vice-Com. Ahlstrom, of the Douglaston Y. C. She will be renamed Katrine, and with Windward will be enrolled in the D. Y. C. fleet.

On March 6 Capt. Nathan Appleton, of Boston, delivered a lecture on the West Indian Islands before the Fall River Y. C. Some sixty stereoscopic views, made by Lieut. Norris, U. S. N., were shown in connection with the lecture.

Javelin, steam yacht, has been sold by Com. Morgan to C. R. Flint, at one time a part owner of the sloop Gracie.

Conqueror, steam yacht, arrived at Kingston from St. Jago on Feb. 19.

Oneida, steam yacht, E. C. Benedict, has been painted white with yellow stack, and is fitting out for a Southern cruise.

Mr. A. Cary Smith is at work on a design for an electric auxiliary schooner for Florida waters.

A model yacht club has been organized at Marblehead, Mass., the name being the Midget Y. C. The fleet numbers about sixty yachts of 12 to 32in. l.w.l. A silver championship cup has been established and races will be sailed every week on Rid's Pond.

The Sing Sing Y. C. elected the following officers on March 6: Com., Ralph Brandreth; Vice-Com., Col. Frank Larkin, Jr.; Rear-Admiral, Chas. S. Raymond; Sec'y, R. T. Dennis; Treas., James Thompson.

The Commonwealth Y. C., of Boston, has elected the following officers: Com., Thomas Murphy; Vice-Com., L. M. Johnson; Fleet Capt., E. J. Smith; Sec'y, W. C. Le Pétier; Treas., A. E. Justin; Meas., F. Pfund. Trustees—C. H. Rushton, chairman, J. H. Cronin, J. A. Evans, F. H. Gould and James Leverage.

Mignon, sloop, has been purchased by W. H. Rowe, Columbia Y. C.

The Williamsburg Y. C. has elected the following officers: Com., W. Martin; Vice-Com., T. Meyer; Fleet Captain, L. W. Rice; Sec'y, G. W. Prime; Treas., A. R. Smith; Meas., W. H. Riker; Steward, J. Lawes. Trustees, J. Northrup, W. Stebbins, P. Monahan, M. Walters and J. Essman. Regatta Com., G. F. Burkard, G. Brek, Jr., H. Harper, T. Ellison, and E. Brown; Delegates to N. Y. Y.R.A., H. Roth, J. Schuessele and C. Barker.

The Sing Sing Y. C. has been divided as the result of internal dissensions, and a new club, called the Ossining Y. C., has been organized with the following officers: Com., R. Stray; Vice-Com., A. B. Osborne; Sec'y, A. L. Riker; Treas., F. A. Griffin; Meas., I. S. Haft; House Com., I. S. Haft, H. O. Tompkins and J. Ryder.

The Newark Y. C. elected the following officers: Com., E. M. Grover; Vice-Com., A. Johnson; Financial Sec'y, J. W. Smith; Recording Sec'y, E. E. Atchinson; Treas., C. Schade; Meas., J. Sandford; Trustees, L. Wright, H. W. Chapman, J. W. Smith, W. H. Vreeland and E. E. Tompkins. Delegates to N. Y. Y. R. A., C. E. Cameron, J. W. Smith and C. Schade. Alternates, Wm. Murray and F. Miller. The annual dinner will be held at the club house on New street, Newark, on Monday, March 20. The club is now comfortably installed in good quarters on Newark Bay at Bayonne, with a large membership and a growing fleet.

At a meeting of the Cleveland Y. C. on Nov. 1 the following officers were elected: Directors, George W. Gardner, W. R. Huntington, P. P. Wright, E. W. Rodder, W. P. Francis, C. W. Kelley, Luther Allen, Ed. Overbeke, Frank Overbeke, J. O. Gardner, P. W. Rice, W. J. Akers, G. Luetkemeyer, W. De Moor, J. N. Richardson; Measurer, J. Barth; Assistant Measurer, H. Richter; Surveyor, C. Krause; Fleet Surgeon, Dr. E. E. Beeman. The board of directors will meet on April 12 to elect the flag officers.

The Haverhill (Mass.) Y. C. has elected the following officers: Com., Chas. W. Meader; Vice-Com., Walter L. Hicks; Fleet Captain, George Ellis; Sec. Chas. H. Thowrow; Treas., Albert L. Jackson; Meas., Frank Drew; Trustees, George Graham, John Crossen, John Godel; Regatta Committee, C. W. Meader, George Kilby, Walter Wills.

The Hempstead Harbor Y. C. has elected the following officers: Com., D. K. Hall, Jr.; Vice-Com., Thomas T. Taber; Purser, Robert F. Cocks; Captain of Boats, John S. Appelly; Members of the Governing Board (in addition to the club officers), Louis T. Duryea, Samuel C. Pirie and Paul H. Grumm.

The Raritan Y. C., of Perth Amboy, N. J., has elected the following officers: Com., J. G. Hall; Vice-Com., H. E. Crowell; Sec., W. H. Hesser; Treas., W. A. Crowell; Meas., J. S. Wright; Finance Committee, J. H. Watson, H. B. Crowell, J. V. Langh, J. A. Simons; Committee, W. H. Hesser, C. F. Hall, J. F. Ten Broeck; Regatta Committee, O. W. Peterson, St. George Kempson, W. A. Crowell.

The Greenville (N. J.) Y. C. elected the following officers on March 7: Com., C. P. Morton; Vice-Com., O. P. Vreeland; Fin. Sec'y, T. Ahrens; Recording Sec'y, Geo. Kraus; Treas., Chas. Mittenzen; Meas., Harry Kaltenstrath; Sergt.-at-Arms, T. Folger. Trustees, J. C. Simmonds, L. F. Harrison, T. McCoubrey, Alonzo Peniston and Dr. S. A. Hollister. House Committee, O. P. Vreeland, F. Wagner, F. Roeder, Jr., Geo. J. Simons and J. C. Folger.

The Carolina Y. C., of Charleston, S. C., elected the following officers on March 1: Com., W. D. Porcher; Vice-Com., E. A. Simons; Sec'y, C. E. Prioleau; Treas., W. D. Middleton; Fleet Surgeon, E. F. Parker, M.D. Executive Committee, James Armstrong, F. Y. Porcher, H. M. Tucker, Jr., R. B. Leiby, Gaston Hardy, D. J. Porter and F. P. Huger.

Alert, schr., sailed from Gibraltar on Feb. 2 and arrived at Bermuda on March 9, bound for New York.

The new Gielow schooner Loyal at Poillon's is now well framed and the planking is going on. The yacht is an excellent specimen of modern moderate construction, everything strong and substantial, but without the weight of extra wood all over that was formerly considered necessary in a yacht. The scanning is of good size and there is no attempt at extremely light building, but the material is judiciously placed and everything is thoroughly fastened. The steam yacht Avenel has undergone a wonderful transformation at Mr. Driscoll's hands in the same yard, being in nearly all particulars a new boat. She has now a fair sheer and side line, which she never had before, two good overhangs, the counter being very well carried out, new planking, decks, bulwarks, rail, pilot house and general fittings. The rail is a beautiful piece of teak wood. There is a fine bridge over the deck house, from which the steering will be done, the fore part of the house being the captain's room, while the after part forms the dining room. A new Almy boiler has been put in, with a Williamson steam steerer. The main question is whether the cost of such radical rebuilding would not have paid for a new boat. The steam yacht Restless is at the yard for alterations before going to the Lakes. A light bulwark and rail will be added on top of the present low rail. . . . At Ayres's shop are half a dozen small electric launch hulls going up together. The two "Scarecrows" have been finished for some time and a third will be started shortly. The Tobin bronze fin-centerplate of the original one is a fine piece of work, well finished on the edges and fitted with a casting on top to support it in the trunk. A steam launch has also been started in the main shop for Mr. Crowley. . . . At Witheringham's yard the Gielow steamer is nearly in frame, while in the various shops are no less than four keel boats of 24ft. to 30ft. l.w.l., all designed by Mr. Charles Olmstead, of Brooklyn, to be used about Shelter Island. One is nearly completed, another is planked and decked, and a third is in frame. They are good looking boats, of considerable beam and draft, with Gioriana bows and deep keels of the modern outlines.

Mr. Hugh L. Willoughby, of the New York Y. C., owner of the steam yacht Wampagoag, which was just purchased in England the iron steam yacht Barracouta, formerly Fauvette. The Fauvette is quite an old vessel, having been built in 1869 at Havre, France, by Nilus & Normand. She is notable as the first vessel which passed into the Suez Canal in 1869 on the occasion of its formal opening, having in tow the English schooner yacht Cambria. She is 121ft. between perpendiculars, 20ft. 3in. beam, and 11ft. 9in. draft. She was thoroughly overhauled in 1891 and underwent a special survey, being rated 100 A1 at Lloyd's. She is now at Cowes, where she will receive a new stern before sailing for New York.

The annual meeting of the Corinthian Y. C. of New York was held on March 7 at the Hotel Legeron, New York. The following officers were elected: Admiral, August Belmont; Fleet Captain, M. Roosevelt Schuyler; Sec., George A. Cormack; Meas., John Hyslop. The club decided on an outside race for schooners in the fall in addition to the regular Newport sweepstakes. A supper was served after the meeting.

Puritan, steam yacht, recently chartered by Mr. Eugene Higgins, New York Y. C. was formerly the Miranda, designed by St. Clare J. Byrne, and built by Ramage & Ferguson in 1888. She is a steel vessel, brigantine rigged, and is 138ft. between perpendiculars, 24ft. beam, 14ft. 3in. hold, with engines 13, 21 and 33x22in.

The Roberts Safety Water Tube Boiler Co. has recorded its 516th order, the boilers being used in yachts, launches, passenger steamers, tugs, canal boats, coal mines and electric light works. The business has increased fifty per cent. within the past year, the boiler being liked wherever it is tried.

"ISALO"—SHARPIE CANOE. DESIGNED BY G. U. LAWS FOR R. W. MCKENZIE, 1893.

Comanche, steam yacht, H. M. Hanna, arrived at Nassau from Jacksonville on March 1, and Sagamore arrived on Feb. 23 and sailed on March 6 for Havana.

Mr. Royal Phelps Carroll's challenge for the Royal Victoria Y. C. cup, which was sent by Mr. Carroll personally with the resolution of the New York Y. C., was received by the club on March 2.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters drawings or descriptions of boats and fittings, and all items relating to the sport.

British "Sharpie" Canoes.

The accompanying illustration, which we reproduce from the *Model Yachtsman and Canoeist*, shows a very curious type of canoe and canoe-yawl which has come into use in England within the past three years, and which is obviously of American origin so far as the governing principle of the design is concerned. This canoe and others of her type, though differing in details, are very similar to the Red Jacket which Mr. Clapham took to the 1886 meet at Grindstone Island and used in connection with his weather grip. The Red Jacket was wider, about 5 ft. beam to 10 ft. length, and she had only about half as much dead rise, but with her nearly vertical sides, each of a single plank and her rounded bottom she was essentially similar. In the following year Mr. Paul Butler had several craft of like model but of canoe dimensions at Bow-Arrow Point, and the Vesper men brought others to Lake George in 1888, but though they made very cheap and good canoes, they showed no phenomenal speed, and have disappeared of late years. Some of the British sharpie canoes, on the contrary, have shown great speed compared with other types of small craft, and the type is now an established one. The present boat, Isalo, is one of two built last year by H. Finn, of Isleworth-on-Thames, her dimensions being 16x29x4x10. The weight of hull is 80 lbs., centerplate 25 lbs., rudder 7 lbs. She has a sliding seat which when closed does not extend beyond the beam of the canoe.

A Model Tracer.

Editor Forest and Stream:

I recently had occasion to make several designs for canoes of unusual dimensions, to meet conditions not often, if ever, found in previous practice. Finding it necessary to make a large number of designs in a short time, I soon discovered that to lay down in the ordinary way was out of the question, I therefore adopted the following combined system, which, so far as I can learn, is new, and which may be of interest to your readers. Familiarity with tools, and the ability to work quickly in wood, turned my attention at once to the use of full models, which, when completed, would enable me to make actual tests under various conditions in the water. Knowing the impossibility of judging by the eye, a perfect fairness in lines upon a model, some means of correcting these inaccuracies became necessary; and, having used the pantograph extensively, it naturally suggested itself as a means for taking any desired line from the model and tracing it on paper.

The instrument was modified in various ways, and finally became, in its simplest form, and for the most hurried work, a simple tracer with a handle 30 in. long. At right angles to this was a tracing point distant from the axis 2 in. In the axis the point of an artist's screw pencil was placed and on the other side, an inch and a half away, was a projection upon which the outer end of the head rested, putting a round-headed tack in this projection formed a bearing surface. Placing the model on the paper and bringing the tracing point (which was only a small round-headed nail), against the side of the model, it was possible, by taking hold of the handle and drawing it along parallel to the keel, to trace any line directly on paper. This was the simplest form of tracing apparatus which I used, and though it is capable of introducing errors when not properly and carefully used, it will put upon paper a line which does not vary from accuracy more than one-fiftieth of an inch. With care even this variation may be made smaller.

The practical working of this was simple and satisfactory; after making a template midship section and working the model to this, the lines were gradually worked out fore and aft, and when apparently fair to the eye, the tracer was used; generally revealing lumps which had escaped the eye. The model was left with a wood top or block, by which it could be placed on the drawing board, and by blocking it up, or by inclining it at an angle, all the waterlines and diagonals could be obtained. For taking off cross sections, the simple tracing stick will not answer, but I found after completing the model in this way that the lines were perfectly fair by laying down. Using full-

sized cross sections, I spaced them 1 in. apart, making the canoe only 16 in. long. The water lines obtained in this way were without lumps, and though of most extraordinary shape were "fair." W. E. P.

Canoe-Yawls and Canoe-Yachts.

Mr. W. BADEN-POWELL has begun in the *Field* what promises to be a very interesting series of articles on the canoe-yawl proper, as distinguished from the canoe-yacht with fixed keel and ballast. The first article gives the lines of the canoe-yawl Jennie, built by Turk and lately purchased by Mr. Coddington, of Philadelphia. She is a sturdy, powerful craft of 18 ft. over all and 4 ft. 6 in. in l.w.l., with 11 in. draft of hull and 2 ft. 10 in. with her plate down, the plate weighing 15 cwt. She has one objectionable feature, an excessively ugly "runt" stem, giving the impression that at one time or another she has been in collision with a stone wall. Apropos of the term canoe-yawl, Mr. Baden-Powell makes the following pertinent remarks: "The term yawl has nothing to do with rig; it is an indefinitely old sea term for a sea-coast model of boat which was of long form and light construction, used for both sailing and rowing, without fixed ballast; such boats to this day are the Yarmouth yawls, the Norway yawls and the cobbles. A work on naval architecture of 1793 describes the 'yawls' carried then on men-of-war, 'for sailing and rowing,' as practically of a form we should now call whaleboats, i. e., sharp at each end; and further, the same authority says of the Norway yawl: 'Of all such boats this yawl seems best calculated for a high sea; it will venture out to great sea distances when a stout ship can hardly carry any sail.'"

"In modern times, whatever yawl may strictly mean, it has come unintentionally into a sort of international marriage with the word 'canoe' (the above-mentioned old book gives the French equivalent of yawl as 'canot'; so the term 'canoe-yawl' may be taken as a fairly good blend). The Vikings' swift sea-going craft were yawls and were sharp at each end and of a distinctly canoe type."

A. C. A. Membership.

The following gentlemen have applied for membership in the A. C. A.: Eastern Division—Alfred E. Chasmar, South Norwalk, Conn. Northern Division—Geo. E. Ireland, Kenneth M. Ireland, Kingston, Can.

CANOE NEWS NOTES.

The Mahn-a-wank C. C., of Milwaukee, held its annual meeting on March 6, the following officers being elected, Com. Geo. F. Mathes; Vice-Com. W. A. Quay; Sec.-Treas. A. P. Chapman; Directors—T. W. Dickens, Geo. R. Nash, E. H. Holmes and R. Merrill. Com. Mathes has appointed a regatta committee consisting of A. W. Fries, C. J. Allen and Guy F. Gregg. Following the meet of the W. C. A. at Oshkosh last year, there is a strong interest in sailing among the club members, new boats are being built and rigs fitted, and the club is working to make a record at the coming Ballast Island meet.

Emil C. Knappe, of the Springfield C. C., and members of the regatta committee of the Springfield Boat Club held a conference on March 6, at which Mr. Knappe made a proposition that the club be allowed to hold a big canoe regatta in connection with the New England Amateur Rowing Association's event. The project was favorably considered by the boat club, and if the matter is arranged satisfactorily the canoe races will be held on the morning of July 4, the rowing regatta taking place in the afternoon.

The Holyoke C. C. held its annual meeting on March 7, the following officers being elected: Capt. J. W. Dickinson; 1st Lieut. F. H. Metcalf; 2d Lieut. E. T. Newton; Purser, J. L. Wycoff. Trustees—J. H. Cook, A. H. Hitchcock and W. D. Judd. The club has now a membership of 50, with 49 canoes. At the meeting a subscription was started for the families of those of the life saving crew who were lost at Cuttyhunk. The club will hold a regatta on Sept. 4.

New York.—*Editor Forest and Stream:* If C. J. L., Detroit, wishes to take one of the finest canoe trips in this country, let him put his canoe on the M. C. R. R. train to Grayling, and launch in the Au Sable River. He can spend three weeks floating down stream to the mouth, or go to the forks and up the south branch to Roscommon. He will get fishing, shooting and the scenery he so much desires. He asks the question in FOREST AND STREAM of Feb. 2.—H. N. BOTSFOORD.

Students of ethnography will be interested to hear that Dr. N. B. Emerson, of Honolulu, is preparing a full account of the Polynesian canoe. In a communication printed in the new number of the journal of the Polynesian Society he points out that the various migrations of the ancient Polynesians and their progenitors, from whatever source derived, must have been accomplished in canoes or other craft, and that the waia, the pahi, etc., of to-day, however modified they may be under the operation of modern arts and appliances, are the lineal descendants of the seagoing craft in which the early ancestors of the Polynesians made their voyages generations ago. He holds, therefore, that a comparative study of the canoes cannot fail to shed light on the problems of Polynesian migrations and relationships.—*Nature*.

Zettler Rifle Club.

THE weekly practice shoot of the Zettler Rifle Club was held at their headquarters on Tuesday evening, March 7. The result of the evening's practice shows to a remarkable degree what can be done with the little .22 cal. when it is properly handled. The rule of the Zettler club, in their weekly shoots, obliges the members to shoot their official scores on the practice days without any previous practice shots. The official scores, as taken from the club's bulletin, for this week shows that M. Dorrier made in his four entries, all of which were shot consecutively without previous practice, 10 shots to each score, possible 250: First, 247; second, 249; third, 246; fourth, 245. Henry Holjes, first, 247; second, 245; third, 247; fourth, 246. M. E. Engel, first, 246; second, 247; third, 245; fourth, 246. The single best score of the other members competing are as follows: C. G. Zettler 246, B. Walther 245, F. Schmitt 245, B. Zettler 243, H. Strate 243, F. C. Ross 242, H. Hintz 242, G. Krauss 234, J. Michelbacher 233. PLAISTED.

Rifle Range and Gallery.

Societa Tiratori Italiani.

The banquet of the Italian Shooting Society ("Societa Tiratori Italiani") was held on the evening of the 11th at their headquarters at Riccadonna's, No. 42 Union Square. To the Italo-American this is next to his church in his affections, for it was here that the Italian colony, years ago, received and entertained that grand old soldier and patriot Garibaldi, and it is hardly a twelve-month since these same premises resounded with the bravos of an enthusiastic assemblage of Italian citizens in entertaining the worthy son of this illustrious sire. The society was organized in 1892, and its membership comprises many of the leaders and more prominent citizens of New York's Italian colony. Up to the time of the organization of this society the bulk of New York's shooting fraternity had been drawn from the ranks of the German-American and native population, with here and there a Franco-American and a small contingent from the Swiss, Tyrolean and Celts. The Italians as a class had not been represented among our army of sportsmen as adepts in the use of the rifle or shotgun.

To be sure they have had for years their battalion of Garibaldi Guards and other organizations of a semi-military nature with their annual parades in honor of Garibaldi; but as marksmen, to use that trite expression, they have never "been in it" with the other elements of our mixed population.

The banquet was for a twofold purpose, first, to receive from the ladies of the society a most beautiful stand of colors, Italian and American, the result of many months' hard labor on the part of the matrons and daughters of the society, and also to confer upon those members who had made the highest scores in the last season's practice shoot the class medals in their respective classes. The result of the season's practice with the rifle for the most points made on the nine practice days, will be found appended below:

* Medal winner.

Upon Miss L. Contencini, the beautiful daughter of Gen. Contencini, was conferred the honor of presenting the colors.

After the ceremonies accompanying the presentation of the colors were through, President A. Marzorati, in a neat and happy manner invited his guests and members of the society to partake of the good things that were at this point being brought forward.

The seat of honor was occupied by Miss Contencini, to her right Gen. Contencini, on her left Mr. A. Marzorati, the president of the society. The next in order came the Chev. Cesaro Poma, the Italian Vice-Consul; Dr. Luigi Roers, the chief editor of the *Progresso Italo-Americano*, a daily paper published in New York; Chas. Barsotti, the proprietor of the same journal; Peter Anifo, the business manager of the paper *Christoforo Colombo*, also published in New York; Louis V. Engazy, the banker; E. M. Franchi and Mrs. Franchi, Mr. E. Zucca, Mr. Bonanus, Mr. Arata, Mr. Cocci, Mr. L. Reali, Mrs. Sappi, Miss Sambruna, Miss Sauti, Mrs. Pasquale Seloaggi, Mrs. Gibella Emilia, Mr. Frank Volenti, Mr. Philip Rossi, Mr. Abaro, Mrs. C. Comotti, Mr. A. Narvoni. There were in all one hundred guests and members of the society.

As the last course was removed from the tables the most interesting part of the evening's pleasures was at hand. The president called the assemblage to order and in a neat speech gave a history of the work done by the members in their practice with the rifles the past year. Mr. F. Gerbolini was then called up and decorated with the first class medal, having made the most points (1,957) in his class. Mr. E. Selvaggi in turn was decorated with the second class medal, having made the most points (1,865) in his class. Then the president called up Miss Augusta Sambruna, Mrs. Angiolina Seyero and Mrs. Mary Franchi, and decorated each of them with a medal for having been the most successful in collecting money for the purchase of the colors presented to the society during the evening.

At this point Dr. Luigi Rovergi was called upon for a speech to which he responded in a masterly manner, giving his hearers a succinct history of the Italians in America from Columbus to the present day, calling upon his fellow countrymen to exert themselves in order to secure political and social advancement in this land of liberty. Dr. Rovergi was followed by Chas. Barsotti, Gen. Contencini and several other gentlemen who were each in their turns given generous applause.

As the last speaker brought his remarks to a close, the room was cleared of tables and chairs, and the merry dancers took possession of the banquet hall. PLAISTED.

Milton Rod and Gun Club.

WILMINGTON, Del., March 8.—*Editor Forest and Stream:* The following gentlemen have been elected officers of the Wilmington Rod and Gun Club: President, Chas. Fehrenbach; Vice-President, Lewis Fox; Secretary, C. C. Kurtz; Financial Secretary, W. H. Hartlove; Treasurer, John R. Marr; Captain, R. H. Stout; Quartermaster, James Deighton. The club will give its third grand tournament on April 25-27.

Puritans, Hudsons, Greenvilles.

JERSEY CITY, March 14.—The first match of a series between the Puritan Rifle Club of Newark and the Hudson Rifle Club was shot on the latter's range Monday, 13th inst., and resulted in a victory for the home team. The visitors were well represented, with a large delegation, and the Hudson boys were out in good shape. During the match the excitement was great, as both teams kept close together.

Mr. August Stuber made 241, which was high score for the evening, while Mr. F. Miller was but a point behind him for the Puritans.

After the match a fine repast was furnished and there was an abundance to eat and drink.

It was what might be called a "gala night" in the Hudson's home, as Messrs. Fred Miller, Henry E. Boddy, Geo. Lutz and G. Vanberg made things interesting and entertaining with their popular comic songs and recitations. When the hour of midnight arrived the visitors expressed themselves as well satisfied and having been entertained so cordially, bade Marion good-night and departed. The return match will be shot at 29 Main street, Newark, N. J., Monday, March 20 and a repetition of the previous match is an anticipation to all who were present.

The following is the full score of the match:

Puritan R. C.	
F. Weiler.....	22 25 20 23 22 25 25 19 21—224

Captain, H. Mahlenbrock; scorer, J. Pfiffenberger. THE EAGLE.

Miller Rifle Club.

HOBOKEN, N. J., March 12.—Editor Forest and Stream: The statement published in last week's FOREST AND STREAM signed "The Eagle," affecting the standing of the Miller Rifle Club, is untrue. There is no discount "reigning in the wigwag" whatever, and furthermore if this were the case, there would not be the smallest tota of cause for it. It is true that the last election of officers did not go the way several individuals desired, and "The Eagle" probably secured his information from the parties mentioned. And if "The Eagle" hereafter finds rifle news scarce he will kindly refrain from attacking the Miller Rifle Club, as that club is to-day one of the strongest in the State. Hoping that you give this article the same prominence accorded "The Eagle's" statement, we remain, respectfully yours,

MILLER RIFLE CLUB,
ERNEST FISCHER, Capt. J. H. KIRBY, Sec'y.

Capt. Ernest Fischer now having the time at hand to shoot a match, would like to arrange a series of three with ex-Capt. C. E. Bird, Hudson Rifle Club, for \$100 a side or more.

Denver Shots.

The Denver Rifle Club held its regular weekly shoot on March 5	
Following are the scores:	
A. W. Peterson.....	56 G C Schoyen.....69 H Willis.....67
J. N. Lowery.....	79 H B Gilbert.....70 J A Ricker.....67
Practice:	
L. Knapp.....	60 W Y Sedam.....61
Mid-range medal match, 500yds.	
P. D. Frazer.....	48 H Willis.....45
W. Maginnis.....	48 H B Gilbert.....42
Practice:	
L. Knapp.....	1012221—45 66
In the revolver practice scores given below, Knapp shot a Smith & Wesson target revolver and Peterson a short pocket revolver of the same make. Distance 50yds., standard target:	
L. Knapp.....	56 70 74 A W Peterson.....71 79 67 64

N. Y. Revolver and Pistol Club.

The following record scores were made by the members of the New York Revolver and Pistol Club at their last regular weekly practice shoot, held on the 4th inst., at their gallery, No. 10 St. Mark's place, 10 shots on standard American target, 20yds.: C. B. Bishop 91, T. E. Babcock 90, B. Walther 84, H. Oehl 83, F. Hecking 80, A. Bertrand 81, E. Walz 81.

F. HECKING, Sec'y.

Beideman Rifle Club.

BEIDEMAN, N. J., March 11.—The weekly scores of the Beideman Rifle Club for week ending March 11, conditions 25yds., open-air range, strictly off-hand, targets 14in. ring, possible 250: A. J. Gergery 246, E. L. Gardiner 216, J. L. Woods 214, W. Gilbert 235, C. Monday 220, W. Hayes 219.

WALTER GILBERT, Sec'y.

Parkway Rod and Gun Club.

The Parkway Rod and Gun Club had a big meeting at Dexter Park on Wednesday, March 8. Twenty-eight members competed in the several classes for the club's gold medal and extra prizes, the latter consisting of three gun bags. C. Wissell won the medal and Class A prize, Mr. Ellis the one in Class B and A. Waelton in Class C. The scores:

Class A.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

March 20.—T. C. Wright vs. Thos. Morphy, 25 live birds, \$100 a side, at Willard Park, Paterson. Hurlingham rules to govern trap and handle.

March 21.—Sipler's live bird tournament, at Reaville, N. J.

March 23.—Live bird tournament on Erb's "Old Stone House grounds," Bloomfield avenue, Newark, N. J., beginning at 11 A. M.

March 28.—First tournament of the Eastern New York Trap-Shooters' League (postponed from Feb. 22), under the auspices of the West End Gun Club, of Albany, N. Y. Liberal purse for highest aggregate scores. Henry A. Kraft, Sec'y.

March 28.—Coney Island Athletic Club cup contest.

March 28-29.—Manufacturers' Trap-Shooting Association tournament, Savannah, Ga.

March 30.—New Jersey Trap-Shooters' League, second monthly team contest, at Maplewood, N. J. Also open tournament.

March.—New Mexico Mutual Fish and Game Protective Association, second annual tournament.

March.—Connecticut Trap-Shooters' League tournament, Park City grounds, Bridgeport.

April 5-7.—Interstate live bird tournament, Dexter Park, Long Island. H. A. Penrose, Sec'y, New London, Conn.

April 11-12.—Manufacturers' Trap-Shooting Association tournament, Greensboro, N. C.

April 19-21.—Waverly (Iowa) Gun Club tournament. Professionals barred.

April 25-27.—Third grand tournament of the Wilmington Rod and Gun Club, Wilmington, Delaware. C. C. Kurtz, Sec'y.

May 2-3.—Independence (Ind.) Gun Club tournament. Added money.

May 2-4.—Williamsport (Pa.) Gun Club annual tournament.

May 9-11.—Ohio Trap-Shooters' League tournament, Columbus, O.

May 9-12.—Saratoga Springs (N. Y.) Gun Club tournament.

May 16-17.—Manufacturers' Trap-Shooting Association, Lansing, Mich.

May 16-19.—Michigan Trap-Shooters' League tournament, at Lansing, Mich.

May 17-18.—West Newburgh Gun Club spring tournament, at Newburgh, N. Y.

May 23-25.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added to purse.

May 23-25.—Nebraska State Sportsman's Association, Omaha, Neb. F. O. Parnlee, Sec'y.

May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.

May 30.—Maplewood vs. Union Gun Clubs, team contest at live birds, at Maplewood, N. J.

May 30.—Iowa State Sportsmen's Association, Clear Lake, Ia.

June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.

June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.

June 20-21.—South Dakota State Sportsmen's Association tournament, at Vermillion, S. D.

July 3-4.—Portland (Ore.) Gun Club tournament.

Oct. 19-20.—West Newburgh Gun Club fall tournament, at Newburgh.

DRIVERS AND TWISTERS.

We publish in this issue a fac simile of an autograph letter from the secretary of the Hurlingham Club of London, testifying to the fact that "Rule 2" of the Hurlingham rules has been altered. This rule

13th January 1893

HURLINGHAM CLUB
FOURMAN.

Dear Sir

Referring to the letter of altered-a shooter can be the 28th December. I beg to hold his gun where he before you that I am better likes. It will be corrected to comply with the Captain in our new rules. I am yours truly

W. H. Hurlingham is playing with

reference to your query

and he writes me. That

the rule in shooting is

formerly read as follows: "2. The gun must not be held to the shoulder until the shooter has called 'Pull.' The butt must be clear below the arm-pit, otherwise the referee shall declare no bird." As shown by the letter the gun can now be held in any position.

John Ryan, of Hackensack, N. J., who formerly conducted the Mansion House at Montclair, has come back to the ranks of active shooters and in about a fortnight he will shoot a 25-bird race for \$100 a side against a young townsman, the match to take place at Marion. Mr. Ryan is one of the old-timers at the sport, having shot at the trap thirty-five years ago with Miles Johnson and other veterans. He has been practically out of the sport for four or five years but previous to that time he won many hard-fought battles. In one of his matches, at 25 live birds, find, trap and handle, the birds being a lot of clinkers, he killed 24 and lost the match, his opponent killing straight. His lost bird was laid bit but managed to struggle to the boundary, falling dead less than a foot outside. The curious feature of the match was that one of his opponent's birds, also hard bit but apparently stronger than the one mentioned above, dropped dead one foot inside the boundary, and within a yard of Mr. Ryan's lost one. This is the luck of the sport. In another find, trap and handle match at 30 birds, he was obliged to kill his last thirteen birds to win, which he did, this giving him a bird to the good. It is fifty-one years since Mr. Ryan first saw the light, but he says that when he faces a trap he does not consider himself over twenty-five.

BALTIMORE, Md., March 8.—The first shooting contest between the members of the Standard Gun Club was held yesterday afternoon at Acton's Park. The contests will be held every Tuesday during the season, and at its close four yearly prizes will be awarded to those whose percentage is the highest. The first prize will be \$15 or a gold medal; the second, \$12.50 or a gold medal; the third, \$10 or a gold medal; and the fourth, a gold medal. Considerable rivalry has manifested itself in the club, and the contests will be interesting. At the contest yesterday 50 targets each were shot at and the following scores were made: Lupus 44, Clements 44, Bond 42, Hunter 41, Hunt and Rice 40, Buckbee and Bondary 38, King 37, Jones 36, Pilson 35, Dixon, Storr and Lotz 34, Williams 30, Hawkins 29 and Dankmyer 28. There was a little too much wind for the best shooting. The officers of the club are: C. Rice, President; W. E. Buckbee, Vice-President; H. E. Lupus, Secretary and Treasurer; W. R. Clements, Captain; L. C. Rice, W. E. Buckbee, H. E. Lupus, W. T. Clements, Chas. E. Bondary, J. Hunter and C. W. Gross, Directors.

WINNIPEG, Manitoba, March 7.—The gun clubs are giving out signs of activity—a sure indication of the approach of spring. An interview with President Trotter, of the Northwest Gun Club, makes it apparent that a good deal of business will be done presently. He is carefully scrutinizing prize lists and models of no end of inanimate flyers that the gun club society will never shed a tear over. He has under consideration samples from all manufacturers of artificial birds on the continent. The club practices as soon as the weather permits will be resumed. One of the leading events will be the shoot-off for the Hamilton Powder Co's gold medal—open to clubs in Manitoba and the Northwest. The electric cars now run to the shooting ground at Kildonan, so that one can get there easily and quickly. The club numbers about 100 members, all enthusiastic gunners. Adverting to the subject of the grouse law, why does not this institution place itself on record as to protection and enforcement?

The Rochester Rod and Gun Club are leaving no stones unturned in the arrangements for their coming State shoot. Prize committees have been appointed as follows: E. D. Hicks, cigars and tobacco; W. F. Brinsmaid, manufacturers; S. B. Williams, hotels; J. Foley, grocers; F. B. Allen, dry goods; W. C. Hadley, clothiers; N. C. Fulton, citizens; S. C. Truesdale, lawyers and physicians; Robert Gardiner, boots and shoes; T. H. Maguire, coal; J. A. Buckley, restaurants; S. E. Trues

dale, bankers; E. E. Meyer, lumber; J. L. Bruff, contractors. William S. Kimball headed each of these subscriptions with \$10. Up to date encouraging reports have been received from each of the above committees. H. M. Stewart is the hero of the club, he having written Gov. Flower for a prize, and the Governor having responded with a check for \$25. The committee is confident of securing \$4,000 in cash and an equal value of merchandise prizes for the State event.

NEWBURGH, N. J., March 7.—The annual meeting of the West Newburgh Gun and Rifle Association was held last night and the following officers elected: John J. E. Harrison, President; David Brown, Vice-President; Wm. C. Gibb, Secretary; John A. Wood, Treasurer; Adrian Kissan, Geo. H. Taggart, Wm. P. Rayland, Trustees. The seven officers constitute the Board of Directors. A vote of thanks was extended to the retiring officers of the club. The annual report of the treasurer showed the following: Amount received, \$1,160.24; paid out, \$1,087.29; cash on hand, \$72.95; there is a credit of 116 barrels of clay birds of 500 each; the club has an outstanding account with H. C. Higginson of \$574.13; of this amount \$375 has been paid, and the amount due him is \$199.13. The club has no other debts.

We would be obliged if every shooter who proposes attending the tournament of the New Jersey Gun Club on May 23, 24 and 25, would send his name and address to the Trap Editor, FORREST AND STREAM, Broadway, New York. In a short time we will probably be able to give them some interesting and valuable information. This shoot at Knoxville, by the by, is exciting interest on both sides of the Atlantic, as the fact of a single club adding \$1,000 in solid cash, besides several hundred dollars of merchandise for a three days' shoot is something heretofore unheard of.

The Harrisburg Shooting Association has not been heard from lately, but it is to be presumed that their members are booming the arrangements for the Pennsylvania State Shoot, to be held under their auspices in August. When the arrangements are sufficiently advanced we may expect to be favored with something elaborate in the way of a programme. And, by the way, we would advise the committee to have its programmes distributed at least one month before the dates of the shoot.

The second monthly team contest of the New Jersey Trap Shooters' League will be held on the grounds of the Maplewood Gun Club, at Maplewood, N. J., on Thursday, March 30. The team shoot will begin at 2 P. M. From 9 o'clock until dark there will be a series of open-to-all sweetstakes on an extra set of traps. The morning and after the team race both sets of traps will be used. The Maplewoods know how to properly manage a shoot and keep the boys hustling so that there will be plenty of lively work.

A. J. Rust, Harry Thurman, E. David, Frank Williard, James Mills, Frank Hoagland and W. Morrison, members of the North End, Keystone, Forest and Roxborough gun clubs, are endeavoring to form a league comprising all the gun clubs of Philadelphia. The idea is to secure grounds convenient to all parts of the city and to erect a commodious club house. The grounds will be equipped for both live bird and target shooting.

The opening exposition and trap tournament of the Manufacturers' Trap Shooting Association will be held at Savannah, Ga., this week after next and the sporting public in general will watch anxiously for news as to the success of the new venture. They need not be alarmed, however, as the fact of the association hanging up \$100 in cash each day will be a sufficient incentive to attract a paying number of shooters.

The Union Hill and New Durham Gun Clubs shot a match on the North Bergen Gun Club grounds on March 8. The teams comprised 10 men each. The coachman was hot at 9 live pigeons, under Hurlingham rules. The score at the finish stood Union Hill 59, New Durham 57. J. B. Collins of the Union Hills, and Adam Johnson and Frank Hall of the New Durhams killed straight. Capt. Hayes, of Hoboken, was referee.

The pouring rain on the afternoon of Thursday, March 9, cut the attendance at the monthly shoot of the Newark Gun Club down to an even quartette, and these quit the game after shooting at two strings of 10 birds each. The following scores were made:

Ernstall.....	221113111—10	0210223121—8
Castle.....	022112123—8	2131111112—10
Hollis.....	221120121—10	0210101—7
Erb.....	2020122220—7	021020221—7

The handicap shoot for a high grade Parker gun, which takes place at Cleveland, O., on the first Saturday of each month under the auspices of the Arlington Gun Club, attracted a good field of entries, and some close work was done in the opening contest. The contest is open to all club members of Cuyahoga county, and the handicaps have been so carefully arranged that all have an equal chance.

The Freeport (L. I.) Gun Club was recently organized, its objects being the protection of fish and game by the rigid enforcement of the game laws. The officers of the club are: President, Dr. T. D. Carman; Secretary and Treasurer, Wm. B. Ostrout; Captain, Henry Lott; Board of Directors—Chas. Allen, V. W. Smith and Dr. Edwin Carman. A suitable club house is to be erected in the spring.

The following have been chosen officers of the Vernon Rod and Gun Club for the coming year: President, Dr. W. A. Little; Vice-President, Dr. J. J. Lamadrid; Treasurer, W. H. Thompson; Financial Secretary, W. J. Hackett; Secretary, J. G. Wischerich; Directors, H. L. Broad, J. Bishop and Dr. J. S. F. King. The club organized a year ago and has now a membership of forty-five.

The McKeesport (Pa.) Gun Club was organized on March 3 with 20 names on the roll. The club intends to hold several target tournaments during the season. Its officers are: President, Frank Berry; Vice-President, Will Dumm; Secretary and Treasurer, Frank Merrington; Field Captain, Fred Reiber; Directors, Dr. W. M. Downey, Grant Ross and Will Coursin.

The Altoona Rod and Gun Club has or is about to request the Manufacturers' Trap Shooting Association to hold one of its expositions at Wopsononock Shooting Park, and we are in hopes that the request will be granted. June, July or August would be excellent months in which to see these grounds at their best.

The following is the list of newly elected officers of the New Jersey Shooting Club, of Camden: President, Frederic G. Moore, Vice-President, Edward L. Vredenburg, Secretary, Charles A. Pope, Treasurer, Elmer E. Bigony, Richard Sunderman, George W. Purdy, A. F. Compson and President Virden, Trustees.

These are the newly elected officers of the Rockville (Md.) Gun Club: Harry Hurley, President; G. Minor Anderson, Vice-President; John W. Keichner, Secretary; Dr. Robert C. Warfield, treasurer; George Dawson, Captain; Edward M. West, Lieutenant; Nicholas J. Offutt, member of executive committee.

The Capital City Gun Club, of Washington, D. C., has elected the following officers for the ensuing year: President, J. Henry Gulick; Vice-President, O. E. Hart; Secretary, Arthur S. Mattingly; Treasurer, V. M. Green; Captain, F. A. Happer; fifth member of the Executive Committee, R. W. Barker.

In the absence of W. Fred Quimby, who is on his usual midwinter trip through the West, W. R. Hobart is acting as treasurer of the Manufacturers' Trap Shooting Association. As Secretary G. Harry Squires is also away on a business trip, his duties as well as are performed by Mr. Hobart.

The Orange (Mass.) Gun Club has elected these officers: President, G. H. Thompson; Vice-President, W. B. Smith; Secretary and Treasurer, E. H. King; Captain, O. D. Hapgood. Efforts are being made to form a league which will include Orange, Athol, Miller's Falls, Holyoke and this city.

The following is a list of the newly elected officers of the Woodbury (N. J.) Gun Club: A. W. Cattell, President; E. Reading, Vice-President; Geo. W. Cattell, Secretary and Treasurer. P. M. Morgan, Charles B. Thackara and Joel A. Sagis, directors. Edward C. Cattell, captain.

The Brooklyn Gun Club, organized in 1885, has changed its name to the Wyandacht Club. This is one of the most prominent organizations on Long Island. The club has a house and farm and extensive fishing and shooting rights at Smithtown, Suffolk county.

The Sportsmen's Association of the Northwest, which holds its annual tournament at Victoria, B. C., in June, under the auspices of the United Gun Club, is looking for 3,000 live pigeons. Here is a chance for some dealer to do some business.

The live bird shoot to be held at John Erb's on March 23, promises to be an interesting affair. The 15-bird sweep, 1 entry, and the star miss-and-out will just suit the shooters. The latter event will be quite a novelty for this section.

Harvey McMurely has started on his annual tour to the Pacific Coast, to boom the L. C. Smith gun and incidentally have some good sport at the trap and in the field. He will be gone almost six weeks.

Hermann Laing, of the Union Hill Gun Club, and Mr. Sheff of the New Durham Gun Club, will meet on March 24, in a match at 25 live birds each, under Long Island rules, for a purse of \$500.

The Montrose (Pa.) Club is officered as follows: President, J. M. Kelly; Vice-President, A. B. Burns; Secretary, E. W. Safford; Treasurer, W. H. Turrell. The club was organized on March 2.

Milton F. Lindsley will start this week on a business trip through the West and South, in the interests of American wood powder. He says he'll capture all the boys before he returns.

A two days' tournament at targets and live birds will probably be held on Erb's Newark grounds early in May. The target shooting will be under the "Jack rabbit" system.

The Island City Gun Club, of Wheeling, W. Va., will send its five-man team to Knoxville in May. The Union Gun Club and Independent Gun Club, of New Jersey, will also send teams.

At a meeting of the Bohemian Gun Club, of Cedar Rapids, Ia., Vac Boria was elected President; M. Haski, Secretary, and J. M. Svor, Treasurer.

The shoot of the Foresters Gun Club of Kansas City, held on Washington's Birthday, was won by V. W. Flower, who killed 15 birds straight.

The Rochester Rod and Gun Club will go to Auburn on March 23, and shoot a match with the Auburn Gun Club. The teams will comprise 15 men each.

The Pittsburg Gun Club will hold a live bird tournament at Exposition Park, on March 22. The programme will include a sweep at 25 birds, \$25 entry.

Portly Colonel A. G. Courtney, he of Lefever hammerless ejectors fame, is still meandering through the West, doing lots of business.

Messrs. "Gilmer and Jordan," alluded to in this column last week, lives at Greensboro, N. C., and not "Greensboro, N. J.," as printed.

The Rochester lay press is giving splendid support to the committee in charge of the arrangements for the New York State shoot.

The Williamsport (Pa.) Gun Club claims dates May 2, 3 and 4 for their annual tournament.

At the last shoot of the Quakertown (N. J.) Gun Club, the club badge was won by Mr. Shoup.

The people are wondering if there will ever be a match between Carver and Brewer.

There will be open sweepstakes shooting at Erb's Newark grounds on Saturday.

The Terrace City Gun Club of Yonkers, N. Y., is about to erect a new club house.

The two gun clubs of Savannah, Ga., will shoot a team match next week.

C. H. TOWNSEND.

Team Shoot at Rutherford.

On Wednesday, March 8, under the most favorable of weather conditions, a goodly number of New Jersey trap-shooters wended their way to the finely appointed grounds of the Boiling Springs Gun Club at Rutherford to take part in a team shoot between that club and the Union Gun Club, of Springfield, and incidentally to participate as well in a series of open sweepstakes events. The day was delightfully mild, the sun shining bright and clear, and there being no wind to seriously vary the flight of the targets.

The sweepstakes events began about 10 A. M., but it was close to noon before the party assumed any size. The teams were comprised of ten men each, and 25 blue-rock targets were shot at by each man, the rapid-firing system being used. The scores follow:

Boiling Springs Gun Club.	Union Gun Club.
Richmond.....10010111111111111111-22	Richmond.....10010111111111111111-22

Live Birds and Crows at Trembly.

Quite a fair number of sportsmen assembled at Bender's Grove, at Trembly, N. J., on the line of the Long Branch Railroad on Monday, March 6, for the purpose of trying their skill in shooting live pigeons and crows. The opening event was at 5 live pigeons, \$4 entry: Woodruff and Appar killing 5 each, C. Jones and Hartman 4 each, S. J. Gleim, LaMott and Erhart 3 each.

No. 2, a miss-and-out at crows, \$ entry:
Appar.....150 Dayton.....0
Hartman.....10 Woodruff.....2322
Tooker.....1211 Glenn.....20
S. Dayton.....1221 La Mott.....2210
Jones.....1220

Event No. 3, 4 pigeons, \$3 entry:
Hartman, C. M. Hedden, Jones, Woodruff, W. Terry, S. Dayton, Dollier, Tooker and S. Terry 2 each, Haskard and Henry 1 each.

Event No. 4, 4 pigeons \$3 entry:
Jones.....1111-4 Gleim.....1200-2
Appar.....1111-4 Woodruff.....0123-3
W. Terry.....1112-4 Haskard.....1120-3
La Mott.....1103-3 S. Terry.....1210-3
Hartman.....1100-3 D. Terry.....2201-3
Hedden.....1110-3

Then came a shoot for a silver cup between Wm. Hartman, representing the Amboy Gun Club, and La Mott, representing the Elizabeth Gun Club. The cup was presented by W. J. Bender. Each man shot at 15 live pigeons, 30yds. rise, one barrel only to be used, gun below elbow until bird was on the wing. The Elizabeth man won by the appended score:

Hartman.....111111001010000-7 La Mott.....00011111010111-10
Miss-and-out, \$2 entry:
Jones.....21213 Haskard.....120
S. Terry.....2110 La Mott.....220
D. Terry.....0 Hartman.....2320
W. Terry.....2112 Woodruff.....120
Appar.....12112

Arlington Gun Club Handicap.

CLEVELAND, March 4.—Below are the scores of the first shoot for the Arlington Gun Club's Parker gun. Quite a large crowd was brave enough to face the cold wind and snow, the wind making good scores almost impossible. Conditions, 30 blue-locks, 5 traps, unknown angles. Jack the winner, with J. I. C. and Packard a close second.

J. I. C. Packard.....011111010101010101011111-21
Packard.....011111010101010101011111-21

R. Richard.....1222010112-7		

The Savannah Shoot.

NEW YORK, March 10.—As previously announced in FOREST AND STREAM, the first tournament of the Manufacturers' Trap Shooting Association will take place at Savannah, Ga., on March 23 and 29. The tournament will be under the auspices of the Independent Gun Club, and will be under the management of Mr. John Parker, the manager of the association. Mr. H. B. Lemcke has charge of the reception of goods shipped to him, and other matters connected with the association at that end, writes as follows: "Say to the boys that I have obtained reduced rates for them at the Hotel De Soto, the first house in the South, at \$3 a day. Anyone wishing to attend the shoot from New York and vicinity can take Ocean Steamship Co.'s ships from New York to Savannah and return; round trip \$32, good for six months."

A great deal of interest will be centered in the championship race for the M. T. S. A. trophy, it becoming the permanent property of winner.

Have also received encouraging reports from E. L. Gilmer, secretary of the Greensboro Gun Club, Greensboro, N. C., in regards to second shoot of Association, April 11 and 12, and everything goes to insure a large attendance and a successful tournament at that place.

Programme will be out in a few days. They are gotten up in a very tasty and attractive manner and can be preserved as a souvenir of shoots. The programme of shoot comprises two pages. Each member has a full page ad. One page will be used as a score card, on which each shooter can keep his score, winnings, losses, average, etc.

The Association will give away \$100 a day, and the trophy on last day. There will be four 10 single target events each day: one of 5 pairs, two 15 single target events, and one of 20 single targets. On the last day will be the championship race 50 singles, and if there is any surplus it will be shot off at 15 singles, at the close of each day's programme.

EXPLANATION OF HANDICAP DIVISION OF FURSES AND CONDITIONS OF CHAMPIONSHIP RACE.

The handicap will be used only in the four 10-bird events; no handicap in the other events, everybody shooting on even footing. Handicap is as follows: Everybody starts each day shooting, in first event, at known traps and known angles; in second event, at unknown traps and unknown angles, shoot first in next ten-bird event, at unknown traps and unknown angles, from traps 1, 2 or 3, or 4, 4 or 5, according to where he is standing, as he walks down the score, he having three unknown traps to shoot from always, indicator to be turned at each shot; those who win or tie for second money, shoot second in following event at known traps and unknown angles; those below second place are not handicapped; if a shooter is classified from one event to another, according to the score he is making.

The two 15-bird events are shot as follows: One man up at a time, standing in the center of 5 traps, unknown traps and angles, indicator turned at each shot. Those who break 15 straight, receive \$10 each; the fourteens, \$8 each; the thirteens, \$6 each; the twelves, \$5 each; the elevens, \$4 each; the tens, \$3 each, and the nines, \$2 each.

Each man up at the shoot as follows: One man up at a time, standing in the center, 5 unknown traps and angles; 21yds. rise for 12-birds and 23yds. rise for 10-birds, both barrels can be used, second barrel to score same as first. Those who break 20 straight, receive \$15; the nineteens, \$13; the eighteens, \$11; the seventeens, \$9; the sixteens, \$7; the fifteens, \$5; the fourteens, \$3; the thirteens, \$2; the twelves, \$1. If there is any surplus over the above entrance money, what has been paid out of the 100 which the Association puts up each day, it will be shot for in the surplus shoot. Fifteen targets, known traps and known angles, rapid firing, entrance price of targets, open only to those who have participated in the two 15 and one 20-bird races, to be divided as follows: Seventy per cent. of the total amount to be divided; 30, 30 and 20 per cent. pro rata among the three highest places, and 35 per cent. to be divided 30, 30 and 20 per cent. among the three next highest places. All events except those specified will be divided 40, 30, 20 and 10 per cent.

The Individual State Championship Race for M. T. S. A. trophy is open only to residents of State; 50 single targets, known traps and unknown angles; ties to be shot off at 25 targets; to become permanent property of winner.

As will be seen this will make a varied and interesting programme, combining all the different styles of inanimate target shooting, and doing away with all pooling and combinations, which have been the bane of shooting tournaments for a number of years. Also, the presence of the expert does not materially affect the interests of the poorer shot, nor is the expert so handicapped that he has no possible show of holding his own. This Association has carefully considered the interests of all, and every shooting has been renewed interest

Waverly Gun Club.

Owing to an accident to George Helmsstead, the president, and several of the members being in Washington, the attendance at the regular monthly shoot at Dexter Park on Monday was poorly attended, only seven competing for the club medal and prizes. The postponed shoot of last month was shot off. Each man shot at ten targets from electric pull traps. The snow affected the shooters. The scores:

Hurlingham Rules.

RULES of the Hurlingham Gun Club and the Gun Club (London), blue and gold, vest pocket size. New edition, price 25 cents.

Answers to Correspondents.

No notice taken of anonymous communications.

J. A. H., Northport, L. I.—The lines of the yacht have never been published. She was built by C. C. Hanley, at Monument Beach, Cape

Cod, and is 28ft. 9in. over all, 27ft. 9in. l.w.l., 13ft. beam and 2ft. 6in. draft.

J. H. S., Philadelphia.—We know nothing better than some of the ordinary washing compounds to remove oil from a sail. The whitening processes sometimes employed would not answer with oil.

F. O., Gay's Mill, Wis.—Can you inform me where I can procure a copy of Capt. Bendire's "Bird Biographies?" Ans. Apply to the Smithsonian Institution, Washington, D. C. We understand that the editions are exhausted.

H. B.—Where can I get adult bass (old enough to spawn)? Would it do to place them in my carp pond? and when should it be done? Ans. Apply to Mr. Mark Samuel, No. 10 East Sixteenth street, New York. See notes in our last issue on bass culture in ponds.

A. S. B., Holland, Mich.—The birds are the long-tailed duck (*Harvelia glacialis*). It is more common on the seacoast than elsewhere but also occurs sometimes on the Great Lakes. They are not abundant on inland waters, however. The color of the iris is carmine. The ermine is one of the weasels which turns white in winter.

F. L., Springfield, L. I.—There is no work that we know of on terrapin culture, and we believe that it has never been carried on successfully, although many attempts have been made. The trouble seems to be that the terrapin will not breed in confinement. You might experiment for yourself and report the results to us.

F. W., Orange, N. J.—1. Is the horsefoot a fish or crab? 2. Is a crab a fish of any description? Ans. 1. The horsefoot is commonly called a crab, but it is not a true crab; by some naturalists it is classed among the crustaceans, while others regard it as belonging with the spiders and scorpions. 2. Crabs are not fishes, but crustaceans.

P., Springfield, Mass.—Could you inform me if I could catch eels with some kind of artificial bait, without taking earth worms to make the bob? Ans. We know of no satisfactory artificial bait. A bob that is much more easily constructed than the earth worm bob, however, can be made by running a threaded needle through a piece of raw meat. The eels catch their teeth in the thread and so may be lifted into the boat.

H. H.—Will you inform a constant reader of FOREST AND STREAM if I, a native born American, go to Ireland a few months gunning, can I take my gun along? The gun is of English manufacture, made by Greener. Will I have to pay duty on it? Let me know can I get a game license to shoot there. Ans. There is no duty on guns taken into Ireland. If you take it over with you to shoot and bring it back you will not have to pay duty here. 2. Yes.

F. H., New York City.—I have a Winchester repeater, .44cal., and a double-barreled shotgun, 12-gauge. I expect to be in Colorado and Wyoming for two months this coming fall and would like to know which would be the most useful in my travels in that country. Ans. Both guns would be useful, but if you are limited to one gun we would advise you getting a rifle with a flatter trajectory than the .44cal. In Colorado and Wyoming much of the country is open and long-range shots the rule. You would find a .45-70-380 satisfactory.

A. M. H., Boston.—Will you kindly inform me through the columns of your paper where to find good fresh water fishing in the vicinity of Boston. Ans. Really good fresh water fishing is scarcely to be found in the near vicinity of Boston, unless possibly one has a permit from the city government to fish for black bass, in their season, in the Chestnut Hill reservoir. Such permits are sometimes granted, if one has a friend in authority to get the permit. Otherwise good fresh water fishing would be best found in some of the private trout ponds and streams in Plymouth county, to fish in which a permit from the proprietor or club would certainly have to be obtained. Some of the numerous ponds in Plymouth county afford considerable pickerel and bass fishing both through the ice and by trolling in the summer. Really good fresh water fishing is extremely scarce about Boston, and the most of the lovers of the angle go to Maine and other States to indulge in the pastime.

F. S. D., Pasadena.—Hornaday in his "Taxidermy and Zoological Collecting" mentions that there are a number of works on the use of poisons in zoological collecting, but gives no titles; if you have such works and will give me the names of the best, with prices, I will send you an order. Ans. We have referred the above query to Mr. Hornaday, who writes us as follows: "I must confess myself quite mystified by Mr. D.'s inquiry, for I cannot recall, neither can I find in the book where I made any mention of anything like 'works on the use of poisons in zoological collecting.' I am sure, on the contrary, that there are no such works and I can say with more truthfulness than egotism that I know of no work which has as much to say on that subject as my own. I think your correspondent is laboring under a misconception and I am quite unable to throw any light upon it."

Dr. A. G., St. Gallen, Switzerland.—Is there published a monograph on the musk ox from the pen of an American, like Morgan's on the American beaver or Caton's "Antelope and Deer of America?" If such a book is published will you kindly procure same for me? If further literature treating of this animal is in existence, will you inform me, with price and where published? I am gathering all literary material possible relating to the musk ox, with a view of publishing a work treating of this interesting animal. I am in hopes of procuring the head and skin of a specimen fit to be set up. Ans. No such monograph exists. Most of the papers on the musk ox are short and in scientific journals. Mr. Warburton Pike's "Barren Grounds of Northern Canada" gives some information about the species; price \$2. We can furnish it. Complete specimens of musk ox for mounting are very hard to get, but Hinds, of Winnipeg, Manitoba, Canada, might furnish a mounted head.

R. R. S., N. Y. City.—As a stranger to the city, lately located here, I will feel obliged if you will be good enough to inform me whether there is a chance for a man—limited both as to time and means—to obtain fly-fishing (preferably for trout) within easy reach of the city? Ans. In certain localities in Pennsylvania and New York State, about the upper waters of the Delaware River, there is good trout fishing to be had, within a reasonable time limit from New York city. Following are some points, with the addresses of hotel proprietors, whom you might write for particulars: W. B. Eldridge, Fallsburgh, Sullivan county, N. Y.; Joseph Fether, Eldred, Sullivan county, N. Y.; Dr. Philip F. Fulmer, Dingman's Ferry, Pike county, Pa.; D. M. Crane, Canadensis, Monroe county, Pa.; Frank Crisman, Milford, Pike county, Pa. You can find bass as well as trout in most of these localities. Nearer at hand good bass fishing may be had at Greenwood Lake or Lake Hopatcong, N. J.

C. W., Pawtucket, R. I.—Kindly advise me through your paper 1. where I could get good deer shooting in Maine without consuming too much time in getting to and from grounds? 2. Could I expect to find deer plenty in vicinity of Machias, or more further north above Bangor? 3. Where can I obtain addresses of guides who take out deer hunting parties, or other information in line of above questions? 4. Please state best month for deer, October or November? Ans. 1. Deer shooting may have been termed "good" in almost any section of the north wood of Maine last season, but to reach good chances for deer in that State involves at least one day from the last settlements, or two days from Bangor. Bangor may be reached from Boston by night trains but deer shooting is scarcely to be found in less time than one day by teams from that city, or any other point on the upper Maine Central Railroad. As a rule better shooting is almost always found by going still another day or two into the woods, either by canoes or on foot. 2. Deer were plenty within a day's ride of Machias last season, and some were killed within only a short distance of that city. But the questioner must always remember that Maine has been termed "the State of magnificent distances;" everybody tells you that it is "only a short distance," but the miles of Maine guides and residents are usually about three miles to the tenderfoot and outsider. 3. The addresses of guides can always be obtained from hotel people, stage drivers and postmasters. 4. November is usually better than October, since "tracking snows" may be looked for in the later month, which snows make the very best of deer hunting.

SAVE YOUR TROPHIES.

FOR SALE.

MEMBERSHIP SHARES
IN THE
Triton Fish and Game Club,
CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 103,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 6lbs. (*Salmo fontinalis* only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment.

AND THIS PAPER.

Mr. Grinnell's Indian Books.

BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

BLACKFOOT LODGE TALES; Pawnee Hero Stories and Folk Tales,

THE STORY OF A PRAIRIE PEOPLE.

By GEO. BIRD GRINNELL.

pp. 360. Cloth. Price, \$1.75.

By GEO. BIRD GRINNELL.

Illustrated, pp. 446. Cloth. Price, \$1.75.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Horicon Shooting Club.

\$250 a share. 7,000 acres.

FOR SALE.—Eight shares in this celebrated Wisconsin preserve. Apply at once. References required.
P. F. STONE, 161 La Salle St., Chicago.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 95 pages. Price \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

TAGS ARE UN-AMERICAN.

THE most interesting point of the newly-adopted New Jersey game and fish law, of which the general provisions were given in our issue of March 9, is the repeal of the former statute requiring non-residents to take out licenses for shooting and fishing. On the other hand, it is reported that the Maine license scheme may be put through in the Legislature of that State.

And now Michigan falls into line with a hunter's license project of the same order. The Michigan bill is closely modeled after the Canadian laws, which require licenses from sportsmen going across the line from the United States. The provisions of the bill now under consideration are, briefly, that no one who is not actually a resident of Michigan shall kill any bird or animal without first having taken out a license (fee \$10), good for the year of issue, which license shall be exhibited to any one who asks to see it; penalty for being without the license, or for refusing to show it, is a fine of \$50 or imprisonment. The bill may be amended also to apply to fishing.

In their origin these discriminations against non-residents usually have some apparent justification. The New Jersey law, as enforced in the eastern counties of the State, has been employed as a defense against the incursions of hordes of irresponsible gunners (not sportsmen) from New York city; and while certain thrifty sharpers over on the Palisades have under the cover of the statute practiced a system of blackmail, for which they should have gone to jail, the respectable protective associations, such as Mr. Force's society in Plainfield, have used the law honestly, with pure motives and good effect. We assume that the Michigan measure has been suggested as a remedy against the market-hunters from outside the State who are destroying the game, and if this theory is correct, the aim of the proposed law is good.

But, after all and at the best, while non-resident license laws may be right and fair as between citizens and subjects of different governments, they do not appear just and becoming as between citizens of a common country. Whatever may be their usefulness in protecting game, surely there is in them something unpatriotic and un-American. Nothing can be wise nor commendable that tends to build higher the barriers of sectionalism between the people of one State and those of another; that encourages sectional jealousies; that suppresses the feeling that we are all of us citizens of one common country; and that emphasizes in the stead of this the less noble suggestion that the resident of Rhode Island is an alien in Maine, he of Illinois an alien in Michigan. Americans, even the most liberal of them, are narrow enough, heaven knows, in their sectional prejudices, without finding themselves discriminated against and taxed and subjected to a passport system when they stray from their own State into another.

The average sportsman—the man who goes from his own home into other sections for his shooting or fishing—is inclined to be more liberal than some others in this regard. He is more liberal because he has seen the country and mingled with the people, and has found out that

his fellow American wherever he may dwell is after all the right sort of man. Sportsmen then as a class should seek to secure game protection without calling into operation statutes which in their essence are the reverse of liberal, the reverse of fraternal, and so it may be repeated are un-American. A non-resident law should be the very last expedient for protecting game or for insuring the success of any other cause, social or political.

It is said for these laws that probably they do not violate the Constitution of the United States. But even if they be within the letter, they may be none the less in conflict with the spirit of that instrument. The Fathers certainly never intended nor foresaw a condition of local restrictions in these United States when the Massachusetts man who goes into the Maine forests must take out a passport, or the Maine man who shoots game in New Jersey must be registered, or the New Jersey man who visits Maryland must be tagged, or the Maryland man who invades the deer wilds of Michigan must wear his label. There is a law now going into effect which re-quires Chinamen to be photographed and listed; when it is proposed to treat native born United States citizens after that manner, the time has come for us to ask in all seriousness, where are we at?

Game preservation is important, and every necessary expedient for insuring it should be adopted; but we believe that the desired end may be secured by statutes based on unobjectionable principles.

THE DELMONICO WOODCOCK.

FOLLOWING our publication in the March 2 issue of the story of how the Delmonico woodcock case has been mis-managed by Assistant District Attorney Townsend, the case was set for trial in the City Court, before Judge McGown, on March 9, when, at the instance of the defendants, it was again postponed.

One very curious phase of the business is that though the case was set for the 9th, Protector Kidd, who is of course the chief witness for the people, was not apprised of this until the following week, nor can we learn that any of the other witnesses for the prosecution were subpoenaed. The case has been put down again for next Friday, March 24; and it is to be hoped that Mr. Townsend will take the usual precautions to have his witnesses ready and his evidence in shape. After all these months and years of patient waiting, the sportsmen of New York will not be particularly edified by the failure of the prosecution if that failure shall be due to any dereliction on the part of Assistant District Attorney Townsend.

As for Protector Kidd, we advise him to come down with his blankets and camp on the steps of the City Hall until the case is actually on. Judging from past experience there will be several more postponements and delays on one pretext or another.

That Delmonico July, 1890, woodcock case must be disposed of, and if District Attorney DeLancey Nicoll has seen half of the newspapers which have copied our interesting little story of March 2, he will agree with us in this.

PUBLIC FISH AND PRIVATE WATERS.

MASSACHUSETTS has followed the good example set by Michigan in respect to the distribution of State fish for private waters. A statute just enacted prescribes that the Fish Commissioners shall furnish no trout nor trout spawn to any individual or corporation, for stocking waters under the control of such individual, without first having exacted an agreement that the waters so stocked with State fish shall be free to the public for fishing during the lawful open fishing seasons. This is hard, practical, common sense; and it is justice too.

We have said more than once that the citizens of a State should not be taxed for the hatching of fish to be given to a private party no more than they should be taxed to hatch chickens for a private party.

There is no more pronounced trait of human nature than an eagerness to get something for nothing, to be a dead-head when deadheadism is possible, to sponge on the public. This trait is manifested strongly and indecently by individuals who cry for fish furnished at the public expense. The Pennsylvania Fish Commissioners told, at the last meeting of the American Fisheries Society, how people in their State would send in for trout over and over again, under assumed names, and actually lie unblushingly, all for the sake of getting what cost them nothing. In New York State the records of the

Fish Commission will show a like experience. One name appearing among the regular annual applicants for the gratuitous issue of trout fry is that of the president of one of our largest life insurance companies, a man who is abundantly able to pay a hundred times over for what trout he requires for stocking his own posted trout brook. And yet this man, not content with getting from the public hatcheries all the fish he can beg in his own name, sends other applications in the names of other people, and does it year after year.

At the recent meeting of the Megantic Club in this city ex-Fish Commissioner Blackford expressed his opinion that the province of State activity in fishculture was in the increase of the food fish supply, the fish that people buy in the market; while the propagation of trout for sport should be an enterprise left to individuals and clubs and associations. These views are shared by a growing number of men interested in fishculture. It is probable that when the public fully comprehend that a large share of the products of State trout culture go to the benefit of a comparatively few individuals, more than one legislature will follow the lead of Michigan and Massachusetts.

POSSESSION IN CLOSE SEASON.

Mr. H. D. McGUIRE, the newly appointed State fish and game warden of Oregon, has already started in to make things interesting. He has brought suit against a Portland cold storage establishment for possession of frozen salmon in the close season, during which period the law prohibits having in possession. There is no ambiguity in the terms of the statute, but the cold storage people, who received the fish in open season and were simply holding it in cold storage for its owners, contend that the prohibition was never intended to apply to lawfully caught salmon preserved by freezing any more than to fish preserved by canning or by smoking.

This contention has been made by dealers in game and fish many times before, but it has been overthrown in court. The Phelps-Racey case in New York State is a familiar precedent. In this case a dealer of this city was prosecuted for having quail in possession in the close season. He set up for his defense that the birds had been killed lawfully, and were preserved by cold storage. The defense would not hold; and he paid his fine.

Prohibition of the sale of game and fish in close season is recognized by all practical and experienced individuals and societies engaged in game protection as an absolute essential. Without shutting down the market sale of game and fish in close season the laws would be in large measure farcical.

SNAP SHOTS.

WHAT a beautiful tribute from one poet to another is that of James Whitcomb Riley's sonnet, "Nessmuk," printed on the following page. Of the bronze medallion portrait, of which an illustration was given last week, Capt. L. A. Beardslee ("Piseco") writes: Permit me to add mine to the many compliments and congratulations you will undoubtedly receive from friends of 'Nessmuk' on the wonderfully good likeness of the old woodsman that Mr. Brewster has produced. I have a photograph of him that does not more closely resemble the mental picture that has staid with me for years."

That is a remarkable and interesting story sent to us by Mr. J. Parker Whitney of a colony of beavers which have taken up their abode in the city of Pueblo, Col. It may be already too late for the suggestion, but if the creatures have not already been destroyed, some one should make it his immediate business to provide for the colony's protection and preservation. A city that can boast such a unique attraction should constitute itself in very truth a "city of refuge" for the wild woods creatures that have put themselves under its protection.

J. M. Tracy, who died at Ocean Springs, Miss., last Monday, will be remembered by his associates as an accomplished sportsman, a companionable comrade and a man of high thinking and noble aims. His distinctive place as a field artist and painter of dogs is not likely soon to be filled by another.

The old term "shooting flying" has come to have a double significance in these days of both shotguns and cameras. Mr. Edward E. Hardy sends us a pretty bit of achievement in "shooting flying" with the amateur camera; and the picture is reproduced on another page.

The Sportsman Tourist.

"NESSMUK."

From "Green Fields and Running Brooks."

I hail thee, "Nessmuk," for the lofty tone,
Yet simple grace, that marks thy poetry;
True forester thou art, and still to be,
Even in happier fields than thou hast known.
Thus, in glad visions, glimpses am I shown
Of groves delectable—"preserves" for thee—
Ranged but by friends of thine—I name thee three—
First, Chaucer, with his bald old pate new-grown
With changeless laurel; next, in Lincoln-green,
Gold-belted, bowed and bugled, Robin Hood;
And next, Ike Walton, patient and serene;
These three, O "Nessmuk," gathered hunter-wise,
And camped on hither slopes of Paradise
To hail thee first and greet thee, as they should.

JAMES WHITCOMB RILEY.

CAMPING ON THE TENDERFOOT.—I.

ABOUT this time a twelvemonth ago, the FOREST AND STREAM contained an article from the pen of Mr. S. M. Emery, concerning the sport to be had on the Tenderfoot in Montana. Many a time had I dreamed about the Rocky Mountain country before I read Mr. E.'s story of his outing on the Tenderfoot, and once at least had I gone so far as to plan a summer trip to that far off region, but a dream of a canoe voyage up and down the "Boundary," between Pigeon River on the north shore and the Lake of the Woods, came athwart my planning and I went on the canoe trip. That was in the summer of 1891. In the following early spring when Mr. Emery's story was read the planning began anew again. First, I wrote to the editor and secured the address of his correspondent and then I wrote to him, and, of course, he answered. Was any true brother of the angle ever known to refuse an answer in such a case? What a batch of letters I have received from fishermen written for the sole purpose of giving information to a stranger. As true is it in this day as it was in the day when Father Walton wrote that "all we anglers do love one another."

Yes, Mr. Emery answered, and what is more, he told me all I wanted to know. Nay, he did more than that; he hired a man with his team for me and did me many other kindnesses for which I take this occasion to thank him, because I can do it no otherwise, having never seen him and having lost the run of him by post.

How very difficult it is now and then to reach the point of ticket-buying for the outing! I found it doubly so on this occasion. The Greek Professor was going back to his old haunts around the Pictured Rocks; the Judge wanted to go with his wife to old Point Comfort; McCaslin had found a place not far from Bayfield, and Jo said he couldn't go to any place. What was I to do? At the last moment I thought of the Preacher, and notwithstanding he had strayed away off down to Lebanon, Ky., I wrote him; and to my surprise and joy a dispatch came saying, "I'll go," but adding, preacher-like, "D.V."

Well, God was willing (and I can say that after twenty summers spent by the streams and lakes I have never known Him otherwise than willing for a man to go a-fishing), and after the necessary days and nights we were landed "bag and baggage" at the young city of Great Falls, in the new State of Montana, where Sheldon Hodges, our teamster and "rustler," met us and announced his readiness to start the next morning.

Our purpose was to repair to the Tenderfoot and spend about three weeks in a permanent camp, after which we would go on to Livingston on the Northern Pacific, and thence up to the Yellowstone Valley to the portals of the National Park at Cinnabar, and thence make the rounds of the Park; and I may here once for all say that we made our journey as we had proposed it, and a most delightful and profitable journey we found it.

The Tenderfoot is a tributary of the Smith River, which latter has its source well up toward the center of the State and flows northwesterly between two mountain ranges, the Big Belt range on the east side and the Little Belt on the west, and which finally discharges into the Missouri not far from Great Falls, our starting point.

It was said to be about sixty miles from Great Falls to the Tenderfoot, but distances in Montana, as well as in all other places in which I have traveled by other than steam power, depend so very much on the roads that it would perhaps convey a better idea for me to state that it took Sheldon two days and a half honest driving to reach our camp ground.

We arrived at Great Falls in the forenoon and during the afternoon purchased our needed supplies in the hope and expectation of getting a timely start the next morning. But the morning paper had, for the want of other news, advertised our arrival, and so, about the time we were ready, George K. Gilchrist came hurrying in to see if "D. D. B." was the same old "D. D. B.," or was he some other. He found him the same and there followed much hand-shaking and a great deal of oh-ing and ah-ing, for the two kinsmen had not met for a half score or more of years, neither had they kept the run of each other during that time. The upshot of their meeting was that George went along and we did not set out on our journey till after dinner.

Of course the journey was interesting. The deeply-worn, but long unused buffalo trails, the prairie dogs and their towns, the cowboys and their herds, the sheep and their shepherds, not to mention the women that are now and then encountered, who sat their horses astride and as firmly, for that matter, as their brothers, the cowboys, themselves. Why, of course we were interested, and when we had well nigh reached the place where we were to enter the Two Creek Cañon and thence go down, down to the level of the Smith, and there saw a miss in her teens breaking a broncho, astride of the wild and vicious brute, which was flying up the mountain side with the speed of the wind, and afterward saw her come riding back, the animal comparatively subdued, the unsentimental and sober-sided George actually took off his hat and cheered, while Mc., the Preacher, said: "Well! If that don't beat all!" and I—well, I said: "Yes, it does beat all."

Notwithstanding the fact that Mr. Emery had furnished

our teamster with an itinerary of the route, we thought it safer to take a guide, which we found in the person of a Mr. Milligan, who lives on a ranch hard by the turning off place. The Smith River had to be forded three or four times ere we reached the Tenderfoot Cañon, and it had been very high, and the fords, it was feared, were dangerous, and so they were. At one place, with pick and shovel, we did an amount of work that in older parts of the country, if done upon a lawful highway, would entitle the road mender to a full day's credit on his "privilege."

But let us not stop to recount the difficulties that beset our way on that day. We left the Milligan homestead at about nine of the clock that morning, and the cañon of the Tenderfoot was shrouded in the gloom of night ere we made our camp-fire, and yet we had traveled not to exceed nine miles, our guide said. The last bad piece of road the outer travels he is apt to characterize as the "worst road he ever saw," and that Tenderfoot road will be my worst road till another year anyhow.

Mr. Emery had advised me to go up as high as the falls—nine miles above the mouth of the stream—but we stopped five miles short of that place. Both Milligan and Hodges advised against going up so far. The latter's advice was received *cum grano*, for did he not own the wagon and horses? but when the former supplemented his with the statement that the falls were being regularly visited by fishermen from Neihart, a town on the eastern side of the Big Belt range, we concluded to take his advice and so stopped where we were.

Our camp was delightfully situated beneath the shadow of a cluster of evergreens close by the stream. Within a stone's throw to the south the mountain rose a perpendicular wall of rock for 100ft. or so, after which the ascent was less steep, but steeper than I could climb, and it continued for 800 or 1,000ft. higher, a man of the country said, but I didn't think it so high. It was high enough, however, for the moon to apparently slide along its even crest as if that were its track. I observed this on two or three nights, and I must say that in the dry, clear Montana midnight atmosphere, it was easy indeed to imagine the moon as actually sliding along in its mountain groove.

To the north of us the ascent was gradual. It took a mile or more of climbing to reach the crest in that direction, but the climb was most delightful, for one went most of the way through a region of pine trees, usually thinly scattered, but occasionally gathered into little clumps, the whole alternating now and then with sapling thickets. We found much pleasure in this mountain. On its ridge the view was very charming. There the horizon was bounded only by the curtained sky, but peaks and ridges were everywhere to be seen, some bald, some crowned with evergreens, and one or two showing patches of snow. All the more distant were wrapped in veils of purple haze.

It was after the middle of July when we made our camp on the Tenderfoot, and if there ever had been any mosquitoes in its thickets, they had disappeared by the time our camp was made. There are mosquitoes, however, in Montana, for at our very first camp, which was on the Smith River, about twenty-five miles from Great Falls, they tormented us greatly till after nightfall.

But if the mosquitoes did not annoy, the buffalo flies did. From 11 o'clock A. M. till about 5 P. M. the sun shone in upon our encampment with great power, and with it came flies in swarms—cowflies as big as those found in the valley States, and so insistent and insidious in getting in their work were they, and so "all-fired" hot was their bite, that quite often we were fain to flee to the mountain side or to the creek side when the dinner hour came, where we could eat in peace. On the brink of the stream they never troubled, nor did they 50yds. up the mountain from the plane of the valley.

We camped and traveled in the country thence on till in September, but met with no fly pests after these on the Tenderfoot.

D. D. BANTA.

BIRD CHAT.

The little brown wren (*T. aedon*) is very solicitous in guarding her nestlings.

She is discriminating and readily distinguishes friend from foe.

Season after season the little house I put up under the piazza roof is taken by a pair of the "wee things;" and though the chairs below are usually occupied by members of my family, the birds are in no way disconcerted, and attend to the rearing of their young oblivious of our presence, scolding, chattering and fussing, as is their wont, to the great delight of ourselves and friends, who never tire of their cunning ways.

When almost ready to fly the young become impatient and restless, chirping loudly for food, while with outstretched necks they peer curiously down at us. Very odd they look, with their fuzzy baby heads and beadlike eyes.

Let the old birds, who are poking about the hedgerows in search of insects, discover a prowling cat and utter their warning *churr-r-r*, and instantly the youngsters slink back in the nest out of sight, keeping perfectly still till a reassuring call brings them clamoring to the front again. I have seen this repeated time after time. No matter how far the old birds may have gone in their foraging, if anything excites their mistrust you will always hear this warning cry, and as regularly witness the sudden disappearing of the nestlings.

The chippie (*S. socialis*) is also a careful little mother, and will flutter along before one as he nears the vicinity of her nest, apparently making the most strenuous efforts to escape, as though wounded. Watching closely, you will notice that there is method in her feigned distress, for though seemingly scarce able to struggle on, it is evident that she has a proper regard for her safety, and will not allow you to get within reach.

For a dozen yards or so the little midget flutters along, recovering strength as the distance from her treasures increases, till suddenly she is herself again, and mounts to the fence rail or tree with a quick flirt of little wings, there to sit calmly till you pass. Presently she will flip away in zig-zag flight to her nest.

The simulated distress of the ruffed grouse (*B. umbellus*) as she endeavors to divert the attention of an intruder from her callow brood is well known. The ruse is at times successful with the uninitiated in woodcraft, who race after the struggling bird till presto! there is a whirr of wings and a "brown streak" vanishes among the tree trunks.

The prairie hen (*T. americanus*) exhibits great cleverness in leading the disturber of her peace away. As in the case of the ruffed grouse, when a biped is to be misled the bird will feign injury, tumbling and fluttering as though sorely wounded.

If it be a dog that ventures near, she changes her tactics. Rising with a loud cackle from under his very nose she skims just over the grass in heavy lumbering flight. The dog bounces at her instantly, barely missing her tail feathers with a vicious snap of jaws. Bound after bound he follows, while with wonderful gauge of distance and speed she keeps just out of reach till well away, then with sturdy wing strokes she rises and swings swiftly back in a wide circle to her young, leaving the discomfited canine in the lurch.

There are other birds that display great sagacity in leading their foes astray, while again we find those which by over-anxiety and noisy expostulation, seem determined to betray the fact that one is in close proximity to their little ones. This is only the case when the young are hatched, as all birds, I believe, are silent while sitting on their eggs.

The male Baltimore oriole (*I. galbula*) will mount the treetop that shelters his pendant nest, and proclaim to the world at large that he is a happy father. Woe betide the inquisitive wearer of feathers who ventures within his bailiwick at this interesting season, Baltimore will pounce upon him "like a hawk upon a June bug."

The robin (*M. migratorius*) will rouse the neighborhood with a fit of hysterics should anything happen to excite his alarm.

So with the catbird (*M. carolinensis*), her nervous *cheel cheel* often betrays the whereabouts of her nest.

The nesting swamp robin (*T. mustelinus*), when you come upon him unawares (which is seldom) will be a trifle flurried and voice his concern in a few short, emphatic notes of protest, after which he relapses into philosophical silence, though watchful of your every movement. I have found that these various demonstrations of solicitude are generally noticed when the birds are certain they are seen, and very quick they are to discern this. In almost every case where they fancy you have not discovered them they will endeavor to steal off unobserved.

The brown thrush (*H. rufus*), for instance, with all the shyness of his race, will dodge away among the bushes and vanish silently, while only the nodding alder tips, as he threads his way below, give evidence of his going. Remain quiet and the chances are the sly fellow will soon return to investigate. To thoroughly enjoy these bird ways one must keep eyes and ears open.

We have heard of people "who go through the world with their eyes shut," and this is certainly applicable to many a would-be student of bird life. There are many charming bird pictures which are missed by not attending to business when afield.

It is well to read up on the habits of any particular species you may wish to study, but do not close the book and blunder away to their haunts. Keep your eyes and ears open from the moment you start and you will be amply repaid in many ways.

For example, the yellow-breasted chat (*I. virens*), your book tells you that he "inhabits shrubbery and in fact any kind of undergrowth." On some lovely May morning you hear his deep voice and immediately start for the coppice whence it appears to sound. Arriving, you hear it further away, and carefully follow, now in one direction, now in another, anon back to your starting point.

Of course, all this tramping is owing to the fact that you are relying too much upon your sense of hearing. Though you are presumably aware that this bird possesses great ventriloquial ability, it does seem impossible to you that he should remain in one spot, the while he throws his voice at will about the thicket.

When you grow impatient of following the voice, and return to your original position, if you are quiet and use your eyes diligently, the odd chap will very probably be discovered on some low perch, from which he has been watching you all the time, no doubt enjoying your perplexity.

Ears are useful! Eyes are a necessity! But a well-trained combination of both is the very thing. You need only try to observe carefully a few times when an improvement will be sure to manifest itself. There is no rule that may be laid down, but to one who loves nature will surely come with practice, the habit of quickly "sizing up," as it were, his surroundings. He knows intuitively how things ought to look and the least departure from the general routine will at once attract his attention. How? I cannot say, perchance he feels it as Whitman says:

I feel the sky, the prairies vast—I feel the
mighty northern lakes;
I feel the ocean and the forest—somehow
I feel the globe itself swift swimming in
space.

So in the field the ornithologist learns to love his work, and literally feels his way into the lives and habits of his favorites.

How the plumage of our birds, with its endless variety of color, blends with their surroundings. The woodcock, for instance. Stop him in full flight and mark his fall "never so carefully;" 'twill take a quick and certain eye to locate him at the first attempt as he lies among the brown leaves. So with our quail and grouse; their plumage harmonizes so perfectly with the cover they frequent that without the aid of your dog you might often pass him.

A striking example of the Creator's forethought in thus protecting his handiwork is seen in the nighthawk (*Chordeiles virginianus*). This defenseless bird always alights lengthwise with the perch he occupies, and, when settled upon a dead branch or along the fence rail, so closely resembles a knot or gnarl that one is deceived over and over again. The bird seems to realize the security its colors afford and will often remain motionless, even though approached within a dozen feet, when the passer-by will likely be startled by seeing the "gray moss-covered knot" suddenly develop a pair of white-barred wings that with irregular jerky flaps speedily carry it out of harm's way.

I have talked enough, though, like Tennyson's "Brook," one might "go on forever" with this subject. Will not some of your other correspondents contribute their experience for the benefit of observers in general?

BAY RIDGE, N. Y.

WILMOT TOWNSEND.

IN THE WILDS OF POTTER.

As springtime drew near, with fitful spells of sunshine and showers, George and I became very impatient. All through the long winter we had discussed and planned for a fishing trip in the wilds of Potter county, Pa.

As early as April 1, our arrangements were complete, our bill of fare filed, and the date of departure from business cares fixed for June 15. During this time my father and Mr. O., having heard of our intentions, expressed a desire to accompany us, and as a matter of course their company was very acceptable, and matters were arranged accordingly. Our bill of fare was altered so as to appease the hunger and supply the wants of four fishermen instead of two.

On the evening of June 14 we held a council and decided that a large packing trunk should be delivered at my house, and all articles should be brought or sent there from each of the other parties. In short, I was to pack the things and see that a drayman took them to the 1:30 P. M. train, the following day. While I was thus engaged word came that father was engaged with a very sick patient, whose condition would not allow of his leaving (for any great length of time) for several days. This was sad news. However, I went on packing and without making any alterations on account of one of the party having dropped out. But when the news came next morning that it would be impossible for Mr. O. to accompany us, I felt my patience giving away. What were we to do? What on earth could George and I do with all that grub? (It never occurred to me that there were too many cigars.) It was now 10 o'clock and I knew very well that in so short a time I could not find two friends to make up the party. My wife tried to console me; but no; our minds were made up to go that day and all arrangements had been made. After telling her this, she quietly left me. Suddenly she returned and I saw a puzzled look in her face. "What is it?" I asked. "I was going to suggest a plan to help you out." "Well, what is it?" "Why couldn't Mrs. George and I go with you, I never went camping, but I feel sure I would enjoy it, and I can soon run over and ascertain Mrs. G.'s views." This was a plan that had never entered my mind. As briefly as possible I explained to her some of the hardships of camp life, and reminded her that she had not long been out of the doctor's care. With a laugh she ran away saying they could stand it if George and I would put up with them. While she was arranging with Mrs. G. I rushed off to find father, and inquire into the advisability of taking my wife. After a moment's thought he said: "If you are careful, and don't let her get tired out, I think a trip of that kind will do her more good than all the medicine in the world." I tore back like mad. Wife had returned and brought George and Mrs. George with her. They were all of one mind. Very soon the immense trunk was repacked to suit the accommodations of the feminine contingent, and in another hour we were on the way, winding, curving, twisting in and out of the valleys, dotted here and there with wild cherry in full bloom, and numerous wild shrubs arrayed in pink and white. Half the time the engine was in full sight, now creeping close to a bounding brook, now climbing laboriously up the steep mountain grades.

At 8:15 we puffed into Coudersport, seated ourselves in the "free bus to the Glassmire," and were soon gathered around the luxurious table of that most excellent hotel. We spent the evening in the pleasant parlors and retired early. Here let me say a word of advice to those who may contemplate a fishing excursion in Potter county, Pa. Coudersport is undoubtedly the center from which to proceed to any of the most prolific streams. Mr. Glassmire you will find to be a most accommodating and congenial host. Having resided in this part of the country for over thirty years he is an excellent guide and will take great interest and care in directing you to good fishing grounds. He has a fine livery in connection with the hotel. You will do well to put yourself in his care.

We arose early next morning and after breakfasting on brook trout were soon speeding along over the beautiful country behind a spanking team of bays. The driver informed us that our trunk and luggage had preceded us several hours on the stage and were to be left off at Cherry Springs, a sort of sportsman's inn, seventeen miles from Coudersport. Here we dined, and, removing the back seat of the rig, strapped the trunk and luggage in its place, the stage having taken a course not leading to our destination, which lay six miles further to the southeast. George and I walked. The roads were not quite so good here and it was 4 o'clock before we

emerged from the woods into Bailey's clearing, on Cross Fork Creek. That gentleman met us with a pleasant smile and invitation for the ladies, at least, to take advantage of his hospitality. But they stood firm and declared their intention of sleeping that night in the tent. So George and I selected a green spot just at the edge of the wood, pitched the tent and made the bed of hemlock feathers. Before the ladies had returned from Bailey's, where they had been arraying themselves in camp clothes, as they called them, we had things unpacked and in pretty good shape. They took hold with us and an hour before sunset we were "in camp" in every sense of the word, and as the sun cast its parting rays into that beautiful valley they fell on four hungry travelers seated around a rough table laden with hot potatoes, salt pork fried with trout, home-made bread, eggs, fresh butter and a large pitcher of fresh milk from Bailey's new milch cows.

After this hearty supper we sat and chatted until gloom darkened into night and the moon cast her silvery light upon the forest-covered hills dimly outlined about us. The ladies now began to look tired, and after several ill-concealed yawns, retired to their room in the tent. George and I listened, fully expecting to hear a scream, as toads were abundant, and they were quite likely to see one or step on one. But no, for some time the only sound that came from that quarter was the hum of their voices, accompanied by an occasional giggle. They called out "Good-night" to us again and then all quite still. George and I sat up for an hour or so longer, planning for the morrow's sport and congratulating ourselves on the good

Everything being quiet in the ladies' department, we decided to give the stream a trial before breakfast. It was not necessary to go far from camp, the stream was not ten yards off; here we began to fish. Ten minutes elapsed without success, then came a wild hoot from George. Looking through an opening in the shrubbery, I caught sight of his bald head. He stood with legs apart, one foot in his hat, and with a face and general attitude that spoke volumes, the cause of which soon came to view in the shape of an 11-inch trout, flopping and squirming about, almost bending his 7oz. rod double. Soon another fair-sized one followed into his basket out of the same pool.

My turn came after a while, and I killed a nice one. The sport continued with good success for about an hour, when we heard a blast from the tin horn we had brought for the purpose. Knowing this to be the signal for breakfast, we turned our steps campward. There we found breakfast in waiting and our wives in a terrible state of anxiety to go fishing. George and I had made a very fair catch already, so we arranged to go all up stream and devote the forenoon to exploring its headwaters and romping through the woods. This pleased the ladies and we were soon on our way. Of course we all carried fishing tackle, but the ladies did the most of their fishing in the trees, and George and I spent the most of our time untangling their lines. Nevertheless we had a fine time and took several trout, more than enough for dinner and supper.

We returned to camp about 1 o'clock and ate our dinner. George declared it was going to rain, and said we would have to spend the remainder of the day in preparing for it. There were several piles of old cherry lumber standing in a neighboring field which Mr. Bailey said we were welcome to, and could use for fire-wood if we liked. So the balance of the day was spent in constructing a house, which consisted of two rooms; dining and kitchen respectively, with door opening from dining room into the tent, which was now entirely used for sleeping rooms. We left an opening in the outer wall of the kitchen in order to admit the light and warmth of our evening camp-fire. This done, we made several rude chairs, a stationary table and several shelves. Everything was very crude, but served our purpose admirably. One of the most serviceable articles we had in camp was a small sheet iron stove, which we had made for the purpose. It was 18in. wide, 24in. long, and about 18in. high, bottomless, and with a small stove-pipe to match. This we removed to our new kitchen.

Evening came and with it a slight shower, after which we repaired to a large pool near at hand. The pool lay calm and peaceful, reflecting the angry clouds as they sped swiftly over the evening sky, and gathering to her bosom the deep shades of night. Occasionally an ash fly emerges from the deep forest and flutters—all unconscious of his fate—over the pool. Midway he hesitates, falters, and seems about to fall to the water. After several awkward dives he recovers his equilibrium and proceeds on his way. But his renewed vitality proves to be of short duration, as he soon sinks again to the water. In a moment the placid surface is ruffled. A trout full 10in. long has risen clear of the water, disappearing the next instant in possession of the fly. We watched these proceedings for some time and then began with great expectations to whip the pool. To our chagrin and amazement we could not coax a single rise. In vain we changed our flies and exerted our skill. For some reason, still a mystery and source of speculation to me, we were unable to take a single trout from the pool that evening. In several instances natural flies were taken within a few inches of our own good imitations. However, we kept on patiently until the darkness forced us to return to camp.

The following day broke clear and warm, and we arranged for another trip up stream. George tried to induce the ladies to wear their gossamer coats, again prophesying rain, but they declined them. We left camp about 6 o'clock and fished slowly and carefully, all keeping together until about 10 o'clock, when it began to sprinkle, and the ladies sought shelter under some thick hemlock foliage. George and I went up stream a little further, taking trout on all sides of us. The sport became so lively that we forgot our wives until the storm became so violent that it spoiled the fishing.

The rain was descending in torrents. However, we were wet to the skin, and instead of seeking shelter we hurried off to find the ladies. Not finding them under the hemlocks we hurried along down stream and soon overtook them. George did not suppress his laughter at sight of them, and soon had us all started. We dragged ourselves

weather and success that had thus far attended our trip. After finishing our smoke we crept cautiously to the ladies' end of the tent to listen. All was still, and we concluded to turn in. Soon George's regular breathing denoted the fact that he was fast asleep, and I was not long in following suit.

I awoke slowly and with a sense of cool freshness, akin to a chill, creeping over me. I sat upright, yawned, stretched and gazed about. All was quite dark except the entrance curtain of the tent, on which the dying camp-fire cast lights and shadows that danced and galloped about, forming themselves in grotesque shapes, now fluttering like a wounded bird, now standing for a moment fixed as though painted on the canvas, then disappearing like magic. "Hoo-hoo-hoo-o-o!" came the lonely sound of the hoot owl's song, as if hooting at the arrival of another day and his consequent retirement. After a prolonged silence, broken only by the murmur of the brook, then came the soft, sweet twitter of a robin perched somewhere among the trees above us. First low and disconnectedly, then louder and sweeter, and at last, as if overjoyed at the coming birth of another day, he broke forth into a volume of song that echoed and re-echoed through the wood, and seemed to fill the fresh, forest-scented morning air with heaven. Out popped thousands of little heads from under downy wings, and in another moment the whole world seemed to be full of song. The shadows on the canvas grew fainter and fainter until put to shame by "the first rosy tints of morn." I rose and threw open the curtain just as the sun peeped above the horizon. The trees, the grass, the field daisies and lilies, wore a look of exquisite splendor, clad, as they were, in sparkling gems of dew; and in return for the heaven-sent gift filling the calm, fresh air with perfume.

George and I were soon at the brook, ducking our hands and arms into the cold water and splashing it over our heads and necks. Ough! how cold it was. However, the reaction set in after firm rubbing with towels; and then we glowed like boiled lobsters. The chill left and then came a feeling that I am at loss to express. I was happy.

to camp, wet, hungry and tired, but in excellent spirits. Fortunately no serious results attended our untimely bath. After a change throughout and a hot dinner we felt better than ever. During the afternoon George managed to take the largest trout caught during the entire trip.

What a jolly little party we made that evening gathered around our bright cheery fire, whose rosy light danced upon the tree trunks and made the stars look dim, spinning yarns and playing cards, and—though we knew it not—storing up pleasant memories, to be hugged to aching hearts in future years—recollections that moderate suffering and soften the sick-bed.

Ten days of this kind of life made us all long for home comforts, and it was with anxious hearts that we looked for the coming of the team that was to carry us back to Glassmire's. We made the homeward journey without incident or mishap that would furnish interest to the reader, and yet there often flashes into my mind some little incident that occurred during that pleasant drive, and I am free to say that our sojourn in the wilds of Potter county did us more good than—well than a trip to Manhattan Beach, and as an experienced fisherman I would advise my brother admirers of the art to take their wives with them at least once a year for a short stay on the banks of some mountain stream. GLENVILLE.

An Old Tale Retold.

A "PASTEL," POPULAR STYLE, IN EASY WORDS, OF TWO SYLLABLES, FOR YOUNG SPORTSMEN.

A CABIN by a lake, behind it the woods, across the lake a meadow. In the meadow a cow. The moon shines bright. At the cabin door a dog. A yellow dog. With cock eyes. One eye sees the cow in the meadow, the other one the trout jumping in the lake. In the cabin a tired fisher and a cat. A fiddle hangs on the wall.

The tired man wants music to rest him. He takes the fiddle and draws a long bow across it. The cat hears the sound and sings, too.

It scares the cow, she jumps over the moon, and the yellow dog laughs, he laughs so hard, it scares the trout, too, and they go back to their holes.

It also scares the iron spoon on the table. The spoon jumps into the tin dish, and they both take to the woods. When the fisher-man wakes up in the morning he can not get any breakfast. His dish has gone. The only spoon he can find has hooks on it. Something else happens. He throws the spoon in the water. A trout tries to eat it. He catches the trout. He roasts him on a stick. He eats him with his fingers. The next night the cow gets back. She is tired, too. So are the dog and cat. They all sleep. All is serene! The moon was scared, too. She got over it. She shines again!

Natural History.

THE PUEBLO BEAVER COLONY.

PUEBLO, Colorado, March 12.—Your readers will doubtless be interested to learn of the bold action of a colony of beavers at this city. Back of the Grand Hotel, where I am at present stopping, well within the city limits, and not more than three blocks distant from the hotel, is a marshy low tract of about ten acres, surrounded by some straggling cottonwood trees. Closely adjoining the tract are three railroad tracks beside each other, the Missouri Pacific, the Denver & Rio Grande, and the Rock Island railroads. On their way from Pueblo to Colorado Springs and Denver, north, over these tracks, night and day pass trains, passenger and freight, probably from forty to fifty daily. Within a few rods is the Union passenger station of the three roads, a large structure. Within a stone's throw of the marshy tract are several residences of an humble class of residents. The marsh tract is overgrown with tules or Indian water reeds, now dead and fallen from the winter season, leaving the tract fully exposed. On the other side of the railroad tracks, only a few rods beyond, is the Fountain Stream, a straggling shallow stream, which empties into the Arkansas River a mile or so south.

The owner of the tract, Col. Stanton, a well-known prominent old resident, drew my attention a few days ago to the feature I am about to describe, which I visited yesterday, which was the occupancy of the tract by a colony of beavers which came in a few weeks ago, but which he had only recently observed. We found three distinct abodes of the beavers, in the low banks about the water, with distinct runways beneath the banks into the houses, showing the presence of several families. The work of the beavers, which of course had been entirely nocturnal, was plentifully shown about and in the marsh.

Across one part of the marsh a substantial dam had been built of roots and cottonwood branches and mud, with a lesser dam below. The water had been raised by the upper dam about 18 in., giving plenty of swimming room. About the marsh the limbs of the fallen cottonwood had been neatly gnawn off from the parent logs, and several cottonwoods, one in particular I noticed, about a foot in diameter, had been neatly gnawn down, and entirely denuded of limbs. These limbs had been employed in building the dams, and were well covered with plastic material. The trees had all been cut so as to fall in the marsh, when the limbs could be most conveniently applied. A number of the trees still standing, had been gnawn more or less, showing that active work was going on, and although no sign of beaver life was visible, the tracks and fresh work plainly exhibited the character of the invaders.

A curious spectacle it seemed to me, the occupancy of this tract, in the center of a bustling active city of 40,000 population, by animals which we account most shy and retiring, and which rapidly retire before the advance of settlements. The arrival also at this season of the year, unusual for migration, indicates that some probable disturbance had occurred at the previous home of these animals, and that they had during some quiet, lately preceding night, taken by concerted action a passage down the Arkansas River, and up to the Fountain Stream to this, I fear, most dangerous locality.

Their presence is yet almost unknown, but I tremble for their fate when the boys about town learn of their presence. I am sure that no concealment is possible, nor that any protecting notices will then be of avail.

The marsh is fed by many little springs of fresh water, and abounds in succulent tule roots and adjacent cottonwoods, all delectable to the taste of the beaver, and the spot otherwise than its dangerous surroundings, presented doubtless a very alluring invitation to this adventurous

colony. But alas! its days are numbered, and soon it will be broken up and scattered, if not entirely destroyed.

Let us hope that the destruction of a few may save the larger part, who, taking seasonable warning, may fly to safe and more secluded retreats. J. PARKER WHITNEY.

Notes on the Pine Grosbeak.

GLOUCESTER, Mass.—I send you some notes on the pine grosbeak, as per request of Mr. Brewster. I have lived on Cape Ann, Mass., something over eight years, near the city of Gloucester, and until this winter do not think I have observed more than twenty grosbeaks, all told. This winter has proved a remarkable exception.

I was away the last half of December and first part of January, so cannot speak for the whole time. Some time in January I heard people tell of a large flock of robins (?) that had suddenly appeared Jan. 18, the flock which proved to contain grosbeaks found its way to my door yard, and again turned up on the 21st and 22d. I should estimate the number of birds at about one hundred. The flock was made up of females and young birds. I saw, perhaps, ten birds that at first I thought were old males, but at last I made up my mind to the effect that they were young males. This flock, or another like it, appeared Feb. 9 and 10. Since that time I have observed, in one of the outer wards of the city, a few grosbeaks from time to time, but they were all old males.

As to food, I can say that when in my door yard the birds greedily ate hemp seed, and some did not refuse crumbs of bread. I saw the flock several times feeding on the berries of the red cedar (*Juniperus virginiana*).

HERMIT.

RIO ARRIBA COUNTY, New Mexico.—In answer to Mr. Brewster concerning the pine grosbeak. They are found here in pairs during spring and summer from about June 1 to the end of July or perhaps a little later. I have never seen them at any great altitude, although there are plenty of them in the foot hills, usually feeding I believe on the young pine pins. A. P. F. COAPE.

The Heath Hen—Where?

NEW YORK, March 17.—Editor *Forest and Stream*: In Ridgway's "Manual of North American Birds" the pinnated grouse are separated into three forms as follows: Prairie hen, heath hen and lesser prairie hen. The habitat of the heath hen is given as, "Island of Martha's Vineyard, Mass.; formerly also Long Island, New Jersey, eastern Pennsylvania, Virginia, etc., but now apparently extinct, except on Martha's Vineyard, and there is danger of extermination." I have been making inquiries for some time past among museums and also ornithologists for specimens of the heath hen from any of the above-mentioned localities, except Martha's Vineyard, but so far have been unable to find any. Among your numerous sportsmen readers there may be some who know of specimens of the heath hen that have been shot in either of the above localities; if so they will confer a great favor on the writer by communicating the fact either to me or, better still, through your paper. It is very probable that the specimens would be known as prairie hens and not as heath hens. The important point, however, is that the bird was procured in either New York State, New Jersey, Pennsylvania, Virginia or Kentucky.

WM. DUTCHER.

[The late Shepherd F. Knapp, of this city, told us years ago of the killing on Long Island of a pinnated grouse. We cannot say, however, whether it was a heath hen or a turned-out prairie chicken.]

The Light Bears of the Guadalupe.

A SHORT while ago I noticed an account of the white bears found near here, in the Guadalupe Mountains. A correspondent asked if other people had seen them. I can tell him that we have the same bear here and in Colorado. Although some hunters have a local name of "range bears" for them, and the Mexicans say they are more savage than others, I have never noticed any difference in their behavior from any other bear, and believe them to be only a variety of cinnamon. I have killed three grown ones, one of which had brown legs, the rest of the body being of a light straw color, also three cubs. In each case the white or very light yellow cub was accompanied by one of another color; one had a jet black brother and a black mother; the other had a cinnamon brother and a light colored mother, and the third, which I believe was also a female, had for her companion a little brown cub, the mother being chestnut brown. My Indian told me one day that he had seen one of these light bears with jet black legs, muzzle and feet. We failed, however, in all attempts to capture him. A. COAPE.

Bald Eagle and Golden.

NEW YORK, March 17.—Editor *Forest and Stream*: In your issue of March 16, Mr. Wilmot Townsend, under the head of "Down the Bay," states, "The bald eagle is not often with us, although by no means uncommon during prolonged cold. The golden eagle, as generally known, is fairly numerous, and a trip down the bay at this season will frequently discover several to the keen observer." Is your correspondent sure of his identification of the golden eagle? May he not confound them with the immature bald eagle? This latter species is resident and still breeds on Long Island, while the golden eagle is, as far as my records show, a very rare bird indeed. WM. DUTCHER.

Rewards for Errors.

From the *Game Laws in Brief*.

THE *Game Laws in Brief* is believed to be correct and complete within the conditions printed on page 2. I will reward any person first advising me of an error that may be discovered, as follows:

For the first notice of an instance where the law quoted in the *Brief*, prescribing game and fish seasons of any State or Territory, is not the general law in force at the time of this revision, I will give \$5.

For first notice of an erroneous statement of a game or fish season in any State or Territory, or of an omission of a prescribed season, I will give \$1.

These offers relate to general, not local, laws, and to recognized game and fish (not, for example, to the Connecticut bobolink, rice bird and robin season).

CHARLES B. REYNOLDS.

OFFICE OF FOREST AND STREAM, 318 Broadway, New York.

If any difference of opinion shall arise as to a claimed reward, it shall be decided by Henry P. Wells, Esq., of the New York Bar, who has courteously consented to act as arbitrator.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

NEW MEXICO BEARS AND BEAR DOGS.

ON the thirteenth of September I heard from my friend E., whose camp is situated on the Brazos River, that he had killed six bears. One day while out reconnoitering he ran on a bunch of four busily engaged in feeding on the fallen acorns. They were easily stalked and he was lucky enough to kill firstly the three black ones and afterward the cub, a brown, which took to the nearest tree and waited to be slaughtered. A few days later he bagged two more, both black.

On Oct. 5 I took a Mexican with me to survey some lakes in the vicinity of our camp. We found some tracks but nothing very fresh, and were riding off through high oak brush, when we came on an open space literally alive with wild turkeys. They did not seem much concerned and began to walk off, but apparently in no great hurry. Neither my man nor myself could get our guns out of their scabbards for a few seconds, but when we did a fusillade began in earnest, and our game, soon realizing the danger, put on race-horse speed. The Mexican missed every shot. I managed to get one and then started to follow them; shortly afterward another flew past me and I downed him. The whole bunch then took to wing and were soon lost in thick cover. Two turkeys, however, were better than nothing, especially as our larder was getting somewhat low and we returned home for dinner. On the road we came on another turkey, dead this time and hung up in a tree; it looked very tempting, but seeing a coat at the foot, we concluded that it belonged to some sheep herder and continued our journey without any further adventure. The next day I shot eight grouse, a mink, and a coyote, rather a mixed bag.

On Oct. 8, one of the men came back early from the traps, and reported that a bear with cubs had fired a gun, but escaped uninjured, so I lost no time in getting my pack together. A man was sent ahead to spring all traps, and put the guns *hors de combat*; and we started for the scene of action. The track being quite fresh, and the scent good, the hounds were gone like a flash and we had some tall riding to do in order to keep within hearing. On the way I rode into the middle of two large bunches of turkey, but had no time to dismount, so I continued after the hounds, who had evidently got a long way ahead. They had gone down a very steep bank densely timbered and very rough toward the river El Rito, and were about crossing when I emerged from the wood into a comparatively open space covered only with short oak brush. Here I remained, for I could every now and again catch a glimpse of my dogs, which were in very close quarters with the object of our chase. Presently the hounds seemed satisfied to keep in one locality, and while I was intently watching, I saw a small brown bear make a dash from the scrub and engage in a tussle with one of my pack. It was only for a moment that I saw him, as they rolled over into the oak again. As soon as the wriggling mass of bears and dogs had disappeared, I put spurs to my horse, and ten minutes brought me to the scene of the fray.

Two other men arrived simultaneously, and we all dismounted and walked into the bushes, for bruin had evidently no intention of coming out. I think we must have been quite a quarter of an hour before any one could catch a glimpse of him, the brush being very thick. An old Navajo Indian then shot him, breaking a leg, and finding it was only a large cub he grappled with it, thinking I would like it alive, but soon let go, for the cub being of a fair size and the dog snapping at and pulling it about made it impossible to secure him without further damage. Accordingly he was dispatched and packed on the back of a pony, not, however, without considerable remonstrance on the part of the horse.

On our road home we came to the track of the she bear and the other cub, but concluded we had had enough, and our appetites being well stimulated by the ride, we returned to worry the beans, bacon and bear meat for a spell.

This hunt took us through some very beary country; on the side of the El Rito Cañon we found six lakes, some with plenty of water and ducks, others nearly dry, all having old and new signs of bear, deer and turkeys.

The next day I was away, but my Mexicans took the hounds and ran a cinnamon, which treed, but on seeing the men came down, and eleven shots were fired before he was numbered among the slain.

The following morning promised well, quite a quantity of snow having fallen during the night. Scouts were therefore dispatched in different directions shortly after daybreak to hunt up tracks, with the effect that the sign of a bunch of five bears traveling south was discovered. It was too late, however, to follow, so we decided to wait yet another day. After breakfast we circled in front of the direction taken by the bears and found that they must be concealed in a large wood near camp. Accordingly we went back to where we had last seen the trail, and after following it about half an hour the dogs became very restive and suddenly broke loose, couples and all. At the same time two brown bears were sighted, but only for a second. The dogs were secured, uncoupled and turned loose.

The El Rito Cañon was again chosen for the chase, which must have been five or six miles at a gallop, for the bear we followed would not tree. Pedro went ahead and Ramon, a 6ft. 6in. Mexican, came behind with me. We now heard the dogs baying, and soon a shot from P.'s rifle made us put spurs to our horses, and it was lucky we did, or we should have lost the hounds, for they were going again as fast as their legs would carry them. Another quarter of an hour's fast riding brought us pretty close to the hunted animal, which had again lagged. This time we dismounted and walked into the timber, finding our bear in a little open space surrounded by dogs, which seemed to be taking it in turns to bite him and get out. P. was already on the opposite side waiting for a clear shot (no easy thing to obtain when an animal is encompassed by eight furious hounds). There was a growl and a rush, and Tiger, a large yellow half breed, ran in, seizing the bear by the lip, tearing off a piece of meat; bruin quickly grabbed him with his one remaining front paw, the other

having been broken by Pedro's first shot, and gave him an ugly squeeze. The poor dog yelled and growled but held on to prevent being bitten; then I fired, sending a ball through the body, at which he dropped the dog and moved off. All the other dogs were on him in a second, and he stopped to fight, giving me another chance. This time I hit him square in the head, and P. got a shot in at his side at the same time, so that there was nothing more left but to skin him, which we quickly set about.

When we were ready to go, my consternation was great to find that Tiger was badly hurt, though no bones were broken; he managed, however, to follow until within about 50 yds. of camp, when he dropped and stiffened out. For about two hours he seemed to hover between life and death, but eventually his youth and strong constitution began to tell, and in two days he was able to move. P. told me it was the second bug that he had had that day.

The other bear that we sighted was followed many miles by Bulger, another half-bred dog, but we had no time to go and help him. What became of the remaining three I never found out.

It was high time to be getting away from the Cagilone, for the snow was becoming more than pleasant; we accordingly started down the mountain in the direction of the Chama Cañon, which we reached in two days, having passed nothing on the road but a beaver dam and a bunch of turkeys. We remained a week in this camp, during which time a gray fox, a beaver and a bay lynx were all the game secured; there had been bear quite recently, also deer and turkey; but we were not in it, so retired to the ranch for winter, finishing our season with a list of twenty-nine bears killed and many wounded, besides a fair show of smaller game. During the winter I bagged a few turkeys, thirty coyotes, three small gray wolves, six lynxes and two wolves.

A. P. F. COAPE.

NOVA SCOTIA MOOSE SNARES.

THE report made by Secretary Geo. Piers, of the Inland Game and Fishery Society, at the recent annual meeting in Halifax, gives some interesting notes on the snaring of moose, which appears to be carried on extensively:

"Your council have much pleasure in being able to state that, notwithstanding the numerous complaints received by them from different parts of the Province of the frequent snaring and killing, out of season, our most persecuted moose, they are still increasing and have been shot the last season where they have not been seen for years. You will see by extracts taken from reports sent in by your commissioners and agents that with the exception of one or two counties they are gradually adding to their numbers.

"Your commissioner, Mr. Archibald, Sheet Harbor, writes that in his district they have not been so plentiful for many years. While in the woods this winter he started in one day three yards, one having six moose in it. He came across a drove of caribou near Liscomb last March when looking after some scoundrels who were dogging. He had reliable men searching the woods last fall looking after snares, but they were not able to detect any in the act; they saw many snares and many instances where moose had been caught.

"Mr. John Bower, agent at Shelburne, reports that moose are more plentiful in his part of the country, more so than they have been for a very long time, there having been killed to his knowledge the past season over forty. He writes that partridges are becoming a thing of the past. He attributes the destruction of them to the skunks, which are overrunning that part of the Province. One of the men employed by Mr. Bower for your society to search for snares found on Oct. 5 two decomposed moose in snares and on Oct. 25 the same man found a live moose in a snare, which he had to kill."

Mr. Daley, agent at Digby, has been most fortunate in convicting three out of four cases that he has had against parties for killing moose out of season and dogging. He also states that he has had no complaints the last year of strangers going there to fish and leaving them when caught on the bank of the river to decay. He hopes this winter to be able to procure the deer from New Brunswick; last winter the snow was not deep enough to catch them.

Mr. Pritchard, commissioner for Pictou, Antigonish and Guysboro, reports from his own personal observation while in the woods last fall and from the testimony of several sporting men, that moose are decidedly on the increase in the above districts; cases of dogging were reported to him, but he did not hear of any being killed in that way. Mr. Pritchard writes that bull moose are scarce; he says he met a gentleman hunting when in the woods last season, who told him he had seen fifteen and only two young bulls in the lot.

William Fahie, agent at Enfield, appointed in November last, reports having found traces where twenty-six snares had been set in the early part of the fall, and found four recently set, which he destroyed; he also found a bear trap set for moose. He estimates the number of moose in the vicinity of Grand Lake, Nine Mile River and Kennetcook to be about thirty-eight, judging from the yards he came across when searching the woods for snares. He says that the rabbit snares in his district are innumerable; the hedges are from 50 yds. to one mile long; he ordered the owners to take them down to 50 ft., which they did without further trouble. He is of the opinion that rabbit snares should be taken up at the end of the year, as after that they can be shot more easily than snared, and that hedging should be done away with, as the hedges are the means of destroying the partridges and are not required for catching rabbits. Your council agree with Mr. Fahie's suggestions.

Donald Ross, of N. E. Margaree, reports that moose in his district are not any more plentiful than they have been of late years, but that caribou are increasing, and have been seen in larger numbers this fall than for many previous years. He only discovered four snares this season. He reports woodcock and partridges as being very plentiful.

Samuel Davis, Barrington, reports having taken up a number of snares and found traces where moose had been caught in them and carried away by the poachers. He also found a large bear trap set in a moose path and by indications around it a moose had been killed in it a few days before.

Mr. Kelly, agent at Yarmouth, has seized fifteen moose snares besides destroying a number on the spot. He has a memo. of the moose killed in his district during the last season, which number fifty. He is also of the opinion that guides taking aliens into the woods to hunt with-

out a license should be made liable, as they invariably assist them in violating the law.

During the close season saw a great many signs of moose, and saw no appearance of persons hunting with or without dogs. There were but few killed in his district last fall, during the calling season, as the weather was unfavorable, but quite a number have been shot since the new year came in. He did not see any signs of snaring last fall. Mr. Crooker scoured the woods west of Liverpool River for timber last year, for over one hundred square miles; he found moose in numbers everywhere he traveled. He was surveying close to the post road at Port Jolly, and in one day came across three yards. He also states that there are numbers on the south side of Annapolis, along the county line of Queens and Annapolis and quite close to some of the farms.

A SNAP SHOT ON A GROUSE.

BOSTON, March 2.—Editor *Forest and Stream*: While attending to the liberation of some pinnated grouse, imported by our Association for purposes of propagation, the thought suggested itself to me of snapping a Kodak at a bird in the air. I tried it, and the result I send you by

PINNATED GROUSE ON THE WING.

this mail, believing you will be interested in this remarkable specimen of marksmanship.

The birds went strong and fast from the crates, and if you don't believe it was difficult shooting, try it yourself.

I believe the rank and file of some of the German soldiers fire with the stock of the gun at the hips. This was my first attempt at that position.

The white in the photograph represents New England snow; the dark over the bird, woods. The definition of the woods suffered somewhat by my holding with the bird, but the bird itself is fairly good, showing a good-sized cock bound after his mate, which latter escaped me.

EDWARD E. HARDY.

A STORY WITH A MORAL.

LONG years ago, about dusk, clad in my hunting toggery, I passed several gentlemen of my acquaintance who were having a confab with some strangers, and one of the latter noticing the well-filled shooting coat and game carriers asked when I passed, "What luck?" I answered, "Forty odd since noon." Somebody in that group must have made some remark I did not catch, whereupon such expressions as "Now is not this abominable?" "Just think of such slaughter," "What does he do with them?" etc., followed me till I got out of range and haunted me all the way home.

I had not gotten my coat and leggins off before one of the boys volunteered the information that three gentlemen from the East were visiting so and so and intended to do some hunting. I grasped my hat and with one leggin on and one off hastened to see one of the local gentlemen whom I had passed, and finding him at home arranged to handle the ribbons over his hunting team whenever it would be placed at the disposition of the visitors. Mr. A. looked quizzically into my eyes, said "Certainly, old man, get around by 7 o'clock to-morrow; and, by the way, load light and let them down easy; they do not know what quail shooting in Texas is, and in a couple of days they'll show the wolf, and possibly the hyena; I know they will."

To prevent being recognized I went to town, got my long beard cropped short and blocked out a la Emperor William, thence home, and without paying any attention to the remark that supper had been kept, began ransacking an old trunk in search of a suit of so-called store clothes. The men who had eyed me suspiciously since my return, began to gather around me; and when I inquired whether they knew anybody I might borrow a stovepipe from, one of them whistled significantly; and later in the evening I casually overheard a kind-hearted fellow who had been with me a number of years, remark: "Boys, there ain't two ways about it, he's gone off, stark splinter gone, we must watch him, he's liable to hurt himself."

Promptly at seven next morning I drew up in front of Mr. A.'s door, and to my astonishment not only Mr. A. but also the Eastern sportsman, whom I will call X., Y. and Z., were ready to start. The lunch basket, four ammunition cases and two dogs were put aboard, the hunters took their seats and Mr. A. said, "To the long arroyo, and remember the days are short and horse flesh cheap," a remark which played the tune to the horses' gait. After reaching the arroyo the party divided, Messrs. A. and Z. taking one side and Messrs. X. and Y. the other, and I was directed to keep close up so as to have ammunition always on hand.

Messrs. X. and Y. had not gone more than 50 yds. when their dog pointed, the covey was flushed *secundum artem* and four misses scored. It would be tiresome to repeat every incident of that day, suffice it to say that at luncheon time Mr. X. had 16 birds, Mr. Y. 19 and Mr. S. 30. Mr. X. remarked that he considered 25 birds enough for any man in any one day. Messrs. Y. and Z. cursed, beg pardon no, but regretted we'll say, their abominable shooting; one used a "Greener ejector" he was unaccustomed to, and the other a high grade Parker which was choked too much to be a good quail gun.

Shortly after 8 o'clock all ammunition cases were empty, every hunter having fired 100 rounds. Then the scores stood: Mr. X. 23, Mr. Y. 39, Mr. Z. 41, whereas Mr. A. had

killed 76. I had the honor to drive these parties three more days, and their scores improved right along, and such a thing as running out of ammunition did not occur again.

As my revenge when they said farewell I told them, when refusing a tendered remuneration, that I was the identical cuss whose bag of quail, on the day of their arrival, had elicited some stinging remarks, and that I wished them to remember that pork, beans and cider, or for that matter canvasback, celery salad and Pommery, three times a day, twenty-one times a week and 630 times a month, become poor eating, and that for that reason the local sportsman is as a rule much less destructive to game than the visitors, who, although unquestionably men of strong resolution, great self-control and true sportsmen, generally end by verifying my old teacher's remark: "Remember, my dear children, that appetite grows by feeding."

HUX.

"PODGERS" ON PACIFIC DUCKING.

SAN FRANCISCO, March, '93.—The shooting season has closed, and ducks of all degrees are flapping their wings and doubtless holding conventions and congratulatory meetings over the release from eternal vigilance that is the price of liberty and hairbreadth escapes from leaden messengers of invitation to the oven and the spit. If we could comprehend the language of ducks no doubt we would be highly entertained by their tales of bad shots and tons of lead wasted in vain efforts to bring them down.

They say that in a battle only one out of 600 shots kills a man. By the same theory of calculation, how many ducks or quail are bagged in a hundred shots? It is fortunate that we are not all good shots, or there would not be a bird left in the country. Speaking of birds, I want right here to make a complaint. I have a grievance. I have a friend who is given to puns, and the wretch lies in wait for me and fires them off every occasion. What shall be done to such a criminal? Here is one he got off on me yesterday. "Why was Macbeth a great sportsman?" "Because he did murder most foul" (fowl). There are occasions in the life of every man where murder is justifiable, and I leave it to you if this was not one of them.

Speaking of ducks reminds me of an effort we made to pass a new game law in our Legislature. We are wont to call our lawmakers Solons. That the term is used derisively I now fully understand, for in all my experience I have never known such a combination of bigoted, malicious stupidity and ignorance as the exhibition just given us at the hands of some of the gentlemen lawmakers at Sacramento.

The bill referred to contained a clause giving a landowner the right to say who should shoot on his property. This was an outrage; the idea that any free-born citizen (born somewhere else) should be deprived of the privilege of shooting where he pleased, was a restriction of the liberties of the people. The next red flag that enraged them was a clause including English snipe in the protected game. An asinine member named Stack opposed the bill on the ground that it was English, and was copied after and aping the English aristocracy and he was against anything English, which he conceived this bill to be, for did it not propose to protect English snipe only? Why English? Why not American snipe as well? In fact the whole thing was un-American and would interfere with the personal rights of the people. Of course Mr. Stack expects to be re-elected.

The shooting clubs leasing the marshes have had a great deal of trouble with the poachers, who have been upheld by an association here, and which raises money to defend every case of trespass. The association is composed of that class of gentlemen who are forinist any restrictions of any kind, and resent the idea that ownership or leasehold of shooting property gives any rights that they propose to respect.

The clubs have a way of making it unpleasant for the gentlemen that encroach on their preserves by sending a keeper in a boat, who anchors broad off where they have located, which, of course, causes the ducks to give the spot a wide berth, or in event the intruders put out their decoys on a pond, the keeper locates near and blazes away at every duck that shows himself a quarter of a mile off, the result being that Mr. Poacher never gets a shot at a bird within hail, and after a while takes himself to other scenes.

There is about as much prospect of our getting a decent game law through, seemingly, as your getting that famous Delmonico woodcock case tried. The law's delays are proverbial, especially when the officials whose business it is to try a case are trying very hard how not to do it. I hope I shall live to see it reach the top of the calendar—I shall in that case arrive at the distinction of being "the oldest inhabitant." What a farce laws are in such hands. The woodcock case will rival Jarndyce and Jarndyce, and is getting (as Artemus Ward says, to be "very amooosin'."

Our trout fishing opens April 1, particularly appropriate as to date, as the squab granger is industriously preparing an April fool for the early fishermen by cleaning out the streams beforehand, a vested right of the dear people to thwart the aristocrat, who wears good clothes and fishes with a fly. The fun is all the greater from the fact that it is against the law. We might as well hand over our rods to the small boy now and not wait for Christmas, as you suggest. There will be no use for them as far as trout are concerned, but the boy can go for catfish, and just think to what base uses do we come at last. A split-bamboo relegated to bullheads! It is time for us old fishermen to climb a tree and go into perpetual retirement. I wish I owned that bulldog with legs in parenthesis that you show in the last number of *FOREST AND STREAM*; what fun it would be to "sick" him on to the law-breaking fisherman and send him home minus the seat of his unmentionables. It would be stern reality of his offense.

PODGERS.

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the *FOREST AND STREAM* one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the *FOREST AND STREAM* during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

BOSTON AND MAINE.

Monomoy Brant.

BOSTON, March 20.—The first party of the season, of the Monomoy Brant Club, went from Boston last week, and at the time of this writing the party is at the club's fine accommodations at Monomoy Beach. No shooting is yet reported from them, and Mr. Warren Hapgood, one of the pioneers of the club, doubts the success of this first party. No brant have yet been seen in the market; not that this party would sell brant in the market, but outside hunters send them to Boston, about as soon as they appear.

This party is in charge of Mr. Outram Bangs, so well known in the Massachusetts F. and G. P. A. The second party was to leave Boston on Wednesday, March 22. This party is made up of A. H. Wright, E. Frank Lewis, R. H. Gray, Henry Colburn, N. W. Arnold, H. D. Reed and two or three others. The four first mentioned are members of the club, I believe, while the others are invited guests. The hopes of the party are not very high from the fact that the boys feel that it is altogether too early for flights of brant. But the rules of the club are such, with the membership so large, that each party must go at the appointed time; and some parties must necessarily be late, with others early. Still the boys hope for a south wind and with it a change of weather and a good flight of birds. One or two flights of geese were seen in the vicinity of Plymouth on their way northward during the south wind and warm weather of a week ago, but the north-west wind and cold weather which immediately followed is supposed to have stopped the birds.

Kennedy Smith.

Kennedy Smith, the well known guide, woodsman and later hotel-camp keeper of Smith's Farms, Tim Pond and Round Mountain Lake, Me., has been in Boston for a few days. He is a man wonderfully preserved, considering that his spine has actually been broken, with two or three ribs separated from the sternum, by a tree falling on him, an account of which was published in the *FOREST AND STREAM* at the time. The accident happened a number of miles away in the woods and poor Smith lay for hours till help arrived, on the ground, crowding his hands in the mud in order to cool the terrible fever he was in. He could not turn his head so much as an inch, not even to take a draught of water. One of the backwoodsman, the first to arrive, bethought himself of a tobacco pipe. The stem of this he put between the, as he thought, dying man's lips, and the bowl in a birchen cup of water. "Oh how good that water tasted!" says Smith, at this day. He was at last borne many miles out of the woods on a stretcher, and to-day he is able to be up and about, and is a comparatively well man and as fond of woods life as ever. He hopes yet to do light guiding, though it troubles him to use an ax even more than to tramp with quite a load. It seems as though he would be just the man to guide a party of boys; genial, fond of the woods and the expert that he is.

No Maine Deer Hunting in September.

Mr. Smith has been at Augusta, Me., during the better part of the session of the Maine Legislature that is about closing. He has been much interested in the opening of the month of September, or a part of it, for deer hunting. He has labored earnestly, but the pressure against the measure from the eastern part of the State has been too great. The measure has been killed. There is no hope of even a part of September. Mr. Smith thinks the measure might have been carried for the northwestern counties of the State if such a measure had been labored for early in the session. He believes that with the growth of a love for hunting and the value of the deer supply, the resident hunters of the State of Maine, especially the eastern part of the State, would be pleased with any form of law that would keep foreign hunters away altogether. It is furthest from their idea to grant sportsmen out of the State any greater privileges than they enjoy to-day, and September will not be opened, if these Maine hunters can help it. "September!" they say. "Why that is too early; earlier than we can leave our crops to hunt deer. No! We will not consent to the opening of September, just to please the guides and hotel men, with their dude city boarders." One of these eastern Maine lobbyists actually went further, in Mr. Smith's hearing, than he intended. "September!" says he. "That is too early; the game is not worth anything then to send to market." "Market?" asks Mr. Smith. "How about the non-transportation law?" "Oh, we'll repeal that this session; and besides, we have three lines of steamers and any amount of coasters, so that we have no difficulty, even with the law, in getting our venison to Boston and New York when the weather is cool."

Maine License Fee.

The Maine Legislature has just passed, through both branches I believe, a most shameful amendment to the game laws. It permits the killing of one cow moose in a season by each hunter. Thus the protection that the noble E. M. Stillwell labored so hard for is gone. Would that his spirit might come from the realms of the dead and visit Gov. Cleaves with the desire to veto such a bill. It is a fact thoroughly established that moose had begun to increase wonderfully under the law forbidding the killing of cows at any time. The shameful non-resident license measure is also in a fair way to pass, though the license has been reduced to \$3 instead of \$5. All the Maine hunting interest mentioned above is likely to favor this measure. It will keep foreign sportsmen from getting their fish and game. Then the lumber interest is likely to favor it. "It will keep the hunters out of our woods," they say. "Tax a citizen of the United States for the privilege of shooting and hunting in Maine!" say some of the Boston sportsmen—born in Maine. "Bah! Take the \$3, or even \$5 or \$10, out of us in some honest and less distasteful fashion if you want it, but deliver us from the paying of a license fee!"

The Gilbert Trout Bill.

The Gilbert trout bill has passed the House of the Massachusetts Legislature, though it is being fought in the Senate. It has been saddled with an amendment which forbids selling of trout under 8 in. in length. It is said that this amendment has been tacked on to please some of the protectors of wild trout, since wild trout are seldom met with in this State of above 8 in. in length. If one will reflect a moment he will be convinced that a trout

that is not 8 in. in length is a pretty small one, since it takes a wild trout of about 13 in. to weigh one pound.

A Boston Man in Florida.

Dr. E. B. Kellogg, of Boylston street, Boston, a lover of the woods and waters, with his son Foster, is in Florida enjoying the shooting and fishing. He writes from Hotel Ponce de Leon, St. Augustine, that the fishing is fair and the shooting is good, if one goes far enough after it. But it is not "all right in front of the hotel."

Maine Moose for the World's Fair.

The Maine Legislature has granted Mr. Gifford, a Skowhegan taxidermist, permission to take one cow moose and a calf in the close season, the skins to be mounted for the exhibit of Maine wild animals at the World's Fair at Chicago. Mr. Gifford is also to prepare an exhaustive exhibit of the mounted skins of the animals found in Maine, some fifty or more specimens. The first shipment is soon to be made.

Mr. C. T. Odiorne, who with Mrs. Odiorne and Mr. A. T. Waite, assistant managing editor of the Boston *Herald*, made a delightful hunting and fishing trip to Byron, Me., last summer, an account of which was in the *FOREST AND STREAM* at the time, was one of the victims of the Lincoln street fire in the Ames building on the fatal Friday night of March 10. His body lay under the ruins till exhumed on the night of the Friday following. Mr. Waite was constantly on the ground, watching the work of removing the debris. When asked if he was not endangering his own life and health by the exposure, his reply was: "He would have done as much and even more for me." Thus it is that to hunt and fish and camp with a friend doeth so endear him. SPECIAL.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., March 18.—Mr. Benjamin Harrison, ex-President of the United States, seems a very philosophical and very sensible sort of gentleman. He spent the week after his retiring from the White House on the duck marsh at Havana, Ill., on the Illinois River, and had fairish sort of shooting, too. But how about the example of a President shooting in the spring?

At Koshkonong.

The flight was a week ago all over Wisconsin. At Koshkonong later the birds came in for a day or two in great shape. Mr. A. W. Knox brought back a half dozen from his trip of a week ago. Mr. R. A. Turtle says that large numbers of geese were crossing middle Wisconsin the latter part of the week, as he learned on a business trip.

Abe Kleinman's Canvasbacks.

Calumet Lake, in Chicago, has held a good many wildfowl in the last two weeks. That well known old timer, Abe Kleinman, killed three canvasbacks and half a dozen other ducks one afternoon last week without decoys. He just walked over with a few shells in his pocket to see whether any birds had come in. He says that if he had gone properly prepared he could have made a big bag, as the birds were flying well.

Another Texas Tourist.

Mr. Geo. H. Miller, of Chanute, Kas., has tasted of the delights of a Southern winter trip, and writes me entertainingly as follows:

"I am a regular subscriber to that most excellent journal, *FOREST AND STREAM*. I was one of a party of eight, beside boat's crew (thirteen in all) who spent about a week in January on the Texas coast near Rockport and Corpus Christi, where we saw more water fowl in an hour than I had ever seen, all put together, in my life before. We had a good time, and some very good shooting. After leaving the coast one of the party, D. L. Mechling, of Denver, and myself, came up to Beeville, thence west twenty-five miles by stage to Oakville, where we were most hospitably entertained and enjoyed some good turkey shooting. There are still a good many deer and peccaries in this locality, and though there were not many turkey in sight when we were there, presumably on account of the continued dry weather, a letter just received from the party on whose ranch we hunted says they have had good spring rains, everything looks green and fine, and the turkeys have apparently returned in increased numbers. In fact he says, 'This morning it seemed to be one turkey roost as far up and down as I could hear them gobble.' His ranch is located on the Rio Frio, thirty-five miles from any railroad.

"We learned that owing to the very dry weather of the past two or three years, and the generally poor market for cattle, that a great many of the ranchers (there is no farming in this part of Texas), who own from 5,000 to 20,000 acres each, are hard up, and land can be bought for almost any price from \$2 per acre up. And most of it as good land as a man ever looked on. This is a good opportunity for clubs, as the country is well watered by streams and seems to be well adapted to all kinds of game.

"Billy Griggs's letter to you speaks of the pictures. Of course you are an experienced Kodaker and know what machines are most generally and successfully used. I have had several machines within the past year, none of which seemed to fill all the just requirements. Had one on the Texas trip and made failures of some things which I would have given almost the price of a machine to have had. I started this letter principally to ask you what machine you consider as the best all round one."

If I should say, right out in meeting, what camera I preferred, I would differ pronouncedly from the view of all the camera makers but one. Indeed, I do not know that one can pick out any one kind of camera as the "best," any more than he can any one make of gun. I shall be glad to give Mr. Miller the name of the camera I used. I value the pictures I got as highly as anything about my trip. I have two photos, just of some clumps of reeds, of which I think a great deal more than I did of my biggest bag of birds. It seems to me that the camera is a coming thing in the sportsman's kit. Of course, one must get results, or it is no fun. To this end he would best go out for a while with a professional photographer, and learn something about focus, light and shade. Many amateurs make exposures with the lens toward the sun, and wonder why they "didn't get anything." The light should shine most straight on the object, when possible, from behind the camera. If making a portrait of a man, have him push his hat back, so that the light will shine

all over his face, otherwise you will get part of his face black in the shadow. Distance is something that only practice and experience will teach, but most of the cameras have distance marks for focusing, say, at 10, 15, 40 or 100 ft. Posing is something that the outdoor artist will not often have to do. When he does, well, he shouldn't do it, ever. Get 'em without any pose. Posing is what kills and stiffens so many amateur photographs. I got pictures of Billy Griggs and Bud Stephenson shooting out of their canvasback blinds, and they look as natural as life. These men couldn't pose when they were in the act of shooting. They tried to, but they couldn't, it was too natural an act. One photo I got of Griggs shooting over his decoys, which I think is the best and most realistic duck picture I ever saw. We spent a whole day fooling around making pictures. The duck blind pictures I made from a boat, and to keep the camera motionless—an absolute essential often overlooked by amateurs—I drove an oar down in the mud, and "took a rest" on the oar when I shot. The instrument used on this trip was a 4x5, but I am getting a 5x7, as I think the larger field will be useful. Mr. Miller's grief over losing his work I can well understand, for once I lost a valuable lot of exposures in the Indian Nation. The cause for this, I found later, was a camera box that leaked light. A good one can be bought for \$50. My machine carried a roll of seventy-five films. On return from the trip I took the camera entire to the firm, and had them take out the holder, and develop and print for me. This is usually the easiest and safest way, though you are then exposed to the long delays of commerce, and come to lose confidence in human nature, in view of the constantly broken promises of picture man to have your views "right down to-morrow." In the smaller towns, the local photographer could probably do as well and would be quicker.

Wisconsin Way.

The following letter is of interest and I wish we might hear more from the writer. The item about the necessity of uniform laws in this group of States is the most direct practical comment on this matter I ever saw. Gov. Peck is, however, wrong. He should make his stand and have the others come to it. If we wait for a simultaneous passing and signing of good game laws in all these States we shall always remain where we are to-day—in the Dark Ages of sportsmanship. The letter follows:

"MILWAUKEE, March 16.—I inclose a clipping from this morning's *Milwaukee Sentinel*, and, on examining it, you will see that, according to its Beaver Dam correspondent, the bullhead crop is not yet exhausted. Gentlemen from this city who have been 'on the ground' vouch for the truth of much that has recently been printed in the line of the article referred to.

"My home is on Pewaukee Lake. The ice softened considerably last week, and on Sunday morning I took my ice boat 'down' and stored it. Before leaving the boat house I took an ice chisel, and on cutting through and measuring, found to my surprise that the ice is still 27 in. thick. Saw a few golden-eyes or whistle wings this week, but there is no open water in Pewaukee.

"Gov. Peck is reported to have said that unless the surrounding States pass bills prohibiting spring shooting he will not sign any such measure.

"Our present law prohibits the spring shooting of mallards, woodduck and teal, but on my way to the train last night I saw a fine bunch of greenheads hanging in front of a restaurant on the principal thoroughfare of this town.—H. S. A."

E. HOUGH.

175 MONROE STREET, Chicago.

SOME MAINE DEER GROUNDS.

Editor *Forest and Stream*:

In *FOREST AND STREAM* of March 16 "G. W." of Pawtucket, R. I., asks for a good place in Maine to go for deer which can be easily reached. South Moluncas, Aroostook county, Maine, is quite a good place. Take 7 P. M. train from Boston to Mattawamkeag, reaching the latter about 8:30 the following morning. There take Patten stage, which passes South Moluncas about noon. I stopped at South Moluncas for a couple of days last winter when on my way home from the headwaters of the Mattawamkeag River. There was no chance to still-hunt, owing to a very noisy snow. Four deer were killed while I was there by a couple of native hunters living in the house where I stayed. I cruised around not far from the house, more to see what the signs were than to hunt, jumping eight deer and seeing a good many tracks. In some respects it is a hard place to hunt, as the woods are full of old tops left by the lumbermen and there is considerable undergrowth. It is easily and quickly reached, and is not expensive; for further information write to Clem Knight, South Moluncas, Aroostook county, Maine.

There is also good deer hunting back of Stacy Village, three miles from Sherman, on line of Patten stage. It will take nearly a day longer to reach this place. Clarence Peavy, of Moro, Aroostook county, Me., knows the ground and is a good still-hunter and guide. The latter part of November is a good time for still-hunting, provided there is good tracking, dry snow. Of late years the snow has come late, and on three trips I have made to Maine there has been hardly any chance to still-hunt. Noisy, crusty snows have been the rule rather than the exception. Last December I spent over three weeks where there were quite a number of caribou and did not have a single day of it to hunt. It was so noisy all the time that I jumped everything I tried to follow before getting anywhere near it. I think in either of the places I have named any one would get chances enough (provided there was the right sort of snow) to kill all the deer the law allows in less than a week's time.

C. M. STARK.

WINCHESTER, Mass., March 20.

Two Woodcock at a Shot.

GREENFIELD HILL, Conn.—"J. I. C." asks if there ever was a man in North America who killed two woodcock at one shot on the wing. I did it once a number of years ago, and did it but once, and I have hunted more or less for over forty years. It was in the fall when the birds were making their annual flight. It was in a spring place where the cattle had made paths. My dog pointed and I went up to him and there were three woodcock that got up and took one of the paths. I killed two at one shot, and I think I wounded the third, for I found him a short distance away, and when he flushed I got him, too.

M. M. M.

Judge Greene Pleads Extenuating Circumstances.

PORTLAND, Ore., March 15.—*Editor Forest and Stream:* I have just read "Podgers's Commentaries" in last FOREST AND STREAM. Some of my sporting friends were sitting here in the office at the time, and as "Podgers" is always entertaining I read his Commentaries aloud for their benefit and edification. Well, I was reading and hurrying for "Podgers" because he was everlastingly burning up the poachers and law breakers, but imagine my surprise when I myself was ordered to stand up and answer to the charge of being an accessory after the fact. Let me quote the exact charge:

As many as 100 dozen [Mongolian pheasants] were received here [San Francisco] one day last week. Such wanton destruction of this beautiful bird is simply damnable. [Here "Podgers" requests you to excuse his French; but as the English offers no stronger or more expressive term, let us adopt the French word and say amen.] Where are all the sportsmen of Oregon, and why do they permit this slaughter to go unpunished? Where is Judge Greene and other well-known sportsmen that should be alive to the destruction of such valuable game?

Dear "Podgers," we all plead guilty, but please point your gun the other way. My hands are up, but let me state the extenuating circumstances.

Speaking for myself alone I desire to say that for years I have fought, growled, cussed and made enemies on this proposition. I believe that the facts, the records of the State and my few remaining friends will bear me out in the assertion that no other private individual in the whole State of Oregon has gone further or worked harder to correct this wrong than my humble self. But you know how little one man, or in fact many men, can accomplish in a legitimate way toward correcting these wrongs or punishing such offenders.

It was this very condition of affairs that prompted me to prepare the game warden bill which, by the energy of Oregon's true sportsmen, the firmness and loyalty of Oregon's noble Governor, Sylvester Pennoyer, and the grace of God, is now a law and in operation, and has been for several weeks. The efficacy of that law is beginning to make itself manifest, as ten of our game shippers (now in the hands of our grand jury) will testify.

Friend "Podgers," I am a little sensitive on this subject at all times and your exhortation has left my skin so thin that if leniency can be extended under such circumstances I feel that I am entitled to it.

S. H. GREENE.

Hard Play is Hard Work.

VICKSBURG, Miss.—The other day while out on a duck hunt, I was sitting in a blind facing a swift current of water on the Mississippi River. The position was a projecting point, and gave promise of being an average good stand, as the flight appeared to be mainly by this point. The decoys were well exposed and the current and existing wind gave them a motion that was almost as natural as life itself.

You see on a previous trip Mr. Warner had made a score that I was anxious to equal, and was mentally resolved to strain myself in an effort to do so. While in this mood a flock of teal decoyed. One only was close and a sure shot, while the next nearest were three well away though closely bunched. These latter got my first barrel and the near one got my second as it took wing. Two dead and one crippled with first barrel and a dead duck with second barrel. I then gave vigorous canoe chase after the wounded duck, which was bagged by an additional shot. After retrieving the other three I went into the blind feeling comfortable, thank you.

In not very many minutes a flock of pintail decoyed with one close and three at long range as before. Quick as I could shoot I played ditto in this gang. On looking out I was little surprised to see four wounded ducks scattered over about as many acres of swift running water. The way they got over the water and radiated from me was astonishing. It took an exciting race with the canoe and five additional shots to bag those animated sprigs. I went back to my blind out of wind and needing rest, but didn't get it.

Just as I sat down, two sprigtails came in. It was another temptation and I fell. A far off and a close sprig, and both went away as only scared ducks could go without indication of either being hit, until one had gone far out into the river where he lit. A view through the glass showed him to have been hit, and it took another enervating pull to windward and far out in the swift current to chase down and bag this duck that proved to be more vital than dumpy.

I guess I must have been very tired when, soon after reaching the blind, I was called on for the fourth and final double shot, for I made two inglorious goose eggs, getting not so much as a feather. Very suddenly I got hungry and paddled off through a blue streak of atmosphere to the launch to eat, on the way cogitating on the futility of events and the rapid descent of at least one man, leaving Warner's score of twenty-seven in an hour still in the lead.

W. L. P.

A Notable Shot and its Corroboration.

PHILADELPHIA, N. Y.—One day last fall a local sportsman was out hunting gray squirrels. He had had good luck, having got seven, and as this was all he cared for, he walked toward his home. While coming through a patch of woods a mile from here he saw a gray squirrel run along a fence and sit up on the end of a rail to readjust a butternut in its mouth. The gunner did not care to shoot the squirrel, but while watching it he thought what a good mark its butternut was. He took a shot at the nut and the squirrel fell. Its mouth was wide open and the sides expanded in a violent effort to breathe. The hunter picked the squirrel up and looked into its mouth. One end of the nut had been driven down the squirrel's throat in such a manner as to shut its wind off. After removing the piece of nut the squirrel became as lively as ever.

It escaped from the man by chewing through his game bag, where he had put it. The hole was afterward shown to friends while he told the story.

WOODCHUCK.

Juniata County Quail.

JUNIATA COUNTY, Pa., March 15.—I am sorry to have to report that zero weather, followed by deep snows, proved too much for our quail to weather. A neighbor who preserves and "pets" the birds on his place had a covey that wintered near his barn, which he used to see daily. One morning, he told me, during the drifting weather they did not put in an appearance, and he has not found any traces of them since. On our own place out of a lot of twenty-

five, less than a third are about. Still, as the quail were abundant last fall, there may yet be left enough pairs to replenish the covers. We hope it may prove so.

ONYJUTTA.

The King of Northern Maine.

LYNN, Mass.—I was much interested in Mr. Egbert Bagg's account of "A Big Deer of the Adirondacks," and in the excellent cut which accompanied it in the FOREST AND STREAM of Feb. 16. It is indeed a "notable head." I think that he is right in judging it to be our common deer and not a "cross."

I beg leave to send you a photograph of "The King of Northern Maine." I think that the two are of about the same age. This one is seven years old, and that is either six or seven. In this, also, there is quite a notable palmaria of the horns as you see, and the left horn has four

A MAINE DEER HEAD.

distinct branches besides the spike (they do not show in the photo). The head is very shapely and symmetrical, and the horns are very large. I think the largest of the common deer that I have ever seen or heard from that region.

I shot him in the fall of 1892 near Second Roach Pond, while still-hunting, about 2 o'clock P. M.

He ran twenty-five rods with a .44cal. bullet through his lungs and then fell dead. He was the largest and the handsomest deer that I have seen during twelve annual visits to northern Maine. The carcass weighed, after it was dressed, 216lbs. without the head, the head (estimated) 28, making 244lbs. dressed, so that as he stood when shot he must have weighed from 325 to 340lbs. If there are larger deer or larger horns this side of the "Rockies," I should be glad to learn of the fact. Let us hear from the "boys."

S. W. STAPLES.

Well, Well, Well!

HERE is a special to the New York World, from a Long Island town: "FARMINGVILLE, L. I., March 14.—Farmers here are complaining that the swelling buds on the fruit trees are being picked out by beves of partridges, which swarm in the orchards. They intend appealing to the supervisors to offer a bounty for the extermination of the birds. The prevalence of partridges in this part of Long Island is said to be due to efforts made by the Waverly Gun Club to stock their preserve. The cold winter and prevalence of snow covering the deer feed, to which they are very partial, has driven the birds from their usual feeding ground. At nightfall the trees in the orchards swarm with them, and the farmers have been killing the birds with clubs in hopes of preventing the destruction of the fruit crop. The county of Suffolk authorizes the payment of bounties for the killing of woodchucks and possums, and the farmers are now preparing to petition that partridges be added to the list. A committee of indignant citizens has notified the gun club to either provide food for their birds or dispose of them."

Iowa Game Notes.

MATLOCK, Ia., March 13.—The river is breaking up here and will be clear of ice in a few days. Ducks and geese are coming. Was out for a few hours to-day, but both geese and ducks were flying high and not lighting. Will be better shooting in about a week. The latter part of the winter here has been very hard, and the game has suffered considerably. There were several large bunches of quail around early in the winter, but have not seen any for the past month. Chickens have stood it better and seem to be fairly plenty. Rabbits, both jacks and cotton-tails, have been the thickest ever known, but there is no danger of their becoming so plentiful as to be a nuisance.

Pampas Snipe Score.

BEAUMARIS, Ont.—Allow me to correct an error which I made in my account of shooting in Buenos Ayres. I stated that I had shot 22 brace of snipe one afternoon; it should have read 23 birds—i. e., snipe.

J. H. W.

A Fish and Game Pocket.

PROVIDENCE, R. I.—Some of your correspondents in the past have written of game pockets that would delight any sportsman, but they are all located too far away for most of us in the East to reach in the limited time at our disposal.

For many years I have journeyed annually to the woods for trout or game and know what one may reasonably expect in the wilderness of Maine and Eastern Canada. I have found in a certain locality in that country a well-stocked trout hole, or rather, a group of them, and their margins are tracked by moose, caribou and deer. The trout are there in abundance and of fair size; some of our catches have averaged a pound to the fish. The fishing grounds are some eight or ten miles from a farm house where visitors are welcomed and made exceedingly comfortable. A trapper, with the experience of age and the strength of youth, a pleasant, kindly, honest man, who has traversed the region for twenty years, is glad to go as guide and has about him some young men, from whom all needed help can be hired. The place can be reached in less than twenty-four hours from Boston.

This country is little known to sportsmen and I do not care to send any wasteful man there, but shall take pleasure in giving any information I possess to gentlemen who know how to enjoy nature's gifts without abusing them. Such will find me ready to answer their letters of inquiry.

FRED TALCOTT.

Podgers's Decoy Deer.

SENEAQUATEEN, Kootenai Co., Idaho.—It has become customary that one of us reads FOREST AND STREAM to the other, and I happened to be reading the number containing the article about a decoy deer. When about half through the recital of the deer's exploits, my friend interrupted me, saying, "Hold hard; brakes down. I want to propose a wager. I bet four days' work at anything, that should, either in this story or at any future time, the death of this deer be reported, the poor animal, after all it had done for the protection of its race in aiding the very acme of true sportsmanlike deer killing, was ruthlessly butchered, without a show for its life by either a market or pot-hunter or possibly a game-hog." Without reflecting on the chances pro and con, I accepted the wager and found before finishing the story that I had lost four days' hard work.

As I mentioned, I never took my chances in consideration at the time I accepted the wager, but have since turned the matter over in my mind and no matter how I look at it I cannot see that my friend had the drop on me.

MUX.

Arkansas Small Game.

LITTLE ROCK, Ark., March 13.—Our shooting season in Arkansas closed March 1, and left us plenty of quail for seed, and I predict a good crop for next year. On my last two trips for quail of one and a half days each we found thirty-three coveys the first time and twenty-three the last. This will give you an idea of our supply. Notwithstanding a hard winter and our usual supply of traps, quail in this section of the State are all right. Snipe shooting was very fine several days this week on Grand Prairie, and a great many ducks passed in their northern flight. We expect to have elegant snipe shooting after the first warm rains come, as a recent cold snap sent them south again. Black bass are being taken in our mountain streams already, and the prospects are very good for excellent sport in this line in the early future.

JOS. IRWIN.

Tennessee Turkeys.

THIS is one of four heavily wooded counties in this State. Wild turkeys are not uncommon and not very hard to get when you know what a wild turkey is. Last fall Morris Ring and W. O. Jones of this place returned (long after dark) from what was, as they claimed, a very successful turkey hunt. The report of "two gobblers killed" was noised around the next morning, and though neither foot, feather nor beard had been seen by any one but themselves, doubts subsided when Frank Laberdy, who had eaten a leg, pronounced it turkey, but a little "queer flavored." However, the owner turned up in a few days, and his price was only five dollars for the four young pea fowls. And this is why they sold their guns.

WARNER, Hickman Co., Tenn.

Vermont Ruffed Grouse.

HIGHGATE, Vt., March 18.—Our noble game birds, ruffed grouse, have wintered well. When hare hunting we see plenty of signs, and also many birds. Foxes and owls are very scarce.

STANSTEAD.

A Myth Shattered.

Mr. W. S. Alden has evidently not a very exalted opinion of the intelligence of St. Bernards and the mythical tales that are told of the Hospice dogs. This is what he says in an amusing article he contributes to the Cleveland Leader: "Look at the lies that have been told for the last 100 years about the St. Bernard dogs! People really believe that when a snow storm comes on the St. Bernard dog gets out with a blanket, a flask of whisky, a spirit lamp, a box of matches, some mustard plasters and a foot bath strapped on his back. When he meets a frozen traveler we are told he sits own and lights the spirit lamp, mixes some hot whisky and pours it down the traveler's throat, gives him a hot foot bath, puts mustard plasters on the soles of his feet, rubs him down and wraps him up in the blankets, and then hoists him on his back and brings him to the convent, where the monks put him to bed and read prayers to him till he feels strong enough to put some money in the contribution box and to continue his journey. Now, I've been to the St. Bernard convent. I went there just to meet one of these dogs and see for myself what he could do. There was a pack of about forty of them, but the only thing they did was to sit up all night and bark at the moon, while the monks shied prayer-books and wooden sandals at them out of the windows. I wanted to see a few travelers rescued from the snow, but the monks said the supply of travelers had been running low of late years, still, they added, that if I'd go and sleep in a snow bank a mile or two from the convent they would see what could be done. I wasn't going to risk the forfeiture of my life insurance policy by such foolishness as that, so I came away without seeing any dog performance. However, I saw enough a little later on to convince me that the St. Bernard dog is about the biggest kind of canine fool that ever imposed on credulous people."

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

CROOKED LAKE, MICHIGAN.—II.

It was in the summer of 1892 that I first took my wife trouting. I had promised her the trip on the next propitious day, and not many mornings thereafter, having done full justice to a hearty camp breakfast, I walked down on our little dock to size up the situation. The sky was overcast with dull leaden clouds, and the wind was coming in gusts from the southwest. Not being satisfied altogether with the outlook, I referred the matter to my wife, who, being anxious to make the trial, decided that we should go. So we invited our friend and fellow camper, John, to accompany us, and gathering up our tackle and rubber coats, were shortly pulling away at a lively rate toward our favorite place to seek the "speckled tribe"—the Minnehaha. On our way down the wind freshened considerably, but as it was assisting us on our course we would not have been concerned about it had we not plainly seen that it was also rapidly rolling up heavier and more threatening-looking clouds.

I mentally decided that we were in for it, but said nothing, taking some comfort in the fact that we had our rubber coats along. Just after we had passed through the reeds at the mouth of the creek, a light rain began to fall, and John suggested that I troll going up, while he remained at the oars. His suggestion to my mind being a very good one, in short order I had out a long line, on the end of which was a "professor," made more attractive by a pair of "angel's wings." My wife followed suit, but shortly the rain becoming harder, she desisted. Not so myself, however, and before we had reached our particular bend, I had landed three of the "spotted beauties." As I was reeling in the last one, the rain commenced to descend in torrents, and yet John stayed manfully by his oars. I always knew he was a gentleman, but that day he gave me a most positive proof of the fact, because he would rather catch a trout than eat a square meal, and I know when he saw me land those three trout in such quick succession that he was fairly wild to have his share of the sport—yet never a word said he.

By the time my last trout was landed it became evident that we must go ashore, as the rain was blinding and our boat was rapidly filling with water. Hastily rowing to about the only landing place thereabouts we beached our waterlogged craft as high as possible, scampered ashore and took shelter underneath some hemlock trees. My, how it poured, and how those sturdy forest trees bowed before the majesty of the storm! Peal after peal of heavy thunder rolled across the heavens, followed by bolts of lightning that were bewildering. There we stood like "Babes in the Woods," and, as the water from the gutters formed by the rims of our felt hats commenced to run down the backs of our necks, we unanimously agreed that this was one of the storms there was no getting away from. John philosophically creased the front of his hat rim to drain the water forward and managed to fill and light his "Missouri meerscham," from which he apparently derived so much comfort that I promptly followed his lead. I then asked my wife as to her opinion of trout fishing. She thought "twas great," was not the least bit discouraged and prophesied that it would clear up shortly. Sure enough in about half an hour the wind shifted to the northwest, and the rain, after giving us a few parting shots, left altogether.

Thereupon we bailed out our skiff, turned up the dry sides of the cushions, embarked and dropped down to the Big Bend, at the upper end of which we tied up at the bank. Luck was with us still, and particularly with my wife, who in short order had landed an even half dozen. The gleam of triumph that flashed from her eyes when she first netted number one plainly told me that she had the fever sure enough, and by the air she assumed when she had number six safely on board, both John and myself were made to feel our utter insignificance, and that we knew very little about catching trout anyway.

Presently we espied another boat coming up stream, which contained two elderly gentlemen. We exchanged friendly greetings as they passed us and watched their little craft until it disappeared around the bend above. Shortly after the wind increased and it grew quite cold, so cold, in fact, that I found myself holding the rod alternately first in one hand and then in the other, in order that I might pocket the benumbed fingers of the unused member. The wind being favorable I made my best record in casting that morning, so far could I place my fly up stream. Suffice it to say we had great sport until noon, when, as we had no lunch with us, we were obliged to discontinue operations and start for camp, so we rowed down stream and passing out into the lake were met by a furious head wind that was lashing the waters into veritable seas.

We at once decided if we made camp at all against such odds it could only be done by skirting the shores along the bays that lay between us and our dock, some three miles away. The only obstacle in the way of this was a raft of logs that projected into the lake a short distance to our left, making it necessary to first stand out into deep water in order to avoid a collision with, and possible wreck upon, said raft. All this was sized up in less time than it requires to relate it, and amid the howling wind and dashing spray I held her head on while John shifted the anchor and everything else of weight to the stern; then he resumed his seat, grabbed his oars and we made a desperate effort to get beyond that raft without going into it.

All went well until we got abreast of the legs and about 30 yds. outside of them, when John reached for the water where it was not, caught a crab, and before he could recover himself we were well nigh upon them. My wife clung desperately to her seat, waiting for the shock which seemed inevitable, when just in the very nick of time, John got in a stroke and we pulled as we never pulled before. The only thing we could do for the moment was to hold our own; not one inch could we gain. I saw something must be done quickly, and yelled to John to head her back toward the creek. 'Twas our only chance, and in doing so we at once got into the trough and an immense wave broke over our side, well nigh swamping us,

but when the next one caught us we had cleared the raft and took it quartering.

We hastily retraced our course and sought refuge in the quieter waters of the creek, where we rested on our oars, having fully determined we must stay there until the setting sun had caused the wind to subside. Accordingly we returned to the Big Bend and resumed, from necessity, the fishing we were so loath to leave a short time before. The knowledge of the anxiety which we knew would be felt at camp by our non-arrival, together with the cold wind and prospects of no lunch (my wife would not hear of cooking the trout caught in the forenoon) detracted somewhat from the interest in the sport which we would otherwise have felt. However, our fair luck continued until 3 o'clock, when we saw coming down stream the boat containing the two elderly gentlemen which had passed up several hours before.

As they came abreast of us I espied a lunch basket in the bow of their boat, and, forgetting all pride, I hailed them, stated our predicament, adding that we were ravenously hungry and would be extremely grateful for a portion of the contents of their basket. They replied that they had dined and there was but little left, but we were most welcome to such as it was. We needed no second bidding, and it took but a moment for us to run alongside, secure the basket and pull for the landing place just above, where we went ashore and at once set about starting a fire, but as everything was so wet this was not an easy matter. However, by the aid of a plentiful supply of birch bark and much fanning, we at last had a merry blaze going, and while John and I were thus engaged my wife uncovered the basket and spread its contents upon a fallen tree close at hand.

Then we all took account of stock and found three slices of raw bacon, two boiled potatoes, one onion, small package of tea, bread, butter, crackers, knives and forks, salt, empty tomato can and skillet. In short order we had a lump of butter in that skillet, which was placed on the burning embers, then into it went the bacon, sliced potatoes and onions, and while the whole was frying and sending forth an aroma that drove us half frantic, my wife made tea in the tomato can. Lunch being ready, we fell to like cannibals, for we were nearly famished. Truly, none but wind-bound fishermen can appreciate the relish with which we devoured the meal, which we one and all declared was the finest we had ever had. It mattered not to us if we burned our fingers and tongues, and got eyes full of smoke; we were in the humor to be satisfied with most anything, and were at peace with all mankind.

We ate every morsel of those delicacies, restored the utensils to the basket, loaded our boat, and again dropping down stream, returned the basket, with many thanks, to its rightful owners, who then took occasion to mention that they had fished years enough to learn one thing: "Always take a lunch along, even if you only go for minnows." In the light of our experience of that day, I believe their idea is correct, and I shall always follow it hereafter. We deemed it wise not to offer those gentlemen any pay for our lunch, but in parting left with them several of our favorite flies as souvenirs of the occasion. We proceeded on down stream and continued our fishing until about 5 o'clock, when who should be seen rowing toward us but Dave, our "camp man Friday." Our friends at camp becoming uneasy at our prolonged stay, had sent him to us with wraps, lunch and a bottle of Kentucky's best.

The wraps were at once donned, the lunch we did not need, but the bourbon was indeed appreciated. Dave stated that in coming from camp he had made wonderful time, both wind and wave being in his favor. He thought, however, that by hugging the shore and with the assistance of his brawny arms we could make camp all right. We decided to make the attempt at any rate, so we loaded all the plunder into our boat and took Dave on board, he having first beached the other boat. John took a seat in the stern by my wife, while Dave and I manned the oars. We were soon in the lake, and then came the tug. We rounded that raft in safety, however, and after a hard pull we at last reached camp, where we were given a royal welcome by the whole party, who we found assembled on the dock. Their welcome was changed to enthusiastic admiration when they beheld the string of trout which we exhibited.

Yes, we were a little tired, but we are not prepared to exchange that day's experience for a good, round sum. One more thought presents itself; we had not been in camp twenty minutes when the wind died down and the lake became as smooth as glass. Strange, is it not, how the wind and waves most always are against us?

CINCINNATI, O., Feb. 8.

EDWIN C. GIBBS.

GOVERNMENT EXHIBIT AT CHICAGO.

THE office of the Board of Management and Control of U. S. Government exhibits at the World's Fair, was moved from Washington to Chicago on Saturday, although Chairman Willits and most of the other members of the Board are still in Washington.

U. S. Fish Commissioner McDonald, accompanied car No. 1 on Saturday night on its way to Chicago, with a large consignment of tench, golden ide, carp, gold fish and aquatic plants raised in the fish ponds for the World's Fair Aquarium. The Commissioner will personally superintend the installation of fresh-water and marine animals and plants in the great tanks.

The supply of salt water mentioned in our issue of March 9 has arrived in Chicago, and will soon be enlivened by the presence of schools of marine fish and colonies of invertebrates and algae.

The collection of subtropical plants obtained by Theodor Holm in Lake county, Florida, has been completed and Mr. Holm is back in Washington. The county is extremely rich in water-plants and has furnished ample quantities and many showy forms.

The Government Building is a busy hive at present. In several of the Departments the work of installation of exhibits is well advanced. The Interior, Smithsonian, Agriculture and Fish Commission are pushing ahead with great vigor and there is great activity all along the line. The Fish Commission sent out eighteen car-loads of materials, and its cases are ready to receive their contents. Chief Special Agent Ravenel is at work with a force of skilled assistants, and the Commission's representative, Dr. Bean, will go to Chicago and take personal charge of the exhibit as soon as the preparation of labels and catalogues in Washington can be finished.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, March 18.—Lovers of the angle and lovers of old literature will be pleased to see, when they come to the World's Fair, a quaint building, square like a tower, whose like and whose origin they may recognize if they look in the early pages of some of the editions of the "Compleat Angler"—the angler's lodge of imperishable fame. The reproduction of this, as an angler's rendezvous at the Fair, was the original idea of Dr. Henshall, Chief of the Angling Exhibit. It will be given form by the generous and active spirit of the Chicago Fly-Casting Club, who took further action in the matter at the meeting of last Friday evening. Various figures have been submitted by firms on the specifications prepared by Dr. Henshall all the way from \$500 to \$2,000. The structure will not be expensive if made of the imitation stone which is the material of all the beautiful buildings of the Fair, and an order rightly placed would soon result in a building which for visiting anglers would be surpassed in interest by but few. Both Capt. Collins and Dr. Henshall are in thorough accord with the plans of the club.

The "Forest and Stream" Exhibit.

FOREST AND STREAM will have an exhibit at the Fair. It will be as good as the paper, and that is mighty good. Just what it is going to be it is not wise to say as yet, though all the arrangements are now made, the FOREST AND STREAM space all partitioned off; in fact, all the preliminaries concluded for something a trifle unique in the journalism of sport. The FOREST AND STREAM space is in the best place in the Anglers' Pavilion, just to the right of the main entrance. It will be one of the brightest, cosiest and most interesting corners of the Fair, and many and many a hundred sportsmen from all over the world will visit it with pleasure. The success of this exhibit was assured when FOREST AND STREAM determined on it, but much of the smoothness and rapidity of the intervening work is the result of the personal supervision of Mr. C. B. Reynolds, the editor of FOREST AND STREAM, to whom so much of the general smoothness and rapidity of FOREST AND STREAM as a paper is directly attributable. Mr. Reynolds has but just returned to New York after a busy visit of a week in what he was once pleased to call the Windy City. He is now another one of the array of New York men who have come and been convinced that the World's Fair is to be an event of surpassing greatness and surpassing interest to all classes of men. To none will it be this more so than to those who read FOREST AND STREAM. These journalistic exigencies FOREST AND STREAM will meet with journalistic forethought and do it thoroughly and well.

A New Thing in Angling.

I suppose all bass fishermen have learned that bass love weeds, reeds and rushes, and that bait-casting for them in that sort of water means frequent entanglements and untold profanity. To get over this trouble numerous "weedless" spoons and hooks have been invented. To the man who wishes to troll or cast with minnow or frog, and to do so right where the bass live, and to do so with ease and success and without profanity, I know of no invention which will appeal more irresistibly than the device this spring put on the market by the Payson Manufacturing Co. of Chicago. This hook guard is in the shape of an elongated spoon, and its brightness makes it serve as a lure, though it does not revolve, but only wobbles. It is heavier than a spoon, but smaller, and is an aid to casting, and not a detriment. The guard does not cover up, but protects, the point of the hook, so that you cannot engage the hook with a thread drawn over the guard. It can be trolled over the heaviest bed of weeds, so I was told by the inventor, Mr. J. R. Payson, without the lead fouling, and yet a fish striking at the bait is hooked at once. Mr. Payson told me that he cast in the weediest parts of Twin Lakes, Wis., and hooked and landed 12 bass out of 13 strikes. That is far above the average of the frog-caster who uses the naked hook. The fact that Mr. Payson is an old and practical bass fisherman, and thoroughly familiar with all the weedy lakes of northern Illinois and southern Wisconsin, where most of our bass fishing is, inclines me to believe that he has struck something here which will be of extreme usefulness to our friends, the bait-casters, whether for application to frog or minnow bait.

175 MONROE STREET, Chicago.

E. HOUGH.

Before the Buds Break.

JUNIATA COUNTY, Pa., March 13.—By the calling of the robins, by the whistling of the blackbirds, by our own instinct, we believe this to be our first day of spring; the treble note-call of the sweet robin is music to our ears, while we can not appreciate the one and two-note ditty of the saucy blackbird that comes to us from the treetop of the old apple tree, still it serves to awake pleasant old memories of early springtimes gone before. These are the days that most vividly of all things bring back the hours of our boyhood, when with our chum we sneaked off from the rest of the boys to get the auger from the old blacksmith shop, and from there to betake ourselves to that "sweetest" tree of the sugar maple colony or, like "the barefoot boy" with our favorite "butty," eager with anticipations, we went off to the pools of the rushing creek or to the banks of the muddy river, there to angle for suckers in their icy waters. While our mountain is still covered with a sheet of white the valley is but slightly flecked with snow. The frost is fast disappearing and vegetation will soon be ready for the awakening. In passing around the ice pond to-day, in the open water near the inlet, and standing motionless, I was surprised to see an 18-inch carp, evidently not long on the scene of action.

ONYJUTTA.

Black Bass in Lake Champlain.

MR. H. L. SAMSON is wrong in his letter which appears in your last issue, wherein he states that black bass may legally be caught with hook and line in the waters of Lake Champlain at any season of the year. The law plainly reads, "A person who between the first day of January and the fifteenth day of June in any year, takes or catches a black bass in any of the waters of this State, or has in his possession any black bass taken in this State, etc., shall pay a fine of \$5 for each fish so taken, caught or possessed." This is as plain as A B C; you may take with hook and line, wall-eyed pike, white perch and maskinonge, at any season of the year in the lake, but not black bass.

STANSTEAD.

WALTON AND COTTON'S FISHING HOUSE.

AS WAS briefly noted last week, acting on the suggestion of Dr. J. A. Henshall, the members of the Chicago Fly-Casting Club propose to build on some suitable site near the Fisheries Building, in the World's Fair grounds, a reproduction of the famous fishing house of Walton and Cotton. Of all the objects to be seen in the Exposition, it is quite safe to assume the fishing house will be second to no other in interest for the fisherman who is familiar with the "Compleat Angler," but the full significance of the little house built by Cotton on the Dove should render it an object of veneration by all men, whether anglers or not, who value friendship. For the house was, in its building and use and preservation for two centuries, not a simple fishing lodge, but a testimony and memorial of the enduring friendship of two "brothers of the angle."

He has not read his "Compleat Angler" aright, nor caught its true and finer spirit, who finds it only a manual of fishing lore. Izaak Walton is remembered to-day, and will be remembered in the years to come, not only as the "Father of Angling," but as a man singularly blessed with friendships; the "Angler" is not a simple book of fishing, it is pervaded with those qualities of the man which won him friends; and these are the qualities that have contributed more than any other to give the book its abiding place in literature.

Among all Walton's friends none are better known to us to-day than Charles Cotton, who, so intimate was the friendship and so strong the affection between the two, used fondly to speak of Walton as his father, and of himself as Walton's adopted son.

Cotton—we are writing now for those who do not know their "Walton"—had a country place not far from London, Beresford Hall, on the river Dove, and as all good anglers living in the country did in those days and do in ours, he used to invite his city friend to come down and go fishing with him. For their convenience on the stream, and as Cotton tells us, for a testimony and perpetuation of the memory of their friendship, he built of stone here on the Dove a little fishing house. Above its entrance was the inscription *Piscatoribus Sacrum* (Sacred to Anglers), and the date of building 1674; while the initials of the two friends were interwoven in a cipher. Surely Charles Cotton built better than he knew, for through the vicissitudes of two centuries, sometimes falling into decay but again restored by loving hands, this little fishing house, testimonial of friendship and brotherhood, has endured. And when its walls shall be built up on the bank of one of the lakes of the World's Fair, it will there, too, stand not alone as a monument of the antiquity and high place of angling, but as a token of the blessed quality of friendship, and a reminder of the manly affection which two hundred years ago bound together two angling friends as father and son.

In the Second Part (Cotton's) of the "Angler," Cotton as *Piscator*, having fallen in with a traveler, *Viator*, and having found him both an angler and an admirer of his friend Walton, straightway invites him to go home with him and test the trout and grayling fishing of the Dove; and when *Viator* modestly hesitates to accept the hospitality so generously offered, Cotton seeks to allure him by describing the fishing house: "I will tell you," he says, "that my house stands upon the margin of one of the finest rivers for trout and grayling in England—that I have lately built a little fishing house upon it, dedicated to anglers, over the door of which you will see the two first letters of my father Walton's name and mine, twisted in cipher—that you shall lie in the same bed he has sometimes been contented with, and have such country entertainment as my friends sometimes accept, and be as welcome, too, as the best friend of them all." The invitation having been accepted, they go the next day to the stream, Cotton sending the tackle on ahead: "Boy take the key of my fishing house and carry down those two angle-rods in the hall window thither, with my fish panner, pouch and landing-net, and stay you there till we come."

Come to the sight of the house, *Piscator* (Cotton) points it out to his guest: "But look you, sir, now you are at

the brink of the hill, how do you like my river, the vale it winds through, like a snake, and the situation of my little fishing house?"

Viator—Trust me, 'tis all very fine; and the house seems, at this distance, a neat building.

Piscator—Good enough for that purpose. And here is

raised so high as the arch of the door. And I am afraid he will not see it yet, for he has lately writ me word, he doubts his coming down this summer, which, I do assure you, was the worst news he could possibly have sent me.

Viator—Men must sometimes mind their affairs, to make more room for their pleasures. And 'tis odds he is as much displeased with the business that keeps him from you, as you are that he comes not. But I am the most pleased with this little house of anything I ever saw; it stands in a kind of peninsula, too, with a delicate clear river about it. I dare hardly go in lest I should not like it so well within as without; but, by your leave, I'll try.—Why, this is better and better! Fine lights, finely wainscoted, and all exceeding neat, with a marble table and all in the middle!

Many pilgrimages must have been made by British anglers to the fishing house on the Dove; and from time to time descriptions of it have been given. In the Hawkins edition of 1784 we find these details: "I have been favored with an accurate description of this fishing house, by a person who, being in that country, with a view to oblige me, went to see it. The account he gave of it is, that it is of stone, and the room inside a cube of fifteen feet; that it is paved with black and white marble, and that in the middle is a square black marble table, supported by two stone feet. The room is wainscoted with curious mouldings that divide the panels up to the ceiling. In the larger panels are represented, in painting, some of the most pleasant of the adjacent scenes, with persons fishing; and in the smaller, the various sorts of tackle and implements used in angling. In the further corner, on the left, is a fire-place, with a chimney, on the right, a large beaufet, with folding doors, whereon are the portraits of Mr. Cotton, with a boy servant, and Walton, in the dress of the time. Underneath is a cupboard, on the door whereof the figures of a trout and of a grayling are well portrayed. The edifice is at this time in but indifferent condition; the paintings, and even the wainscoting, in many places, being much decayed."

In his edition of 1833 Rennie records: "Mr. Bagster, who visited it in 1814, found it much dilapidated, the windows unglazed, and the wainscot and pavement gone, but the cipher still legible."

Major's edition of 1844 quotes the account of a visit made by W. H. Pepsys, in April, 1811: "The fishing house is situated on a small peninsula, round which the river flows, and was then nearly enveloped with trees. It has been a small, neat stone building, covered with stone slates, or tiles, but is now going

fast to decay; the stone steps by which you entered the door are nearly destroyed. It is of a quadrangular form, having a door and two windows in front, and one large window on each of the other three sides. The door was secured on the outside by a strong staple; but the bars and casements of the windows being gone, an easy entrance was obtained. The marble floor, as described by White in 1784, had been removed; only one of the pedestals upon which the table was formerly placed was standing, and that much deteriorated. On the left side was the fireplace, the mantelpiece and sides of which were in a good state. The chimney and recess for the stove were so exactly on the Rumford plan, that one might have supposed he had lived at the time when it was erected. On the right-hand side of the room is an angular excavation or small cellar, over which the cupboard or beaufet formerly stood. The wainscot of the room is wanting, the ceiling is broken, and part of the stone tiling admits both light and water. Upon examining the small cellar, we found the other pedestal which supported the marble table; and against the door on the inside three large fragments of the table itself, which were of the black Dove-Dale marble, bevelled on the edges, and had been well polished. The inscription over the door, and the cipher of Walton and Cotton in the keystone, were very legible."

Our illustrations are copied from the beautiful engravings in Mr. R. B. Marston's *Lea and Dove edition* (being the one hundredth) of the "Angler" published in 1888. The views are from photographs showing the present condition of the fishing house, after its restoration by the Beresford Hope family.

WALTON AND COTTON'S FISHING HOUSE.

From Marston's Edition of the "Compleat Angler."

a bowling green, too, close by it; so, though I am myself no very good bowler, I am not totally devoted to my own pleasure, but that I have also some regard to other men's. And now, we'll sit, and talk as long as you please.

Viator—Stay, what's here over the door? "*Piscatoribus*

WALTON AND COTTON'S FISHING HOUSE.

From Marston's Edition of the "Compleat Angler."

Sacrum." Why, then, I perceive I have some title here; for I am one of them, though one of the worst. And here, below it, is the cipher, too, you spoke of, and 'tis prettily contrived. Has my master Walton ever been here to see it, for it seems new built?

Piscator—Yes, he saw it cut in the stone before it was set up, but never in the posture it now stands, for the house was but building when he was last here, and not

ANGLING NOTES.

Size of Hooks for Big Fish.

A GENTLEMAN writes to me: "Will you be kind enough to tell me the kind of bait used in catching the large small-mouthed black bass in Glen Lake, N. Y., and the size of hooks commonly used, as I understand the big fellows are taken by bait-fishing." The most of the large bass, and I mean fish over 7lbs. in weight, taken in Glen Lake, have been taken on yellow perch bait. One, of 8lbs., which I sent to Mr. Blackford, was taken on a frog. The 10lbs. bass taken by Nat. Parker was taken with an ordinary minnow—chub or dace—as was the bass caught by the late Reuben Serleye, for which he claimed a weight of 11½lbs. At one time gold shiners (bream) were considered an excellent bait for the big bass, and some fish were taken with these, but bream seem to have disappeared from the lake since the bass were introduced. All the big bass of which I have record, except one, were taken on bait of small fish of some kind. I have not known of a very large bass being taken from the lake on crawfish, dobson, cricket, grasshopper or earth worm, and I never knew of but one bass of any size being taken on a trolling spoon or artificial bait.

I cannot think of a better bait for the large bass in Glen Lake than a yellow perch from 4 to 5in. long, and one of 6in. would go. As to the size of the hooks used, I have no means of knowing, unless in a general way, except in my own case. I caught two bass in one morning, and both were caught on the same hook, a No. 3 Limerick. When the fish were first taken from the water one weighed 6½lbs. and the other 8½lbs. In each case the bait was a yellow perch. The hook is tied (I say it is, because it is before me as I write) on single gut that now measures 29½ by Stubbs's wire gauge. The gut and the hook are both too small to use if one could be sure in advance of catching such large bass. I caught the smaller bass first, and as the gut was not reinforced above the hook with an extra piece of gut, called a keeper, the fish chafed the gut for an inch of its length above the hook. I noticed this, and was aware that the gut was weakened, but concluding that lightning would not strike twice in the same place, I baited the hook again and put it out. When I saw the second fish I wished most heartily that I had put on a fresh hook, and I deserved to lose the large fish for not doing so. When the second bass was netted the gut was chafed and ragged for two inches above the hook, and about one-half the silk winding was gone; and from handling afterward the gut parted from the hook. For fish of this size at least 1-0 hooks should be used, and the gut should have a reinforcement just above the hook for an inch or inch and a half.

Big Pike and Small Hooks.

In looking for the hook I have already mentioned, I found one on which I caught a pike of 12lbs. This is a No. 3 Sproat, tied on single gut. I was fishing for yellow perch, using a minnow about 2in. long for bait. My guide was fishing from the other side of the boat for a big pike and had mounted a heavy hand-line with a 3-0 hook on gimp and baited the hook with a sucker about 8 or 9in. long. I got the pike and the guide got nothing, although he was fishing in the weeds and I was fishing as far as possible away from them. I saved the pike simply because the gut got behind the maxillary, and I kept it there so the fish could not cut it with his teeth. The capture of this pike was not so unusual, however, as the capture of a 25½lbs. pike on a trout gang by Will Taylor, a professional fisherman. The gang was of single gut and the hooks were No. 6 treble, and the fish was so hooked that he could neither cut the gut nor smash the hooks. I caught a lake trout of 11lbs. after a good fight, and when the fish was gaffed I found that it was held only by one of the hooks of the gang, No. 8 in size, which was fastened in the lip of the fish. I was so surprised that I held up the fish on the gaff for the oarsman to see where it was hooked before I killed it, and while so holding it the fish shook the hook out of its mouth and would have been free except for the gaff.

Thomson's Mills Fishway.

I met Mr. John A. Dix, of Thomson & Dix, who own the mill where the upper fishway in the Hudson River is situated, and he told me that just before the ice formed last autumn, he had the fishway cleaned out and put in order, and that hereafter he would take it upon himself to keep it open and in order, for no one representing the State or Fish Commission had given it any attention last year when it was in need of it. Mr. Dix told me further that he became interested in the fishway and realized the importance of keeping it in order from reading something I had written on the subject in *FOREST AND STREAM*, for which compliment I made him my best bow. Now, if I could awaken some other men I know on the same subject, I would be quite content to continue writing upon the matter of opening the Hudson River for the passage of salmon. I asked Mr. Dix if he had seen salmon in the fishway or above it, but he said he had not personally, although his men had seen salmon baits in the fishway and in the river above it. When it was first built—the fishway being impassable last summer—the salmon could not get above it.

Propagating Yellow Perch Artificially.

As supplemental to what I recently wrote in *FOREST AND STREAM* about yellow perch, I may add that in a circular just sent to me by Mr. J. J. Armistead, of the Salway Fishery, Dumfries, Scotland, I find that he makes quite a feature of cultivating yellow perch for stocking or restocking waters with this excellent pan fish. Mr. Armistead says: "The hatching of perch ova being more thoroughly understood, they are very easily dealt with, and as no apparatus is necessary they are within the reach of all who possess suitable water. They are sent out when just on the point of hatching, and all that is necessary is to place them in the pond or stream, where they usually hatch out without loss, and soon after laying them down the little creatures may be seen swimming in all directions." Fry of the perch, as well as the eyed ova, is also furnished, and the fry costs ten English shillings per thousand, while trout fry costs £1 10s. per thousand.

A. N. CHENEY.

The Pennsylvania Fish Protective Association.

THE monthly meeting of the Association was held Saturday evening, March 11, 1893, at 8 o'clock, at room, 1020

Arch street, Philadelphia. The subject of an extension of the present open season for taking brook trout in the State to Aug. 1 was proposed for discussion at the meeting.

ILLINOIS WARDENS WORK FOR LOVE.

DANVILLE, Ill., March 16.—*Editor Forest and Stream:* In *FOREST AND STREAM* of March 9 there appeared a communication from Henry G. Abbott, of Chicago, which criticises the Illinois State Fish Commission. Mr. Abbott is apparently sincere in his desire to see the State fish laws enforced, but it is astonishing that any intelligent man should presume to severely criticise a subject before he acquaints himself with the facts in the case.

Without even mentioning the work of the Commission, he makes the statement that the Illinois State Fish Commission is "worthless when it comes down to actual business," and in proof of this statement cites instances where fish wardens have failed to strictly enforce the law in some localities. Mr. Abbott seems to be ignorant of the fact that fish wardens are not the Fish Commissioners, and that their sins of omission should not be charged to the Commissioners. That all wardens have not succeeded in strictly enforcing the law in their territory is not the fault of the Fish Commissioners, but of the laws and law-makers of the State. Some wardens have found the duties of their office such difficult and thankless work that after a short effort they have fallen by the wayside and given it up, while others have worked with perseverance, firm determination and undaunted courage, and have enforced the fish laws in their locality without fear or favor.

The sentence: "When I hear and see such things, and know that the State pays some lusty game warden for preventing this kind of slaughter," is the unkindest cut of all. The State of Illinois does not and never has paid fish wardens a single penny, as can readily be seen from the following extract from the law:

Sec. 4. The Governor on request of the Fish Commissioners shall appoint Fish Wardens, who shall enforce all laws relating to fishes, arrest all violators thereof, prosecute all offenses against the same. They shall have power to serve processes against such offenders and shall be allowed the same fees as constables for like service, and shall have power to arrest without warrant any person found violating any of the provisions of this act, but such wardens shall receive no fees except in cases where convictions are obtained.

On May 9, 1890, Governor J. W. Fifer, on request of Fish Commissioner S. P. Bartlett, appointed me one of these lusty wardens, and since that time I have secured twenty-six convictions for violations of the fish laws. The offer and payment of rewards for information that would lead to the arrest and convictions of violators, together with other necessary expenses incidental to the hunting up of evidence and securing final conviction, have aggregated considerably more than the income from the convictions, and the deficit has been paid by the Vermilion County Fish and Game Association. As a member of this association I have paid my share of this deficit, and thus I have prosecuted and convicted my neighbors, have given much hard work and many days and nights of my time, and have actually paid out money of my own for the privilege, but I have the satisfaction of knowing the fish laws are feared and obeyed in Vermilion county, Illinois.

It is probably impossible for the Fish Commissioners to find in every locality an enthusiast who is willing to make the sacrifice and accept the office of fish warden, but the croakers should put their shoulders to the wheel and do a little work themselves instead of scoffing and sneering at those who are doing the best in their power for the good of the cause. Such men as Henry G. Abbott and his boasted "retaining influence of the true sportsmen of Chicago and the large cities" are probably not located where they might become efficient fish wardens, but they might exercise their wind in favor of better laws. All true sportsmen should try to encourage those who are bearing the brunt of the battle instead of finding fault because the millennium has not yet arrived. GEO. KAMPER.

WHEN DO THEY SPAWN?

Editor Forest and Stream:

In the *FOREST AND STREAM* of last week a Michigan correspondent speaks of a good bass stream emptying near Grand Rapids, and tells us that the best time for fishing it is in July. Pray when do the Michigan bass spawn? Close to the southern Michigan boundary line we get our best spring bass fishing from the 10th to the last of May, in the waters of Lake Erie, and perhaps a week or two longer in our northern Ohio streams; while in the lakes about the northern border of the lower Michigan peninsula we find the first two weeks of June to be the very cream of the spring season. When the spring fishing ends (that is, when the spawning begins) it stops off short, and in this latitude is not considered worth bothering with till well in August. It is part of the creed of our fishermen that an all-wise Providence has made the month of July the poorest fishing month of the entire season, for the especial benefit of the great army of summer tourists ("resorters") they are called up in Michigan) who frequent the lakes and streams at this time of the year.

And yet, and yet. I know a rapid, spring-fed stream in southwestern Michigan, which has fine bass fishing at other seasons and which ought to have good July fishing if any waters in this latitude have in that month. Whether there is or not I cannot tell, never having fished it in July. Perhaps our friend is right; but we would really like to know when the bass spawn in just such streams as he describes. JAY BEEBE.

TOLEDO, O., March 18.

The Faded Charms of Lycoming Waters.

MANY years ago, while living in Elmira, N. Y., I used to make frequent trips to Ralston, Pa., to fish in the beautiful Lycoming and its tributaries. Many a delightful day have I spent on those streams with Dr. Up De Graff, Sam Hamlin, W. M. Sanders and Wakeman Holberton. There I first met Seth Green and McBride, the fly maker. Then the streams were clear and trout were plentiful. Three years ago I visited the old, much-loved places to sketch and paint, as I am an artist. But what changes I saw! On the Lycoming, at Roaring Branch, was an immense tannery belching out its poison in the once crystal stream. Four miles below, at Ralston, was another and the water for miles below was the color of chocolate. Of course the trout were all gone. The tributaries, Roaring Branch, Rock Run and Pleasant

Stream, were nearly all destitute of trout as the gutters of Broadway on a rainy day.

What a shame that such noble streams should be ruined to gratify the selfish greed of a few men. Why does a great State like Pennsylvania allow it?

Other changes I saw that were nearly as painful to contemplate. The fine forests that once clothed the mountains were in many places destroyed. The "march of improvement" had built up an ugly little village at Ralston. In fact, the whole region around which clung so many pleasant memories was changed and its charm lost forever. SAMUEL CONKEY.

Mussels Caught on a Hook.

GREAT FALLS, Montreal.—In England I used to do considerable fishing in the rivers Thames and Mole. I remember once going for a day's fishing in company with my father. We started early in the morning, taking with us among other things, a huge receptacle in which to place our "spoils." The fish had evidently had a late supper the night previous, for they were by no means hungry on the day in question. We first trolled, then floated, and finally whipped the stream, but not a bite did we get. The sun blazed down upon us in all its fury, and to say that we were hot is drawing it mildly. Late in the afternoon, my father had a bite; "Ah," said he, "I told you so, it's worms they want on a day like this," and immediately afterward he hauled up a small mussel, the hook completely inclosed between the shells. Those shells, I have no doubt, my father still keeps as a memento of a most uneventful day. The mussel was duly placed in the receptacle as the sole trophy of our day's sport. D. C.

Florida Tarpon.

PUNTA GORDA, Fla., March 15.—A large number of tarpon have been caught at Punta Gorda, Charlotte Harbor, Fla., the past week, six being landed in one day. This is rare sport, and the guests of the Hotel Punta Gorda are enjoying the sport as much as the fishermen.

Massachusetts Black Bass Season.

By an act approved March 10 the Massachusetts black bass close season is between Dec. 1 and June 1, instead of Dec. 1 and July 1 as formerly.

Canadensis Trout.

A CORRESPONDENT advises us that Mr. Crane, of Canadensis, Pa., to whom we referred an inquirer last week, has sold out and moved away.

WITH ROD AND CREEL.—The days approach when the sportsman will go forth with rod and reel. Where will he go? If wise, to the great trout and bass country along or tributary to the Grand Trunk Railway of Canada. Write for particulars to N. J. Power, General Passenger Agent, Montreal, Canada.—*Adv.*

New Publications.

"BLACKFOOT LODGE TALES."

MR. GRINNELL'S new book about Indians ("Blackfoot Lodge Tales," by George Bird Grinnell, Chas. Scribner's Sons, New York) leaves out the old saying that it is the second book which tests the author. In this case the author is both tested and proved, and his claim to a high position in American literature is assured, if there were any who could doubt that after reading the earlier book, "Pawnee Hero Stories and Folk-Tales." Not that the question of position has troubled the author, whose personality is, if anything, too retiring. Indeed, he has said to the writer, "You know I did not write these books for myself, but for the Indians. They have no one to speak for them." The singular charm of both these books, and one very difficult to gauge, so unusual is it, is the fact that the author does not even speak for these men whom he has known so long and thoroughly. He does more. He gives us the Indians speaking for themselves. Author and even interpreter are effaced. It is the high accomplishment of these books to bring us face to face with the savage tellers of these tales, to make us understand their tongue direct, to be in touch with their methods of reasoning and to know their ways of life. It is probably not too much to say that there is not a book other than these two in the English language which possess this unique quality. It is something new in literature. This book is a literary phonograph. You can hear the Indians talking!

To be able to attain such a result required first a long residence with these Indians and a familiarity with their life which no one could gain who had not merited and won their complete confidence; and it required secondly a mastery of that high literary art which compasses the simplest forms of expression, always the most difficult. If a man can do this once he is an author of merit. If he can do it twice he is an author of note.

Some time ago Mr. J. V. Schultz, of Piegan, Mont., who from his associations with Mr. Grinnell in the Blackfoot country knew much of the preliminary work on the book, wrote me, before a line of it was in type, "The Blackfoot book is going to be a better book than the Pawnee book." This may in the main be true. It is a fuller book, more complete, better rounded out—in short, it is a bigger book, though much the same in treatment, and much the same in the patient fidelity to detail.

As one reads these books, this book, which is new from the press, new in the field it takes up, and new in the method of the writing, he begins to have some new ideas. The first of these comes with an increased knowledge of the great American native peoples now so deplorably decreased, so unspeakably ill-treated, so rapidly passing away. He finds that not all now has he had any conception of the true importance of the Pawnees, the Blackfeet, that he has not known how great a territory they covered, how strong they were in numbers. After that come new ideas as to the way these people lived, and after that again more ideas as to the actual individual character. Following this new knowledge there are bound to come some surprising reflections. One wonders that he has not known before that the great American native peoples, even a literature and poetry found their home under the smoke-blackened roof of the Blackfoot lodge. These Blackfoot Lodge Tales are novelettes, many of them, short stories whose leaves we find ourselves turning faster and faster as the story moves. They comply with the canons of the short story. They are literature, though never before have they had any medium of letters.

As for the poetic expression, let us take one story, that one called "Scarface," which begins that division of the work marked "Stories of Ancient Times." Many stories are published as good ones which do not have in them either the human nature or the human interest, the poetic conception or the poetic expression that this one does.

Scarface is a poor young man and he loves a beautiful girl, the daughter of rich parents. Note the social exigency, not unknown to us.

Note also the right sort of man, the right sort of girl, openly and with frank speech. As she passed by to the river after water he said: "Girl, wait! I want to speak with you. Not as a designing person do I ask you, but openly, where the Sun looks down and all may see." "Speak then," said the girl.

"I have seen the days," said the young man. "I am poor, very poor."

"* * * I have no relations; all have gone to the Sand Hills."

"Then 'the girl hid her face in her robe and brushed the ground with the point of her moccasins, back and forth, back and forth, for she was thinking.' It seems that all women have always been alike."

Scarface must go on his quest. He must seek his fortune, as men have done since then. He must go to the Sun's home and ask consent. "Oh," says he, "I was glad, but now it was dark. My heart is dead. Where is that far-off lodge? Where the trail which no one yet has traveled?" He is "very sad." He sits down and covers his head with his robe; but at length he sets forth. He does not know the trail, and he asks of the wolf which is the way to the Lodge of the Sun. The wolf does not know; neither does the bear, nor the badger. The wolverine knows the trail. He takes Scarface to the edge of the big water. Scarface sits down on the shore. His heart is sick. "Here by this water I shall die," he says.

But he is not to die. His Helpers come to him, two swans. They bear him over the sea, to the Lodge of the Sun. He meets Morning Star, the son of the great ruler, and Moon, the Sun's wife. He saves the life of Morning Star from some monsters of birds. The Sun is glad, and asks what reward he will have. Scarface asks for the hand of the girl and his request is granted. The Sun cures Scarface of his disfigurement. He then takes him to "the edge of the sky" and shows him the world, meantime giving him words of wisdom. Then the Sun shows him the short trail to the earth (the Milky Way). He follows it, and duly reaches the earth and finds the lodges of his people. The maiden was faithful, and when she knew that all was well, "great was her gladness then." So they were married. The story ends with these simple and beautiful words:

The Sun was glad. He gave them great age. They were never sick. When they were very old, one morning, their children said, "Awake! Rise and eat." They did not move. In the night, in sleep, without pain, their shadows had departed."

If that is not a story, and a beautiful one, and if it does not show imagination worthy to be called poetic, then I am ignorant of these things. We have a poet in this language who has sung gloriously of a lover in another desert land, of a love which should endure

"Till the stars are old,
And the sun grows cold
And the leaves of the Judgment Book unfold."

Yet far away, across the big waters, in a desert land, under these Blackfoot lodges, burned the same unquenchable fire, beat the same pulse which not all the ages can still, which in every civilized time, in every civilized people, has called forth the purest form of human thought, and the highest form of human expression. Could this thought be so pure, the expression so high, in a people worthy of nothing but contempt and scorn?

But these condensed epics have among them other stories; stories of war, of adventure, of craft, of statesmanship, of heroism and of heroes, interwoven all the while with myths as wild and graceful and beautiful as any of ancient Greece. Of an actual deity we have no hint, except of one so crude as could be only the God of children. The matter we have the key to the whole problem. These people are only children in their ways of thought, though along these ways they have thought further than children do. We read of a great peace brought about with another warlike nation by the exercise of real statesmanship, but lo! at the moment of the ratification of this peace the childlike spirit crops out, so that the peace is broken, and that thereafter there is never anything but war between them. We read of individual valor, of midnight journeys of solitary warriors, of battles of Ekus-kia—so brave a warrior that he never thought of himself fighting until he began to feel the knives sticking into him; but mixed with all this is a belief in ghosts, in magic, in foolish things, which first excites our disrespect, then our curiosity, and finally our thought. And so we think that we have not understood these people of the mountains, these stalwart children who tell the most pleasing nursery tales the earth ever knew, and yet who in staccato were men, in war were giants. We read as nowhere else in any book we may read, and as we read we can see the long line of the war party, the shuffling feet tireless in their travel-blackened moccasins; we can see and understand the glance of each keen, restless eye; we can see beyond the eye, and catch the true image of the brave, primitive, unformed, unlifted soul. When we have understood, we can pity. Though this singular book offers no remedy which will prevail against relentless fate, and though it cannot save the Indian from the blue-eyed men, it can teach us to pity and to hope that when these Indians have seen the last of the land which once was all their own, then, "in the night, in sleep, without pain, their shadows may depart." In parting each such shadow might well point in solemn scorn at the nation which robbed them of their homes, their faith in truth, and finally of their lives.

This book was written "for the Indians," and it fills its mission nobly in teaching us of them, but quite aside from all that, the book is interesting reading of itself indeed, one would hardly know where to look for one more fascinating in these days where novelty of theme is as scarce as originality in treatment. Some readers may fancy most the stories of war and adventure, such as that of "The Lost Woman," and some may prefer the stories of the ancient history or the daily lives and customs of the people, or perhaps those relating to the antics of the Blackfoot deity, Old Man, the quaintest and most grotesque joss of all the josses of the world. The hunter and the outdoor man will be very likely to find his keenest pleasure in reading of the habits of wild animals as noted by these people, who studied nothing else, or in the grotesque explanations of natural phenomena as figured forth by observers who are apparently ignorant of the true relations of cause and effect. How the rabbit got the brown patch on his back is explained in two separate stories. How the lynx lost his tail and got his flat face is another one, and how the birch tree happened to be marked with its white scars. Here one can learn also how the bear came to be so fat, and can find out many things he never knew before. Fairy tales, ghost stories—and very good ghost stories, too—stories of the peculiarities of animals and things, stories of the chase, of the "calling of the buffalo," indeed, all sorts of stories may be found herein, and when one has gone into them he has had the best possible substitute for an actual residence with these wild, free people of the untroubled lands. Crude enough the stories are, and they often repeat themselves, but they do this incidentally, like the rough but precious designs of an Oriental fabric, careless of petty rules, and only bent on the result. In total they make what seems to me a very rare and valuable fabric indeed, one worthy of possession and of study, and one such as we shall not soon see duplicated.

E. HOGG.
175 MOSKOW STREET, Chicago.

The Triton Fish and Game Club.

THE shares of this club, elsewhere offered for sale, are deserving the attention of persons desiring to invest in such property. We know several gentlemen who have inspected the tract in question and all of them unite in speaking of it in terms of the highest praise. Mr. Light has received the following letter:

SEPT. 8, 1892.

Mr. A. L. Light:
MY DEAR SIR—I have carefully examined as much of your territory as I could, and have come to a very clear and decided conclusion from the knowledge I have gained. It comprises as fine sporting preserve as there is on this continent, and it is so close to the water as to have the same advantages as if it were a thousand miles from any settlement. It is but using reasonable language to say that the "Light Tract" is a fisherman's paradise, and the most exacting angler would find in these waters his hopes and anticipations fully realized. The mountain streams swarm with brook trout and the lakes with the large fish of the Pacific, *Salmo gairdneri*, as indeed it is but natural seeing that except that for an occasional cast of a fly, the waters are untroubled and undisturbed as they were in the days when the aboriginal Indian propelled his canoe through the waters, or floated with the current. Your preserve is so vast * * * A club of one hundred members could get all the fishing they wanted in the different lakes, with plenty to spare. My experience in clubs shows that a rare and valuable territory, such as this, is at the club house at any one time; from natural causes men crowd into the water and take their outing, and hence there would never be a crowd. Another thing, a fishing club increases, instead of diminishing, the number of game fish, for the reason that it is always the rule of a fishing club to restore to the waters all game fish under a certain size, and destroy all fish of a coarser species; this gives more room to the trout, and they multiply accordingly. Nor is the splendid fishing the great attraction of this wonderful preserve. In my trip down the water as far as Lake Batiscan, I found the country alive with game. I shot two ruffed grouse with my rifle. The stream was alive with black duck. I ran into a herd of caribou feeding on the lily pads, badly wounded one, and could have killed him a dozen times over, as he swam down the river, but for my culpable negligence in forgetting my cartridge and not having a spare. Half a mile further down a splendid bull moose walked deliberately from the woods into the water and looked at the passing canoe. He was not 50 yds. away. I could only gaze in despair at the noble animal. Being on an inspection tour and not expecting game, I left my double Greener with Mr. Townsend, and but for that could have had glorious sport with the snipe and plover that fed on the marshes and shoals. I mention these facts to show that an incomparable territory your tract is, as well for the gun as for the rod, and I feel sure that if the lovers of sport in trout and game the country could only be made aware of its unexceptionable advantages, there would be no lack of eager and enthusiastic applicants to join the club. I saw three more caribou on my return trip in the evening. As for Lake Batiscan, it surpassed in beauty and grand and majestic surroundings anything I ever saw. It would become world renowned if people could only see it. Every word I have written is the result of thought and observation. I may be wrong in some of my deductions, but I do not think so. Trusting my observations may prove of value to you, I am, very truly yours, ALEX. HUNTER.—Advs.

WASHINGTON DOG SHOW.

THE third annual show of the Washington City Kennel Club was brought to a close on Friday night last. With a new and excellent building and a first-class lot of dogs, it would be only a fitting climax to chronicle a success similar to their first venture. This, however, we are unable to do and again must a deserving club go down with the reserve and make good a loss. We do not think that this is because of any waning interest in dogs in the national capital, but several circumstances tended to bring about a result as entirely unlooked for as it was undesired. Several reasons may be advanced for the failure. In the first place, when the hall was engaged it was expected that it would be entirely completed, and have been open for several weeks previously and several public entertainment have taken place therein, so that the public would have become acquainted with its location; etc. As it was, the average Washingtonian pleaded

POINTER RIDGEVIEW PANIC.

Winner First, New York, etc., 1893. Owned by Rinada Kennels at the time. Now owned by Mr. Lewis, Tarrytown, N. Y.

complete ignorance of its whereabouts; one cabman even taking a party to the old riding school where the show was held last year. Then the neighborhood in which the hall is situated is not very desirable, and is not nearly so well placed as the riding school, which is in the heart of the "swell" neighborhood.

The show was not boomed sufficiently in the daily press, the Post alone giving space to an extended notice, and this was supplied by an exhibitor. The weather again was against a large attendance, being very changeable, and on the last afternoon, to cap the climax, a heavy snowstorm fell. This was disheartening, and though the committee put a cheerful face on affairs, they felt that to look a loss of \$1,000 squarely in the face needed some courage and "sand." Their first show was so successful that even with the loss of last year and this, most of the members who guaranteed are from \$50 to \$200 ahead, profits having been divided pro rata. The hall is built over the market, and is very light and airy, and in fact in all our experience we never attended a show where the atmosphere seemed purer, not the slightest smell throughout the week. The building could hold a thousand dogs instead of the 485 that were present, still if cleanliness is not attended to the largest building soon becomes offensive. John Read, the superintendent, looks after this, however, and he did his duty well.

The committee, Messrs. A. W. Mattingly, Wm. Travers, Sam. W. Steinmetz, president, J. Henry Gulick, Joe Hunter and Mrs. E. W. Barrett and E. K. Goldsborough, were continually on hand and worked hard on the details of the show.

The secretary, Mr. Webster, owing to his business in New York, could not devote the time that his duties as secretary demanded, and only spent a couple of days at the show. There was delay in the arrival of catalogues, but we fail to see, when entries close so long before the show, why this clerical work can not be attended to in time and the printer put under contract to have his work out in time. Nothing blurs, if we may use the expression, a show so much as the tardy arrival of catalogues. The attendance was best at night, but at no time was there any crowd like the first two shows.

Judging progressed fairly well, Messrs. Taylor, Mortimer and Jarrett donning the ermine. The latter had only collies and his work was soon over, but the two former worked con-

tinuously until noon Wednesday. There was some dissatisfaction in pointer and fox-terrier specials, but on the whole the judging was indorsed. Among those present we noticed Dr. L. C. Sauvaur, Hon. John S. Wise, Mr. and Mrs. Harry Malcolm, F. R. Hitchcock, C. A. Beazell, Maj. Purcell, Mrs. Smyth, Fred Lewis and those mentioned last week.

Several of the awards in specials created great interest, especially that between the Irish setter kennels, King Lud and Leonidas and the fox-terrier kennels, and again did Princess Florence take the palm from Sir Bedivere. This decision all depends on whether one goes for a complete, unapproachable *tout ensemble* that in parts may not be so good as the other or give undue prominence to certain points such as body, bone and substance at the expense of type and quality. Sir Bedivere shown in England is not the Sir Bedivere here, is lacking coat, one of his chief charms is wanting, and one which served to impress him as such a beautiful animal upon the minds of those who saw him in England. It is folly for men to criticize between two dogs so nearly equal when one of the principals has not been seen by them for two years, and in the mean time had for months been a wreck of his former self. We allude to Sir Bedivere. Change of ownership has brought a change of health, and the dog is himself again, barring coat.

MASTIFFS (Mr. Mortimer, Judge).—In spite of the efforts of the Mastiff Club in putting up valuable trophies the entry of good dogs in this breed is confined to a few moderately good ones. At this show the winners were as at Baltimore. Miss Caution again the only challenge aspirant, and Merlin and The Moor winners in the open dogs (8), followed by Nero, who loses to the latter in head, front and depth of body. One cannot speak very highly of Queen, second to Ethel in bitches (3), when the latter beats her well, as Ethel herself is but a moderate one at best. Queen is only a puppy. Gladstone, the dog puppy, was given second only, he is too straight-faced, bad on his feet and entirely not much good. And the same may be said of Leo, in novices, a weedy animal, from whom first was withheld.

ST. BERNARDS (Mr. Mortimer, Judge).—It was a relief to see these mediocre mastiffs file out of the ring and give place to the St. Bernards, the entry of which was in great part a repetition of Baltimore. We cannot see how mastiff men can hope to compete in popular favor with the St. Bernard if they do not take steps to bring their best more frequently and conspicuously before the public. Sir Bedivere and Kingston Regent again came forward in challenge dogs. The latter is losing flesh, but Sir Bedivere keeps up well and was as playful as a kitten during the show. He was benched next to Princess Florence, and to see these two leviathans tumble each over in play was a treat. Lady Livingstone had another

walk over, but looks fit for any competition. In open dogs, Refuge II. was the only fresh face, and Mr. Mortimer placed Marvel at the head of affairs, with Altomeer second; but changed the Baltimore order by putting Comte over Grand Master. The latter had fallen off a good deal in flesh and looked tucked up, but he is an all-round better dog than Comte. Refuge II., vlc., looked well, and had his legs better would be higher up considerably. This time Princess Florence thought she might indulge herself with a blue ribbon; as she feels she can do this any time she likes, it must be taken as a condescension on her part. Her highness will now make things a little livelier in the challenge class. Hepsey came next, again beating Miss Anna. Another old friend that appeared here was Zenith in her new owner's name; she is a well-formed bitch, though I don't care for her front much. The puppies were poor. First was withheld and second given to Ingomar, poor in head. In the novice class quite a good bitch, Countess Madge, celebrated her first appearance with a victory; she has a well-formed head of good breadth and depth, but marred by a very wide blaze, allowing only a little marking each side of the head; in legs and body she needs little improvement, and should win many prizes for the Dutchess Kennels. Fritz Emmet, second, is a big dog with a wealth of coat, that is about all.

In smooth challenge dogs Melrose was alone and looking fleshier, I thought, while in bitches Empress of Contoocock again defeated Miss Alton for the reasons stated last week. In open dogs Melrose King scored again, having no trouble in beating Trojan Hector in head, which is plain, good forelegs and better coat than the winner, but inclined to be too straight behind. In bitches the order was again Melrose Belle and Bellegarde, followed by Psyche, whose plain, snipy coat and profuse coat for a smooth, besides her lack of size, put her well back of the others; she is by August Belmont out of Dology. Melrose Belle showed better here and was alone in novice class. Mr. Reick and Mr. Moore took the kennel prizes in their respective divisions.

GREAT DANES (Mr. Mortimer, Judge).—Again do we find a good lot of these dogs. In challenge class Melac had again to go it alone. Why does Imperator not show up? This dog has, we understand, been boxed and taken to every dog show since New York, and, though present, is not shown. Surely his owner cannot be afraid to meet Melac. The doubt is all with Melac, as he has been beaten twice by

Imperator, still Melac is ready for more business every time. It is cruel to the dog to keep him so long boxed up. Of course it was to be expected that, all things equal, Mr. Mortimer would place the open dogs, with the same entry as at Philadelphia, in the same order. Maj. McKinly, in spite of very poor hind action, first; Heppern Hero, second, and Theseus, third, while Wenzel could do no better than vhc. We cannot justly see how Wenzel is inferior to Heppern Hero, who is wretched in front, while the other dog, barring his hocks turn in a little and a light eye, has few important faults. A good bitch in Heppern Vera won rightly over Charmion. She is a good-fronted bitch and showed up well; trifle heavy in body perhaps, but of good formation. Minerva, third, of good type, is spoiled by indifferent front and faulty action. Juno, reserve, is rather light, but of good type all round. She beats Phoebe, vhc., in head and front. In puppies Harras had an easy win, as second was withheld from a weedy specimen. In novice class Bismarck had to succumb to Victor, whose better head and stronger looking back rightly accounted for his position.

BLOODHOUNDS (Mr. Mortimer, Judge).—As usual, Belhus, Jr., was the only entry and took the blue ribbon as a matter of course.

NEWFOUNDLANDS (Mr. Mortimer, Judge).—Only two in open dogs, and as Surpass was placed over Prince George last week and reasons given therefore which obtain this week, the decision that reversed their positions here shows that condition played no part in the ruling. New York Lass was alone in bitches.

RUSSIAN WOLFHOUNDS (Mr. Mortimer, Judge).—Our best of this breed were out here and the entry was pretty much the same as at Baltimore, but here challenge and puppy classes were provided. Argoss was alone in his class but Svodka beat Princess Irma in bitches; this she can do with her superior breadth of loin and quarters and substance throughout. In open dogs Groubian again beat Osslad, the only two entered. Open bitches, however, saw the New York and Baltimore decision reversed, Vinga getting the ribbon over Zerry; two reasons for these bitches being placed the other way were given last week. Every judge is entitled to his opinion, but we still believe that Zerry's superiority in loin and quarters and hocks should give her premier honors. Modjeska, beautiful in quality and type as she is, loses in size and substance, loin and quarters, to the others, while Flodeyka's faults were given last week. In puppies Krimena beat Lobedyain loin, spread of quarters and bone, but Lobedyka has a longer and better shaped head, though perhaps not showing so much quality as the other, which, however, is overshot. According to the placing it was a foregone conclusion that Seacroft Kennels took the special for best kennel.

DEERHOUNDS (Mr. Mortimer, Judge).—Not many entries but still an improvement on past shows, as there were really two dogs present. The dog Roderick Dhu is a rather peculiar looking animal, good bone, but spring in knee, strong loin, fair coat and pretty good back strongly made. The bitch Maiden is a poor sort, weak in head and small. Roderick Dhu also took the novice prize without competition.

GREYHOUNDS (Mr. Mortimer, Judge).—The same dogs with which the past few shows have made us so familiar with, showed up again. This is the worst of this circuit business, there is precious little variety among the winners. In challenge dogs, Ornatus unfortunately having gone to a happier hunting ground, left the competition between Gem of the Season and Lord Neverstill. The latter once beat Gem under the same judge, but he cannot do it now, losing in pasterns, neck, loin, quarters and second thighs and quality. Poor Lily of Gainsborough, a good greyhound had she had better pasterns and feet, will never raise the question of superiority with her prettier kennel mate Bestwood Daisy, having run the long course with Ornatus. Open dogs (2), it was Henmore King and Watcher again for reasons stated last week. In bitches (3), Wild Rose proved a winner again, but how Marguerite can beat Chips, we fail to understand. Chips beats Wild Rose in arch of loin, and had she a better front would win outright, but between the weedy Marguerite and Chips there is little comparison; Chips beating decisively in head, neck, body and quarters, and size, Marguerite being very small.

FOXHOUNDS (Major Taylor, Judge).—Two fair American hounds were shown, one in each class. Barney, the dog, was the winner here last year. Brush, the bitch, is quite a fair sort, both from the Sandy Spring Hunt Club. In English hounds there was one in each class, both from Mr. Harrison's kennel, Denmark and Rosemary, and now well-known.

POINTERS (Major Taylor, Judge).—An entry of seventy-nine pointers outside of New York is wonderful, and take the lot all through the quality was good and the field element very strong. Robert le Diable started the ball with a bloodless victory, Tempest being absent; the old dog is keeping himself well. In bitches Woolton Game beat Revelation, Revel III, being absent; she does it in depth and squareness of muzzle, rib and quarters. In open dogs the class had a round dozen, and Duke of Kent II. this time won first, followed by Sanford Druid, who is gradually moving up and is in better shape. Black Wonder, third, is all right behind the head, which is plain. Gun Gun last year was reserve; he is a "blue belton" pointer, of fairly good formation, faulty in muzzle, narrow, and falls away in quarters. Duke of Dexter, vhc., is getting heavy in front. Nicodemus of Ion has a long pointed muzzle, nice skull and ear, but is light behind; Lad of Culpepper is short in neck and body. Rod H., c., was hardly treated, though he was out of condition; he has a good frame, capital legs and feet and a good head; in shape he will prove a winner. Marshal Ney, c., is plain in head and faulty in neck and ribs. Bitches (six competitors), saw Telie Kent the winner, shown fat; she, however, beats Westminster Gladys in body, but is little superior taken all around. F. F. V., third, is a good-bodied bitch, strong quarters and loins, heavy in shoulders and plain head. Flake of Flockfinder, hc., has a short neck, heavy in shoulders and feet turn out, though a bit straight in stop and plain in muzzle; her head is a fair one.

Duke of Hessen won in challenge light-weights, while Lady Graphic did the same in the corresponding class in the absence of Rosa May, who arrived late. Lady Graphic was afterward protested by the handler of Rosa May for cezema, and disqualified; she had a little of it, but in no wise objectionably, and there were twenty dogs or more in the building that showed none of it. The disqualification led to a good deal of bad feeling, which was the most objectionable part of it. Dogs under 55lbs. had twelve entries, and was a very even class and bad to judge. The Major leaned toward his field proclivities and left head qualities out of consideration evidently. Rip Rap, who is a capitally made dog from his plain head back, was put first; his pasterns might be stronger. Arthur, the New York winner, had to play second fiddle this time; he has a much better head than the other and is fairly well formed all round for bench show type; he is the better dog. Conscript, third, has a short, plain muzzle, faulty ear carriage, stands back on pasterns, but is good in body, in hindparts and action. The well known Ridgeview Faust came reserve. Then the Major, feeling generous, just dumped a lot of commended cards among the rest; they all got something. Exile, vhc., is weak in pasterns, short in neck and muzzle, but well shaped; is inclined to be straight behind. Wild Dancer is light in eye, but has a fairly good head, is a bit straight in shoulder, but is well formed from there back and especially so in hindlegs. Glamorgan and Rock II., in the same division, are both well known and really better types of show dogs than the others of this division. Flockfinder III. and Heineken, hc., are well known in the field, the first named has a poor head, feet faulty and loin and quarters nothing to boast of, is light behind and needs

more chest. Rod H. is a dog worth a dozen of him. Heineken is heavy in shoulders, weak in back and toes turn in, but he has a fairly good head; Kenmar, hc., is thick in skull and short in muzzle. The bitch class had another warm entry of 17. The winner turned up in Maid of Kent, who has a fair head but not enough stop, back on pasterns, wide and heavy in front, very good in body and hind parts, but lacking true pointer type all round, cannot see where she beats Patti, second, as the latter is much better in front and head, and as good in other parts; Dame Bang, third, is faulty in ears and heavy front. Sweet Lavender, reserve, could be better in ear and rib. Cosset, vhc., is a bit off in muzzle, is well formed from shoulder back, is better in head than the average, and should have been higher up; like her better than Maid all round. Firenze, vhc., is faulty in feet and pasterns, plain straight back, good straight bone. Black Wonder's Sister deserves her letters; she was spoken of last week, and so were Spinaway IV., Elkwood Kate and Ellen Kent, the latter this time rightly placed with a c., according to criticism last week. Lady Margaret, hc., has a round, plain head and is

ENGLISH SETTER GLENDON.
Second, New York and Philadelphia, 1898.
Owned by the Rosecroft Kennels, New York.

straight in shoulders. Bloom, hc., well known, was hardly treated with two letters only in such company. The puppies were only fair and most of the novice dogs have been mentioned. Charlottesville Field Trial Kennels with an even lot of dogs beat the Hempstead Farm Kennels by force of numbers, but taking the best four of each, there could be but one decision when true bench show pointer type and quality are taken into consideration.

ENGLISH SETTERS (Major Taylor, Judge).—Many of the winners here are now familiar names. Donna Juanita was the only challenge representative. Open dogs had twelve entries, with four absent. First went to Antonio, who was placed over Ben Hur of Riverview; the latter is a better show dog, though a bit heavy in front, he has better head, legs, body and coat than Antonio. Third went to Ezra Noble. Hoosier Boy, reserve, is a well-made youngster, good bone, body and legs, head of fair shape, but strong in skull. Gath's Mark, vhc., keeps up well; he has many better points in head and body as a show dog than his kennel mate Antonio. Carnegie, hc., is a son of Monk of Furness, faulty in head and forelegs. Glendon and Prince Ben Ali were absent. In bitches the fielders were in it again, Countess Rush, Gossip and Laundress taking the money. Countess has a plain head, but has better neck, shoulders and bone

First and special, Philadelphia, 1893.
Owned by Mr. George Jarvis, New York.

than Gossip; Laundress loses to both in body and neck, good legs and feet, and well shown. Bessie, reserve, is a fairish all-round bitch, well placed. Belle of Blue Ridge, vhc., has a plain head and legs, could be truer, good behind. Virginia Rockingham certainly deserved mention. Dolly Noble, vhc., has faulty shoulders and set on of neck, head faulty, not stop enough and was shown fat. Nannie, c., has a fair head, but is faulty in structure fore and aft. Prima Donna and Spectre were absent. Tonie was the winning dog pup, beating Druid's Dick a trifle in body, but not in head and bone. Modest Girl, the winner in bitches, is out at elbow, wide in front, good behind. Blackmore Girl, second, had gone when I came to her. Fanchon, vhc., has a short plain face. Ezra Noble won in novice dog class, Hoosier Boy coming second. Bessie, spoken of above, won in bitches. Blue Ridge Kennels made a good display and won the kennel prize.

IRISH SETTERS (Major Taylor, Judge).—Another brilliant lot of dogs, both the leading kennels showing full hands. Seven in the challenge class for dogs make an imposing array and again old Tim wrested the honors from his fellows, Duke Elcho this time getting the reserve over Kildare. There is little between them. I like the latter's head and quarters better. Bitches saw Norma again the winner, but that Rose Sarsfield can beat Laura B. there are doubts. She may be a little better behind, but is not so good in front, head, ribs or color. The old bitch was shown fat. Montauk, Jr., and Barney, Jr., reversed their Philadelphia positions, followed by Young Tim, whom we have also commented on before. Tim's Dandy, hc., certainly deserved another letter, as he is a fairly good dog all round. Finley's Fleet, c., is flat-ribbed and plain behind. Marc Antony should have been vhc., but was passed over. Shamrock has a plain, thick head. The entries in the bitch class (9) have been seen out several times. Queen Vic repeated her list of victories and will now compete with Norma and the others of the higher class. Kildare Winnie, second, is rather straight in stifle, fair color, plain head. Fly, third, was second at New York; a pretty fair all round bitch. Claremont Heather and Delphine, vhc., have both been commented on lately, while Lady Cleveland, with only hc., was hardly treated. She is a little faulty in head, but is a nice all-round bitch. I forgot to say Marchioness, reserve, was in her right place.

No puppies entered and novice winners were in open class. Oak Grove Kennels took the special.

GORDON SETTERS (Major Taylor, Judge).—These showed up well, but there was little new from the past three shows. Ivanhoe and Leo B. in dogs and Duchess of Waverly and Becky Sharp was the order in challenge classes, the same as at Philadelphia. Archibald, in dogs (3), again won well from Duke, who is faulty behind. Windmill Shot, c., is narrow in front and light in face, faulty quarters. In bitches the Baltimore order was carried out and their comments stand. Lill Lavender, c., has a nice head, light in tan and no penicillings; feet are not truly placed either. In dog pups a fair one was shown in Freemont, in poor shape, especially round the eye, looks like making a fairly good dog, but needs much finishing. Fairmont, a litter sister to the dog, was alone in her class as well; she loses in front, too narrow, and head considerably to her brother; both have good tan and markings. The novice winners have been mentioned. Dr. Dixon of course took the kennel honors.

CHESEAPEAKE BAY DOGS (Major Taylor, Judge).—In the absence of Old Judge, Oak and Deacon supplied the winners in dogs; they seemed to possess good coats, bone and bodies. Dawn was absent in bitches (2) and this left an easy time of it for Flow.

SPANIELS (Mr. Mortimer, Judge).—Not very many of these and much the same as before. How is it the spaniel men are not showing up better? We have already stated the reason the Swiss Mountain Kennels were absent, but there should be lots of others. It is not enough that the spaniel men should make a special effort at New York only. Only one field spaniel present, Newton Abbott Laddie. Cockers saw Fascination alone in his class; the little dog looked well. In bitches competition was a little more "bothersome." If Mr. Bell needs more nomenclature, there it is. Troublesome beat I Say in cocker type all through. In dogs Brantford Jet's better cocker body and head sufficed to beat Leo, who is strong in head, longer in body, but straighter in front. Prince W., third, is fair, also too long in body and faulty in front, coat could be better. In bitches Realization, Woodstock Dora and Mary Queen of Scots was the order this time, and rightly placed, Realization winning every where but in front, and Dora being better in body than Mary. Leo was the only novice. Clumbers had no entries, and there was one Irish water spaniel that we have mentioned before.

COLLIES (Mr. Henry Jarrett, Judge).—This is the first time we have been able to write this popular young fancier's name down as judge. Mr. Jarrett is noted for his easygoing, cool, collected manner, and though he did not have an entry calculated to rattle any one, he went about his work without a trace of nervousness. In challenge dogs, first went to The Squire, who beats Ormskirk Shep, second, in front and head; Roslyn Dandy, who loses to both in head, getting reserve. In bitches, old Metchley Surprise added another to her score. In the dog class (7) there were some good ones, and here the new dog Gold Dust made his American debut. Coming over with such a brilliant reputation great things were expected. While we were not disappointed, he having one of the longest and cleanest heads we ever saw and beautifully carried ears, his hindlegs should be better bent and forelegs straighter in bone; his coat is very dense, but soft; he is a trifle short and small-sized, his expression is keen and collie-like, but he lacks the intelligent expression of a Mee, Scottilla or The Squire; his is truly what we should say is the modern-craze head, and there need be no fear of its getting thick and coarse; he is a smart dog, full of snap and vigor, and is a distinct acquisition to his plucky owner's kennel, the Seminole. Woodmansterne Trefoll, second, while he loses very much in ear, is better in true expression and is better behind, but not so dense in coat, though a trifle better in texture. Conrad II. came next, he is getting into shape again. Prince Wilks, vhc., has gone coarse, but carries a good coat. Chrysolite, reserve, is well known. Roxie, hc., is faulty in head, ear and front. Another new one, Gypsy Maid, won in bitches, her ears just tip over and that is all, she is short in skull and full in brow, good legs and feet, out of top coat but plenty of undercoat; a bitch that shows a good deal of quality. Second went to Ormskirk, Susie, who loses in substance and front. Crissey, third, is well known. Roslyn, reserve, is big in ear, in skull and chunky looking throughout. Roslyn Baby has a plain head, should be longer, and ears are down, her best quality is in texture of coat. Gold Dust had no competition in dog pups, Roxie Boy being the only competitor and he has too much stop and ear. Gypsy Maid also repeated her win, beating Fisher's it in muzzle which is snipy, skull which is thick and coat soft. In novice, Gold Dust beats Don all over, later thick and short in head. Gypsy Maid also won again over Roslyn Baby. I liked Flora, reserve, better for second, better body, coat and length of head and in ear. Of course Seminole Kennels took the kennel prize and Gold Dust won the special.

POODLES (Mr. Mortimer, Judge).—A surprisingly good show of this breed; that is, as far as numbers go, though there were but few that had much merit. Berrie and Dexter occupied their usual positions in the challenge class. In black dogs—the class being divided to allow Mikado, a white, a chance—Lion, the New York winner, won; he has a fairly good coat and is a well-formed dog. Ben L., second, droops in quarters a bit. Milo, vhc., is sharp in muzzle, coat woolly and open. Murat, vhc., has a soft, woolly coat, but is small and young yet. Betsey, the winner in bitches, has a poor, short coat, and was fat. Chloe, the New York winner, was second; she beats the other in muzzle and ear and coat. Dinah, third, loses in head and ear to the others. Mikado is a fairly well-formed white dog, short of coat.

BULLDOGS (Mr. Mortimer, Judge).—The same old "mugs" again, with just a new face or two to keep them in countenance. King Lud and Saleni fulfilled their challenge missions without competition. In dogs (5) the order was again Leonidas, Val Hampton, Rustie Sovereign, with Lord Sheffield vhc. He is faulty in lower jaw, not square enough, not out enough at shoulder, should be shorter in back and better rounded in ribs, feet are open, and he should be deeper in stop; good skull and ear. Trott, hc., with his crooked legs and indifferent skull and long muzzle, could not hope for any more; he has a good body. Addiscombe Gipse had no difficulty in beating Dairy Maid, whose head is small, but pretty well formed; lots of wrinkle and loose skin, and deep stop. Leonidas beat King Lud for the special, "which should endorse our criticism of last week."

BULL-TERRIERS (Mr. Mortimer, Judge).—These were heavy classes, as the club providing classes for different weights gave every one a chance. Attraction and Starlight furnished the challenge entries, the former winning. Starlight was hog fat; the winner is cleaner in head and a bit longer; both are good in legs and body, but of course Attraction, being in better shape, had a pull in this direction. In dogs over 30lbs. Young Marquis was placed over Sir Rudolph, beating him in front and also in head; the winner will make it interesting for Streatham Monarch when he grows up. Surefoot, as before, fell in behind the second winner, beaten in head and eye. The female division saw Vesper Bell, a good winner, better in head, shoulders and feet than Kit, second, who is flat in loin. Maggie Cline and Fidget, third and vhc., have been commented on before in these columns and the same may be said of Countess Dufferin, hc.

In the light-weight dogs only two out of the six entries showed up. White Duke winning, beating Cleveland, a puppy, in head and front, both are fair dogs. In bitches, Edgewood Wonder was again placed over Early Rose, beating her in jaw, in hind parts and set on of stern and carriage. Loumont Vixen, a little outclassed here, took third, Cleveland and Loumont Vixen were the winning puppies. At

traction won the special for best bitch. It is surprising how well this bitch keeps her form. A neat little Boston terrier was shown and won.

BASSETS (Mr. Mortimer, Judge).—Three of these quaint hounds turned out of the four entered, and Solomon's better head and general type, ear, body and bone, though out at elbow too much, sufficed to beat Bracelet, who is not so long or deep in head, nor so long in body. Third went to Drayman, who is coarse and leggy. The Dachshund entries were absent.

BEAGLES (Major Taylor, Judge).—The challenge class produced Emeline, Roy K. and Racer, Jr., and as the latter cannot hope to win in this company with his weak hind parts, typical dog though he is, the struggle lay between the two former. By the way, some of the critics seem to forget that a beagle should be a great extent a miniature foxhound, and as such and for the purpose for which he is bred, should not some attention be paid to running gear? One critic lately remarked, *ye* Baltimore judging, that Racer, Jr., can beat Roy K. That might be if the dog was not allowed to move and nobody touched him. As it is, in half an hour's run Racer couldn't get out of his own way comparatively. Emeline beats Roy in body and front; heads about equal, though I like Emeline's expression better. In open dogs Doctor, Hawkeye and Rockland Boy was the order, though were Jim Simmons, shown with less flesh, he can beat either in type and build. In bitches Lonely kept her pride of place, but Snow was in her wrong place according to our lights as second, which Fanny Reed is entitled to. Prudence was ho., about right. Rockland Kennels again gets the specials with the kennel and Lonely. It is to be hoped that we shall see something new at Elmira this week.

FOX-TERRIERS (Mr. Mortimer, Judge).—This judge generally draws a strong lot in this breed, and this show proved no exception, all the principal kennels being represented. Blenton Victor II. and Raffle were the challenge dogs and the little one had to give way to the other's better front, stronger jaw, longer skull and better body. Grouse II. was alone in her division. Five dogs came forward in the open class and Ripon Stormer shone out superior to Warren Tip Top in body, head and loin, Blenton Rasper coming third. The latter loses in bone, but has a better head, ear and front. Beverwyck Rufus, vhc., loses in head, front and foot to the others. Spinster proved the winning bitch. She is well known, is weak in muzzle, and ear not close enough carried. This time the judge put Warren Dorothy over Dusky II., and rightly, which we must say, indorses our criticisms of the last week or two. (FOREST AND STREAM does not care to be left, even in this indorsing business.) A lot of well-known bitches came along after, with reserve to Ripon Regina, vhc., to Lady Rosebery, hc., to Maystorm, Miss Domino and Danson, all commented upon lately, except the latter, whose full, round skull and want of rib are his worst faults. Blenton Sticker had an easy win in dog puppies and Blenton Vindex beats Seacroft Myrtle in head, size of ear and body, which is light. Novice winners followed other awards, principally Blenton Sticker winning easily. St. Broom had no difficulty in winning in wire-haired dogs, while Sister Pattern's superior head sufficed to explain her placing over Jess Frost.

IRISH TERRIERS (Mr. Mortimer, Judge).—The challenge class was warm—very—with Jack Briggs, Dumurry and Candour in the order named. Good dog as Jack Briggs is, he is lucky to beat Dumurry, who excels him in front, coat and body. Jackanapes had not much difficulty in scoring in open dogs (2) over Paddy Dorlan, whose thick head puts him out in good company; he is short of coat, too. Judy proved the winner in bitches, but I like Salem Witch much better in body, though not so good in head. Third went to Little Maid. Little Maid, a frequent winner, is out-classed here.

BLACK AND TAN TERRIERS (Mr. Mortimer, Judge).—Four well known animals came forward in challenge class, and Broomfield Sultan rightly won. In Prince Regent's present shape and following type Queen III., reserve, should have got the second. Salisbury was rightly vhc.; he is getting out of it now. Gypsy Girl, first, was the only open class entry present.

The Welsh terriers Dewr and Mephisto Dick represented the "Pouty Pridds" as usual.

BEDLINGTON TERRIERS (Mr. Mortimer, Judge).—Only two entries, Qui Vive in challenge class and Mignonette in the open division; she is snippy, neither are really good; don't seem to have the punishing heads of the old type, such as Miner, Shark, Tear'em, etc.

SKYE TERRIERS (Mr. Mortimer, Judge).—With a separate class for each sex Barnaby Rudge's position could not be assailed by any one as he was alone. In bitches Endcliffe Maggie and Islay occupied their Baltimore relations.

SCOTCH TERRIERS (Mr. Mortimer, Judge).—That great little dog Trec was again placed over Rhodman for reasons previously stated, while the modest Ashly Plug loses to both in many essential points but is a most persistent little chap, popping up at every show only to be "plugged" again. Kilroy and Kilree were absent and so was Cullbean and Wankie Diana from the same kennel. In Yorkshires Young Ted again took a ribbon in dogs, being alone, and Nell, a much inferior one, also took a ribbon in her class; she is light in tan and blue.

PUGS (Mr. Mortimer, Judge).—These classes were well filled and several new faces came out. Bob Ivy and Seminoe Dixie came together, the latter losing in muzzle and width of skull and stop. Midget, well-known, had a class to herself. In open dogs Little Fritz and Tip Top were placed as named, Fritz getting it in formation of muzzle, low in ear, but gets it again in body and curl. Dandy, third, is some degrees behind these two in size, head and ear. Bitches (3) saw a neat little bitch in Princess May, the winner; fairly formed head, needs a little more depth of body, is large in ear. Juliette, second, I could not find, while Nellie, third, carries her ears wide and is pinched in muzzle. Princess May won in novices, being the only entry.

KING CHARLES SPANIELS (Mr. Mortimer, Judge).—Yankee Boy put another ribbon to his credit, beating Blackstone, second, in length of ear, height and volume of skull, tan and coat. In bitches Twezel, too long in muzzle and dark in tan, won from Jessie, who is superior in head, shorter in muzzle, but was out of coat and faulty behind. They won easily over Queen in Blenheims, beating in muzzle, squareness and depth. Prince Charles had one entry, Bell, only a fair one; little long in muzzle and faulty behind. The only decent Jap was Jap, who beats Mandarin in color, forelegs and face.

ITALIAN GREYHOUNDS (Mr. Mortimer, Judge).—These were the same as at Baltimore, and although Jos. Lewis's dogs are not so good a size as Dr. Hoyt's, they are altogether better formed. The prize list tells their order.

The miscellaneous class though small was choice, one might say. First went to Boston Model, the whippet, and another first to Little Tarquin, a nicely formed toy bull-terrier; his worst fault is his weak hind parts. Spot, an indifferent Dalmatian with bad ears and spots not distinct enough on body, took third. Dash, an English water spaniel, had a first, being transferred.

BEAGLES.—CHALLENGE.—1st and 2d, Rockland Beagle Kennels' Emeline and Roy K. Reserve, Shrewsbury Beagle Kennels' Racer, Jr.—OPEN.—Dogs: 1st, Shrewsbury Beagle Kennels' Doctor; 2d, W. G. Harding's Hawkeye; 3d, Rockland Beagle Kennels' Rockland Boy. Com., E. A. Talbot's Jim Simmons. Bitches: 1st, Rockland Beagle Kennels' Lonely; 2d, Middleton Kennels' Snow. Very high com. and high com., Shrewsbury Beagle Kennels' Fannie Reid and Prudence.

SPECIALS.
MASTIFFS.—Best American bred and best in open class, Merlin. Best bitch, Miss Caution.
ST. BERNARDS.—Best kennel of roughs, W. C. Reick. Best kennel of smooths, E. H. Moore. Best American bred smooth dog, Melrose. Best American bred smooth bitch, Empress of Contocook. Best Ameri-

can bred rough dog, Altoneer. Best St. Bernard in show, W. C. Reick's Princess Florence.

GREAT DANES.—Best kennel, Cumberland Kennels. Best in open class, Major McKinley. Best in show, Melac.

RUSSIAN WOLFHOUSES.—Best kennel, Seacroft Kennels. Best in show, Argoss.

DEERHOUNDS.—Best in show, Roderick Dhu.

GREYHOUNDS.—Best kennel, Manatang Kennels. Best in show, Gem of the Season.

POINTERS.—Best kennel, Charlottesville Kennels. Best heavy-weight dog, Robert le Diable. Best heavy-weight bitch, Woolton Game. Best light-weight dog, Duke of Hessen. Best light-weight bitch, Maid of Kent.

ENGLISH SETTERS.—Best kennel, Blue Ridge Kennels. Best dog or bitch which has been placed at any public field trial, Antonio. Best in show, Donna Juanita. To breeder of same, Rosecroft Kennels. Best in open classes, Countess Rush.

JOHN BRETT'S ENGLISH SETTER REAL ENGLISH.

First, New York, 1893.

IRISH SETTERS.—Best kennel, Oak Grove Kennels. Best in show, Tim.

GORDON SETTERS.—Best kennel, Dr. Dixon.

COLLIES.—Best kennel, Seminoe Kennels. Best in open class and best in show, Gold Dust. Best bitch bred by exhibitor, W. G. Lee's Flora.

BULLDOGS.—Best in open classes and best in show, Leonidas. Best bitch, Salem.

BULL TERRIERS.—Best kennel, F. F. Dole.

BEAGLES.—Best kennel, Rockland Kennels. Best beagle, Lonely.

FOX TERRIERS.—Best kennel, L. & W. Rutherford's. Best in open classes, Pomboy Stakes, Blenton Vindex. Wire-hair, Saint Broom.

PUGS.—Best in open classes, Tom & Synon's Princess May.

ITALIAN GREYHOUNDS.—Best kennel, F. H. Hoyt's. Best dog in show, Joe Lewis's Spring. Best bitch, Joe Lewis's Sprite.

Toronto Kennel Club.

Editor Forest and Stream:
It is said that there is no finer club of its class in America than the Toronto Kennel Club (Incorporated). Its members are wealthy, its officers active, and its dogs are world-famed

GREYHOUND SOUTHERN BEAUTY.

First, New York, 1893.

Owned by Mr. A. W. Purbeck, Salem, Mass.

prize winners. In its well-equipped library the club held its second annual meeting on Thursday night, March 16, with Mr. Geo. B. Sweetnam in the chair. The various reports read revealed remarkable organism, progress and prosperity. The reading of an article entitled "A Lesson from the Toronto Kennel Club," penned recently by Hugh Dalziel, the eminent English author, for the London *Bazaar*, elicited great applause. Mr. Wm. Brodie, of London, Eng., presented personally the club a fine oil painting, handsomely framed, of his old favorite, the Irish Ambassador.

The following gentlemen elected to office for the ensuing year are well known to every dog fancier: President, J. K. Kirk; First Vice-President, J. S. Williams; Second Vice-President, C. A. Stone; Secretary, W. P. Fraser; Treasurer, H. J. Hill; Librarian, F. L. Mabey; Executive Committee—H. B. Donovan, F. H. Elmore, Fred. Habart, J. O. Bennett, H. P. Thompson and Geo. B. Sweetnam; Solicitor, D. M. Robertson, B.A.; Auditors—J. S. Williams and Geo. B. Sweetnam; Visiting Committee—R. P. Forshaw, H. P. Thompson and Thos. Armstrong.

After thanks were tendered to the retiring officers and to those who had generously contributed toward the library, Dr. Wm. Mole, M.R.C.V.S., and Mr. D. M. Robertson, B.A., club solicitor, delivered short addresses. The secret of the club's success is its educational advantages and the cordiality of its members.

Reflection Brought Correction.

Editor Forest and Stream:
I was very pleased to see by the letter of Mr. Edward Brooks in your issue of March 16, headed "Reflection Brought Correction," that there are others who think it strange for a judge to give a dog a certain prize and then in his comments on the awards disagree with himself. I am afraid exhibitors will fight shy of judges of this kind. I have no interest in the two dogs in question, Kilree and Trec, but being very much interested in the breed I cannot help thinking it would only be fair if the judge would give his reason for saying "the decision should be reversed." I am aware that it is very bad policy on the part of a judge to answer criticisms, but this is a special case, seeing the criticism is his own and exactly the opposite of his judgment.

SCOTTISH TERRIER.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

The Weight Classification of Pointers.

CHICAGO, March 11.—I desire to express my appreciation of the attentions bestowed on me by some pointer fanciers in consideration of my remarks on weight classification in recent issues of *FOREST AND STREAM*, that is, and let it be always so understood, if it be proper to do so. This uncertainty in respect to propriety is consequent to the remark of a gentleman of distinguished petulance, who wrote, in reference to the matter under consideration, as follows: "It is a question for the pointer men to settle, that is, if there is anything to settle." I feel that now and hereafter permission to write on pointers should first be obtained of the pointer men, or at least the manuscript should be submitted to them for approval or disapproval. Seriously I do not believe that the pointer men are so intolerant. An *ex cathedra* pearl of wisdom should not be ignored. I will heed what the *nom de plume* gentleman says. Not to do so would be to display an absence of proper veneration and sensibility to a *nom de plume* ukase. I proceed.

Pressure of important news matter has prevented me from giving this question earlier attention.

Mr. MUSS-ARNOLT, in *FOREST AND STREAM* of Feb. 9, in reply to my remarks, has a short article on pointer weight classification. The points he makes are substantially as follows:

1. That the gist of my argument is that the present division in weight compels bench shows to give more money. That such is "parsimonious and illogical." That no bench shows give more prizes than they have to, and are "perfectly regulated by the entries they get."

The following arguments are quoted literally:

2. "Otherwise Mr. Waters advances the new idea that all setters had the same right to weight division; why, he leaves us to assume. Because he and, I suppose, some more setter men think it unfair to the setters."

3. "Pointer classes have pretty nearly always and everywhere, here and in old England, been divided—as a matter of fact and necessity—by the peculiarities of the breed; the setters have never been divided, either by weight or size, as there is no cause for it. As to the relative question between light weight and heavy weight, in regard to field qualities, Mr. Waters lets his setter vein have a bit of freedom."

4. "Dog jockeying, as I call it, between the classes, should be more severely dealt with, I agree, and have to acknowledge it is done by men who would be very much insulted if you would call them sharpers, and it is nothing else."

The foregoing are the main arguments.

Taking Mr. Arnolt's first point into consideration it needs but a few lines to prove his mistake. English setters and some other breeds rank equally in importance from a bench show consideration with pointers. To divide pointers by weight and give each division an equal sum of prize money as each equally important breed receives, is illogical. Is it "parsimonious" to call attention to this unreasonable favoritism? If so, why?

I think that Mr. Arnolt is entirely mistaken when he says that no bench shows give more prizes than they have to, and are perfectly regulated by the entries they get. A bench show management makes its prize list first and takes its chances on entries afterward. Sometimes important classes do not have a single entry. Others have but one or two. Classes are arranged for some of the smaller toy breeds when it is a certainty that the entries will not equal the prize money. There is more to consider than the mere cash return derived from entries in making up a prize list. I think that Mr. Arnolt will on more mature consideration modify his statement that these matters are "perfectly regulated by the entries they get."

Mr. Arnolt is inconsistent at the beginning of his second paragraph. He says I advance the new idea that all setters had the same right that the pointers have to weight division. He then says that why it is so I leave them to assume. If they have the same rights, is not that the why? I do not think that it is unfair to the setters that they are not classified by weight. The real issue is that weight classification is unnecessary in respect to pointers. I do not know what the setter men think of it, nor do I discuss it in their interest. It is an issue by itself.

Concerning his third paragraph, I will quote the remarks of a writer who deems it proper to conceal his identity under a *nom de plume*. He says: "As a matter of fact the Chicago club has exploded nothing, neither is it the first nor the one hundredth that has given a premium list minus a weight classification of pointers." Here two eminent defenders of the pointers disagree. Settle it, gentlemen. The matter of fact is unsettled. Referring again to Mr. Arnolt's statement, what is the "necessity" which he mentions? What are the "peculiarities of the breed" which cause the necessity? In discussing the relation of light-weight and heavy-weight pointer, I cannot perceive wherein Mr. Arnolt is justified in implying prejudice on my part, from an assumption of a preference for the setter. The relative merits of the two breeds were not under consideration, nor even mentioned. The remark, therefore, was irrelevant and in a manner unjust.

In respect to the matter he calls "dog jockeying" it is a natural sequence to the artificial weight division.

This, I think, covers all that Mr. Arnolt has advanced. If he will scan his argument, I think he will not find a single reasonable explanation of the weight division, much less reasons for it. Were it true that the weight classification had always been in existence, it would not necessarily be a sound argument for it. Progress means the destruction of precedent and usage.

There are some other writers who have written on this subject, and incidentally therewith referred to myself. There is one misapprehension I wish to correct at the outset. One writer referring to me says: "So, likely his friends will deplore his weak defense of a still weaker case." There is no defense, nor has there been—it is and has been an attack on an unreasonable matter of bench show usage. My friends continue in good health and sleep well notwithstanding the gravity of the question.

To strip the subject of a lot of irrelevant matter, with which it has been festooned for the purpose of creating a diversion from the issue, it will be necessary to do some pruning of the ideas advanced by the opposition.

The *nom de plume* gentleman says: "What is there behind this weight classification talk? Another nigger in the fence?"

Following out that elegant simile, why not take fence and nigger and put them on exhibition publicly—if he can? The act would go far toward settling what is real and what is not, in respect to the colored gentleman in question, and the fence in which he so picturesquely is figuratively reposing.

The same *nom de plume* writer says: "Draw the curtain, Mr. Waters, lest daylight do enter." I know of no curtains, and, indeed, I do not know the need of any. Turn on the light. The issue is a very simple one. The position of a writer in respect to it must be very weak when he stoops to innuendo which has no foundation in fact, but which may have an effect in prejudicing the readers. But in discussions of this kind there is always one or more men, wise in many things though he or they may be, who are unfair, or over-cautious, or over-suspicious, or over wise, yet at all times great discoverers of grim bugaboos, and manufacturers of motives for their opponents. Yet an unfair argument to the author of it often brings a kind of notoriety and the gratified craving for a satisfied vanity. An affectation of purity, a dark frown, a few ambiguous nothings, a vague reference to a bugaboo and the thing is done—the disaffected hail the

coming reformer. For my own part I feel disappointed when a man is so heavy with dangerous bugaboos, and yet will only utter dark forecasts of disaster. Turn the bugaboo loose!

En passant, I beg leave to thank the *nom de plume* writer for informing me concerning what I do know, what I do not know, and for the affable manner in which he teaches me in regard to the weight and size of setters.

The *nom de plume* gentleman has intimated that it is necessary to breed pointers if one would be a judge of them, or in fact know anything about them. Could anything be more absurdly fallacious? The breeder should learn first of all what constitutes a good pointer. This he can learn by studying approved models. There is no reason why a man cannot profit by the experience of others. How can a breeder know when he has bred a good specimen if he has no knowledge of what is a good pointer till he has bred one? There is a lot of trash written about breeding. Light and heavy weight pointers are bred as it happens. Sometimes both kinds are in the same litter. A small sire or dam may produce large progeny, or a large sire or dam or both may produce small progeny. One of the largest heavy-weight pointers of the day is out of a very small bitch. When a breeder mates a dog or bitch, he is in profound ignorance in respect to what the weights of the progeny will be. There is no weight distinction which differentiates heavy and light weights in nature. It is wholly artificial.

As a working dog, there is no weight classification. There is no heavy-weight or light-weight work. The standard of performance is the same for all. Therefore the distinction is not on a working standard.

The distinction is purely a bench show classification. That it is a necessity to breeders cannot be shown in any principles of breeding. That a good pointer can hold his own well with big or small competitors, I as freely admit as the *nom de plume* gentleman does. If this is granted, the good dog needs no class protection. But where there is one good large pointer, there are a dozen or more not so good, and the class distinction protects them from formidable competition. They just grew big and awkward because they could not help it, yet they by so doing achieved protection for themselves. The dog which weighed near the weight line of classification, was a light-weight when his stomach was empty, and a heavy-weight when he was full. By steering him skillfully through the circuit, he could have numbers of walkovers in challenge classes, and there was no impediment to him having the double honor of a light-weight and heavy-weight champion. Handlers can relate some amusing stories of how it has been done.

Yet no one claims that there are two different breeds of pointers based on a weight distinction.

Of course the double money awarded them at bench shows is not necessary to perpetuate big and small pointers. The pointers would not come all of the same weight if there were no bench shows. They would still be all weights, as they are at present. Everything which is said about the weight classification of pointers is quite as applicable to setters.

The *nom de plume* gentleman says: "Evidently Mr. Waters is not aware that there is a far greater difference in the weights of pointers than in setters." No, I am not. If the weights were so, what would it prove? I think it would prove that breeders would do well to forthwith turn their attention to producing dogs somewhere nearer alike. Apparently the pointers are larger, for the big pointers, many of them inferior specimens, are protected from competition with the best specimens by class lines. The same protection would bring in the large setters. As it is at present the large or small setters have to meet all comers, and the former have a very poor chance to win. While each setter must meet all comers the pointer is protected from one-half of his kind.

The *nom de plume* gentleman says: "The reference to Gordons is highly amusing. Dog show managers cannot get a decent entry when there are two classes, and likely the pointers outnumber the Gordons by more than a thousand to one." Here the learned gentleman shifts his base of defense and holds forth the small number of Gordon setter entries and inferentially the small revenue they produce to the bench shows—the plea that it is necessary for reasons of breeding is abandoned. Such shifting is begging the question.

"Would Mr. Waters make as many classes for Mexican hairless and for chow-chows as for English setters?" Pointers might also be included. The question brings the inevitable *reductio ad absurdum*. The weight classification is one of revenue and not of breeding.

Again, the gentleman who betrays his identity says: "Mr. Waters is not aware that dog shows are dependent on dog owners, and that the latter possess a never-failing remedy for catch-penny management and Munsonian methods." Well, no, I did not know it just that way, nor do I believe just that way to be a fact. The Chicago club held a successful show and intend to hold another. If any one breed remained bodily away from a show the show would not necessarily be a failure, nor would it necessarily be a success if every individual of one breed was present. My knowledge of the matter is that show managers and breeders are mutually dependent and helpful. If shows ceased to exist the weight classification would cease with them. This idea of one breed being all powerful in making or marring a bench show is visionary. When the owners of any one breed remain away from a bench show they do themselves more injury than they do to the management of the show. Bench shows are the medium which have given the different breeds their high standing in public estimation and recognized monetary value in the market. To take any action which tends to their injury or destruction is equivalent to quarreling with their bread and butter, or at least with their canine interests. The question is one which admits of being discussed fairly on its merits. At least, I can perceive no reason for peevishness or ill temper. I believe that the dog men of America are intelligent and fair enough to appreciate the dispassionate discussion of any proper subject, and will not be misled by appeals to their prejudices, monetary interests or personal preferences where public matters are concerned.

I do not think that either pointers or setters should be divided by weight. There is much more I could say on this subject, but this will have to suffice for the present.

Where Is the Cocker as a Sporting Dog?

Editor Forest and Stream:

Time was when the cocker spaniel, instead of being merely a toy or show dog, was of some value to the sportsman as a hunting dog, and no one who has never hunted over a well-trained pair of these sagacious little dogs can appreciate what a great loss to the fraternity of sportsmen the change from work to play has been. For some portions of the United States, in the pursuit of grouse and woodcock, the cocker spaniel has few equals and no superiors.

Thick, tangled swamps, with a ground covered with almost impenetrable briars and laurel roots, where the setter or pointer can with only the greatest difficulty force his way, the one on account of his size, the other because of his silky coat, and where, if either of them do find the sought-for game, is useless because of his silence, are as open fields to these bright little dogs, whose joyous "gap" signals to the watchful hunter the flush of the grouse or woodcock. The cocker possesses to quite as great a degree as the setter or pointer the ability to scent game. They are of a sociable disposition, easily trained and are of more than usual intelligence. Two reasons come to me as a cause for, if I may say it, the degeneration of this dog. There may be more, but

these two are sufficient. The one is the popular fad for the black spaniel, the other the desire to breed so small and fine, and the reducing of the standard of weight, till all the working traits are gone and the comparatively toy dog is a natural consequence.

Now, that the black dog is a pretty fellow no one will deny; but who has shot over a black or solid liver dog in the late afternoon of an autumn day and not been thoroughly disgusted at his inability to distinguish the dog from an immature lump of sod at twenty or thirty feet? With the old liver and whites—I don't like the orange and whites, though their color would be as good to see in the wood or swamp—this trouble of not being able to distinguish the dog would be so little as to be almost unappreciable. One could see the pair, working eagerly ahead, as long as one could see to shoot. And yet a fashion, a popular fad, has almost taken this noble little dog "out of it."

My first dog, the "boy's dog," was a little liver and white cocker of the old McKoon strain; I don't remember the pedigree now. We didn't dwell so much on pedigrees then. And my heart still warms up, even at this late day, when all I have is the remembrance of past good old shoots over her. I trained her myself. Teaching her was a pleasure (who doesn't remember with joy the teaching of their first dog). And it really seems as if nothing was too hard for her to learn. For many years, till she got too old to even start up at the familiar whistle, I hunted her in old Connecticut, and many were the grouse and woodcock and even quail that came to grass when we three, Bess and I and the old muzzle-loader, went out in the cool afternoons after school. She would retrieve from land or water, hunt in any condition or state of the weather. No day was too cold or too hot or too long for her, and the next morning she was ready to go again and with as much vim as if it was the first hour of the first day.

What one of your present black "pretties" could keep up that pace and follow an enthusiastic, half-grown boy day after day, up hill and down, always alert, always ready, always obedient?—few I am sure.

Where are the old hunting cockers? The spaniel was always a favorite of mine, and it does seem hard to think that my boys, and theirs will never have a chance to work a pair of these game little dogs, are that perchance when they go to some of the big dog shows in the future, and look at the little saucy faced black things done up in cotton and silks and look at their snub nose, snarling faces, say with a sneer on their faces, "Well well! and did Grandad ever shoot over those things?" Ah well! all the good things are going, and sorry enough the old hunting cocker spaniel is one of them.

COCKER.

Flaps from the Beaver's Tail.

TORONTO, Canada.—Mr. C. A. Stone, one of the partners of the Forest Beagle Kennels, has purchased from Mr. T. G. Davey, of London, the English setter bitch Forest Heather, by Sir Tatton out of Forest Fern. Heather is the winner of a number of prizes, among which are first, novice, Toronto, and first, novice, and first, open, London, 1890. She was bred and originally owned by Mr. Stone, who sold her to Mr. Davey. Her dam, Forest Fern, is by Prince Royal out of Forest Ruby, Ruby being a litter sister to Forest Dora, the dam of Donna, owned by the Rosecroft Kennels, who have bred so many winners from their Rockingham—Donna cross; in fact many of the winners at the recent New York show in all the classes were descendants of Forest Dora.

I am glad to know that the famous wire-hair fox-terrier Dark Eye will soon be an inmate of Mr. A. Macdonald's kennel, Toronto. Mr. Macdonald is the owner of that good little dog champion Blemton Trump. Dark Eye, though only two years old, has won twelve first prizes besides a number of specials. They have been won at the leading shows and in the best company. At Edinburgh he won his most decisive victory under Mr. Vicary; besides winning first in his class he was awarded the gold medal for the best terrier in the show, rough or smooth, beating the crack smooth, Paniel. He also got the challenge cup and the Edinburgh Club silver medal. He is grandly bred, being by probably the best wire-hair ever bred, Carlisle Tyro out of champion Dartmoor Belle and is most suitable for poorly coated smooth bitches as well as his all round qualities for those of his own class. The price paid, which is private, was a big one. As the dog has a number of bitches booked for service before leaving the old country, he will remain for a few weeks in Mr. William Brodie's kennel in Scotland. Mr. Brodie carried out the negotiations between Mr. Macdonald and Mr. William Martin, of Ayrton, Scotland. Dark Eye on his arrival here will be put to stud at Detroit at the reasonable fee of \$25.

By the way, Mr. Brodie must have an "Ambassador" of some kind and has named one of the puppies he brought over the Canadian Ambassador. He is by the Irish Ambassador out of Tyrees Dunbar, and will make his debut at Elmira.

The president of the C. K. C. takes the ground that a meeting called by circular on March 14 to be held March 28 does not give the required fourteen days' notice, and has instructed the secretary to send out the notice that the meeting will be held April 8 at 6 P. M., at Queen's Hotel, Toronto.

At the annual meeting of the Toronto Kennel Club, held on the 16th inst., the treasurer's report showed that \$392 had been received during the year, and that a small balance remained on hand. At the close of the meeting the president read the following letter from Mr. Hugh Dalziel, and stated that Mr. Dalziel proposed writing a criticism of Dr. Mole's paper, to be read at a meeting of the T. K. C. The letter reads:

"HEATHER BRAE, Maybury Hill, Working, Surrey, Feb. 21.—I see that Dr. Mole read a paper at your club meeting Jan. 19 on 'The Origin and Development of the Dog.' If this was printed I shall be greatly obliged if you will forward a copy to me. I think the Toronto Kennel Club is to be congratulated in taking the course the above indicates. It is in strong contrast to the bickerings and pettiness of kennel club procedure in general and entirely to the credit of the Toronto association. Wishing your club the highest possible success, yours truly—HUGH DALZIEL."

Mr. A. D. Stewart, who bought the fox-terrier Raby Domino back from the executors of his late owner, has resold him to Mr. J. M. Dale, Brooklyn, N. Y.

A new bull-terrier, raised in a cellar and who has seen but little of the light of day, a litter brother of the Duke of Wellington and Siderio, will have a try for honors at Elmira.

Mr. Phil Brown's (Toronto), Irish terrier bitch Peggy has just whelped a full litter to Fenian Boy, nine, three dogs and six bitches. H. B. DONOVAN.

Canadian Kennel Club Meeting.

The following business is to come up at the executive meeting to be held April 8 at 6 P. M. at the Queen's Hotel, Toronto, Can.: 1. Matters in connection with selection of dogs for the World's Fair. 2. Letters and declarations from Mr. F. H. F. Mercer referring to his disqualification. 3. "Sir John disqualification." Mr. Bell having declined to comply with ruling of committee at last meeting. 4. Election of new members. 5. Incorporation. 6. General routine business.

DOG CHAT.

Toronto Kennel Club.

The Toronto Kennel Club seems to be formed on a solid basis and the methods they are pursuing in building up such a strong club is attracting the attention of outside dog men. On the executive are three bankers, three civil servants and two editors. Clubs run on such lines cannot help but increase the interest in dogs in the locality in which they have their being. The association of such gentlemen and men of standing in their community tends to eradicate that foolish idea so prevalent once, and now to some extent, in the popular mind, that to be connected with dogs in any public manner meant a loss of moral attributes. Such clubs should spring up in every town. It is not necessary to give shows; often the holding of a show sounds the death knell of further interest in dogs—this when the venture has resulted in a loss. Much good can be done by monthly social gatherings, informal talks and members' shows. These draw in the young fellows of the town and before these know where they are they are casting round for a good bred dog or two, and some breeder or other in the country derives a direct benefit therefrom by supplying the requisite animals. Toronto is happily placed, the Fair people assume all the responsibility in providing a show such as probably the T. K. C. could not hope to give. Relieved of this burden the local club can enter heart and soul into its proselyting mission and furthering "dog interests" in Canada. We wish the club every success and hope its good example will be followed by others. The Hamilton Kennel Club is an older club and is doing good work on similar lines.

Denver Dog Show.

The Continental Kennel Club once more issues the premium list for their show at Denver, Col. The show will take place April 11 to 14. The arrangement of prizes, while not startling in amount, is solid and affords considerable picking, for them with the right material. Mastiffs, St. Bernards, great Danes, greyhounds, pointers and setters, spaniels, collies, fox-terriers and pugs have challenge classes with \$10 prize money; open classes get \$10 and \$5. Other breeds get \$10 and \$5 in open and the smaller toy classes, etc., get \$5 and \$2. For the larger breeds the club gives a kennel prize of \$20, others having one of \$15. The entry fee for the large dogs is \$3, Blenheims, Italian greyhounds and whippets \$2, and all others \$2.50. Having in view the fact that Denver is not "next door" by any means, the club, as an inducement to handlers to bring out good teams from other States, put up a handler's prize of \$300—\$200 to first (provided that fifty dogs are shown by one handler), \$65 to second and \$35 to third—to the handler showing the largest number of dogs in the best show condition. We rather fancy that a team of fifty dogs after the circuit just ending will be more than any handler can secure. These prizes are not open to local competition. Entries close March 27, with Mr. F. W. Rand, Denver, Col. Mr. John Davidson will judge all classes and Mr. C. H. Withington will superintend. The amount of money donated by the club foots up to \$1,750, which is more than double the amount given in a recent issue.

Fake Pictures.

A correspondent wishes us to expose the fact that the Philadelphia *Inquirer* published a cut of a Skye terrier published in *Stock-Keeper* and owned in England, as one of the dogs shown at the Keystone Kennel Club show. It is pretty well known by this time that certain cuts of well known dogs are made to do duty in the daily press from show town to show town, and while dogmen may detect the innocent fraud it is a matter of so little moment to the general public that we do not think there is one exhibitor who would take the trouble or be willing to jeopardize the success of a show by any action that would expose the fake. In the papers devoted to kennel matters it is different, and the palming off of a picture of one dog for another may tend to much confusion and harm, and should be severely frowned upon. Mistakes will occur, but the FOREST AND STREAM is always ready to acknowledge one, so no harm is done.

Importing Breeding Animals.

Secretary Carlisle has issued a circular in regard to the importation of animals for breeding purposes, which modifies the existing regulations by making them in some respects less stringent. The previous requirement of "four top crosses" is reduced to "three top crosses." Whenever the required certificates cannot be furnished at the time of arrival of the animals and the Collector is satisfied from other evidence that the animals would be entitled to free entry, they may be so admitted on bond for the production of the required certificate. A new list of recognized registries has been promulgated for the guidance of collectors of customs.

Dr. H. T. Foote has sold the well-known black and tan terriers Rochelle Majestic to Mr. McLean, Ottawa, Can.; Rochelle Sultana to Mr. Erdman, Janesville, Wis.; Rochelle Olata to Mr. Tiernan, New York; also several puppies. The best of his dogs are still unsold, but such big winners should soon be placed, as no reasonable offer will be refused.

We are sorry to hear from Mr. Siddons that Argyie Sandy, the promising collie puppy that won at Nashville and was vhc. at Chicago, died two weeks since of pneumonia. After the Nashville show he was sold to Mr. R. T. Mott, of Chicago. Belvoir Van, the fox-terrier that Mr. Siddons purchased at the Chicago show, is doing well and will be shown at Indianapolis.

As an additional special at Indianapolis, Mr. J. E. Dager, Toledo, O., offers services of Toledo Blade for best bitch sired by Cincinnatians. Mr. Dager's dogs will be at the show.

The Northern Ohio Poultry, Pet Stock and Kennel Association, Akron, O., have claimed the dates Jan. 31, Feb. 1, 2 and 3, 1894, for their next show. H. F. Peck is the secretary.

Another of the Philadelphia Kennel Club supporters was to take place last Tuesday evening, and again a dog show calls us another way. If these suppers only hold out and the dog shows give us a rest, "we'll be there."

We regret to hear that Mr. Pickhardt's (owner of the Rinda Kennels) noted pointer-bitch Duchess of Naso is dead. She died last week through inflammation arising from a bone or some hard substance lodging in her throat. This is a serious loss to this kennel, but Mr. Pickhardt's feeling of loss is blunted somewhat by the reflection that he has a young dog in his kennel to bring out at New York next year that is to—well, we shall see.

We must reiterate that matters of general importance should be sent to the Forest and Stream Pub. Co., and not to the kennel editor personally. During our absence at dog shows numerous circulars and news notes concerning shows, etc., are neglected because they come in our personal mail. The following is a sample, and, of course, opened too late to do any good: "The New England Kennel Club has extended to the New England Field Trial Club the following courtesy: It will bench together all dogs belonging to members of the N. E. F. Trials Club, and properly designate them as such. A large class of purely working dogs will be a prominent feature of the show, as well as of great interest to our mem-

bers. We hope that each and every member will take personal pride in making this class as strong as possible without regard to breed or bench show qualities. The above is a new thought and we hope the lateness of the hour will not deter you from entering your dogs. Entries close Saturday, March 18. J. W. HAYWARD, Pres., WM. M. LOVERING, Sec'y, N. E. F. T. Club (Taunton, Mass., March 13, 1893).

Mr. F. Senn sold his King Charles spaniel Yankee Boy during the Washington show to a lady resident of the city. The price paid was nearer three hundred than two.

His Lordship and Lady Venn arrived all safe at Mr. Dole's quarters in New Haven and will be shown at Boston.

The greyhound Spinaway is now on her way home, having been served by Col. North's Young Fullerton, who is counted one of, if not the, fastest greyhound in England. Spinaway will probably be shown at Chicago in June. She comes over in charge of Mr. J. F. Smith's St. Bernard kennel man, who is bringing two St. Bernards for Mr. Symonds, who is getting them out for a Western gentleman, as stated some time since in FOREST AND STREAM.

During Thursday the W. C. K. C. invited the children of the industrial schools to view the dogs, and the rising generation showed their appreciation by simply swarming all over the building. The collies and fox-terriers never had a moment's peace, the continual bustle in the aisles exciting them to an unwonted degree. Prof. Batchelor never had a more appreciative audience, and certainly some of the tricks his dogs perform deserve every praise.

The Watson-Bell charges have been referred to the Maryland Kennel Club for action, as we pointed out that they should have been in the first instance. The M. K. C. sent for Mr. Bell, and we understand that the upshot of the affair is that if Mr. Bell will make a public apology to Mr. Watson the latter will withdraw the charges. This, we are told, Mr. Bell is willing to do.

It was desired that Mr. J. R. Krehl should become one of the committee of the English Kennel Club, but he very rightly declined the honor, preferring to hold an independent position.

Mr. F. S. Kinney, New York, has purchased from Mr. T. S. Bellin, Albany, N. Y., the wire-haired fox-terrier Jack Trick, third, Brooklyn; first, Gloversville; reserve, New York.

The following new advertisements are to be found this week in our kennel business columns: For sale—Pointers, Thos. Johnson, A. P. Griswold; setters, Thos. Johnson, G. S. Raynor, Catherine St. Kennels, Owner. Mastiffs and bloodhounds, J. L. Winchell; great Danes, Harrison; hounds, F. Dotzert, C. F. Kent; fox-terriers, E. C. Ray; St. Bernards, Peninsular Kennels. Geo. S. Thomas offers to take dogs to board and condition. The Kildare Kennels advertise Kildare Beyer at stud. Mr. A. W. Shaw, a member of the Passaic Gun Club, had the misfortune to lose his English setter. A liberal reward is offered for his return.

Elmira Show.

ELMIRA, N. Y., March 27.—[Special to Forest and Stream.] This show opened this morning with 221 entries. Few dog men here. St. Bernards very poor, also English setters and pointers. Best breeds are wolfhounds, fox-terriers, beagles, bull-terriers, spaniels and Irish setters. Wooden benching. Bad weather. No attendance yet. H. W. L.

The Detroit Awards.

DETROIT, Mich., March 21.—[Special to Forest and Stream.] Following are the awards made to-day:

MASTIFFS.—CHALLENGE—Dogs: 1st, E. L. Kimball's Elkton. Bitches: 1st, J. J. Lynn's Lady Dorothy.—OPEN—Dogs: 1st, Dr. G. B. Holcomb's Prince Cola; 2d, J. J. Lynn's Cardinal Beaufort Mint. Bitches: 1st, Dr. L. Young's Maudie Beaufort; 2d, B. F. Lewis's Ethel; 3d, Tracy Bros.' Belle of Detroit.

ST. BERNARDS.—ROUGH—Dogs: 1st, C. J. Bousfield's Lord Dante; 2d, Mrs. J. E. Dager's Lochlin; 3d, Anna M. Griffin's Earl Douglas. Bitches: 1st, C. J. Bousfield's Lady Taylor; 2d, Detroit St. Bernard Kennels' Lady Hickley; 3d, C. A. Pratt's Duchess Lomond.—SMOOTH—Dogs: 1st, C. A. Pratt's Alton II. Bitches: 1st, H. Gorman's Solo. Bitches: 1st, C. A. Pratt's Alton II. Bitches: 1st, H. Gorman's Solo. Bitches: 1st, C. A. Pratt's Alton II. Bitches: 1st, H. Gorman's Solo.

GREAT DANES.—CHALLENGE—Dogs: 1st, Cumberland Kennels' Melac.—OPEN—Dogs: 1st, Illinois Kennels' Major McKinley; 2d, J. W. C. Glynn's Lord Wolverton. Bitches: 1st, Osceola Kennels' Neverzell; 2d, Cumberland Kennels' Chamion.—BLUE OR HALLGUM—Dogs: 1st and 2d, Dr. G. Nicolai's Brutus and Pascha II. Bitches: 1st, Dr. G. Nicolai's Iris.

DEERHOUNDS.—Dogs: 1st, Mrs. D. McLaine's Paul Potter; 2d, W. H. Muir's Bruar II.

GREYHOUNDS.—CHALLENGE—1st, A. W. Purbeck's Gem of the Season.—OPEN—Dogs: 1st, W. Sarvis's King Dick; 2d, Mr. Ireson's Rawer. Bitches: 1st, A. W. Purbeck's Wild Rose; 2d, Manantag Kennels' Chipp.

POINTERS.—CHALLENGE—Dogs: J. R. Daniels's Count Graphic. Bitches: T. G. Davey's Lady Gay Spauker.—OPEN—HEAVY—Dogs: 1st, J. B. Daniels's Boxer; 2d, A. S. Johnson's Duke O. Bitches: 1st, T. G. Davey's Josie Bracket; 2d, T. Donoghue's Sol.—LIGHTWEIGHT—Dogs: 1st, L. A. Biddle's Glamorgan; 2d, Kalamazoo Kennels' Wonderful Lad. Bitches: 1st, T. G. Davey's Miss Tumour; 2d, J. R. Daniels's Duchess.

SETTERS.—CHALLENGE—Dogs: 1st, J. E. Dager's Cincinnati. Bitches: 1st, W. B. Wells's Cambria.—OPEN—Dogs: 1st, Wash-ton Kennels' Wash-ton Grouse; 2d, W. B. Wells's Matane. Bitches: 1st, Dr. J. Kime's Lady Patch; 2d, C. A. Rathbone's Toledo Queen.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Oak Grove Kennels' Kildare. Bitches: 1st, Oak Grove Kennels' Norma.—OPEN—Dogs: 1st, T. Sharpless's Blarney, Jr.; 2d, D. L. & C. Carmichael's Queen. Bitches: 1st, W. H. Beazell's Queen Vic; 2d, Oak Grove Kennels' Norma.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, Dr. S. G. Dixon's Ivanhoe. Bitches: 1st, Dr. S. G. Dixon's Duchess of Waverly.—OPEN—Dogs: 1st, George Meister's Louis S.; 2d, Dr. S. G. Dixon's Duke. Bitches: 1st, Dr. S. G. Dixon's Princess Louise; 2d, George Meister's Fly M.

FIELD SPANIELS.—CHALLENGE—Dogs: 1st, G. Bell's Newton Abbott Laddie. Bitches: 1st, J. A. Spracklin's Queen.—OPEN—Dogs: 1st, J. A. Spracklin's Daisy Dean; 2d, W. G. McCollagh's Gipsy Queen.—LIVER—J. A. Spracklin's Bob II.

COCKER SPANIELS.—CHALLENGE—Dogs: 1st, G. Bell's Fascination. Bitches: 1st, G. Bell's I Say.—OPEN—Dogs: 1st, Luckwell & Douglass's Woodland Prince; 2d, Jersey Cocker Kennels' Pienpaia. Bitches: 1st, G. Bell's Realization; 2d, Jersey Cocker Kennels' Nona II.

COLLIES.—OPEN—Dogs: 1st, McEwen & Gibson's Scotsman; 2d, Saunders & Mighton's Finisbury Duke; 3d, S. H. Wickes's Streatham Laddie. Bitches: 1st, Thyme & McFadden's Bernice; 2d and 3d, McEwen & Gibson's Dawn and Vanity.

DACHSHUNDS.—Dogs: 1st, W. Loeffler's Hundesport Bergmann; 2d, C. F. Gentz, Jr.'s Hundesport Zaenker. Bitches: 1st, W. Loeffler's Lina K.; 2d, C. F. Gentz, Jr.'s Lida L.

BEAGLES.—CHALLENGE—Dogs: 1st, Rockland Beagle Kennels' Roy K. Bitches: 1st, Jude M.—OPEN—Dogs: 1st, Shrewsbury Beagle Kennels' Doctor; 2d, Middleton Beagle Kennels' Adam. Bitches: 1st, Rockland Beagle Kennels' Loney; 2d, Middleton Beagle Kennels' Snow.

B. WATERS.

Judges for the World's Fair.

Editor Forest and Stream: I have before me the entry blanks for the exhibit at the World's Columbian Exposition, June 12 to 17. The first thing that occurs to me is, "who will be the judges," and no doubt the same subject is uppermost in the minds of hundreds of breeders and exhibitors throughout the country. Believing that much good can be effected by frank, open discussion, by and between the canine owners writing under their own names, and not a *nom de plume*, in order that all may know

who is writing, I will open the ball by giving my opinion regarding the selection of judges for this kennel exhibit.

First, the gentlemen selected should be American citizens with recognized ability and known to be above petty preference for any strain or kennel, honest in their judgment and fearless in their decisions. They should not be in any way connected with a kennel, sportsman's journal, receiving or expecting to receive financial advantage from dogs or their owners in any way whatsoever. Judges that possess the moral courage to award a prize to the best dog, regardless of whether it be owned by John Smith in Oshkosh, or a wealthy, influential kennel situated elsewhere; in plain English, "judge the dog and not the owner." Select gentlemen who have no axe to grind.

I have two nominations to make, as coming up to my standard for the World's Fair kennel show, names that have always carried weight and are without a taint, although before the canine world for thirty years. They are Hon. John S. Wise, judge for pointers; "Honest" John Davidson, judge for English setters.

Such gentlemen would bring out the full entry and their decisions be accepted with more general satisfaction than any two judges that are eligible. Now is the time for the exhibitors to express themselves publicly and I trust they will not be backward, but I do not think an article worth publication on this subject unless it be signed by the author.

GEORGE W. LARUE.

Death of J. M. Tracy.

ALL sportsmen will join us in expressing sorrow at the news of the death of this well known artist and sportsman. Though it was rumored that he was very ill, even his own family, until the last few days, did not suppose the illness would have a fatal termination. He died at Ocean Springs, Miss., the morning of March 20. Mr. Tracy was born in Illinois, where, as a young man, he taught school. On the outbreak of the war he joined an Illinois regiment and served throughout the war, taking rank finally as a captain. After the war he went to Paris and studied painting for ten years. In 1875 or 6 he returned and located in St. Louis, Mo., as a

MR. J. M. TRACY.

portrait painter. At the dog show there in 1877 he saw Berkeley, the Irish setter, and was so pleased with him that he begged Mr. Turner, his owner at that time, to allow him to paint the dog. He did so and Mr. Turner was so pleased with the picture that he purchased it and introduced him to other friends in the St. Louis Kennel Club, among whom he secured several commissions to paint the celebrated pointers of that day. Mr. Tracy saw an opening and taking advantage of it he became the leading animal artist, as far as dogs are concerned, in America. There are few field dogs of note whose lineaments he has not transferred to his canvas.

Mr. Tracy naturally became an ardent sportsman and has been interested in field trials for years past. With the Central Field Trials he has been intimately connected, and what this organization will do now is a question that is asked on every side, for on Mr. Tracy fell all the arrangements of the trials for the last three years. He was also a good field trial judge, and at times officiated in the setter and pointer ring of the W. K. C. show. Taking his subjects from the field and having an intimate knowledge of field work, he was able to impart admirable action and life into his pictures of pointers and setters. At the time of his death Mr. Tracy was busily at work on some trotting picture for Mr. Hammond and in repainting the finest subject he ever painted, "The Chesapeake Barnum Retrieving a Goose." This Mr. Tracy himself considered his finest effort. Unfortunately, after exhibiting the picture at the Paris Exposition, where it was greatly admired, he sent it on its return to this country to a dealer's to be reframed, and it was soon after burned up. To make good his promise to show the picture at the World's Fair, it is thought that he has been overworking himself, and this led to the illness that terminated in his demise. Mr. Tracy resided at Hempstead, L. I., and leaves a wife and three children. His wife had word of his serious illness, and starting last Friday for Ocean Springs arrived before his death. Mr. Tracy had a wide circle of friends among sportsmen in this country and his death will be deeply felt.

"Kennel Secrets."

It has always been the cry of the novice and even the large kennel owners that in the books hitherto written on dogs and kindred subjects, he real practical knowledge to be gleaned therefrom is superficial. Either the advice is so clouded with technical terms so as to be almost unintelligible to any one but a medical student, or when clothed in every-day language the advice given is vague and only indicates what should be done, not how to do it. This, however, cannot be said of "Ashmont's" magnificent new book, "Kennel Secrets." The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint, that could possibly occur to a man of wide experience with dogs. As "Ashmont" says: "Not a few popular beliefs have been antagonized, but seldom other than those which owe their force to antiquity and repetition. Mystical speculations and ungrounded theories, calculated to invite confusion, have been excluded in so far as possible; and the measures advocated are such only as rest on bases proved sound by observation and experience. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. The simplest language has also been chosen, and needless technical expressions excluded, to favor ready understanding in the least experienced."

This is not a book that advocates at every line a treatment of drugs, but gives one an idea of the best methods of treat-

ing dogs in a natural and kindly way. The first part is devoted to management, and here the question of natural diet and the varieties of animal and vegetable foods, their constituents, applicableness to dogs in confinement and a work, the quantity that should be given, etc., are fully treated. If you have a dog that puts on too much flesh or one that won't put on any, turn to the chapter that treats of this very important subject, and "Ashmont" tells you what to do and what is more, gives his reasons for it. The novice and in fact every one has trouble in raising pups, and to know what to give them, well, even the most experienced can learn a thing or two about this in "Kennel Secrets." Any one who thinks a barrel or any cover good enough for a dog will be enlightened on that subject by perusing the chapter on Kenneling.

Then the drinking water is considered, a vital question sometimes with dogs. If you don't know how to wash a toy dog or a St. Bernard before you tuck up your sleeves, see what "Ashmont" has to say about it. The lively flea, the curse of some kennels, is the subject of another long chapter, and he fares pretty badly when the Doctor gets through with him.

Part II. relates to exhibiting and getting dogs into condition for shows. This subject is exhaustively treated, and though we thought we knew a good deal about this part of a dog's life we read the chapter through with a result that our knowledge was greatly increased, and satisfied that the amateur could ill afford to miss such sound advice. It is not enough that "Ashmont" tells you how to get your dog ready for a show, but he tells you the best way to go about it to land the dog in good shape in the show building, and he does not leave your dog until the show is over and he is safe back in the kennel again. The subject of the absurd notions exploded. It is well known among show-goers and those who have to spend much time in shows that a badly disinfected—badly because disinfected too much so—will affect a man's throat and nose passages more or less, and in the same way the dogs suffer, too. "Ashmont" advises permanganate of potassium as the most efficient disinfectant, not only because of its well known efficacy, but on account of its being odorless.

Part III. is a most important one. This is devoted to breeding. The selecting of the sire is discussed, treatment of the bitch in season; in fact, the reader is carried along, so interesting are the pages, until the puppy has been whelped, through its puppyhood and onward until the finished, trained dog stands before him in imagination. Other chapters are devoted to intestinal parasites and their eradication. But all this time your attention will have been arrested every page or two by the portrait of some celebrated dog. All the pictures are half tones from photographs taken from life, so that the natural dog is seen. This part of the work alone is so educational that the book should find a place in every school library in the country.

The portraits are of their relative proportions. Some of these pictures are valuable as portraying past champions long since gathered to their fates. The fox-terrier pictures are especially good and so are the Irish terriers and toy spaniels. The faces of many noted dog men will be found interspersed and in all ninety-six pages of illustrations are given, some pages containing no less than six dogs. Not the least interesting are the head and tail pieces to the different chapters, and which are generally appropriate to the chapter at the head or tail of which they are found. In the limited space at our command we cannot say more, but we have said enough to show our appreciation of a work as unique as it is useful to the dog breeder and exhibitor as well as the one dog man who loves his dog as a companion. The last few lines of Byron's memorable poem occur to us when we look at "Kennel Secrets," and had he lived at the end of the century instead of its commencement we doubt if they would have been penned:

"Unhonored falls, unnoticed all his worth,
Denied in heaven the soul he held on earth;
While man, vain insect, hopes to be forgiven,
And claims himself a sole, exclusive heaven."

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.
Nancy. By C. H. Mills, Baltimore, Md., for black and white ticked English setter bitch, whelped July 8, 1892, by Toledo Blade out of Grace M.
Golden Gem. By J. B. Martin, San Francisco, Cal., for white fox-terrier bitch, whelped Oct. 17, 1892, by Blanton Reefer (Venio—Rachel) out of Blanton Brilliant (The Moonstone—Media).

BRED.

Prepared Blanks sent free on application.
Dinily—Dusky Trap. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Dinily to Regent Kennels' Dusky Trap, Nov. 30.
Tenny—Desperado. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Tenny to their Desperado, Sept. 1.
Tessa—Triton. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Tessa (Pitcher—Little Trotter) to their Triton, Nov. 6.
Trim—Brittle. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Trim (Warren Laird—Warren Tackle) to Rochelle Kennels' Brittle, Dec. 21.
Daisy—Triton. T. M. Rice's (Philadelphia, Pa.) fox-terrier bitch Daisy to Lansdowne Kennels' Triton, Oct. 1.
Hare Bell—Flute D. E. H. Bragg's (North Sidney, Me.) beagle bitch Hare Bell (Chubb—Mystic II.) to W. E. Deane's Flute D., Feb. 1.
Josephine—Earl Douglas. Tuxedo Park Kennels' (Indianapolis, Ind.) St. Bernard bitch Josephine (Benmore—Lady McBeth) to Belle Isle Kennels' Earl Douglas (Earl Butte—Ellen Terry), Feb. 15.
Constance—Earl Douglas. Belle Isle Kennels' (Detroit, Mich.) St. Bernard bitch Fernwood Urania (champion Victor Joseph—Fernwood Inez) to their Earl Douglas (Lord Bute—Ellen Terry), Jan. 27.
Dudley Lilla—Sorrocco. Belle Island Kennels' (Detroit, Mich.) St. Bernard bitch Dudley Lilla (Earl Douglas—Bernie II.) to J. C. Guellet's Sorrocco (Othello—Bernie), Jan. 9.
Loz—Frank Forrest. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch champion Loz (Keno—Fly) to his champion Frank Forrest (Riot—Skip), Feb. 26.
Vic—Bathos. Dr. T. H. Blodget's bull bitch Vic to J. H. Mathews's Bathos, Feb. 11.
Dolly Tesler—Bathos. J. H. Mathews's bull bitch Dolly Tesler to his Bathos, Feb. 17.
Derby Hebe—Bathos. J. H. Mathews's bull bitch Derby Hebe to his Bathos, Feb. 19.
Shamrock Belle—Onota Don. E. Beaver's (Conshohocken, Pa.) Irish setter bitch Shamrock Belle (Heanmore Shamrock—Daisy) to H. G. J. Hollowell's Onota Don (champion Chief—Bizeena), Feb. 16.
Floss—Onota Don. H. G. J. Hollowell's (Conshohocken, Pa.) Irish setter bitch Floss A. C. Wimebago Max—Vastia) to his Onota Don (champion Chief—Bizeena), Feb. 11.
Nat L.—Onota Don. Jas. Longhery's (Conshohocken, Pa.) Irish setter bitch Nat L. to H. G. J. Hollowell's Onota Don (champion Chief—Bizeena), Feb. 8.
Fan—Count Noble. H. O'Reilly's Gordon setter bitch Fan (Don—Fanchon) to Inwood Kennels' Count Noble (Ben—Belle).
Blumont—Count Noble. Fenwick Kennels' Gordon setter bitch Blumont (Beumont—Belle Stephen) to Inwood Kennels' Count Noble (Ben—Belle).
Flossie—Blanton Reefer. Dr. J. McCarthy's (Tiburon, Cal.) fox-terrier bitch Flossie (Blanton Shiner—Jess) to J. B. Martin's Blanton Reefer (champion Venio—champion Rachel), Jan. 29.
Grit—Bathos. J. H. Mathews's (New York) bull bitch Grit to his Bathos, Feb. 5.
Gyp—Troy. Multnomah Kennels' (Portland, Ore.) Chesapeake Bay bitch Gyp (Duke II—Jess) to their Trouble (Duke—Dundee), March 5.
Nellie Gordon—Gordon Grouse. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Nellie Gordon (Shot—Brownell's Quail) to his Gordon Grouse (Ben Butler—Gordon Rose), March 2.
Gordon Norah—Gordon Grouse. C. T. Brownell's (New Bedford,

We lay that night beside a handsome schooner yacht, the *Idler*, which now hails from Chicago, but was once widely known in Eastern waters.

Of course we didn't intend to make a run every Sunday, but as all cruisers know, one can confidently count on a fair wind for this day. Yet the fact remains that we slipped out of harbor next morning with a fresh wind from the east. We bowled merrily past the *Graham* Shoals buoy and had as the *Idler* sailed fair ahead when the wind fell light. Then it jerked round to the west, and, close hauled on the starboard tack, we drove into a dense fog. The mate firmly believed that our safety depended on his lungs and he kept the fog horn screaming until the reed was blown out.

"I wish we had the 5ft. horn that lies in the bottom of the lake," said Dan, "but the Elephant got his feet against it at night, and you only too vividly remember the fair ahead when the wind fell light."

"Hullo, ahoy! Down helm!" shouted the skipper as a great shadowy spectre came towering out of the mist. It was a magnificent vessel standing on the same tack we were on, with every stitch sheeted home and taut as a bowstring.

"Is it always foggy here?" her master had time to ask as we dropped into her wake.

"Never saw anything else," shouted the irrepressible deckhand. With such a warning the boat took out with eyes as well as ears. Late in the afternoon the fog lifted, and we found that we were close with the shore at the south. Then with the southerly breeze we kept on toward the west as far as the end of Waughashance Island, where we hove to and dropped anchor on the shoals.

The graphic logbook entry at this time furnishes but small data for a description of the long, gruesome night. My remembrance of it is only that a red light shone a spell from the south. When this subsided, leaving an ugly sea, the fog thinned down again. Then the long-drawn, lugubrious notes of the whistle at the lighthouse expelled all cheerfulness that remained with the anchor watch; finally the belated steamers, carefully picking their way among the dangers, would take up the dismal strain, till it echoed back like the despairing wail of a lost soul.

When the light of day appeared it was a relief indeed to trip anchor and get under way. With Dan at the helm and the other three below enjoying a morning nap, the *Idler* crept out from the lee of the land and began to ratchet up against the southwest wind.

"Hullo, wake up; come out and see what you make of this, Skip. There under the lee bow. I've been watching that steamer for half an hour and she ain't stirred a peg. But just see how she smokes."

"Let's have the chart, Bert. About due west, I guess. Yes, she's on Gray's Reef or thereabouts."

"And there's a tug making for her from over by Skillagalee. I can see a crowd of men on her deck for'd."

"Hold her full and by, Dan, we'll just about fetch the big one with the leeway we're making. We may get some fun out of this thing yet."

HERBERT L. HARLEY.

[TO BE CONTINUED.]

Royal Victoria Y. C. Cup.

The fact that Mr. Carroll had sent a personal challenge indorsed by the New York Y. C., to the Royal Victoria Y. C., has been known for some time, and also that the challenge had been accepted. Until last week, however, the details of the correspondence have been enshrouded in decency, decency and fashionably secret. The veil has at last been removed and the following particulars made public:

On Dec. 17, 1892, Mr. Carroll telegraphed that he would challenge for the R. V. Y. C. Cup, providing the club agreed to meet him with a vessel not exceeding his load waterline by more than 2 per cent.; also that all five races be sailed outside headlands; and again, on Jan. 1, 1893, he wrote saying that he intended to challenge in May for the Cape May and Brenton Reef cups, and continued as follows:

"In view of the fact that a race has been arranged on this side of the Atlantic, between the Earl of Dunraven and the New York Y. C. for the America Cup, to be sailed during the coming season, I should not care to make a similar match in England unless the sailing committee of the R. V. Y. C. conceded to me terms that would be similar to those that have been conceded to the Earl of Dunraven by the New York Y. C. I may say here that as my purpose in racing in English waters during the coming season, as well as the estimated length on the load waterline of my yacht was known in England as early as Nov. 1, 1892, I did not propose, when sending the above cable, to debar any vessel then existing, or under construction in the United Kingdom that might be available to defend the cup. There is a rumour here to the effect that a large racing cutter has been ordered since that date, and furthermore it is rumored that her estimated length on load waterline exceeds 84ft."

"Glad as I would be to have a yacht of that length as an antagonist in ordinary regattas, or for such races as those for the Brenton's Reef and Cape May cups, I should, however, be unwilling to meet an opponent in a match race, whose length on the load waterline might exceed that of my vessel by from 6 to 8ft."

"Should, however, the committee be able to assure me that the yacht chosen by them to defend the cup would not exceed the estimated length of my vessel on the load waterline by more than 3ft., I would be happy to forward a challenge in due form, as I am most anxious to arrange a match, if possible."

"I should expect the races to be sailed over courses as nearly as possible identical in their conditions to those which will be sailed by the Earl of Dunraven for the America Cup. That is a series of five races, outside of headlands, of which at least three will be to windward or leeward and return."

"The estimated length on the load water line of my yacht is 84ft."

"ROYAL PHELPS CARROLL."

The sailing committee of the R. V. Y. C. met on Jan. 19 and forwarded the following reply:

"Your estimated length of 84ft. shall not be exceeded by more than 5 per cent. Courses shall be settled by mutual agreement should you challenge."

It was voted that a sub-committee consisting of Sir William Levinge, Bart., Capt. E. du Boulay and Mr. Percy Thellusson be appointed to arrange matters re challenge. Mr. Carroll replied Jan. 23, 1893:

"Condition of length satisfactory. Wish courses settled before challenging."

The courses were then agreed upon as follows: (1) From Warner to Nab, then ten miles to leeward or windward, twice round; (2) and (3) twenty miles to windward or leeward and return; (4) from Warner to the Owers, Dunnose and back round Nab to Warner, and an extra race if required.

On Feb. 2, Mr. Carroll cabled:

"Objections to my giving rating in challenge on account Herreshoff boat building to meet Valkyrie. Will committee waive rating in my challenge?"

The committee of the R. V. Y. C. replied they would waive the rating being stated in the challenge.

On Feb. 3 Mr. Carroll wrote:

"I regret to say that a great deal of opposition was shown by the members of the New York Yacht Club when I asked the club to forward a challenge in the name of the principal objection to the challenge in the event of the New York Yacht Club holding the cup a club might challenge and insist on sailing under Y. R. A. rules in these waters. The New York Yacht Club would never consent to this and does not care to place itself in a position where it might ever be called on to do so."

To this the R. V. Y. C. committee replied that under the first paragraph of the regulations the rules could be changed should Mr. Carroll win, and the committee said they considered any further agreement on this point unnecessary at present.

Mr. Carroll then sent the following challenge:

NEW YORK, Feb. 21, 1893.

DEAR SIR—I hereby challenge for the Royal Victoria Yacht Club's international gold challenge cup, to be sailed for during the coming season of 1893, in the vicinity of the Isle of Wight, under the terms proposed by the Royal Victoria Yacht Club's sailing committee and myself.

The committee agrees under these terms to meet me with a vessel not to exceed the estimated load waterline of my yacht by more than five per cent.

The races to be five in number, if necessary, two of which are to be twenty miles to windward or leeward, and return to a point outside the Solent and the other three to be over the courses designated in the conditions governing the cup as numbers one, two and four.

Accompanying this challenge I send the following required statements regarding my vessel:

Name of owner—Royal Phelps Carroll.

Name of yacht—Nayaboe.

Reg. Number—1892.

Estimated length on load waterline—Eighty-four feet.

I have the honor to remain, yours truly, ROYAL PHELPS CARROLL.

To Percy Thellusson, Esq., Secretary Royal Victoria Yacht Club, Ryde, I. W.

Authority to challenge from the New York Yacht Club:

SECRETARY'S OFFICE, NEW YORK YACHT CLUB, 67 MADISON AVENUE, Feb. 21, 1893.

DEAR SIR—I have the honor to inform you that at a special meeting of the New York Yacht Club, held at the club house Monday, Feb. 20, 1893, the following preamble and resolution was passed:

Whereas, Mr. Royal Phelps Carroll has been in correspondence with the secretary of the Royal Victoria Yacht Club in relation to a challenge to sail a match for the Royal Victoria gold cup with a yacht

now building by him, and has obtained conditions satisfactory to himself.

Resolved, that Mr. Carroll be and he is hereby authorized to challenge for the said cup. Yours truly, J. V. S. ODDIE, Sec'y. Capt. Royal Phelps Carroll.

NEW YORK, Feb. 21, 1893.

DEAR SIR—I inclose a challenge for the gold cup, accompanied by a copy of the resolution adopted by the New York Y. C. and signed by the secretary.

Kindly let me know the views of the sailing committee regarding the dates for the matches.

As I stated in my letter of Jan. 1, I propose to enter for all races in the United Kingdom, where my vessel will be eligible.

I had hoped to begin with the Royal Thames regatta, but I doubt if I can be in racing trim so early in the season, and it would be better, for obvious reasons, if I did not meet Valkyrie before she sails for America. I hope, however, to enter all races from July 1.

As I do not propose to enter my vessel for the defense of the America Cup, I should prefer to have the dates for your cup arranged as late in the season as possible.

Hoping this will meet the views of the sailing committee, believe me, very truly yours, ROYAL PHELPS CARROLL.

Percy Thellusson, Esq., Secretary Royal Victoria Y. C., Ryde, I. W.

To this the club replied as follows:

ROYAL VICTORIA YACHT CLUB, March 3, 1893.

DEAR SIR—We beg to acknowledge receipt of your letter of Feb. 21, and inclosures challenging for the Royal Victoria Y. C. international gold cup, which challenge, on behalf of the sailing committee of this club, we hereby accept.

With regard to the dates of the matches, we propose fixing them with you after your arrival in these waters, so as to avoid clashing with any regattas elsewhere in which you may wish to take part. Yours truly,

Cup Sub-Committee, WILLIAM LEVINGE, ERNEST DU BOULAY, PERCY THELLUSSON, Secretary. To Capt. Royal Phelps Carroll, New York.

Sir William Levinge will be remembered as the cousin of Sir Richard Sutton, who accompanied him in *Genesta* in 1885.

The Scotch Lugger Nox.

THE success of the *Pife* cutter *Yama* in 1890 and '91 was so marked that three new boats from the same designer were launched on Lake Ontario last year, the smallest of them being the 25-footer *Nox*, a photo of which is here given through the courtesy of her owners. *Nox* was built by three amateur yachtsmen of Rochester, N. Y., Messrs. Miller Bros. and Meerdick, they ordering the design from Mr. Pife and doing the work themselves during the winter. We had the pleasure

"NOX," SCOTCH LUGGER.

last fall of seeing the yacht hauled out at Charlotte, and she would do credit to a good professional builder. She was destined for the 25ft. sailing lugger class, her dimensions being: Length over all 36ft., l.w. 1. 24ft. 6in., beam 8ft., draft 5ft. 6in. She is to all appearances a keel boat, but, like the *Vedette* of Toronto, has a steel plate in the after deadwood increasing her draft when down by over 2ft. The pole-masted rig, with one jib and a lug mainsail gives her hardly enough sail in very light weather, but she made the circuit of Lake Ontario with the fleet last summer, winning three firsts, one second and two thirds.

Yachts at the World's Fair.

Mr. J. V. S. ODDIE, secretary of the New York Y. C., has prepared and caused to be sent to all the members the following memorandum regarding the route via the St. Lawrence which yachts must take to reach Chicago:

SECRETARY'S OFFICE, NEW YORK Y. C., 67 MADISON AVENUE, N. Y.

ROUTE VIA ST. LAWRENCE RIVER AND CANALS AND LAKES TO THE WORLD'S FAIR AT CHICAGO, 1893.

Steam yachts steam to Montreal. Sailing yachts proceed under sail to Quebec, and from there tow to Montreal.

Rates—Towage from Quebec to Lachine and return. \$300 to \$400, according to size of vessel.

No necessity for lowering masts or funnels.

The Dominion government has passed an order in Council exempting all yachts going to and returning from World's Fair from payment of tolls in canals.

At Montreal enter Lachine Canal under tow or steam to Lachine. Yachts not to exceed 138ft. in length and 28ft. beam and 14ft. draft.

LACHINE SYSTEM OF CANALS.

Eight and a half miles. Five locks. Depth on sills 9 to 10ft.

Lake St. Louis, 15 1/2 miles.

The Beauharnois Canal, 11 1/4 miles, 9 locks. Depth 9ft.

Lake St. Francis, 32 1/4 miles.

The Cornwall Canal, 11 1/4 miles, 9 locks. Depth of water 9ft.

Farrans Point Canal, 3 1/4 miles, one lock. Depth 9ft.

Rapide Plat Canal, 4 miles, 2 locks. Depth 9ft.

Galops Canal, 7 1/2 miles, 3 locks. Depth 8ft.

Lake Ontario—After Lake Ontario the Welland Canal, 26 1/4 miles, 26 locks. Depth 14ft. to Lake Erie, thence to Detroit River to Lake St. Clair. St. Clair River, Lake Huron and Mackinac Straits to Lake Michigan, thence to Chicago.

NOTE.—Vessels of greater draft have passed the canals by using pontoons and "camels." The Collins Bay Rafting and Forwarding Company, Collins Bay, Ontario, Canada, will furnish appliances and contracts for the lifting of vessels through from Montreal to Lake Ontario and through the Welland Canal if desired.

In case of steam yachts, when their own power is sufficient to propel them, with pontoons alongside, the charge for the round trip will be as follows:—

When two pontoons are sufficient. \$1,000 00
When four are required. 1,500 00
When six are necessary. 1,750 00
A reasonable charge for any extra towage will be made.
In case of sailing yachts the charge for towage would be from Lachine to Prescott and return to Lachine from \$200 to \$400, according to size. Yachts at owners' risk.

J. V. S. ODDIE, Secretary.

Yachting versus Hay Fever.

BY DR. W. H. WINSLOW.

PITTSBURGH, Pa.—Orinda did not swing idly at her moorings last summer, as so mournfully questioned by one of the *FOREST AND STREAM*'s readers, but she made no long cruises, nor did she have any disasters, and so tame were her performances that I thought them not more worthy of notice than any of the stay-at-homes. I have published in these columns many stories of cruises and personal hardships to please the boys, and I have been minute in regard to modes of life and places visited to instruct amateur yachtsmen upon pleasure bent; but there has been another motive, to show how and where to escape from that pest of the sensitive and cultured, hay fever.

Eight years ago my constitution was seriously damaged by successive annual attacks of hay fever and chronic bronchitis, which I had only mitigated in part by travel to certain regions where aerial spores were few and the atmosphere was purified by altitude and the great forests, or by blowing over the ocean. Several short cruises upon the coast of New England convinced me that there was a better form of escape could find relief if he was willing to rough it, and I decided not to trust to chartered and more or less unsuitable craft, the only ones which can usually be had during the season, but to have a small yacht of my own and be my own skipper.

My physical condition at this eventful period of my life was far from enviable; attacks of hay fever began about Aug. 15 in each year with violent sneezing and mucous discharge of working mucus from nose and eyes. The mucous membranes of the eyes and nose were itchy, red, swollen and extremely sensitive to air, dust and light. Sneezing was frequent, violent and almost continuous. Soon the palate became sore, the throat rough and voice husky, a short dry cough came with occasional attacks of wheezing and shortness of breath or asthma.

Then the bronchial tubes became congested, their lining swollen, red as tender, the cough dry, tight and spasmodic soon to be followed by dryness of the throat and chest, and the difficulty in breathing was so great as to threaten suffocation. The asthma generally lasted from two or three weeks, the cough brought up a little mucus and threads of fibrin, and sometimes a little blood, which had choked up certain parts, and life became a burden. The head ached, the back and shoulders were dreadfully tired and sore; the mouth, throat and nose were dry; small taste and appetite were abolished; the system generally was weak and baggard, the heart was weak and fluttering, and the eyes looked anxiously and despairingly everywhere for help. Oh, for sleep and rest, even in the grave. I thought during many a day and night of struggles and terror. Nursing, diet, medicines hardly mitigated the distress. The disease ran its course in six to eight weeks and ended coincident with the advent of frost or the ripening of vegetation. I have been told that the only brought relief tardily after the disease had once gained mastery.

It is reasonable to suppose that a person so terribly racked annually by tortures infernal should deteriorate in strength, vigor and constitution, and there results thickening of the mucus lining of the nose, roughness and granular inflammation of the throat and larynx, thickening and chronic congestion of the bronchial tubes, dilatation of the vessels of the lungs, a weak and strained heart, weakness and weariness between the shoulders, disturbed digestion, nervousness on exertion, and an irritable and over-sensitive nervous system.

All these I had as sequelae of eighteen annual attacks of hay fever, though I had sought relief at Petosky, Mackinac, Sault Ste. Marie, Bethlehem, Halifax and in Europe. Were it not so sad, I would relate my sufferings in many of the celebrated, delightfully-situated, much-lauded, eleemosynary, four-dollar-a-day institutions, presided over by pure philanthropists, who say in the prospectus, "No hay fever."

I was only forty-three years old, with a good constitution and pedigree and promised longevity from inheritance. I had been a hard student and taken many sheepskins and degrees. My brain was over active in retaining and acquiring knowledge of several languages, and of everything possible pertaining to science and art. I was reading enormously, writing voluminously, and my mind was incessantly and hustling through life with Yankee energy yet unimpaired. And I broke up with the last attack of hay fever and took an inventory. I filled the schedule of sequelae enumerated above. I was practically an invalid, still doing a man's work. My organism was seriously and, I feared, permanently injured, and unless I repaired damages I would soon go to "Davy Jones's locker."

So I built the little *Elfrim*, took my boys aboard and cruised in August and September from Boston to Eggemoggin Reach and back again. I pulled and hauled, scrubbed the deck, rowed the boat, handled anchors and sails, basked in the broad sunlight, slept in an open cabin, dressed like a tramp and also ate like one. I sailed, drifted, camped, cruised and loafed at my own sweet will, exploring coves and crannies in the grand coast of New England never seen by the average traveler, but in the grandest of my heart's desire, my heart came strong, my breathing deep and free from wheezing, my bronchial tubes clearer and less irritable and my general condition robust. I took a new lease of life.

During the following winter there was some bronchial irritation and a tendency to asthma, so the next season I took another dose of yachting in the *Elfrim* in the same waters, and with the same good results. I could feel the sun's rays and the breeze of air invigorating my whole being and stimulating me like champagne. I could feel the thickened mucus lining of my bronchial tubes gradually becoming thinner and thinner, and deep satisfactory breathing took the place of gasp and struggle. Again I escaped hay fever and its horrors and felt rejuvenated, and the winter passed without pulmonary distress.

I know my experiments saved me great suffering, and saved my life as nothing else could have done. The most eminent physicians could not help me, and I could not help myself except in the way described. I became an enthusiastic advocate of barbarous outdoor life for improving the constitution and curing diseases, and through my interest in yachting, a happy reader of and contributor to the *FOREST AND STREAM*.

Of course after reading the delightful literature of yachting in this journal, and the details and log-books of the famous small yachts which have been added to the clubs since 1885, I could not be satisfied with a 25-footer, so I built the *Orinda* in 1888, and your readers know all about her. I have cruised in her every season and I have not had an attack of hay fever. Since I took to the briny deep my health has been wonderfully improved by every cruise, and my yacht has prolonged and saved my life. She has also improved the health and vigor of quite a number of weaklings, who have belonged to my annual August crew, and I could tell of several organic diseases which have yielded to her sanitary environment. But enough of this for the present. I am firmly convinced that it is better to spend money on a good yacht than in a drug store, and better to live a natural life afloat than a diseased one ashore.

Every season I have it necessary to cruise to the eastward of Whitehead, fearing that the hot days and southwest breezes of Massachusetts would help some of the spores to excite the sneezes, but last summer I dared the experiment of remaining south of Cape Ann, and that's why I have no winter stories for the boys. Through August and September *Orinda* was between Boston and Eastern Point, sailing up and down, into Gloucester, Magnolia, Beverly, Salem, Marblehead, Lynn and Boston. She folded her wings generally off the Corinthian Yacht Club house in the evening and the captain and his guests dined *table d'hôte* at the club, where the tables were surrounded by commercial and professional men, all enthusiastic yachtsmen, who mixed food and beverages with *otium cum dignitate* and *dolce far niente*. Pool, billiards, songs and stories and band concerts sped the nights onward till the end of September, and the regular and scrub races, the long sails and picnic excursions and daily care of the yachts made the days glorious.

One northeast gale that everybody fought two days to keep off the rocks was the most exciting event of the season. *Orinda* won two prizes in the cruising class; creased the waters of Massachusetts Bay in many devious ways; became known as one of the club yachts, and again saved her owner from any symptoms of hay fever. My experiment was a success. One may therefore very cautiously remain in Massachusetts waters, prepared to start sheets for the coast of Maine if threatening symptoms arise.

I have had many hay fever patients under my professional care and have directed the conduct of many every season, and having suffered so much myself and found such relief in yachting, I wish to say emphatically that the coast of New England with a yacht *à libitum* is the best and safest place in the world for hay fever sufferers.

Racing About Boston.

In preparation for the coming season the South Boston Y. C. has sent out to all clubs about Boston the following circular, looking to a uniformity of racing rules:

Boston, March 13, 1893.

To the Regatta Committee of the ———:

GENTLEMEN—The regatta committee of the South Boston Yacht Club voted to extend the ——— regatta committee greeting of the season '93, and to respectfully solicit their assistance and influence to ward arranging for an understanding between all the clubs possible in this section whose yachts race together, in regard to measurement rules for open regattas.

Sincerely hoping you will communicate with us on this matter at your earliest convenience, as we wish to perfect our arrangements for the S. B. Y. C. Open Regatta of May 30, we remain, Yours very truly S. B. Y. C. REGATTA COMMITTEE, (WM. ALLERTON, Sec.)

YACHT NEWS NOTES:

Atlantic, schr., was at Kingston, Jamaica, on March 18.

The new steel schooner for G. H. B. Hill will be named Ariel.

Marjorie, cutter, has been sold by F. L. St. John to H. D. W. Burt, Larchmont, Y. C.

Viking, steam yacht, has been sold by W. H. Starbuck to Horace A. Hutchins for \$39,000.

The wooden schooner building at Nyack for J. B. King will be named Elsinarie. The yacht is only 70 ft. long.

The house of the Troy Y. C. has been damaged by ice to the extent of \$1,000 and cannot be used until repairs are made.

Yampa, schr., C. W. Chapin, will go to Poillon's for new spars. Mr. A. Cary Smith having designed a larger sail plan for her.

The Madison avenue house of the New York Y. C. will soon be connected by long-distance telephone with the different club stations at Whitestone, New London, Newport, Shelter Island and Vineyard Haven.

On March 17 the barkentine Altonah, Capt. Parsons, Darien, Ga., for Boston, loaded with yellow pine, struck the wreck of the Alva off Pollock's Rip, and stove a hole in her bottom, filling by the time she reached the beach, where she now lies, her crew having been taken off by the life-saving crew.

The annual meeting of the Toledo Y. C. was held on March 13, the following officers being elected: Com. John Roser; Vice Com. Geo. Frey; Sec. Fred Greiner; Treas. Frank Thomas; Treas. Walter Woodruff; Ex. Com. George Butterfield, William Scheller, Henry Ilet, Andrew Gray; Chairman of Reg. Com., John Scheuerman; Auditing Com. (re-elected), J. W. Hepburn, George Miller and Frank Thomas.

The steam yacht Samara was launched at Cowes, on March 6, by Messrs. White & Sons from their Vectis yard. She has been built for Mr. B. Vagniez, from designs by Mr. Dixon Kemp, and is 36 ft. on the waterline, 10 ft. 2 in. draught of water, and is intended for traversing the French rivers and canals. She has triple compound machinery, supplied with steam at 160 lbs. pressure, and has a four-bladed brass propeller of the pattern successfully introduced by Messrs. White & Sons. She has a cellular bottom for water ballast and is fitted throughout with all the latest improvements.

The General Electric Launch Co., of New York, is prepared with a large line of electric launches of various sizes and models, designed for general use, yacht service and fast speed, and the cleanliness, simplicity of operation and quiet running of these boats are likely to bring them into general use wherever electric light or power plants are at all available, either ashore or on a steam yacht. The launch Electra, built last year for the competition for the contract for the World's Fair launches, in which she was successful, made a 10-hour continuous run with 25 persons aboard, her maximum speed under favorable conditions being 9 to 11 miles, her length being 34 ft. over all.

The Knickerbocker Y. C. will hold a regatta on Saturday, June 17, over the club course from College Point to Execution Lighthouse and return, open to the yachts of the following clubs: Seawanhaka Corinthian, Corinthian of N. Y., Atlantic, American, New Rochelle, Brooklyn, Marine and Field, Indian Harbor, New Haven, Sea Cliff, Riverside, Douglaston, Hempstead Harbor, Stamford, Horse Shoe Harbor. The following regattas will be open only to the yachts enrolled in the Knickerbocker Yacht Club: July 8, race for sloops and cutters; Aug. 5, race for cabin cutters; Sept. 2, race for open yachts; Sept. 9, ladies' day, regatta for all classes. The regatta committee includes G. K. Rosenquest, Chairman; Godfrey A. S. Wieners, Secretary; Louis H. Zocher, Alfred D. Ilich and Thomas F. Graham.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with lists of clubs, maps, and information concerning their local waters drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

JUNE.

3. Red Dragon, Delaware River. 17. New York Ann., Bensonhurst.
10. Brooklyn Annual, Bay Ridge. 24. Marine and Field Club, Bath
13. Atlantic, Ann., New York Bay. Beach.

JULY.

1-15. At. Div. Meet, Captain's Island. 15-30. W. C. A. Meet, Ballast Island.
29. Red Dragon, Delaware River.

AUGUST.

11-26. A. C. A. Meet, St. Lawrence River.

SEPTEMBER.

16. Red Dragon, Delaware River. 4. Holyoke, Fall, Holyoke, Mass

The Canoeists' Club.

TWENTY-SEVEN gentlemen sat down to the dinner of the Canoeists' Club at the Arena on March 11. Among them Messrs. Whitlock, Norton, Schiefelin, C. J. Stevens and Lake, of the New York C. C.; Dunnell and Wilkins, of the Brooklyn; Palmer, of the Isthmian; Dorland, Schuyler, Ellis, House and Crowell, of the Arlington; the Messrs. Griffin and Mr. O'Shea, of the Knickerbocker; Mr. Goodsell, of the Yonkers; Mr. Elliott, of the Marine and Field; Mr. Jackson, of the Crescents; Mr. McCles, of the Rutherford, and Messrs. Peebles and Berry, of the Bayonne C. C.

The dinner was an exceptionally good one, even for the Arena, and the smoker afterward developed post-prandial talent on the part of a number of the speakers that should not be suffered to be dormant. President Whitlock, of the Canoeists' Club, presided during the earlier part of the evening, and introduced a new feature into the usual conduct of such affairs by substituting another presiding officer for the latter half of the proceedings. Vice-Commodore Lake, of the Atlantic Division, took the chair for this portion of the entertainment.

A representative of each club was called upon, the intention being to require him to make a speech, and to dance a jig. It turned out, however, that the last alternative might as well have never been thought of, for there was no occasion for resorting to it, though P. might have been called upon to "do the trick," had he not made up in blushing what his speech lacked in words.

The following men spoke for their respective clubs: Messrs. Elliott, Dunnell, Dorland, Palmer, McCles, Griffin, Jackson and Whitlock. Commodore Norton, editor of Out's Island, the club's organ, Bob Wilkins, without whom no gathering of canoeists is complete, were the extra numbers on the programme.

In consideration of a handsome silver-backed clothes brush which was presented to him by some of his male admirers, Schuyler Schiefelin told how to do the "lady act" at a meet. It consisted in nothing more than loosening the screws around the mast-plate of your canoe, before entering a race, the result being a frightful (sic) catastrophe which involves exemption from all the other races, and earns for you unlimited sympathy from all the fair ones, to whose comfort and pleasure (sic) you may devote your society and remaining energies during the balance of your stay in camp.

Commodore Dunnell got all "balled up" in trying to explain away the impressions left by a few "telling" remarks from Elliott of the Marine and Field, and the enthusiastic enthusiasm of the programmes for the Marine and Field and Atlantic Division races that if he does all he says he will bankrupt both of these institutions. He proposes sending to every boat house in the vicinity of New York, and gathering up the canoeists, canoes, bag and hammock, and taking them to the M. & F. house, where and at the N. Y. C. C.'s neighboring home they are to be cared for and shipped after the races direct to the Atlantic Division meet at Captain's Island. The cruisers, himself among the number, to debark after they get into the Sound, and cruise the rest of the way to the island.

The three energetic canoeists who lately, by their own unaided efforts, got up the finest canoeists' dance ever held in the city—Messrs. Palmer, Dunnell and Holbrook—donated a substantial surplus from that affair to the exchequer of the Canoeists' Club, and the first named gentleman, in a quiet and unobtrusive way, sang so well together that it was impossible to hear but one voice. O'Shea, who afterward demonstrated that he was something of a singer himself, said the voice belonged to Crowell, and indeed there were some indications that he was this time speaking the truth; but Schuyler, who was (mentioned as) one of the quintette, declared that O'Shea was only jealous. Mr. Jackson, of the Crescents, gave a lively account of an illegal or hush in Florida, where "igators are not nearly as thick as they are in the Brooklyn C. C." After that the talking and singing grew so pronounced that no one could keep track of it.

CANOE NEWS NOTES.

The division meet of the Eastern Division will probably be held at Springfield on May 30.

Mr. Rushton is preparing for his exhibit at Chicago a 16x30 racing canoe, with plate board, bucket cockpit and silk sails.

Mrs. Florence Watters Sneedeker, wife of Rev. Chas. H. Sneedeker, a member of the American Canoe Association and the author of the bright little book, "A Family Canoe Trip," died suddenly at her home in Poughkeepsie, N. Y., on March 13. Mrs. Sneedeker was an ardent canoeist, the companion of her husband on many cruises. Both were present at the 1891 meet at Willsboro, where they made many friends.

The annual meeting of the Chelsea Boat Club, of Norwich, Conn., was held on March 15, the following officers being elected: Com., N. A. Gibbs; Capt., N. S. Lippitt; Lieut., Arthur L. Peale; Treas., C. H. Phelps; Directors, Amos D. Allen and John M. Johnson. Com. Chapman, owing to his absence from town during a portion of the summer, declined to accept again the office he has so ably filled for three years and a vote of thanks was tendered him by the members. It was also decided by unanimous vote to reserve in the book of records a page each in memory of the two members, Louis N. Blackstone and Harry Potter, deceased during the past year.

Rifle Range and Gallery.

Hudsons and Puritans.

New York, March 21.—The return match between Hudson and Puritan rifle clubs took place at the ranges of the latter, 29 Main street, New York, N. Y., Monday, March 20. For the second time the home club met with defeat and lost by 50 points. The Hudsons seemed to be in remarkably good form, as only one man scored below the 100 mark. Conditions, 25 yds., 12-ring target. It was thought early in the evening that the Hudson Club would be short-handed, it was on account of a delay of the electric cars, which duly brought the full complement of the Hudson team. Mr. C. E. Bird, who has been making lowest scores in the last few matches, made top score of 109 out of 120 with 5 center shots. Geo. W. Graf followed close with 100, but only 3 center.

Mr. C. E. Weiler, of the Puritan Club, scored the highest of the evening, making 110, and was loudly applauded when finished. Capt. Mahlenbrock made a wager with Mr. Braun on the totals of those two gentlemen, and the latter, who has been making 100, duly quenched the thirst of the thirsty crowd.

Although the Puritans have lost two consecutive matches, still they wish to shoot the third; and the arrangements are complete to shoot at the Hudson's ranges in a few weeks.

There was also a match arranged between two Essex county and two Hudson county barbers, each man to fire 100 shots, one match to be shot on the Hudson range and one on the Essex range. The winners are to be served at each match, and the team losing pays for the said refreshments.

After the match the Puritan Club entertained to a fine collation and wound up with songs, recitations, stump speaking, etc., and all seemed delighted with the good time they had spent in the home of the Puritans.

New York Pistol and Revolver Club.

A few members of the New York Pistol and Revolver Club met at the headquarters of the club, No. 12 St. Mark's place, on Saturday evening, the 18th inst. We were glad to see that Geo. E. Jantzer is out again. This is the only organization of its kind in New York City, and ought to be in a much more healthy condition than it is at the present moment.

The much hoped for match between a team from this club and one from the Boston Athletic Association, of Boston, Mass., will hardly take place this season at least. The club hopes that by next fall it will be in condition to accept the offer of the Boston society and give them a race for honors. The scores of the members participating in the weekly practice are appended:

J E Jantzer	89	C B Bishop	85	G L Hoffman	80
B Walther	87	E Walz	81	F Hecking	79

Zettler Rifle Club.

The members of the Zettler Rifle Club met at headquarters on Tuesday evening, March 19, for the regular weekly shoot. The appended scores show the results of the evening's competition. Ten shots, possible 250:

M Dorrier	247	F O Ross	243	C G Zettler	245
M B Engel	247	J Hentz	238	B Zettler	244
F Schmidt	245	H Holges	240	G Nowak	240
B Walther	244	K Busse	245	Michelbacher	219

On Maple Bay Range.

SYRACUSE, March 15.—Following are scores of members of Syracuse Rifle Club at Maple Bay range to-day. Rough weather prevented a large attendance of shooters; 200 yds., standard American target, off-hand.

Stillman	8	10	6	10	8	10	10	8	88
	6	8	10	8	9	9	6	10	83
Seely	8	9	9	7	7	8	7	9	81
	7	8	10	10	6	6	7	8	79

Beideman Rifle Club.

BEIDEMAN, N. J., March 18.—The following shows the weekly shoot. Conditions, 25 yds., open air range, strictly off-hand, 1/4 in. ring target, possible 250:

J Yergery	246	J L Wood	244	W Gilbert	227
H J Mehard	245	A L Gardiner	241		

Pistol score, 50 yds., possible 100:
H J Mehard, .91 A J Yergery, .83 J L Wood, .79 E L Gardiner, .60
WALT. GILBERT, Sec'y.

RIFLE NOTES.

It looks now as though the coming season was going to develop quite a crop of new shooters and a considerable boom in rifle shooting.

Although the programme of the Chicago Schuetzen Verein for the Columbia prize shoot, to be held at Chicago this summer, is a huge disappointment to the shooting fraternity at large, there is some satisfaction in the belief that the distribution of the programmes of this festival has had a tendency to arouse new interest among many of the older shooters and friends of this sport, and also to awaken a desire in many others who are as yet new to the pleasures that are to be derived from the use of the rifle. Early last winter there was a meeting of delegates representing twenty-one of New York's prominent shooting societies. This meeting was called for the purpose of coming to a decision as to whether the Eastern societies should participate in the Columbia and Festival shoot. The result of the meeting showed an almost unanimous desire to take part, provided the Chicago Schuetzen Verein would modify its prospectus as then submitted so as to make the time of holding the festival from one to three weeks continuous instead of two days per week for six months as proposed. The only modification that the Chicago Schuetzen Verein saw fit to make in order to meet the views of the New York shooters was to reduce the length of the festival from three months, or from June 1 to Sept. 1, two days per week. This modification not meeting the views of the New Yorkers, interest in the Chicago festival lapsed. We now learn that the interest engendered by this committee has had its effect; and that a call has been issued for a meeting to be held to-morrow (Friday) night, the 24th inst., at 12 St. Mark's place. The purpose of the meeting is understood to be to form an organization of all the societies in New York, and in the next spring to hold a grand shooting festival that will be a credit to the Empire City.

The summer practice shooting of most of the shooting societies begins in April.

The Excelsior Club opened its season yesterday at Armbruster's Park, Greenville, N. J.

The Independent New York Corps, Capt. Wm. V. Weber, will open its season this year on April 29 at Washington Park. This corps is in a flourishing condition. Its membership includes some of New York's most expert marksmen.

The New York Schuetzen Corps, Capt. Henry Offerman, opens its season on April 15 at the Union Hill Park.

The well known Zettler Club will begin its season on April 9 at Wissel's Cypress Hills Park. Mr. Wissel is giving his grounds an extra flourish in anticipation of an increased business this season. The Zettler Club will have its first shoot on May 14 and May 14 and May 14 in cash prizes will be divided among the lucky winners.

The New York City Corps, Capt. Chris Rehm, will open its season's shoot on April 28 at Washington Park.

The New York Central Corps, Capt. Adolph Richter, will begin its season on April 23 at Washington Park.

Messrs. Bird and Fischer.

REPLYING to the communication published in your issue of March 16 attacking the note previously published by the "Eagle," I may say that the article was not intended to create any ill feeling, but was confidentially given to me by good authority. The enclosed clipping appeared in the Newark paper, and fully tallies with what was written, namely: "It is rumored: The members of the Miller Rifle Club made a statement on Christmas Day that it was almost an impossibility to get ten men together to shoot a match, and when a challenge was sent by the Hudson Rifle Club for seven men it was not accepted. Instead of having friendly feeling and participate in friendly match shooting, the Miller Rifle Club only shoots for money, which is proper at times, but to make a practice of it, would say that it is a poor way to keep up the interest of rifle shooting, and is nothing more than out and out gambling, and if the rifle clubs intend to make it a money making scheme and not a manly sport it has always been considered, then I would say that the sooner the ranges are closed of all clubs the better, as it would be better for organizations of this kind to disband than to degrade the sport of rifle shooting by making it a gambling sport."

It is for this reason that I will not accept Mr. E. Fischer's challenge, as he has previously refused to shoot a match with me, and I fail to understand why he now wishes to meet me. I trust this will prove satisfactory. C. E. Bird, Hudson Rifle Club.

New York Revolver Scores.

NEW YORK, March 3.—The following record scores were made by the members of the New York Revolver and Pistol Club at their last regular weekly practice shoot held on the 11th inst. at their headquarters, No. 12 St. Marks place, 10 shots on Standard American target at 20 yds., Smith & Wesson revolvers:

C Bishop, 4 cal.	87	F Hecking, 38 cal.	80
H Oehl, 4 cal.	85	E Walz, 22 cal.	84
		F. HECKING, Sec.	

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

DRIVERS AND TWISTERS.

WEIMAR, Tex., March 10.—The Weimar gun club is now trimming up for the spring shoots. The grounds have been all cleaned off, and the club is making large preparation for a State shoot, which comes off in June. The members decided that they would divide themselves into two parties and go out on a field shoot. Monday was selected as the day. John Walker was chosen as captain on one side, and Mr. Chas. Fahrentbold captain of the other. The party bringing in the least game was to pay for the preparing of the game and also settle for the banquet. The Walker side consisted of John Walker, W. B. Butt, Jim Tooke, Alf Shatto, Lee Wall and S. H. Hancock. The Fahrentbold side was Chas. Fahrentbold, Fred Von Lenpikie, H. F. Jurgens, Dr. E. F. Hestner, W. H. Hestner, C. J. Brieger, (Brieger on account of business absent for the shoot). At the close of the day and on the count it was found that the first party in the day's hunt killed 14 partridges and 2 snipe, the second party bagged 29 partridges and 3 snipe, giving the victory to the second party by 15 partridges and 1 snipe. All rabbits barred. The supper was well prepared, and a most enjoyable evening was spent. Agent Alf Shatto, in his day's round, spied a jack rabbit, which was about 50 yds. in advance of him, he turned aside his pot-lucker ejector and killed the rabbit, which fell into a burning brush heap, and it is recorded that he is the only man who can kill and cook a rabbit at the same time. It is also said that W. J. Hefner is a persevering sportsman. He shot five times at a bird, missing every time, finally letting the dog catch it. When laughed at for his good marksmanship his reply was, "Well, we got him all the same." The sport closed with the members of the club, who were very much interested in the most substantial citizens taking great interest in making the Weimar gun club one of the most prominent clubs in the State.

The first match at live birds for the championship of Berks county, Pa., will take place on the Reading Shooting Association grounds at Matz's Three-Mile House, at Shillington, on Good Friday, March 31. The conditions of the shoot are as follows: Open only to residents of Berks county, 15 single birds, \$10 entry, A. S. A. rules. After deducting cost of birds from the entrance money 10 per cent. will be deducted toward payment of championship badge, to cost \$50. The balance of the purse will be divided as follows: 30 per cent. to the winner, and the badge, balance to be divided 50, 30 and 20 per cent. class shooting. The badge will be shot for annually on a date to be fixed by and under the direction of the Reading Shooting Association. Entries close at 8 P. M. on March 29 and a forfeit of \$3 must accompany each entry. The winner must give a bond of \$100 for the safe return of the badge, which must be won three years consecutively to become the property of any shooter. The forfeit must be paid at Keystone targets before and after the above match.

WILLIAMSPORT, Pa., March 15.—We have decided to hold our seventh annual tournament on May 2, 3 and 4. We shall make this event the most interesting ever held in this section by a diversity of shooting. We shall arrange our park so that we can have a set of target traps and live-bird events going at the same time, for which we have ample room, and one will not conflict with the other. Will commence our live-bird events the first day, and will have one grand sweep at 25 live birds, \$30 entry, purses divided 30, 25, 20 and 10 per cent. Shooters wishing to enter this event will notify the secretary by April 30, and accompany their entry with \$5 forfeit. Would ask that entries be made as soon as possible. Target events will be shot under the N. H. handicap, and purses divided 30, 20 and 20 per cent. Will allow 1/4 cent for every target thrown for first, second and third best averages each day. Every comfort and convenience will be afforded our visitors, and a grand good shoot guaranteed to all.—N. A. HUGHES, Sec.

It would be an excellent plan for managers of trap grounds to procure copies of *Forest and Stream*, Feb. 2, 1893, and carefully study "Hints on Holding Pigeons," written by Col. Cox. The article will be found on page 109, and it seems with very good information in reference to how birds should be handled when being trapped and at other times. There are with the article two illustrations showing the right and the wrong way of holding a pigeon from the time of taking it from the crate or basket to putting it in the trap. On this point in particular managers should instruct their handlers. We have personally attended to the shooting on nearly all the grounds in this section of the country and not in a single instance have we seen a bird properly handled. Were the birds handled according to the advice offered in the article above referred to we are satisfied that there would be far less need for "flushing up" when the trap was pulled.

The match between Thos. Ely and H. E. Buckwalter, announced to take place at Wilkesbarre, Pa., on March 11, was postponed, as there were from three to five feet of water on the field. The shoot will take place on Saturday, beginning at 2 P. M. In connection with the match there will be a 15-bird sweep on Friday, March 11, 24 birds, and a 10-bird sweep on Saturday, March 12, 24 birds. The prize for the 10-bird sweep will be \$10, 10, 15 and 10 targets. On Saturday, beginning at 9 A. M., there will be live bird events at 4, 5, 6 and 7 birds, the entries being \$3, \$5, \$7 and \$8 respectively. The match will be shot regardless of weather, and will be at 50 live birds for \$300 a side, under A. S. A. rules. Sportsmen who want some good shooting in fast company should attend this tournament.

MILWAUKEE, Wis., March 11.—The Milwaukee Field and Trap Association held the first of its periodic shoots to-day at National Park. The association will meet the Chicago Club in a few weeks for a deciding contest, Milwaukee and Chicago having won one each of the previous shoots. Though the weather was not particularly pleasant, there was a good attendance. The Milwaukee men intend to capture the medal when next they meet Chicago. The officers of the association just elected are: President, Dr. Carmichael; Vice-President, Richard Merrill; Treasurer, C. Schmidt; Secretary, E. P. Thomas.

The events in order at the Savannah shoot will be at 10, 10, 15 single, 5 pairs, 10, 15, 20 and 15 singles. The programme will be the same as last year, excepting that on the second day there will be a 50-target match for the championship of Georgia. Entries will be \$1.50 for 10, \$2.50 for 15 and \$3.50 for 20 target events. In the championship and surplus shoots the entry will be the cost of the targets only. The 10-target events will be under the Parker handicap, the 15-target events will be one man up, 21 yds. rise, both barrels, unknown traps and angles.

The Forest Gun Club, of Philadelphia, held its third monthly prize shoot at clay targets on March 11 on the ground, Twenty-seventh and Lehigh avenue. Messrs. Willard, Benton and Van Nort won their respective classes. The conditions were 25 birds each, 21 yds. rise, 8 yds. boundary, American Association governing. Scores: Class A.—Willard 19, Greenland 18, Morrison 10, Mills 10. Class B.—Benton 19, Riott 17, Hothersall 14, Smith 13. Class C.—Van Nort 15, Martin 14. After the club shoot a number of sweepstakes were shot, Messrs. Willard, Morrison, Hothersall and Benton carrying off the honors.

The monthly target shoot of the Roxborough Gun Club took place on their grounds at Shawmont, Pa., on March 11. The conditions were 50 birds each, 8 yds. rise, American Association rules governing. H. Blouin carried off the club badge, hitting 47 out of 50, and breaking down the 50-bird target. Scores: H. Blouin 47, W. H. P. Rogers 46, G. H. Caven 34, A. Weir 30, W. French 30, S. Evans 33, J. Ennis 35, E. H. Block 37, F. Ozias 33, J. Taggart 31, H. Ozias 31, J. G. Helt 30, J. G. Hocks 30, F. Smith 30, J. Free 29, J. Weir 20.

Those who go to Savannah will have to leave New York on Saturday in order to get there in time for the opening of the shoot. Leaving Savannah on Thursday evening they will arrive in New York on the following Saturday afternoon. This is a far pleasanter trip than going and coming by rail, provided the time can be spared. The fare for the round trip is \$34, this, of course, including a stateroom and meals.

The Lakeside Rod and Gun Club, of Burlington, Vt., held its annual meeting at the Ethan Allen Engine Company's rooms on March 9 and elected the following officers: President, Gen. W. W. Henry; Vice-President, L. C. Grant; Secretary, L. Hazen; Treasurer, W. S. Phelps; Club Captain, H. E. Spear; Board of Directors, A. E. Morgan, J. S. Denning, E. H. Shattuck, L. Harding, B. R. Seymour.

If the Wilmington Rod and Gun Club shoot the majority of their events under the "Jack Rabbit" system they should draw out a big crowd of 50 to 500 men who will not shoot under the regular money day rules. The club has already won a great reputation among shooters, and by catering to the "light weights" it will become still more popular.

Miss Annie Oakley, "Little Sure Shot," received an ovation each evening during her recent two weeks' engagement at Tony Pastor's Theatre in this city. She intended to remain two more weeks but the need of a rest before leaving for Chicago, where she will open with the Wild West show, impelled her to be content with her two weeks' work.

BRADDOCK, Pa., March 12.—The Braddock Gun Club had a field shoot yesterday on the grounds at Bessemer. Seven members shooting at 100 birds made the following scores: W. J. Vance 87, W. J. Jones 73, David Creighton 70, William Pierce 66, George Mimom 70, W. M. Brown 58, M. E. Sebill 62, Alexander Durant out of a possible 75 scored 55.

Away down in Vermont the trap shooters are beginning to show a commendable amount of enthusiasm, and the Putney Rod and Gun Club announces that it will hold a target tournament on May 25 and 26. There will be added money in two events each day. Information about the tournament may be procured from W. C. Ayer, Putney, Vt.

The Manufacturers' Trap Shooting Association is to be complimented upon the general get-up of its Savannah programme. The topography and press work are excellent throughout and reflect credit upon the printer.

T. W. Morfe, the trap-shooting hotel keeper of Paterson, uses a gun made by Charles Boswell, of London, which he says is the only one in this country of this make. They are extensively used in Australia. The one used by Mr. Morfe is of an elegant model and finish, and a close, hard shooter.

The opening tournament for 1893 of the Eastern New York Trap Shooters' League will take place on the grounds of the West End Gun Club of Albany next Tuesday, and a rousing time is anticipated. The team contest is expected to draw out a big field of entries.

A few days previous to the big sweep at E. D. Miller's, Frank Glass broke the gun with which he had recently been shooting and was obliged to fall back on his old Leffer, with which he graced 24 out of his 25 birds and lost the other by half judgment.

The Rockingham Rifle and Gun Club, of Portsmouth, N. H., met March 9, and elected the following officers: President, Geo. D. Whittier; Vice-President, C. C. Charlsen; Secretary, Thomas E. Noyes; Treasurer, Will White.

John Hornung, Conrad Steffegren and Thos. Thomas recently defeated James Robertson, David Thomas and Lemar Pritchard by killing 19 birds to the latter team's 17. The shoot took place at Pottsville, Pa.

Hamilton and Wilson of the Wilmington (Del.) Rod and Gun Club shot a \$25 match at 100 bluecock targets a fortnight ago, Hamilton breaking 96 to Wilson's 95.

Don't forget to hustle in your entries for the great American handicap. April 5 is not such a long way off and you cannot afford to be late with your entry.

The Interstate Manufacturers' and Dealers' Society will begin the week from next Wednesday. Have you entered for the handicap?

Morristown, N. J., has a gun club modeled somewhat after the Carteret and other exclusive clubs. The members shoot every week on Class' grounds.

The third contest for the cup offered to Kings county teams by the Coney Island Athletic Club will take place next Tuesday.

Harry Transue and Harry Rittan shot a 50-target match at Easton, Pa., on March 13, Transue breaking 46 to Rittan's 26.

Berkeley Springs, Md., has a new gun club with twenty-five members.

The Ansonia (Conn.) Gun Club has decided to join the State League. C. H. TOWNSEND.

The Eastern New York League.

The following well written account of the opening tournament for 1893 of the Eastern New York Trap Shooters' League is from the Albany *Argus* and is from the pen of the well known Horace B. Derby: The tournament season of the Eastern New York Trap Shooters' League opened at Saratoga on March 14. The first tournament of the league series of 1893 was originally scheduled to take place at the grounds of the West End Gun Club, of Albany, Feb. 22, but a blizzard placed a heavy blanket of snow upon it, as a few of our local sportsmen have cause to remember, and the Westenders postponed the event to March 23. After we were snowed under nothing enlivened the tournament season of the Eastern New York Trap Shooters' League Gun Club braced up and decided to hold a tournament on the 14th of March. The date being filed with the league secretary, the tournament was placed as the first on the official schedule of the present year's series.

The opening day dawned auspiciously, though a heavy March mist shrouded everything in its chilling folds; but the sun god soon asserted his power and a gentle way as it seemed, for his light gleamed the cold gray veiling of the morning by changing its dull coloring to a pale purple, then to rosy hues, and finally the last vestige of the folds and wreathings of misty vapor were dissipated in the full flushing of a bright day.

The heavy freshet in the noble Hudson that had converted a portion of our city into a very dirty representation of Venice, had receded, and the water was as clear as crystal, the brown ground town being delayed by flooded railway tracks; so every thing looked favorable for a strong gathering of outward-bound gunners, and, in good truth, Albany showed a very creditable representation, and had the other league towns done half as well, the Saratoga tournament would have gained much in the enriching of the treasury of the crack club of the Springs, though an increased attendance could hardly have added to the enjoyment of what proved to be a thoroughly pleasurable affair. The early-morning gathering of Albanians at the Delmar & Saratoga depot showed John B. Sanders, Parker Stone, George Glendy, G. L. St. Charles, W. W. Warden and the *Argus* reporter. With a company of congenial spirits, the ride could not fail to be a delightful one, saying nothing of the inspiring influences of a sunny morning that made one forget it was the chilling, rioting month of March, until such times as a glance from the car window showed the brown fields and dark woods and only a few patches of their recent heavy covering of snow, with here and there long stretches of jagged walls of gray white showing where the drifts had been heaped. While such an outlook made the fact patent to the observer that the transition from winter to the vernal period had but just begun, the occasional appearance of a muskrat hunter, standing like some watchful bittern along the canal banks, and the croaking of the river and the smaller water courses, was a fairly suggestive of spring.

Well, here we are at last, and the keen fellows in the crowd of drivers at the depot recognize and accost by name the well known veterans of the trap and trigger. "Are ye there, Uncle Sammy?" shouted one of the jehus, and the salutation conveyed the pleasant information that the veteran pigeon shot, Samuel Goggin, was "on deck," and, as usual, the latter, looking about him the worse for a night's rambling of the "cracked dery" that had placed him on the list for many weeks. The sleighing was not killed in Saratoga by the late rains, though the "going" was hard and rough, and to the music of jingling bells we were soon en route to the shooting ground.

As we neared the unpretending lodge of a decidedly crack league club the burly figure of a man, apparently watching for arrivals, attracted our attention, and the first greeting we met came from Nelson, a man whose name rivaled the sun in the beneficence of his beams. Nelson is one of those genial souls who never grows old, and save for a streaking of gray in his prized goatee—once irreverently alluded to by the manager of the Johnstown baseball nine as a "paint brush"—the good-natured giant might pose as an example of perennial youth. Harry M. Levensington, Jr., Saratoga's star performer at flying targets, emerged from the shadow of the wigwag and his hearty greeting we met with his kinsman, W. H. Pike, who, by the by, is expected to run up against Fulford some day in a blood race at live birds. Secretary Gibbs was hustling along the preliminary work, in which he was assisted by his son Frank, the latter, when the events were called, later on, acting as cashier. Another efficient tournament officer was George Holden, who manipulates the electric trap pulls with never a break or halt. I also exchanged a long range hail with chief trapper Johnny Reed, the best man in managing his corps of assistants in all the league clubs. A youthful figure togged out in a shooting jacket attracted my attention, and it is a pleasure to mention "Wash" Coster, Jr., the crack shot of the Brierwood Gun Club, Saratoga's junior shooting organization. From the boy I learned that his father was on a business visit to certain of his old haunts in North Carolina, and the absence of the popular league expert, Coster, Sr., was a disappointment to every visitor present. The later comers of the Saratogians were "Peters," who refuses to be exalted, yea, even by his own people, and Will. Shaffer, the caterer, whom we all willingly pay tribute to at the hour of luncheon.

There were two arrivals from Yankeland. One was a tall marksman, who is a pretty sure participant in every league shoot; who never kicks, grows or swears; who is always accorded a warm welcome and every body familiar with the personnel of the regular tournament attendants will, when reading this personal mention easily guess that the individual referred to is the favorite Green Mountain State sportsman, Myron F. Roberts. The other Yankee gunner was from the great and only "Hub," a man with a fairly won prestige among the skilled marksmen of New England, whom I, with many others present, knew something of by seeing the results of much of his splendid work in various eastern tournaments, set forth in the sporting press. Of heavy, powerful build, with deep-set, gray eyes and a rather massive face that betokened lots of resolution, there was a certain striking character about the big fellow that could not fail to arrest attention, and with a pleasant manner and a well-poised air. C. O. Barrett, of Boston, made an impression both favorable and lasting. Of his powers as a grand and steady shooter, the chilling shots and the scores best tell the full details of the story.

Taking into consideration that only about the middle of the month of March had been reached, the day was a particularly favorable one for shooting, with the one exception of the glaring light of the morning sun, that reflected from the vast expanse of snow and ice on the great plain whereon the shooting ground is situated, made the tax on the visual powers of the shooters exacting to the last degree. The air was at the time quite cool, and the absence of the chilling shots and squalls made the weather conditions quite acceptable. The blinding reflection of the sun on the snow was, after a while, modified by a gathering mist, to the unspeakable relief of the shooters, and as the day wore on, a deeper thickening of the clouded canopy brought a precipitation of rain at nightfall.

The targets placed were Crumfenden & Card's kingbirds, and the steady flight of these matchless flyers would have made easy shooting for all the participants had not the traps been tensioned to throw the

birds with terrific velocity. The general average made by the shooters was excellent under the circumstances, and the winners of the divisions of the purse for highest aggregates richly deserved all that was awarded them. The story of each shooter's performance is best told in the detailed scores:

No. 1, 10 kingbirds, entrance \$1: Sanders, Barrett and Levensington 10, McGinnis and Roberts 8, St. Charles, Goggin, Ramsdill, Stone and Warden 7, Glenly 7, Pike 6.

No. 2, 10 kingbirds, entrance \$1: Barrett and Roberts 10, St. Charles and Levensington 9, Glenly 9, for birds only, Stone and Gibbs 8, Sanders, Goggin, Ramsdill and Pike 7, Warden 3.

No. 3, 15 kingbirds, entrance \$1.50: St. Charles, Barrett, Stone and Levensington 14, Pike, Ramsdill and Roberts 13, McGinnis 12, Sanders and Goggin 11, Warden and Glenly 8.

No. 4, 10 kingbirds, entrance \$1: Levensington and Stone 10, St. Charles, Sanders and Barrett 9, Pike, McGinnis and Roberts 8, Goggin and Warden 7, Ramsdill and Glenly 6.

No. 5, 15 kingbirds, entrance \$1.50: Barrett 15, Levensington, Stone and Roberts 14, Goggin 13, Sanders, Pike and McGinnis 12, Glenly and St. Charles 11, Ramsdill and Warden 10.

No. 6, 10 kingbirds, entrance \$1: Barrett, Levensington and Pike 10, St. Charles, Sanders, Stone, McGinnis and Roberts 9, Ramsdill and Warden 8, Goggin and Glenly 7.

No. 7, 15 kingbirds, entrance \$1.50: Barrett, Levensington and Warden 15, Sanders and Roberts 14, St. Charles and McGinnis 13, Stone and Ramsdill 12, Goggin and Pike 11, Glenly 7.

No. 8, 10 kingbirds, entrance \$1: Barrett, Levensington and McGinnis 10, St. Charles, Sanders and Roberts 9, Stone and Pike 8, Glenly 8, Goggin and Warden 7, Ramsdill 6.

No. 9, 15 kingbirds, entrance \$1.50: Barrett and Levensington 15, Sanders, Stone and Roberts 14, St. Charles 13, Glenly 13 for birds only, Goggin and Pike 12, Peters and Warden 11, McGinnis 9.

AWARDS FOR HIGHEST AGGREGATES.

A purse of \$15, divided \$5, \$4, \$3, \$2, \$1 was offered to the contestants making the highest aggregate scores in all the above contests, except the first. In the eight events to qualify for the purse a contestant had to shoot at 100 kingbirds. The names of the winners and their totals are given herewith:

Barrett, Boston, 93, won first money; Levensington, Saratoga, 97, won second; Roberts, Rupert, Vt., 91, won third; Stone, Albany, 89, won fourth; St. Charles, Albany, 87, won fifth.

Of the other contestants who shot through the qualification events, at 100 kingbirds, Sanders, Albany, scored 84; Pike and McGinnis, Saratoga, 81; Goggin, Troy, 74; Glenly and Warden, Albany, 69.

A FEW EXTRA SWEEPS.

The regular programme was shot out early in the afternoon, a result attributable to the small entry list and the rapid firing system under which the events were hustled along. There were lots of cartridges left, and the enthusiastic and untiring shooters called for extra sweeps to fill out the day. Four of these events followed under the following conditions: Ten kingbirds per man, unknown angles, \$1 entrance, the purse divided 30, 30 and 20 per cent. The scores follow:

No. 1: St. Charles and Levensington 10, Barrett, Stone and Peters 9, Sanders, McGinnis and Coster, Jr., 8, Glenly 7, Pike 5, Warden 4, Goggin 2.

No. 2: St. Charles and Stone 10, Barrett and Levensington 9, Coster, Jr., 8, for birds only; Sanders and Peters 7, Roberts 7, Pike and Warden 4, Glenly 3.

No. 3: St. Charles 10, Barrett 8, Sanders, Levensington, Stone and Coster, Jr., 7, Peters 6, Warden, Roberts and Glenly 4.

No. 4: Stone 9, Barrett and Levensington 8, Sanders and Peters 7, McGinnis 6, St. Charles and Glenly 4, Warden 3.

A DOUBLE BIRD MATCH.

The burly Bostonian, Barrett, wanted to try a few rounds at "doubles," evidently thinking that the steady flight of the kingbirds would act as a "cinch" on a good, big score. His invitation to join him in a modest rattle at the silver-center discs, thrown in pairs, was responded to by two Saratogians and one Albanian. Each man shot at five pairs and the scores made are presented in detail:

Levensington.....11 10 8 Barrett.....10 11 10 10 7 Peters.....11 01 10 11 7 Sanders.....10 10 10 10 6

This interesting little race made a fitting finale to a lively and thoroughly enjoyable tournament. There was a hurried tumbling into the sleighs that were to convey the departing sportsmen to the depot, and those in the south-bound train were whirled along to meet a rain storm that later turned to sleet and snow, accompanied by a severe north wind, and the roar of pelting winds, in striking contrast to the gentle weather on tournament day, but a worthy example of the fickle moods of that dreaded blusterer, howling, raging March.

CHICAGO TRAPS.

[By a Staff Correspondent.]

EUREKA CLUB.

CHICAGO, Ill., March 18.—The Eureka Gun Club held its meeting last Wednesday and voted \$35 donation to the Illinois State Association for tournament purposes. The following gentlemen were chosen as delegates to the convention of the State Association next June: J. E. Willard, R. O. Heikes, O. Von Lengerke, W. B. Morgan and A. J. Atwater. The board of directors and club captain will choose the club team for the State shoot. Eureka Club has leased new grounds at Seventy-ninth street and Vincennes avenue, very convenient to the Rock Island and C. & E. I. railways at Auburn Park, and also to Seventy-ninth street cars. The following meeting will be held every Saturday afternoon, commencing with the first Saturday in April and closing with the last Saturday in October. Eureka Gun Club last year shot 46,100 targets, a very high record, indeed. It is one of the model clubs of the country and has among its members some very strong shots.

A GOOD PROGRAMME.

Messrs. H. B. Meyer & Co., who do the Illinois State programme this year, have now had the work in hand for some time, and can safely promise an interesting and handsome book of the shoot. The frontispiece is a clever trap scene by the well known Chicago artist Mr. W. H. Wells, a shooter also, and therefore of good touch in such matters. The committee of the Association have arranged a simple but flexible scheme of shooting, and the shoot for this year will do credit to the Association and to the city. Mr. H. B. Meyer soon goes East to obtain business for the programme, I understand.

THE WORLD'S FAIR SHOOT.

Only one thing seems certain about the much mooted World's Fair shoot, and that is that those who should be most diligent seem now most negligent. Get to work, gentlemen, or go home. Let Chicago and Chicago sportsmanship suffer in the eyes of the sportsmen of the country. For my part, if this thing falls through, I could never have a word of answer for any jeer that might be flung against this town. E. HOGG.

Shooting for Offices.

QUITE a number of people assembled at the Mendon Gun Club shooting ground, Mendon, Mich., March 1, for the purpose of seeing the election of officers, the club having agreed to shoot for them, the shoot to be at 100 birds, 30 yds. rise, rapid-fire, expert rules (trap No. 1, 2 and 3, and 4 and 5), ties to be shot off in a sudden-out. The league rules to govern, the one getting the highest number to be president, next best, vice-president; next best, secretary and treasurer. The Mendon team were the only competitors—six in number—the rest of the club not thinking themselves able to compete with the Maratelle brothers, as they hold the championship trophy of the Auxiliary League of the State of Michigan, having won it now twice in succession; they have only to win it once more to have it become their individual property:

Syracuse Gun Club.

A KINGBIRD shoot on the "jack rabbit" system, will be held on the Syracuse Gun Club grounds, March 27, at 1 P. M. sharp. Cars leave Onondaga County Savings Bank every 7 minutes. Open to all, rapid-fire, known angles. Birds included in entrance. Every shooter breaking over 50 per cent. receives 10 cents for every target broken. Balance divided 50, 30 and 20 per cent. to three highest scores, ties divided. Shells for sale on grounds. H. R. BECKER, Manager.

Long Island Sportsmen's Club.

The Long Island Sportsmen's Club held its first shoot of the year at Dexter Park on Monday, March 13. Ten members competed at 10 birds each, club handicap, H. and T. traps, for a new gold medal. C. Wissell won with a straight score of 10. Mr. Schoettler and C. Freese were good seconds with 9. The scores:

C. Freese.....1111111110-9	P. Kunzweiler.....0110212012-7
N. Schoettler.....010220111-7	M. Schoettler.....1201112111-9

Phoenix Gun Club.

The first shoot of the season by the members of the Phoenix Gun Club was held at Dexter Park on Tuesday, March 16. Nine out of the ten members had a good day's sport, each one shooting at 15 birds from H. and T. traps, old Long Island rules. A. Botty was the winner with 14. The birds were a fine fast lot. The scores:

D. Freiligh.....121101102101212-12	A. Botty.....212130212211121-14

Hurlingham Rules.

RULES of the Hurlingham Gun Club and the Gun Club (London), blue and gold, vest pocket size. New edition, price 25 cents.

Answers to Correspondents.

No notice taken of anonymous communications.

MEDICUS, Brooklyn.—There is a letter here for you. Please send address.

K. C. G., Cleveland, O.—See FOREST AND STREAM of Dec. 25, 1890, for drawings of sliding seat.

W. A. F., Jr., Beverly, Mass.—Write to the correspondent who in this week's issue tells of a fish and game resort not many hours from Boston.

DR. W., New York.—Would you kindly let me know the nearest place to Philadelphia, where brook trout can be found, and how to get there? Ans. Try Dr. Fulmer's Dingman's Ferry, Pa., or Price Bros., Canadensis, Pa. Both are on Erie R. R.

E. B. M.—Can you tell me if there is any fluid which is injected into birds to preserve them, instead of skinning and mounting them? Ans. There are such fluids, but they are not used to any extent. There was more or less interest years ago in the Wickersheimer fluid. Ordinary embalming fluid will do for small birds.

W. M. P., Montague, Mich.—Where is there in Florida where a man can go on the coast on the gulf side and get land reasonable that is adapted for orange culture and other fruit? Ans. We cannot refer you to any particular point. Send for a copy of the Jacksonville (Fla.) Times-Union, and write to some of the real estate men therein advertising.

W. L. M., Pittsburgh, Pa.—"Nessmuk's" contributions to FOREST AND STREAM extended over a period of nearly ten years. It would be impracticable for us to supply a full set of the numbers containing them. His two books were "Woodcraft," price \$1, and the poems, "Forest Runes," price \$1.50. We can supply both of these, though there are but few Runes left.

A. W. B., Elizabeth, N. J.—We know of no canoe yaws that can be hired. Such boats are seldom kept for hire.

C. R. P.—1. The price of unbound volumes of FOREST AND STREAM is \$1.50 per volume (six months), bound \$2.50. 2. The address is 48 Wall street, New York. 3. There are no published photos of the pug named. 4. The E. K. C. S. B. registry of the sire and dam of an imported dog renders that dog eligible for registration in the A. K. C. If the sire and dam of an imported dog are not registered abroad it cannot be registered here.

J. D., Ironton, O.—Before using marine glue the planking must be perfectly dry, and the caulking must be done without oil on the iron, naphtha being used instead for dipping the iron in. The glue must be melted slowly over a moderate fire and kept at a fluid state without boiling. No more should be melted than can be used at once, as the glue is not improved by continued melting, though the surplus when trimmed off may be returned to the pot. We cannot give you the proportions you wish, but you will find full receipts for waterproofing in the FOREST AND STREAM of Jan. 16, 1890.

P. G., Danbury.—A bird dog that I own points all right; the only fault is that his tail isn't steady. My friend claims that for a reason why his dog won't back mine up. Again he says it is no point for the reason that his tail wriggles. Ans. Your friend is mistaken in stating that because your dog wiggles his tail on point it is no point. It simply mars the style of the act, but does not impair the act itself. A dog which backs honestly will seldom refuse to back a dog which points truly, even if the latter wiggles his tail when pointing. However, some impatient, industrious dogs are on the alert for any pretext to lead in the work, therefore they refuse to back any dog which is not motionless on point. Oftener, however, a refusal to back is from imperfect training.

W. D., Ovando, Mont.—I am engaged in fishculture and have the honor of hatching the first mountain trout in Montana. I set out 700,000 eggs and got 500,000 trout for my trouble. I think that is very good for a beginner. I expect to set out 300,000,000 next spring. This State takes no interest in our fish; we have no fish commissioner and no game warden and the laws are very poor here. I have hunted and fished in Montana for twenty years and I thought I would try fishculture and have had good luck so far. I would like to ask you a few questions. 1. Is there any way for a man to get control of a meandered lake that has more than 160 acres of land in it? 2. If a man owns the land has he the right to dam up a small creek on his land for the purpose of making fish ponds of it? The creek is 3 or 4 ft. wide and runs through my land and I could make a lake one-half mile long by putting in a dam 10 ft. high. Ans. 1. A meandered stream or body of water surrounded by land is meandered for the purpose of leaving that body of water in the eminent domain and not to be disposed of. 2. If there are no priority water rights in the creek crossing your land you can use the water as you please, but if property owners or others below you expect to use the water and have legal rights to do so, then the water would have to pass off your land in its usual channel after flowing through your pond.

H. G. C., Washington C. H., O.—I wish to raise fish, frogs, eels and turtles in southern Ohio. Would like to get an idea of how much water and what kind of water, how long it takes the bass, frog, eel and turtle to mature, what to feed them, what kind would be the best for the location, or anything that would assist a party starting to raise these animals profitably? Ans. You should read FOREST AND STREAM's catalogue of books and select some work on fishculture as a preparation for the difficult task proposed. "Fish Hatching and Fish Catching" by Green and Roosevelt and "American Fishculture" by Thaddeus Norris deal more with the subjects named than most of the other books on our list. You can not do much with eels except fatten them; they breed only in the sea. Green and Roosevelt have a short chapter on frog culture. The only turtles that have been reared, as far as we know, are the diamond-back terrapins of salt waters, about which see our "Answers to Correspondents" this week. For recent information on black bass rearing see our issue of March 9, page 211. Bass mature in two or three years, their growth depending upon the

amount of food furnished them. We published an interesting article entitled "A Successful Frog Pond" on Feb. 14, 1890, with an illustration.

F. S., Meriden, Conn.—We have a certain brook in this part of the State and have had quite a discussion. In one part of it, about one-eighth of a mile long, there are some nice pools, but no trout can be caught. Can you explain? There is good fishing above and below this spot, and why do not the trout stay there? Ans. You do not state whether the pools formerly contained trout, and what changes have taken place in that part of the stream within your knowledge or that of your associates. It may be possible that the pools are visited at night by net fishermen, or anglers may visit them so persistently that the trout are driven away. Give us full information as you can about the brook and we will try to solve the riddle.

F. L., Springfield, N. Y.—Can you tell me in your valuable paper how to breed and raise terrapins with profit, as I own swampy land on Long Island, best spring water. We find terrapins occasionally in it. Perhaps you know of some book which treats of it. Ans. We assume that the diamond-back or salt water terrapin is the one you refer to. Short chapters on the habits, mode of capture, method of feeding, etc., are given in a work published by the U. S. Fish Commission and the Tenth census, nearly ten years ago, entitled "Fisheries and Fishing Industries of the United States." The volume containing the account of the terrapin fishery, in which the inclosures for fattening the animals are described, is still to be found in second-hand book stores in Washington, D. C., and may possibly be purchased at the U. S. Government Printing Office in that city for about \$1.50. The first volume, containing the natural history of the terrapin, has long been out of print. When kept in pens, terrapin are fed on fish, oysters, crabs, clams, and sometimes celery, to give them a fine flavor. The diamond-back lays its eggs in June and July on sandy bars or banks above water. The number of eggs is small, and the young grow very slowly, making the business of rearing them very uncertain as to profit. The terrapin buries itself in the mud in cold weather and remains torpid during the winter, and this still further retards the growth of the animal. The finest terrapin are found in the cranberry bogs of Cape Cod, but the greatest shipping point on the east coast is Crisfield, Md., where a number of "crawls" are located.

J. P. J., Elsinore, Cal.—We have a lake here which we wish to stock with sunfish, bream, or some other kind of fish suitable for still water in a warm climate. The lake is five miles long by two wide, and from 10 to 50 ft. wide. The water contains some alkali, but there are millions of minnows which seem to do well. Perhaps you can suggest the best kind of fish for our purpose, and tell us where to get them. We will willingly pay all expenses. Ans. The sunfish and bream are small fish, and their introduction into new waters should not be undertaken without caution. If the lake contains no trout and is not drained by trout streams, why not stock it with large-mouth black bass? This belongs to the family containing the sunfish and bream, but is a large and valuable food and game fish, and its introduction involves no special difficulty. Furthermore, it is known to occur in brackish waters in Florida and other Gulf States, and the chances are in favor of its adaptation to the lake waters described. If you are not too remote from Washington, it might be feasible to procure a breeding stock of bass by application to U. S. Fish Commissioner Marshall McDonald, who will forward blank application upon request. If the Government is able to forward the fish, they will cost you nothing. It would be worth your while, at all events, to make the application. If you prefer to make arrangements with private parties, perhaps Dr. S. F. Bartlett, Quincy, Ill., may be able to suggest some one competent to transport, the fish. The task is not an easy one. There is in the Sacramento and San Joaquin rivers, Cal., a fish of the sunfish family which is called the "Sacramento perch." It is a good fish, of fair size, and might prove suitable for life in your lake. There should be no difficulty in getting it alive, as it is to be found in the markets of San Francisco, where it is known as "perch." This is said to be an excellent pan-fish, similar in qualities to the black bass, and reaches a weight of one pound. A letter addressed to Mr. Ramon E. Wilson, Sec'y Fish Commission, may secure additional information about the "perch."

SAVE YOUR TROPHIES.

Write for Our Illustrated Catalogue "HEADS AND HORNS."

It gives directions for preparing and preserving Skins, Antlers, etc. Also prices for Heads and Rugs, Birds and Fish, and all kinds of work in Taxidermy.

Mr. Grinnell's Indian Books.

BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

BLACKFOOT LODGE TALKS; THE STORY OF A PRAIRIE PEOPLE. By GEO. BIRD GRINNELL. pp. 360. Cloth. Price, \$1.75.	PAWNEE HERO STORIES AND FOLK TALES, WITH NOTES ON THE ORIGIN, CUSTOMS AND CHARACTER OF THE PAWNEE PEOPLE. By GEO. BIRD GRINNELL. Illustrated, pp. 446. Cloth. Price, \$1.75.

MEMBERSHIP SHARES

IN THE

Triton Fish and Game Club,
CANADA.

There has just been incorporated under the above title the finest fishing and gunning association in Canada. This preserve consists of 102,000 acres, having within its borders over fifty lakes and a score of rivers and mountain streams, all of which swarm with trout ranging from 6lbs. (*Salmo fontinalis* only.) The virgin wilderness teems with small game. Of the larger kinds the caribou abounds. Moose and black bear are fairly plentiful, as also beaver, otter and other fur-bearing animals.

The Triton Club is situated 100 miles north of Quebec, on the line of the Quebec & Lake St. John Railway, and is reached in twenty-four hours easy journey (by rail) from New York City. (See prospectus.)

A limited number of shares is offered to gentlemen of unexceptionable references.

As a summer resort for both gentlemen and ladies the Triton Club offers great attractions, in addition to the best fishing and shooting to be had on this continent, at a very low cost.

The shares are \$250 each, and are an absolutely safe investment.

Salmon Fishing

ON THE

RESTIGOUCHE.

A complete fishing lodge, the property of the late Captain A. H. Sweny, fishing for four rods; house accommodations for eight persons, in the Province of New Brunswick, seven miles from Metapedia on the Intercolonial Railroad, from July 4 to the end of the fishing season, Aug. 15. For terms, address HARRY R. SWENY, No. 5 Elk street, Albany, N. Y.

SALMON FISHING

For Sale.—The river Grand Wacheeshoo, on the north shore of the Gulf of St. Lawrence, with or without steam yacht Dahinda, being the salmon fishing establishment of a gentleman compelled by age to give up the sport. Particulars on application to ABBOTS, CAMPBELL & MEREDITH, Solicitors, Montreal, Can.

ALBEMARLE AND PAMLICO CRUISING AND HUNTING ASSOCIATION.—Bear, Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck. Membership limited to twenty; one more subscriber wanted.

H. A. WEEKS, 74 Murray street, New York.

FOR SALE.—THREE HUNTING AND FISHING reserves in Mississippi, consisting of 10,000 and 15,000 acres each. Land heavily timbered, quail and duck plentiful; numerous streams and lakes. Particulars of J. W. ECKFORD, Aberdeen, Miss.

SALMON FISHING TO LET.—ON GRAND CASCAPIA River, Quebec. Easy of access and the best salmon river in Canada. The fish run large (twenty to fifty pounds). Apply to ROBT C. LOWRY, 28 State street, New York.

SALMON FISHING FOR SALE.

The entire right to a valuable salmon river in Canada, terms reasonable. Address X., this office.

FOR SALE.—SALMON FISHING PRIVILEGE ON Gold River, Chester, Nova Scotia, with camp and 100 acres land. Price \$500. Correspondence solicited. C. E. BROWN, 1112 Fir st., San Diego, Cal.

FOR SALE.—A MEMBERSHIP IN THE LAURENTIAN Club, of Canada. For particulars, address J. B., of this paper.

SALMON FISHING.—SEVERAL POOLS ON Restigouche. Address P.O. Box 192, Savannah, Ga.

Routes for Sportsmen.

A BLANK DAY.

BUT IT WAS NOT ON THE

RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

CHINESE AND AMERICAN.

THE Geary Chinese exclusion act, which will take effect next May, provides that within one year from the date of its adoption, May 5, 1892, every Chinese laborer resident in this country must have applied to the Collector of Internal Revenue of his district for a certificate of residence; and when the specified term shall have elapsed, every Chinese laborer not so provided with his certificate shall be arrested and sent to jail for a year and then packed off to China.

The Geary act was not adopted without strenuous opposition, and it has met with the decided disapproval of many individuals and societies and influential journals, which have denounced it in strong terms as ungenerous, unmanly, un-American, unchristian and unworthy our time, our country and our character and position as a nation.

But with what reason can an outcry be made against these restrictions laid upon Chinese laborers by the United States, when individual States themselves make similar exactions upon certain citizens of other States, who are not Mongolians nor aliens, but native-born American citizens? The United States enacts that if a Chinese laborer be not registered he shall go to jail; Maryland enacts that if a visiting citizen from Connecticut or Ohio or Missouri, who happens to be a sportsman, be not registered, he, too, shall be sent to jail. Maine and Michigan are considering the enactment of laws of like purport.

If the Geary exclusion act is wrong as applied to Chinese laborers, these non-resident laws are wrong as applied to American sportsmen; and if the Geary act is right as to Chinamen, the non-resident laws are none the less wrong as to Americans.

THE ADIRONDACK PARK.

THE new forestry law just enacted by the Legislature at Albany provides for a board of five forestry commissioners who shall serve for terms of five years, and shall have general charge and control of the State forest preserves. The sections of the law relating to the Adirondacks set apart forever all lands now owned or to be acquired by the State:

All lands now owned or hereafter acquired by the State within the county of Hamilton, the towns of Newcombe, Minerva, Schroon, North Hudson, Keene, North Elba, St. Armand, and Wilmington, in the county of Essex; the towns of Harrietstown, Santa Clara, Altamont, Waverly and Brighton, in the county of Franklin; the town of Wilmurt, in the county of Herkimer; the towns of Hopkinton, Colton, Clifton and Fine, in the county of Saint Lawrence, and in the towns of Johnsbury, Stony Creek and Thurman, and the islands in Lake George, in the county of Warren, except such lands as may be sold as provided in this article, shall constitute the Adirondack Park. Such park shall be forever reserved, maintained and cared for as ground open for the free use of all the people for their health and pleasure and as forest lands, necessary to the preservation of the headwaters of the chief rivers of the State, and a future timber supply; and shall remain part of the forest preserve.

The Forest Commission shall have the care, custody, control and superintendence of the Adirondack Park; shall have power to purchase land situated within the bounds of the park; and may sell and convey any part of the forest preserve within the counties of Clinton, Fulton, Lewis, Oneida, Saratoga, Washington, Saint Lawrence, Franklin (except the town of Harrietstown), Herkimer (except the town of Wilmurt), Essex (except the towns of Newcomb and North Elba), Warren (except the islands in Lake George and land upon the shore thereof), and the town of Hope, in the county of Hamilton, the ownership of which is not in the opinion of the Commission needed to promote the purposes of the act.

SNAP SHOTS.

THE Saranac River, in the Keene Valley, constituting one of the most attractive and beautiful features of the North Woods, is menaced by a scheme of vandals and barbarians, whose fell purpose is to destroy its scenic beauty by making a log drive of it. A bill in the New York Senate, No. 559, makes provision that "The Ausable River, including both the east and west branches above the forks, is hereby declared to be, and is constituted a public highway for the purpose of floating logs, timber and lumber down the same." To constitute this lovely stream a highway for logs means that it will be dammed here, blasted there, and ruined throughout its entire course. A Legislature which has just enacted the Adirondack forestry bill cannot without stultifying itself give over the beautiful Saranac to destruction and desolation for the benefit of a few individuals against the advantage of the community, present and future.

Connecticut people living near Honey Pot Brook, in South Meriden, are awaiting with decided interest the coming of April 1, which will mark the opening of the

trout season and the issue of the Honey Pot fishing imbroglio. Certain South Meriden fishermen have stocked the waters with trout fry furnished by the State; other parties have purchased the exclusive right to fish the streams. The stockers declare that next Saturday they will go fishing in Honey Pot, trespass signs or no trespass signs, and the lessees promise with equal emphasis to prosecute intruders. The gentle art of angling is mixed up with a prodigious amount of lawing in Connecticut. Fishing rights cases run through years of litigation. Out of it all must come a final determination of the angler's rights.

The members of the Gun Club of Wellsboro, "Nessmuk's" home, have generously undertaken to provide the natural boulder, which will form a part of the memorial of Mr. Sears. The total sum subscribed to date is \$221. Those whose subscriptions have not been recorded are:

MR. A. NELSON CHENEY, Glens Falls, N. Y.
MR. H. D. LEEK, East St. Louis, Ill.
DR. GEO. A. McMILLEN, Alton, Ill.
MR. J. WALLACE HOFF, Trenton, N. J.
MR. ROBT. M. MACKAY, Philadelphia, Pa.
MR. J. W. HUTCHINSON, Brookline, Mass.
MR. ARTHUR WOOD, Grand Rapids, Mich.
MR. S. G. HARTMAN, Indiana, Pa.

Mr. J. U. Gregory, of Quebec, has just reached New York with the first robins, on his way back to Canada, after a winter in Florida. The one thing that appears most to have impressed him down there was a congregation of forty-nine field dogs baying the moon one night in concert in the hotel yard in Tallahassee. That meant, said Mr. Gregory, that there were forty-nine quail shooters in town; they had come from all parts of the country, and they bagged quail by the hundreds. Tallahassee has become a famous center for sportsmen visiting Florida.

The enactment of a Maine law permitting the killing of cow moose is a distinct retrogression. It is an accepted principle among all who are intelligently and actively interested in game protection that the parent stock of such species may be maintained only by insuring immunity for the females. By and by sportsmen, at least, will be educated to such a degree that they will find nothing to boast of in the slaying of a cow moose. The better sentiment is against it to-day.

For the man who shoots, nothing in the world is more rapid than a shooting story which is on the face of it a lie, an invention, a silly exaggeration, an affirmation of the impossible. But it is equally true that the man who shoots, and who knows what queer things do happen with guns and bullets, is of all men the readiest to believe a story which is of unusual and perhaps unaccountable but not impossible occurrences.

The Gilbert bill to permit the sale of artificially reared trout in close season came up in the Massachusetts Senate last Tuesday, and was lost by a tie vote of 17 to 17. It is feared by the friends of trout protection that a reconsideration may be asked for. The measure is thoroughly bad and we are astonished that seventeen votes should have been cast for such a bill in the Senate of Massachusetts.

Among the mounted specimens of American wild animals at the World's Fair will be a mountain lion, which was recently killed in Washington. It measured 7ft. 11in. Where was our sprightly and ever entertaining cougar-conquering and panther-prostrating correspondent, "O. O. S.," with his handspike?

Dr. W. A. Blaisdell, of Macomb, Ill., is repeating his attempts to introduce the chickoor from India as a game bird for Illinois. The experiments will be regarded with much interest.

"Nessmuk's" famous little Rushton canoe the Sairy Gamp will be shown in the FOREST AND STREAM exhibit in the Angling Pavilion of the Fisheries Building at the World's Fair.

INTELLIGENT sportsmen of Tennessee are seeking to provide better game and fish protection for the mountains and valleys. The people at large are taking great interest in the matter.

For Prospectus and Advertising Rates see Page VII.

Many Men of Many Minds.

THE FOREST AND STREAM is not the organ, nor the advocate, nor the champion of any one narrow class of sportsmen. We aim to extend to all classes and conditions of men the fullest and best opportunity for expression of their convictions, whims, notions, opinions, sentiments, beliefs, apprehensions, misgivings, anticipations, yearnings, forebodings, prognostications and vaticinations respecting the topics which belong within the scope of this journal.

Correspondents frequently express views with which the editorial page is not in accord. That paper would be dull enough, to be sure, the editors of which should assume to possess a monopoly of all there was to be written on subjects so suggestive, so intricate, complex and many-sided, so far-reaching and so manifold as the topics which from week to week and from month to month are discussed and settled and then brought up and discussed again in our several departments. As for ourselves, we do not pretend to "know it all" nor to "say the last word."

Where else in all the journals of the day will be found such a never-ceasing flow of good-humored and well-mannered discussions as here?

It is not too much to say that through the agency of the FOREST AND STREAM, which is as a forum, free to all, the field sportsmen of all the widely separated sections of this continent understand one another better, have a more manly respect for each other, and constitute more truly than would otherwise be possible, a fraternity. Did you ever think of it in that way?

MORE DELMONICO DELAY.

STATE GAME PROTECTOR KIDD was on hand last Friday for the trial of the Delmonico woodcock case. The District Attorney's office had told him that it would be on that day's calendar. Assistant District Attorney Townsend, who is in charge of the suit, had not subpoenaed any witnesses, but Dr. Kidd had taken the precaution to provide them. When he reached the office he was met with the intelligence that on request of the defendant the trial had again been postponed.

The new date set is April 5, next Wednesday, and even Dr. Kidd appears to believe that on that day the suit will actually be disposed of. Dr. Kidd has greater faith in Col. Townsend than we have; but as the Colonel has finally permitted himself to give more than a five minutes audience to the Protector and has absorbed some information about the evidence, it is possible that the District Attorney's disgraceful Delmonico record may be closed next week.

It would be outrageous if through inattention and want of preparation Col. Townsend should after all lose the suit. If he does he may rest assured that the public will understand fully where to put the blame.

The Sportsman Tourist.

AN EASTER CROCUS.

I WATCHED a budding crocus
As it rose to meet the light,
From a slumber 'neath the snowbanks
Through the dreary winter night,
And it seemed too pure and lovely
For a thing with roots in dirt.

Came a whisper from Ostara:
Stored up forces from the Sun
Sprang from out that bulb all-potent—
And its mission was begun.
Then it pleased men with true beauty,
Though the roots were deep in dirt.

Once on Easter morn a spirit
In the form of man arose,
Calling forth a power eternal
For believers; to disclose
All the sin and human folly
That we slumber in, as dirt.

And to-day from all that's worldly
May fine character arise
Out of envies, lies, injustice.
There's to us a glad surprise
That such thing can spring from forces
Hidden in the midst of dirt.

DR. ROBERT T. MORRIS.

CAMPING ON THE TENDERFOOT.—II.

WHETHER I was justified in writing my first paper may be a question. To those who love the outing for the outing's sake I must look for my vindication, if to anybody, for there was no story of either hunting or fishing in it. There are not a few writers, I am sure, who belong to that class, and as the fish and game more and more disappear the class will grow in numbers. The time is bound to come, and that, too, sooner than some of us may think, when the majority of the readers of FOREST AND STREAM, this FOREST AND STREAM possibly, but anyway, some FOREST AND STREAM, will simply be outers, and not hunters and fishermen, for there will be neither game to kill nor fish to catch within their reach. I am still in my prime, and yet I have witnessed the disappearance of the cream of the fishing from the Michigan Au Sable to the Wisconsin Brule. Brethren, the fishing is going, and I sat down to write the story of my Tenderfoot experience mainly that I might tell how one splendid trout and grayling stream was stripped of its fish inside of ten days, and that right under my own eyes.

As we were slowly dragging our way up Tenderfoot Cañon I asked our guide whether or not we would be apt to see any wild beasts during our stay. "O yes," he bravely answered. "You will see both black tails and white tails; you may see bears and possibly elk; you will certainly hear wolves howling and lions roaring." Whether he believed his own words or took us for tenderfeet and was lying outright we did not certainly know at the moment, but while I recognize as a rule of law that every man is presumed to speak the truth as he understands it, I nevertheless am firmly persuaded that our guide knew at the time that he was not. And yet while we saw but few deer and never a bear nor elk, and heard neither the howl of wolf nor roar of lion, evidences were everywhere abundant that there had been the greatest abundance of game in the Tenderfoot valley at a comparatively recent time in the past. Chalk-white buffalo and elk bones were to be seen gleaming in the sun wherever one went, and on the less than an acre of valley on which our camp was pitched we picked up a big barrow load of broken elk and deer horns and old buffalo heads, which we piled in a heap at one side.

If the game had largely disappeared, it soon was made manifest that the fish had not. At our camp the Tenderfoot flowed in a swift and strong current 20ft. in width and from 18in. to 2ft. in depth. It ran with such strength and swiftness that one had to use the utmost care in wading to keep from being borne down. The valley is in all places very narrow, and generally very crooked. It averages, I would guess, from 75 to 200 yds. in width. At every bend is a deep, rocky pool, and between these is usually very swift water. The stream has its source in the mountain springs, and from the falls to its confluence with the Smith, a distance of about nine miles, springs are constantly adding to its volume. With the great cliffs overhanging in places its deep and cavernous pools, with the evergreen trees casting here and there their shadows upon its wrinkled surface, and with now and then a stretch open to the sun glare, one need not be reminded of the stream's transcendent beauty, nor of the fact that it must be the natural home of the choicest of the finny tribe.

The waters of the Tenderfoot we found swarming with trout and grayling. A cast of three flies as often brought in two fish as one. The Preacher, who is fond of experimenting, tried on six flies one day, and brought in four handsome fish at one cast. We found the sport too good on the Tenderfoot. It required few fish to supply our larder, and after two or three days we tired of catching trout and grayling to throw back into the stream.

Not far from our camp we found a squatter's shack into which a ranchman of the country had moved during the haying season. We soon scraped acquaintance with the ranchman and his men, and the first visit the latter made to the falls on a cattle and horse salting expedition, I was of the party. Sitting Bull, a venerable broncho, too old, lame, gentle and safe for any of the "boys" to ride, was thoughtfully assigned to me, and I must say that the old fellow did his work well.

At the Falls and for a half mile or so below there was no fishing. It was plain that the Tenderfoot had been fished out at that place, and as there were two sets of campers from Niehart, a new railroad town ten miles distant over the Big Belt range, it seemed reasonable to attribute the work to Niehart fishermen. Both Bill and George said that the Niehart campers were using dynamite, and I think they knew.

In less than a week after my visit to the Falls, the valley was entered by gangs of pot-fishermen coming from the Niehart direction, and at once the work of destruction began in our immediate vicinity. Each gang charged that the preceding had used dynamite, and we believed

that each had told the truth. There was not a true fisherman among them all. The first party to pass our camp consisted of three. Their journey was attended with such a fusillade of pistol firing as to warrant the conjecture, when we first heard the shots, that a troop was on the march. They passed our camp in Indian file, the first being fairly well mounted, the second was also mounted, but rode bareback without a bridle, and the third footed it along behind. Each carried a green pole cut from the thicket, and wore a half-bushel sack, shot-pouch fashion, in which to carry his fish. For bait they had grasshoppers. These worthies fished for greed, and had the same love for the business that the wolf has for the chase of the lamb it devours. "Trout and grayling are worth in Niehart," they said, "from 25 to 35 cents per pound," and it was the money they were after.

Other parties came and went, till within ten days we counted sixteen new faces, and from morning till night during these days the work of thrashing and pounding the waters and the hoisting out of trout and grayling went steadily on. And when the ten days were up and the last of the sixteen were ready to leave, they cursed those who had preceded them for being hogs and dynamiters, for the trout and the grayling were gone. The day before we left I fished the stream for a mile or more below our camp before I got a decent creel. It was a revelation to me, this rapid and effective depletion of the Tenderfoot of its fish. The teeming waters of the Smith River will, of course, replenish the Tenderfoot, but for how long?

The work of destruction of game and fish is going on in the mountain country more rapidly than we are apt to think. Butchering is the rule. I have before me a letter from an Idaho man in which is an account of a Chicago gentleman who, with his family, spent six weeks in that State last season, and "during their stay they killed 2,000 chickens besides other small game." Let us hope it is a lie, for what would even a Chicago gentleman do with 2,000 chickens during a six weeks' outing? And yet, while we may hope that the story is not true, it is certain that the Chicago man was better than the most of his neighbors, if he didn't kill every chicken he could, "besides" all "other small game."

On our way to Livingstone we went up the beautiful valley of a delightful trout stream, whose name escapes me, for a distance of some four or five miles. All along, the banks indicated a recent and unusual invasion of fishermen, and on trying the stream we found an unexpected scarcity of trout. On inquiry of the ranchmen, we were informed that a company of fishermen from a town forty miles distant had spent ten days on the stream and that they had "salted down" thousands of fish. Our informants probably gave them credit for taking more fish than they were justly entitled to, but the fact was plain that they had skinned the stream.

The Yellowstone River above the falls and within the Park affords as fine fishing of its kind as perhaps can be found in the world. But one hears fault finding wherever he goes because the Government will not suffer the market-fishermen to come in and take possession.

But the market-fishermen are not the only people to blame for the work of extermination going on in the creeks and rivers of the West. The day we spent at the Yellowstone Falls we noticed a couple of gentlemen setting out on a fishing excursion in the upper part of the river. Subsequently we met one of these men, who told us the story of his catch. It was 150, and I have no reason to believe that he did not tell the truth. But that was a shameful butchery. The fellow was certainly no true sportsman, and I trust the time is not far hence when a man would as soon think of purloining his neighbor's property as to kill more game than he can find use for.

D. D. BANTA.

THAT PARADISE IN THE NORTHWEST.

SEATTLE, Wash., March 13.—Though you will not find my name on your list, I am still a constant reader of the best sporting paper published. I am almost constantly on the move, thus have no fixed address, and consequently obtain the FOREST AND STREAM of newsdealers.

In your issue of Feb. 23 I notice a communication from Tacoma from the pen of Dr. J. A. Beebe, in which he literally makes this region a sportsman's paradise. As one of the disciples of rod and rifle I feel called on to correct some parts of the genial Doctor's statement. He evidently has the "Sound fever," and has it bad. (There is no known cure for the disease.)

"Bears, deer and cougars are killed within ten minutes' ride of the court house," says the Doctor. It is true that a cougar or bear does occasionally stray into some of the "real estate" suburbs of the cities of the Sound, but these are from four or five to six or eight miles from the city and surrounded by a jungle that would rival like places in India or Africa. Decidedly the Doctor has only shown one side of the picture.

"Seals, whales and dolphins * * * crowd into our harbor and sport at our very doors. * * * Salmon of 25 to 45 lbs. are very common. * * * Rainbow trout of 4 lbs.," writes the Doctor, are to be caught (presumably) right at the door. "Twenty minutes' ride * * * or an hour's walk or row will convey the ardent sportsman into—" Paradise, the Doctor would give you to understand. Now I'll see what is the sane version. First, "dog," or hairless seals, do frequent certain localities in the Sound during salmon season, and then only in limited numbers. Once in a generation, perhaps, a small whale does get lost in the channels and strays up the Sound. I have questioned quite a number of old settlers and my information is that some time several years ago three small whales actually got into Commencement Bay, Tacoma's harbor. I can find not even a tradition of any others above Port Townsend, seventy-five or eighty miles from Tacoma. Verily the Doctor's door is a wide one. Inquiry fails to find any one who has ever seen anything nearer like a "dolphin" than a porpoise. Perhaps the Doctor meant the latter fish, if so we can overlook his error.

I caught a great many salmon myself last season and inspected whole schoolloads caught by the cannery fleet of Italians looking for some of these fabled monsters of the salmon tribe. The largest one I could find tipped a Howe beam at 22 lbs. The Doctor must use "spring" scales with a very weak spring. As to the trout, there are undoubtedly large trout in some of the mountain streams of Washington. Just how large it would be hard to state. I myself never saw one over 3 or 3½ lbs., and don't know what kind of trout he was, but am under the impression that he was captured in one of the lakes.

You of the East, of the Maine woods, of the Rangeley

Lakes, of the Michigan or Canadian pines, of the crags of the Rockies, you know not what the Doctor's "paradise" is. Just put on your imagination cap and follow me closely. First, we have a rough up and down hill country which nature has planted with a solid grove of sombre fir and cedar trees, whose plume tops find the sunshine 200 or 300 ft. above the ground and whose diameter 10 or 12 ft. from the earth will reach 6 or 8 ft. to 12 or 15 ft., and in some cases much more. Hemlock and spruce form a good undergrowth, which shuts out the sun and vegetates the huge bunches, mats, festoons and stalactites of green, gray, brown and yellow moss that covers every stick in the woods, gathers a cold, clammy dampness and lends a decided ice-house air to these woods. Don't think for a minute that this is all. We must clear away a mass of swamp alder, cottonwood, wild cherry and hundreds of other "shrubs," including a mass of ferns of four or five kinds which grow, some of them, almost to the magnitude of bushes, and are all as high or higher than your head. Mix with these a dozen or fifteen kinds of thorny berry vines and drop a few acres of that vegetable terror known as "devil's clubs," here and there just carelessly, so they will stab you, tear your corduroys and give you a three or four hours' job removing the needlelike thorns; then knock a lot of big timber down and pile it criss-cross in every direction, some of it so big you cannot climb over it, and brush so thick you can't go around it; add enough light to see newspaper print under the thinnest places of the vegetable mass above you and let a common every-day coast rain envelop you like a wet blanket (this is in deer season, January), and you have the most truthful picture my pen is able to describe to you of this beautiful "paradise" of the Doctor's. EL COMANCHO.

TAGS ARE UN-AMERICAN.

CHICAGO, Ill., March 25.—*Editor Forest and Stream:* You are right when you say that "tags are un-American." I have fished the lakes and rivers of Illinois, Michigan and Wisconsin with rod and hook for over thirty consecutive years, and if the people desire to protect the sportsman's interest, there is no necessity of licensing a hook and line, but let them keep the seines out of our small streams, see that the waters are not polluted, and don't introduce such spawn-eaters as the German carp, and our rivers will yield enough fish to satisfy any reasonable minded person for a century to come. OLD NICK.

NEW YORK, March 24.—*Editor Forest and Stream:* Your splendid editorial, "Tags are un-American," deserves the admiration and praise of every lover of field sports. I trust the time will come when such foolish dickerings with law will be a thing of the past. "Non-resident license laws" should only be passed by States who wish to build a Chinese wall, and not regard as worth any consideration the amount of money is spent by a constantly increasing sporting element that supports thousands of summer places. I have traveled in thirteen different States in the last nine months and always carry my rod and gun with me, and have resolved never to stop at places where I am so un-welcomed with a non-resident license tax. I trust others will do the same. I agree with you that game preservation is important and necessary, but is non-resident license tax the remedy? I think not. H. C. W.

NEW BRUNSWICK BEAR BRAVES.

THE landscape was bathed in the soft light of the late autumn sun when, one day, two hunters—mighty nin-rods—left one of the fairest villages in the little Province of New Brunswick on a rabbit hunt. On their shoulders were their "trusty firelocks" and their pockets were filled to overflowing with cartridges loaded with No. 5 shot.

As they crossed the long bridge that spanned the river between the town and their hunting ground the wind whistled merrily through the upper works of the bridge and also through the whiskers of the hunters. In the anticipations of the good things in store for them later in the day they were in high spirits. Only one little drop of bitter was in their cup, they had not brought cartridges enough. It was too late now to go back for more. And after they had slain either a rabbit or a grouse with each of the six and a half dozen they had with them they would probably be tantalized by the sight of game galore which they would be powerless to reduce to possession.

Alas! that there should be so wide a margin between expectation and realization. When the day was fast waning, and they had tramped many a weary yard on the ground where they had decreed that so much game was to die, they found that:

The steps of the "joe-buck" were far and fleet,
And the grouse kept aloof from the hunter's feet.

The wind now sighed mournfully through the trees, and toyed not at all with the whiskers of the nin-rods. "I'll tell you what," said one, "we've got to lie low till after dark and steal into town unobserved. Then we must keep mighty quiet for a few days or the boys will have it on us good." "I know a trick that'll beat 'lying low' all hollow," replied he of the judicial mind. "Over there, on the other river, is a man who owns a tame bear, which has grown so cross that he is dangerous. Let us buy that bear, shoot him, and pass him off for one killed in the woods, in fair fight, with No. 5 shot. Then we'll enter town in open daylight; also in a blaze of glory."

And they hid them to the owner of the bear, and transferred to his pockets a goodly number of shekels. Then he of the judicial mind ventured within the scope of bruin's chain. As the animal tried to resent the intrusion, he was "knocked speechless" by a charge of small shot, delivered at a point blank range.

When they entered the village they left in the morning there was great rejoicing. They had met the fierce denizen of the forest; he had attacked them and he was theirs. Their fame went abroad in the land. They were pointed out on the street as the men who in self-defense had slain a bear with No. 5 shot. The bearskin was placed on exhibition in a store window. Their names got into the papers; yea, even into FOREST AND STREAM, and theirs was great glory.

One day an old hunter entered the village and stopped for a moment to look at the glossy pelt so conspicuously displayed. "A brav skin," he said, "and evidently that of an individual of mark and distinction in his own country. For, while we sometimes hear of bears wearing white shirt fronts, it is extra-ordinary for one to wear a collar, and the chafed ring on the neck of that skin is a

plain mark of that same. It is also clear that he was a philosopher and much given to meditation. That bare spot on the skull was probably caused by the working of his brain on the subject of woods ethics. The chafed spot on the rump, too, shows his habits were sedentary." At length his eye caught a mass of matted and befoiled hair still further down on bruin's transom, and he continued: "How easy it is to reach a wrong conclusion! The clothing of a philosopher might very well be a little thin in spots, but no gentleman and scholar would willingly allow his breeches to get in that state. He is plainly a criminal—a member of some ursine chain gang. His meditations were forced; his range so restricted that oftentimes he could not find a clean spot on which to sit down. I wouldn't be surprised, though, if inquiry should elicit the fact that somebody's tame bear had crossed the dark valley, and the place that once knew him knows him now not quite so well."

The glory—such as it is, still belongs to the two hunters; so does the skin. * * *

Natural History.

THE FIVE-TOED KANGAROO RATS.

CERTAIN of the leaping members of the remarkable family of pocket mice were made the subject of a paper by Mr. Vernon Bailey at a recent meeting of the Biological Society of Washington. The region included in Mr. Bailey's notes is the southwestern part of the United States, and the species under his observation were Ord's kangaroo rat (*Perodipus ordi*) and the *Perodipus agilis* of California.

These are small animals, the first having a body only about 3in. long and the latter somewhat larger. In both the tail is longer than the body and the hind legs are admirably adapted for leaping, so that their capture above ground, except by trapping, is well nigh impossible.

The kangaroo rats are famous for the burrows which they construct and in which they conceal themselves during the day. Ord's rat digs a principal burrow about 12ft. long, 2in. in diameter and nearly round. A central chamber, used for storing food, is located about 1ft. below the surface, and in the particular one examined by Mr. Bailey five holes communicated with this granary. The nest was placed near one end of the burrow; it was a ball of fine grass, fibers and roots, intermingled with hulls of seeds, wheat, etc.

The amount of dirt moved by this little rat is surprising, amounting to at least a handful. Some portions of the hole are very near the surface and if one tries to capture the animal by digging it will break through at some point and escape.

The burrow of the larger rat above mentioned was described by Mr. Bailey from notes of Mr. Stevens. It is 17ft. long between the entrances in the one examined and a number of irregular lateral branches communicated with it. Several granaries formed a part of the habitation, and these contained upward of 400 acorns of the *Quercus lobata*. The nest, composed of hulls of poverty grass, was found to be 4in. in diameter and 6in. long. One of the entrances was located under a perennial plant and the hole was nearly perpendicular in the last six inches of its course. The young in the nest numbered three.

The most singular external feature of these rats is the hair-lined pouch under the mouth on each side. In the *Perodipus agilis* each pouch will hold a single acorn.

ELK IN HARNESS.

GRAND VIEW, Tenn.—I noticed in the number of Feb. 23, the picture of the moose in harness, which brought to mind some experience I once had with elk in harness. My brother had a pair of buck elk two years and a half old at that time, the eldest of a half dozen does and a half which he kept in a park. Those two bucks we separated from the others, and we drove them through a lane into the barnyard, thence into the horse stable, where they were kept a few days and subjected to the halter. After that a harness, which had been prepared for the purpose, was fitted on, and they were taken out and hitched up to a light one-horse sleigh. All this was accomplished without much resistance on the part of the elk. But it required much coaxing and some whipping to make the first start. We succeeded, however, in driving a mile or two, but they did not take kindly to the bit and could not be guided much by the lines; consequently we made zig-zag courses and frequently brought up against a fence or some other obstruction. They were harnessed and driven perhaps ten times during the winter with about the same result. They did not seem to learn anything by using, and we came to the conclusion that elk were not made to work in harness, and it seemed by their actions that the elk were of that mind, so early in the spring they were driven back into the park.

During the month of August, after they were four years old, they became ill-natured and ugly, and one had become so furious that we had to look around for some way to confine him. If he broke through the fence we considered him very dangerous and no man dare go into the park when the elk was in sight. I believe that I never saw an animal more aggressive or that was more full of fight. He would go for any one who stood outside of the fence as far as the fence would let him, and he would stand punching with handspikes and prodding with pitchforks until his face would be a gore of blood, and never flinch nor back an inch, when, if he had broken through the fence, the punchers and prodders would have wished themselves anywhere else but there.

The way I secured that elk from further trouble was this: Taking 25ft. of cable rope and climbing on to the fence, thence into the top of a white beech that was full of limbs and stood close inside of the fence, I tied one end of the rope to a strong limb, having made a strong noose at the other end, and then worked my way down on to the lower limbs, some 8 or 9ft. from the ground. By that time the elk had got there, even before I was ready.

Just then I would as soon have walked into the grasp of a grizzly bear as to have dropped from that limb, although outside of the rutting season he was no more dangerous than a Devon steer. He soon gave me as good a chance as I wanted, and I was lucky enough to drop the

noose over both horns. Then I had him safely tied up, where he was fed with hay and oats for three weeks, after which he was let loose, being then as quiet as the others, which numbered at that time fifteen—does, fawns and young bucks.

Some time in the month of December following we drove those two old bucks down through the lane to the barn and had them altered, and drove them back into the park again. In the spring they shed their horns at the usual time, and the next set were grown to the full size, but the velvet dried down to the horn and never peeled, and they never shed them.

The trumpet-like call or lowing of the buck elk, which is heard only in the rutting season, is unique and can hardly be imitated.

ANTLER.

Pennsylvania Otters.

AUBURN, Susquehanna County, Pa., March 23.—*Editor Forest and Stream:* Your correspondent, "Onyjtta," writes of the killing of an otter on the Juniata, and wonders whether it came from up or down the Susquehanna. That an occasional otter is killed in the "north counties" I can testify.

Last December some boys named Grozitki were on Jones Creek, a small stream in Windom township, Wyoming county, emptying into Nigger Pond on the headwaters of the Little Mehoopany Creek, whose waters reach the Susquehanna at Mehoopany. Their dog drove some animal into a log heap, and they succeeded in killing it. It proved to be a fine specimen of otter.

Another was trapped last fall by a man named Shaw near the outlet of Oxbow Pond. This pond is in Lemon

ELK IN HARNESS.

Amateur photo by A. H. Phillips.

township, Wyoming county, some four miles northeast of Tunkhannock, and its waters flow to the Susquehanna. The other succeeded in loosening the trap and carried it off, but was afterward found still in the trap by a man named Billings. Billings returned the trap to Shaw. Shaw claimed the otter, but offered to divide—give or take \$5. Billings would do nothing, and Shaw sued for the value of the otter, and the case is now in court. According to the laws of courtesy among trappers, to whom did the animal belong? And how will the court decide?

BON AMI.

[The otter belongs to the owner of the trap, unless he has given over its pursuit.]

The Woodcock Have Come to Town.

NEW YORK, March 28.—*Editor Forest and Stream:* On Sunday last, little Laura Page, a daughter of my neighbor W. D. Page, the well-known lawyer, discovered near her father's house, 157th street and Eleventh avenue, a live woodcock crouching on the ground. She announced her discovery to her uncle who caught the bird and found that it had injured itself by flying against something, as it bled from the bill, and when it breathed a little bloody froth could be seen at the nostrils. At the same time it seemed fairly strong and struggled vigorously to escape from the hands.

After examination it was placed on the ground beneath some bushes well out of the way of wandering cats and dogs. Once or twice during the day it walked away, but not to any great distance, and was found and put back. The next morning it had disappeared, but it had evidently walked about during the night and probably recovered sufficiently to fly away. It seems rather late for the woodcock to be migrating, but that perhaps may be accounted for by the severity of the past winter.

SUBSCRIBER.

NEW YORK, March 27.—*Editor Forest and Stream:* On Saturday morning last one of my clerks brought into my office, 20 Broad street, a large plump woodcock, having picked the bird up from the sidewalk at the door. The bird was alive when found. It appeared to have broken its neck and was nearly bald, showing where it had struck against one of the numerous wires abounding in this region. Harry McIntosh, of Squires', kindly set it up for me.

W. ALEX. BASS, JR.

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

It "Fills In."

I CAN'T get along without the paper somehow. Now that my work keeps me out of the fields and woods, it "fills in" wonderfully.

A. F. R.

Game Bag and Gun.

GUADALUPE DEER.

TAYLOR COUNTY, Texas, Feb. 12.—I note Mr. C. H. Ames' inquiry whether I know anything of white bear in the Guadalupe Mountains of New Mexico and Texas. I do not. The only bears known to me in those mountains are the black bear and cinnamon bear, which abounded a few years ago and are no doubt tolerably plentiful yet. But is it impossible a bear of these sorts should sometimes turn gray? Who shall say nay? However, I suspect that Mr. Ames' friend had seen some bighorns in the distance which he mistook for bears. It is remarkable what singular appearances may be observed in the glittering and rare atmosphere of those elevated regions. I have seen a raven walking on a railroad track in that region, which at a distance of a few hundred yards looked to be ten feet high at least; inasmuch that I marveled what the thing could be till I drew my glasses upon it. His size increased with distance and diminished with approach. And though as black as anything can be, he glittered with alternate white and black, or a commingling of both, as he turned his plumage in various ways to the sun. Thus it would not seem to me very strange if one in the Guadalupe Mountains should mistake a mountain sheep on the declivities, or any kind of sheep, for a white bear.

As to Mr. Briggs' "cactus deer," I have no doubt Judge Caton is right in explaining the abnormal protuberances on the deer's head as the result of castration. After mailing my letter from Eddy I met the gentleman who killed that identical deer, and he told me that the animal had been castrated. He added that he had seen several so-called cactus deer, and in every instance found that the animal had been deprived in that regard in some way unknown to him, or had never been supplied by nature. I took this gentleman's name and address, and am sorry to have lost the memorandum. It is a strange effect of that sort of disablement, and just the contrary of what we observe in young bulls, whose horns always are greatly enlarged as a result of losing their virile pellets. It is more like its effect in men, whose beards cease to grow or fall entirely.

I threw out some remark in my last letter to FOREST AND STREAM regarding the Mexican or mountain lion, so called in Texas. I did this with the view of eliciting discussion and solving what appears somewhat of a difficulty. When I came to Texas some 35 years ago I heard a great deal of this animal and sought eagerly all knowledge I could get of him. I was in the Injun service of the State, always on the remote frontier or far beyond it, among hunters and frontiersmen entirely, and thus had great advantage to pick up much lore on this and all such subjects. The animal was represented as a terror who would not scruple to fight back promptly and fiercely if attacked. It was held that if you should startle one alone you would be wise to give him a wide berth at once, though armed as an arsenal. He was undoubtedly terribly destructive to horses, whose flesh he seemed to prize above all other food. I have myself seen his deadly work among horses, and in one instance saw where a full-grown horse had been dragged a considerable distance after being dispatched. The tracks of the formidable creature were plain, and it was not a panther or cougar, who could by no means do such work.

No Texan in those days held that this animal and the panther or cougar were the same; and none, I dare say, living now who lived in those days would so hold. But I found that there was difference among them as to what the animal really was. Some said it was that spotted, beautiful, ferocious creature, whom we now call the jaguar, or *Felis onca*, or *Leopardus onca*. Others said it was a dark-brown or black creature, in shape like the jaguar, but much larger and altogether more formidable and terrible. I believe both sides were correct; and that two great beasts, differing in size and color, but much alike in quality, were not scarce in Texas in those days, though not often seen, being nocturnal in their ways. I have seen the jaguar, whom we still have with us, and if I do not greatly err, I have seen that other great beast more than once. What is he? The Mexicans call the jaguar the *tigre*, and I have heard that the old-time Mexicans called that other animal *tigre melan*, or something of that sort; or in plain English the black tiger.

I hope Big Foot Wallace and Geo. Henry McCulloch may see this communication and turn their light on the subject. They should be acquainted with every sort of animal that ever sat foot on Texas soil.

My explanation of the dark beast is this: There is a very bad animal of the jaguar relationship whose abode is in the mountains of lower Mexico and Central America, said to be more fierce than the tiger of the jungles of Asia. That animal, following the mountains, occasionally came into Texas, and thus gave rise to the confusion. I have no books of natural history about me here, hence cannot give what may be his name.

To-day, for the first time this year, I heard the love song of the lark. My little boy says that he says, "Spring time come, gentle Annie;" and he repeats it so as to resemble much the lark's song. I dare say in a few hours he will be seeking covert from a Texas norther, and will think more of keeping warm than of love for his Annie. But it is the first sign so far of the coming vernal sweets. I count not the love season as well upon us until about the 1st of April, and sometimes we have cutting frosts after that date. Though far in the southwest, we are 1,800ft. above the sea.

N. A. T.

Canandaigua Rod and Gun Club.

THE scope of the Anglers' Association of Canandaigua, N. Y., has been enlarged to include also shooting interests, and the name has been changed to indicate the new scope of the organization. At a recent meeting under the new amended rules these officers were chosen: F. W. Chesebro, Shooting Master; Lewis H. Adams, Assistant Shooting Master; J. S. Crawford, Chief Angler; H. Van Vechten, Assistant Chief Angler; W. H. Fox and H. M. Finley were elected to the executive committee and W. H. Knapp to the auditing committee. The president and secretary were authorized and directed to make application for the admission of the Rod and Gun Club to the New York State Association for the Protection of Fish and Game. The attorney for the club, W. H. Knapp, was directed to take steps to secure the club's incorporation.

WISCONSIN NOTES.

Editor Forest and Stream:

If the bill now before the Legislature placing a penalty on hunting deer with dark lanterns should become a law it will be welcomed by all right thinking persons as a step toward preserving deer in the forests of this State for an indefinitely long period. This method of hunting is becoming more and more the mode each year till almost every one who owns a repeating rifle also owns a dark lantern, which is not intended for purely ornamental purposes, but is very frequently used during the open season and often before the opening of that season. Deer were very plenty all over the wooded portion of this State last fall. They seem to have suddenly increased and appear to be nearly as numerous as they were ten years ago. Even in the Baraboo bluffs, thirty miles from Madison, numbers were killed where they were supposed to be nearly extinct. I believe it is proposed to do something substantial toward permanently preserving the species in that region, which is comparatively worthless for agricultural purposes.

Very little attention was formerly paid to the law making a close season, but the law providing for a game warden in each county brought the matter home to all, and especially to those who were habitually disregarding legislative enactments.

A large portion of northern central Wisconsin, covering perhaps one-half of the northern half of the State, is not well adapted to the general purposes of the farmer. At present this area is covered with a dense growth of hemlock and other woods, but chiefly hemlock. As this timber becomes exhausted in the Eastern States, those engaged in the tanning of leather turn their attention to this portion of Wisconsin. The four tanneries within sixteen miles of this place require the bark of at least 3,000 acres of land. The lumber manufacturer follows after and removes every piece of timber valuable for his purposes. It is easy to see what follows. A large portion of land is denuded. Fire perhaps runs over the ground, clearing it of refuse. A new growth springs up in a soil naturally adapted to plant growth. This growth, while too dense to admit of successful hunting, is the ideal one for a natural preserve and feeding ground, not only for deer, but for grouse and rabbits.

A liberal bounty of \$10 on wolves tends to lessen the number of that marauding family. So far as my observation goes, there were five wolves in this locality ten years ago where there is but one now. This bounty no doubt, intended primarily for the protection of flocks, has done a good work incidentally for game protection.

Two trappers wintering ten miles west from this place caught fifteen wildcats before the deep snow came on. A bounty of \$6 per head, together with a good price for the pelts, nets them a handsome sum.

There were comparatively few good days for hunting last November, yet the number of deer killed in this State, if it could be known, would be astounding. It was estimated that 500 carcasses were shipped out of Douglas county, to say nothing of the large number consumed by the large population at the "head of the lake." Take one-half of this number for a basis for the thirty odd counties of the State where deer are numerous, and one obtains a total that seems almost incredible.

A peculiar accident happened to a deer hunter in Clark county. He was watching a runaway from a hammock fastened to two trees about 15ft. from the ground. Being supplied with a fur overcoat, he often remained till late at night watching from his perch. Suddenly his hunting career came to an end. A flying squirrel gnawed off one of the fastenings of his hammock and he fell to the ground. He was partially paralyzed by his fall and would have frozen to death but for his warm fur coat. He was finally rescued, but in a condition which promised little for recovery.

We have yet all the snow which has fallen during this unprecedented winter. A few days since we had a material addition to what all considered a sufficient quantity. While the addition was material, there was a material accompanying the storm which does not usually accompany storms as far from the open prairie as we are. I refer to a yellow earth which fell with the snow and drift, along with it giving the snow a decidedly yellow cast. Dirt storms are common in the West, but the interesting feature of this one is that we are supposed to be at least 200 miles from any portion of the country which is not covered with snow. WYANOAK.

WESTBORO, Wis., March 17.

"DUFFERS."

MERRIMAC, Mass., March 20.—*Editor Forest and Stream:* I am a regular reader of your paper, and as I glanced through last week's issue I noticed particularly the article under the heading "Massachusetts and Maine," signed by "Special." Let me say a few words in defense of the poor workingman, who in a whole year can hardly save \$50 or \$75 with which to take a short outing to enjoy what nature furnishes in its season. I would like to ask the two Boston gentlemen who want the license fee raised to from \$25 to \$125, where the man with the \$75 for all the expenses of an outing comes in? He works hard all the year and wants a vacation just as well as the rich man. Why don't these gentlemen buy the State of Maine and then they can have the exclusive right of going there with a few of their friends, and by doing this they can keep out the many "duffers" whom they don't want there.

Because they have ample means to pay any license which the State might see fit to impose, is that any reason why they should try to have the fee raised beyond the reach of the man who is limited to a certain sum with which to enjoy himself for a short time? What benefit they could get by having the fee raised I can't imagine. It can't be for the better protection of game, for does not the State game laws furnish the necessary protection? If it does not, it ought to. I should naturally suppose that such an action on the part of the State would hurt these gentlemen, more especially the one who owns so many thousands of dollars worth of property there; for no doubt he makes considerable by leasing his camps by the season to parties who go there for the express purpose of hunting and fishing. But the great question is, would these parties be so numerous if such a high license fee was imposed upon them? I, for one, don't think they would.

I suppose "Podgers" would like to have the farmer's small boy sit on the fence and whistle while he was at the stream near by with rod and bait catching all the fish. Is that so, "Podgers"?

U. NO,

NOTABLE SHOTS.—V.

The Great Scratch Rooster-Under-the-Corncrib-Hogshead-Ricochet-Around-the-Corner-of-the-Chickenhouse-Hogpen-Shute-Chicken Shot, with a Diagram of How it was Done.

PHILADELPHIA, March 11.—*Editor Forest and Stream:* The articles in some of the recent numbers of the FOREST AND STREAM, under the headings of "Snap Shots," and "That reminds me," recalls to my mind a scratch shot that I once made, which from its unexpected results, and the singular circumstances that caused the shot to be made, have tempted me to commit it to paper, and forward it to you, and if you think it worth the space, give it a place in your columns.

The incident related is strictly true in every particular, and the actions of this rooster, on this occasion, are totally unaccountable except on the supposition that domestic animals sometimes understand something of human language and expression. We know this to be the case with many animals, but it is a faculty not generally accorded to the ordinary domestic fowl.

Once, when living in the country, I had an old partridge Cochon rooster that I thought had outlived his usefulness as a stock bird, and I had decided to kill and eat him. It was his custom, after the fowls had been fed their early supper, to retire immediately to roost, while the rest of the fowls would pick around outdoors an hour or so afterward, the old rooster, meanwhile, being the sole occupant of the hen house. This habit had been long established and was well fixed.

So I said to my wife one day, "When the old rooster goes to roost this afternoon I will go in and catch him, as it then can be done without disturbing the rest of the fowls."

But whether he overheard and understood the conversation with my wife about him or for what other reason will probably never be known, but certain it is that he utterly refused to go to roost at all that night.

After the fowls were fed, instead of going to roost as usual, he would walk up to the hen house door, look in, commence cackling, and wander away, to come back and repeat the operation, and after the old fowls had long

A A A, supports or corner. B, rooster. C, hogshead. D, shooter. E, hogpen. F, trough. G, chickens in trough. H, chicken house.

been to roost he still kept it up and refused to go in. Finally, as it was getting dusk, we tried to drive him in, but in alarm he ran away round the barn.

I then took the bucket of well scalded meal and went to feed the hogs. I had a shute on the outside of the hog pen, leading to the trough, in which I poured the feed, and I was never particular about scraping the shute out, as the half-grown chickens used to follow me to the pen when I fed and jump up on the shute, as many as could accommodate themselves on it, and clean it out. These half-grown chickens did not roost in the hen house with the older fowls, but had little coops of their own in which they still staid nights.

After feeding the hogs, I returned to the house with the empty bucket, and the old rooster came up and took a position under the corn crib, still keeping up a great cackling. The corn crib was set on posts, and the bottom of it was fully 3ft. from the ground. I always kept a loaded gun standing just inside the outer kitchen door, to have it handy when hawks made a descent on the poultry, which they often did, and frequently they paid for their audacity with their lives, as I often got a successful shot at them on such occasions.

So, now, being out of all patience with the old rooster's perversity, I said to my wife as I stood in the dooryard, "Hand me the gun, I will shoot his head off where he stands." She did so, and I raised it to my shoulder, took good aim at his head, he standing sideways to me, and fired.

The rooster fell promptly at the discharge, but a tremendous outcry from the chickens which were feeding from the shute of the hog trough told me something was wrong there, and, running around where I could get a view, there laid three of them in the throes of death and we found two more dead ones in the coops the next morning.

Now, these chickens were neither in sight nor in range, and to understand the situation a little plan of the premises will be of assistance, which please find inclosed.

Beyond the corn crib, and in the line of fire from where I stood, was an old oak lime hogshead, used at the time for keeping wood ashes in and well away from all buildings as a precaution against fire. It also stood opposite a passageway between the hog pen and the hen house, this passageway running at right angles to the line of fire, and the chickens feeding at the shute were in this passageway, fully 30ft. from and at right angles to the line of fire and protected by the hen house, which was 16ft. square,

The explanation is this: The hogshead stood at the intersection of the line of fire and a line drawn at right angles to it, between the hen house and hog pen where the chickens were feeding; the staves of the hogshead were nearly as hard as iron, and the shot, striking on the hard curved surface of it, caromed or glanced off, taking a course at right angles to the line of fire and killed five chickens 30ft. from it. It is the only instance I ever knew where a gun actually shot round the corner of a building and did execution. F. R.

A TOWN MAN'S NOTIONS.

NEW YORK CITY, March 22.—*Editor Forest and Stream:* If you will permit me, I would like to do a little "kicking." I know of no paper which reaches and teaches the vast number of sportsmen who dwell on Manhattan Island, where there is no hunting ground, better than FOREST AND STREAM.

What is the use of purchasing high-priced guns and hunting outfits, with the hope of bagging a little game, when the natives take good care that most of it is killed a week before the open season. On such days as Thanksgiving and Election Day all trains leaving the city carry crowds of sportsmen, who cannot get off any other day, while the country boys gather round the depot to see the city chaps arrive, and laugh as they think that shooting tomato cans is about all that's left.

Putting up the sign, "No shooting allowed on these premises," is also a little game, but some people don't know it. I was once told by a teamster, whom I had treated to cigars, that the signs in his locality were mostly put up by local sportsmen to fool outsiders.

As regards license to hunt in certain States and counties, it's all wrong. I don't believe in putting on any restrictions to hunting that will bar out the poor clerk who works all day in a dark office, in favor of his more fortunate brother, who can afford to pay for these privileges. It is not right. The game of the forest don't belong to any one in particular. Put on restrictions of a different nature. Let it be a test of skill, not of wealth. Take squirrel shooting, for example. Pass and enforce a law prohibiting the use of a shotgun, and allowing only a small caliber rifle. In this way the game is not so easily killed; the sportsman who takes pride in his skill with the rifle will make a decent showing; the hunters will be less numerous, leaving only the true sportsman, and the man that wants to put his scatter gun within 20ft. of the object, close his eyes and pull the trigger can "keep off the grass." Otherwise stop shooting altogether for ten years and give the boys a part of Central Park for their exclusive use to keep up practice. F. H.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., March 24.—A gentleman of Aurora, Ill., whose name I will not give, lest he should not like so much publicity, writes me this week as follows:

Some time ago I wrote you inquiring about duck shooting on the Kankakee marsh, and you gave the address of Sandy Sollers, Shelby, Ind. I have made arrangements with him by which he is to keep me informed of the movements of ducks this spring, and am going down soon. I wish to thank you, and wish to say without any hesitation that I get more information in your letter about local matters than I can by taking the *American Field*, and have discontinued taking the same.

My business is such that I have but little time for the field, but take a few days in the spring and fall for ducks and geese, but have had none of the latter shooting for three years. Can you tell me where I would be likely to get a little shooting this spring? I have a dog and good profile geese decoys, and used to go out to Winnebago marsh, but have not been out there for six years. I used to get off at Harmon, Lee county. Can you give me the address of some one in that section with whom I could correspond? I used to hunt around Little Beaver Lake, Newton county, Ind. Is there any use of going there for geese? I once shot a swan on that lake.

There are quite a good many ducks and geese passing over here, but they do not stop. No quail. Quite a number of prairie chickens left over. Have seen no jacksnipe this spring, but they will be here soon after this rain. Rather dull in sporting matters here at present.

If I can be of any help to you in keeping you posted on matters of interest to your paper in this section let me know, and I will willingly help you so far as I can. Am invited to accompany three different parties to the Wisconsin woods this fall after deer, and will have to go with one, I think.

We have two gun clubs in this city, but they have been rather dormant of late. Will report when they get in shooting order. Good weather will bring them out. When I am in the city will try to call on you. Please keep us posted in the FOREST AND STREAM on movements of ducks.

Probably I can best answer the above query by offering another letter, which comes in the same mail and which reads as follows:

Dakota Geese.

CANDO, N. D., March 21.—Judging from your notes in FOREST AND STREAM that you are running an office closely approaching an intelligence headquarters for sportsmen I take the liberty of asking you to direct this way some of the many that must be looking forward to a goose-hunting trip this spring.

This vicinity is yearly visited by countless numbers of the snow geese and others of the goose family. I have hunted here three years and feel that I would be competent to give any who might come here plenty of good chances to kill geese to their heart's content; that is, unless they are something besides real sportsmen.

I can give good, comfortable bachelor quarters in the town, have a team and outfit, plenty of decoys, a good spaniel for retrieving, and I know the country. I can care for two only. What I want is two gentlemen who will take things as they come, or, at least, partially so. I shall expect them to remunerate me for board and loss of time, for I have to work for a living. I will guarantee plenty of good board, the best the land affords, and will devote all of my time to their interests and comfort. Time for hunting from April 10 to May 10. ELMER T. JORD.

The law of North Dakota, as I see by reference to the *Game Laws in Brief*, opens the season on ducks and grouse Aug. 20. It does not protect geese in the spring as it should. I leave the matter of a spring goose hunt to the conscience of my shooting friends, but don't believe I should advise it. It seems nicer to shoot geese in the fall some way, and I don't doubt that Mr. Judd will be at Cando in the fall. As to the Winnebago marsh, its glory has departed, and if Beaver Lake is any good for the fowl now I don't know it, though once it was very good. The geese do not stop in Illinois or Indiana very much now. Once in a while a tired flock of honkers will tarry a while, but not often, and I don't remember ever to have seen a gang of the Hutchins or of the snow geese this far east. Dakota, Nebraska and Kansas are the best goose countries, and it doesn't pay to call a hunt a goose hunt much this side of there. Any success would be by accident.

Where the Ducks Are.

As to the ducks of this section, the flight is now up all over this country. On Thursday the bluebills were dropping into Fox Lake in large numbers. A week before that they had scattered north all over Wisconsin.

On last Monday Mr. J. F. Barrel killed 100 ducks, mostly ringbills, at English Lake, on the Kankakee. On the same day Mr. Johnson, of the Waltonian Manufacturing Co., of this city, with his friends Mr. H. Rossiter and Mr. Wm. Cutler, bagged about 50 birds on the Kankakee Marsh, near De Motte, Ind. Two parties have gone down to Sandy Sollers's place, at Water Valley, near Shelby, within the last three days and they should have met shooting. I have also heard of another good bag, 40 birds, at English Lake. The largest bag of which I heard at all was made at Quincy, on the Mississippi River, of 144 birds in a day to one gun. Several members of the Hennepin Club, on the Illinois River, are now absent at the club and some good shooting has been had there, or near there, the past week. His royal highness, Governor Altgeld, went down to Swan Lake Club to-day for a brief go at the ducks.

A Market-Shooter's Views.

My friend Billy Griggs writes me from Browning, Ill., March 21, as follows: "We haven't had many ducks here on the Illinois River this spring, and I am glad of it. The more I see and think about spring shooting the more I don't want to do it. I am not going to kill any ducks for the market this spring."

I believe this is the first spring Billy ever didn't kill ducks for the market since he was big enough to wear long boots. Is it not possible, gentlemen, that times may have changed on this wildfowl question?

Loose Prairie Soil.

I wish to carp a little about a story in the *March Century*. The writer describes a "ranch ball," with Pike's Peak for a background to the picture. The characters get along all right with Pike's Peak in the night time, but the author has one of them out plowing the next morning, of course still in sight of the Peak, and his plow makes ever such straight, pretty furrows in the "loose prairie soil." The *Century* often causes swift aches in a Westerner's system when it tackles wild West topics. I wish it would send out a commission to establish just how far and since when the prairies have run into the plains, and whether a cold chisel would not be useful in turning the loose soil of some of that plains and foothills country. The writer of that article wrote from hearsay and not from observation. He, or I would say, she, had never tried to drive a tent pin in that loose prairie soil, or lammed himself, or herself, vehemently thereon by reason of a difference in beliefs with a Colorado broncho. There isn't a thing in Colorado that isn't looser than the soil.

E. HOUGH.

175 MONROE STREET, Chicago.

OREGON DUCKS.

PORTLAND, Ore., March 16.—Our spring shooting of waterfowl closed yesterday. The boys have housed their boats and decoys and laid away their guns. The shooting has been the poorest for years, which can be accounted for in various ways.

A good joke was perpetrated to-day on my hunting partner, Mr. J. Roberts Mead. He is one of our strongest game protectionists, but circumstances came near making him the victim of his own doctrines. He went down to the Green Lake yesterday morning to round things up and take a last look at his beloved lake for the season. Of course he could not resist the temptation to give his friends, the canvas, a parting salute, and so before 10 o'clock in the morning there was a baker's dozen of the russet-headed fellows hanging to his string. Here is where the joke comes in. He failed to connect with the morning boat up, and was forced to hang around down there in the wilderness all day and stay another night in the cabin alone. But his troubles did not end here. The boys were lying in wait for him; and when he stepped ashore this morning with his canvas, an officer tapped him on the shoulder and called his attention to the fact that he was an offender against the laws of the great State of Oregon. Friends (?) here came to the rescue and the offender's liberty was secured. Brother Mead is now awaiting his turn.

S. H. GREENE.

"Johnny Get Your Gun."

DID "I. C. J." kill the one quail and two woodcock flying at one shot? He does not say whether they were on the ground or in the air; but anyhow he is entitled to the chromo, and if he will come to Minneapolis he may take my hat.

I have never seen woodcock feeding or flying in flocks, but then I have never hunted in Pennsylvania. Certainly it would have been a rare treat to watch the fifteen feeding, of which "I. C. J." speaks. I have never seen even one feeding, and am told they are the greediest feeders in the world. To my fancy he is the most unique of the feathered tribe, and with his solitary habits and great goggle eyes, and his beautiful sombre markings the most interesting. But I am not going to call him the "great brown beauty." What a chestnut that is, and how fired it makes me whenever I see it in print.

J. I. C.

Maine Sportsmen's Fish and Game Association.

UNDER this title an organization has been incorporated by the Maine Legislature. The list of incorporators includes many representative men of the State; twelve are in the House and nine are in the present Senate; the President of one and the Speaker of the other are included; two are on the Governor's staff and two are of the Executive Council. Several of the others hold responsible State, county and city offices as well as in the courts.

The purposes named in the charter are: "Assisting in the preservation of our forests and the prevention of forest fires, in the protection of the fur, fish and game of the State, in their propagation and in the enforcement of the fur, fish and game laws; in the publishing and distributing of valuable information for the benefit of all classes of our citizens, so that they will become better qualified to judge and understand their rights and wants, thereby securing their sympathy and confidence, for the purpose of aiding the State in the enforcement of the laws relating thereto. The association may acquire real and personal property, occupy any lands for the use of the association, owned by the State, by gift from or by lease, as the governor and council may determine; prosecute and defend suits at law; construct

hatcheries for the propagation of both shore and inland fish and with the consent and under the supervision of the fish and game commissioners of the State, construct dams and fishways, screen outlets leading to large rivers to prevent the sluicing of fish from waters that are being stocked with fish, to provide suitable grounds, erect buildings for the use of the association, establish safe and permanent gun, rifle and revolver ranges for the practice of both military and sporting arms."

The organization is due to the activity of Mr. J. A. Fairbanks, who originated the scheme and has put it into execution.

Killing Maine Cow Moose.

BOSTON, March 21.—*Editor Forest and Stream*: Being very much interested in the protection of moose in Maine, I wish through your paper to express my regret at the change in the game laws in the State of Maine, which will permit the killing of the cow moose during the open season. It seems to me it is only a question of a short time at best when the moose will be numbered among the extinct animals in Maine, which will of course be hastened by the action of the Maine Legislature. As one who has hunted moose in Maine for a number of years, I am of the belief that the number of moose killed will be greatly increased by this change in the law, as it opens a clear field for hide and meat hunters, already too large.

HARRY A. PITMAN.

Camp-Fire Flickerings.

"That Reminds Me."

A Cyclone with Legs to It.

TACOMA, Washington.—The common mule-eared deer of our forests is a beautiful and graceful animal, and his profusion here gives us an opportunity to study him in all his phases. One of his characteristics is immense strength, apparently out of proportion to his slender and exquisite lines. To illustrate: Last fall a friend sent me a yearling buck, and after I had expended about \$15 for wire fencing, and had paid \$10 more for damages to my neighbors' shrubbery, awnings, vegetables, etc., I determined upon inflicting the lovely and docile creature upon some one else. I selected my friend, E. S. G., a thorough lover of animal life, and the proprietor of a very pretty park at Lake Steilacoom, and sent him a carefully worded telephone message advising him of my generous intentions, and also instructing him to bring a wagon and a big dry goods box with which to haul away his prize.

My victim took the bait with the alacrity of a mountain trout, and within two hours presented himself at the alley gate equipped with every appliance for handling the acquisition to his collection.

Ben Harrison (that is the deer) nipped the succulent verdure, and eyed askance the preparations for his entertainment, and when Mr. G. announced that he was ready, I led the gentle animal alongside of the box. Mr. G. stooped deliberately and encircled the slender waist of Mr. Ben Harrison, firmly and affectionately, and essayed to hoist him over the side of the receptacle.

At this juncture something happened. It occurred so suddenly that none of us could exactly tell how, but the scene was shifted to the other side of the alley, 40ft. away, and the actors had changed places. A confused medley of legs, horns, tail, plug hat, linen duster, man with red whiskers, and redder face, together with ashes, empty cans and other bric-a-brac obscured the vision for the next five minutes so that the referee could not decide upon points and scores, but the spectators said that Benny had the first round.

I was just about to answer a professional call and stood with gloves on and medicine case in hand, a glossy Dunlap surmounting my head, a little knot of violets upon the lapel of my new overcoat.

As the issue of the combat became doubtful I grew intensely interested, and when Mr. G. lay flat upon his back in the ash heap and Ben's feet, with the speed of lightning and the precision of a paper knife, cut long strips in his clothing, until a Calabrian beggar would have declined to appear in such coat, vest or trousers, I got excited and rushed into the ring. I was nearly knocked out in the first round, a battered hat, a split glove, and a cut ten inches long through trousers, drawers and integument testifying to the athletic qualities of the thoroughly frightened deer. I went back at him, though, and this time sparring cautiously for an opening. I at last pounced down into the ashes among the smothered expletives and scintillating profanity and succeeded in grabbing both hind-legs.

After this, with the assistance of a rope, a small boy and two ladies, we secured the gentle ruminant and boxed him in due form.

The episode lasted fifteen minutes and cost us \$40 each for clothing and a week's confinement to the house. Hereafter commend me to the gentle and persuasive allurements of a 40-inch buzz saw, but never again to the illusive nether extremities of a mule-eared deer.

J. A. BEEBE, M.D.

Wild Life in the Far West.

WE anticipate for Mr. Grinnell's "Blackfoot Lodge Tales" a sale quite as large as that reached by his "Pawnee Hero Stories." That the book has pleased the critics is certain. This is an extract from the *Boston Transcript*: For the stories themselves, taken down from the lips of old warriors and braves, altered in phrasing only where transposition was necessary to obtain sense, they are fascinating in their honesty of narration, in the scenes of awful horror they conjure up the weirdly poetic turn they often take, and in the cheerful matter-of-fact way in which some incredible piece of bravery is disposed of so different from our emotional vaunting of tamer deeds.

Pullman Car Route Chicago to Detroit and Mt. Clemens.

TRAINS leave (Dearborn Station) Chicago, daily, via Chicago and Grand Trunk Railway, for Detroit, and daily except Saturdays for Mt. Clemens, at 11:25 A.M. and 8:15 P.M.; arriving in Detroit 9:25 P.M. and 7:45 A.M.; the latter has a new and elegant Pullman buffet sleeping car attached through to Mt. Clemens, arriving there at 8:50 following morning except Sunday. This is the only route by which Mt. Clemens is reached from the west without long omnibus transfer in Detroit. For tickets or further information apply to E. H. Hughes, G. W. P. Agt., C. & G. T. Ry., 103 S. Clark street, Chicago, Ill., or J. A. Robbins, Ticket Agent, Dearborn Station.—*Adv.*

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

BAIT-CASTING FOR BASS.

Editor Forest and Stream:

In your issue of March 16 "Eurus" expresses the intention of following my advice and giving bait-casting a thorough trial on the first opportunity. I feel that "Eurus" and I are coming to an understanding after all and that in time we can be very good friends, and to this end I will meet him half way and drop all pseudonyms or *nom de plumes* and will ask him to do the same. "A Bait-Caster" is hardly as pretty a pseudonym as "Eurus" I will admit.

Now to the point. He says that I take it for granted he does not understand bait-casting and that in this I am wrong, as he has taken a number of bass in this manner and has attained some degree of proficiency in it, but that he rarely practices it on the lake he mentioned, because he found it ineffectual.

I took it for granted that he did not understand bait-casting, because I have never yet found a man who, when he had conquered it, would willingly go back to trolling, no matter how ineffectual it might prove or on what water he found himself. No, my friend, you have never mastered bait-casting. You think you have, no doubt. I thought so for many years and am just beginning to understand that I did not. It is an art not easily acquired, not easy to become proficient in. You may be able by main strength to place your frog, say 60 to 70ft. away from your boat, but can you drop it gently in a hole in the weeds, say 4ft. square and 100 to 125ft. away? Own up now, do you honestly know just where your frog will drop when you make your cast? I have been bait-casting for about nine years and I confess I have not mastered the ins and outs of it yet. Every once and awhile I will find that my bait has fallen short of the mark about 80 to 40ft. and that my line is a mass of tangle on my reel. I go at it carefully and always find that there is a kind of slip noose and indescribable slip noose that cannot be explained in words. The line has formed itself into two links resembling the links of a log chain, and it would puzzle a Yankee lawyer to know how to undo it, to say nothing of how it got there.

This noose is the result of allowing the reel to overrun—not placing the thumb upon it at the right time. When the bait first flies from the end of the pole it draws with it the line and gives impetus to the reel. If the reel works freely, as it must to cast effectually, it will continue to revolve some little time after gravity overcomes the impetus of the bait, and it not being able to throw off the line, the line naturally clings to the reel and is rewound in the contrary direction. The act of placing the thumb upon the reel, or rather upon the line wound on the reel, is technically known as "thumbing," and the thumbing at the right time is the most necessary part of bait-casting.

This little eccentricity that the reel possesses when bait-casting is very discouraging to the novice, and causes him more often to go back to trolling than the particular water in which he finds himself. It is not necessary that there should be a great abundance of reeds or aquatic vegetation in order to make a body of water good casting ground. I used to think so but have changed my mind in late years. True, my favorite grounds are thickly covered with a mass of weeds and reeds, but some of the best casting ground I have ever seen was in lakes where there was very little vegetation and the bottoms were sandy and pebbly. The only reason why I visit these lakes in preference to the ones last mentioned is their proximity to the city and the ease with which I may get at them.

Take for example Powers Lake, Wis., on the C. & N. W. Railway. This is a lake say two miles long by three-quarters wide, with pebbly shore and rocky bottom. The water is very deep and cold and there is no inlet, the lake being fed by springs at the bottom. I say they are at the bottom because the coolness of the water indicates that it is fed by springs, and no springs are to be found on the shore. There are three bays running inland from the lake, one at the extreme east and the other two at the west end, and at the entrance to these bays are bars covered slightly with rushes. These are the only places on the lake in which there are any rushes, and yet there is—or was—as fine bait-casting ground on this lake as any I ever visited. I visited this lake for six successive seasons, and rarely cast on these bars that I did not get bass sometimes in large and sometimes in small quantities. I invariably cast from a boat, as the water was too deep to wade, and kept in the open water at say 100ft. from the margin of the reeds, and cast close up to their edge.

Silver Lake, Wis., on the Wisconsin Central, also affords excellent grounds for the bait-caster, but on the other hand it is an extremely weedy lake and abounds in rushes. Here I prefer to wade close in to shore, casting in front of me as I walk. The water is so shallow and the bays so numerous that one can cover much more ground in a given time wading than he can in a boat. I find that I can strike as many bass in 2ft. of water, if not more, than I can in 6 to 8ft. If the fish are not disturbed by numerous boats you will usually find them in on shore, in from 18in. to 2ft. of water looking for minnows. You cannot successfully manipulate a boat in such shallow water without disturbing the fish.

I do not accuse "Eurus" or any other man of unsportsmanlike conduct because he prefers to troll rather than to cast, neither have I ever claimed that trolling is less scientific. It is simply a matter of taste. I advised him to try bait-casting because his description of the lake where he fished and the abundance of game convinced me that he might enjoy himself immensely were he to turn his talents to bait-casting. I can myself take keen satisfaction in the very act of casting regardless of whether I get strikes or not.

"Eurus" has so far given me not the slightest clue as to what vicinity he resides in and I should indeed be glad to know and also would be glad to hear what and where his "pet" lake is. When the "Chicago" lakes are all fished out we may have to go some distance for sport, and I am preparing myself for this day in advance. Should "Eurus" visit Chicago during the World's Fair, he should not fail to "take in" the bait-casting and fly-casting contests that will take place there.

HENRY G. ABBOTT,

CHICAGO, March 18.

SAGINAW BAY ICE SPEARING.

BAY CITY, Michigan.—Spearing fish through the ice on Saginaw Bay is still followed by a large number who enjoy the sport, as well as those who make a business of it. Trout are not now speared in as large quantities as formerly, owing to the large number caught in nets during the spring and fall. In former years the fisherman, after cutting a hole through the ice, would lie flat upon his stomach with a blanket over his head to exclude the light, and in that position watch for the fish to make their appearance. Now, we find the fisherman comfortably housed in a snug shanty while following the highly exciting and oftentimes profitable sport of spearing through the ice. The shanty, which is often the exclusive abiding place of the fisherman, is easily hauled here and there about the ice by means of a hand sleigh. The shanty of itself is very light, being made of thin timber and covered or lined with tarred paper to exclude the light as well as the vigorous weather of winter. In one end is a miniature sheet-iron or oil stove for heating and cooking purposes. In the other end is a trap door through the floor. When this is removed it reveals an opening which must be placed directly over the hole in the ice. With shanty located one has but to take a seat within and commence "decoying" as illustrated.

Landing the trout, as shown by the illustration, is next in order. This is most easily and generally accomplished by stepping out of the shanty door and drawing your spear after you. The weight of trout varies from 5 to 25 lbs., as in other branches of the sport the largest fish always gets away, and thus it is that we hear an old fisherman tell of 75-pounders which flirted with his decoy but missed connection with his spear.

The trout illustrated as propped against the shanty on the upturned sleigh weighed 9 lbs. when taken from the spear, the mark of the spear is plainly visible where he was "struck." The kind of fish to be speared in Saginaw Bay is determined by the distance one goes from the mouth of the Saginaw River. Pike, pickerel, perch and herring are to be found in their particular runways, while lake trout are not to be found without going many miles out.

The accompanying views were taken by me off Point

of fishing tackle as possible. Messrs. Dame, Stoddard & Kendal will also make a fine display. Messrs. Appleton & Bassett have made a live trout display, on the opening of the season, for a number of years, but they have found that it attracts more of the attention of the rabble and the curious than it does of sportsmen and their customers.

The Gilbert Trout Bill.

Up to the present writing the Gilbert trout bill hangs where it was left after having passed the House. It is liable to be called up any day in the Senate. There the

citizens, and the Commissioners to grant hearings and render decisions protecting the localities or not, as they deemed expedient. But the Legislature has failed to frame such a law, and now some of the special bills have passed and some of them have been killed. The proposition to close B. Pond, the shores of which are controlled by the Oxford Club, to fly-fishing only is not likely to receive favorable action; it is killed, in fact, unless its friends succeed in getting it again acted upon, and that time favorably. This is the measure that was petitioned for by Gov. Russell of Massachusetts, and about which so much noise was made in the papers, since he vetoed the Gilbert trout bill last year. Three members of the committee on fish and game reported for a bill and four against it, and the Legislature has refused to accept of the minority report.

The proposition to make the transportation of moose, deer and caribou in the State of Maine legal, without the owner—the person who killed it—accompanying, has also failed, though the friends of the measure have a faint hope of getting it up again and getting favorable action. The object of the present law is to prevent sending game to market. The law now permits of a sportsman taking his game out with him, provided it has been legally killed in open season, the same to be open to view and plainly marked. The celebrated case of State vs. Mathison, coming up under this law, has just been decided in Mathison's favor, by jury trial in the Supreme Court at Farmington. Mathison attempted to take out two deer last fall and take them to Boston, but they were seized by the game warden. Mathison had been guiding for one Smith of New York, who had been obliged to leave the State a few days before the game, killed either by himself or Mathison, could be got out of the woods. Mathison pretended that Smith had given him the deer, and that he was taking them out as his own. The question was entirely on the real ownership of the game.

The measure to enforce the payment of a license fee by sportsmen proposing to hunt and fish in Maine, lies on the table in the Maine Senate at the present writing, and it is hoped that it will lie there till the Legislature has adjourned.

GOING OUT.

Massachusetts Fish and Game Protective Association will fight it.

Maine Legislation.

The Maine Legislature is about ready to adjourn; indeed it is to be hoped that it will have come to a close before these lines are perused by the readers of the FOREST AND STREAM. It has not been a very prosperous session for the

IN THE SHANTY.

"LANDING,"

Lookout, a summer resort at the mouth of the bay, where trout abound.

At this point it is always best for the fisherman to return to the shore each night, with shanty and equipments, else he may find himself far out on Lake Huron the next morning. I. C. THOMPSON.

BOSTON AND MAINE.

Backward Balmy Spring.

BOSTON, March 27.—The opening of the trout season in Massachusetts, April 1, promises to be a very dull one this year. At the time of this writing it looks as though none of the streams would be free from ice and snow water. The season is backward, and with this backwardness the enthusiasm of the early trout fisher is at a low ebb. In Maine the season also promises to be very late. The open season legally commences in that State on the 1st of May, but the ice is likely to stay in the principal trout lakes almost a month later; that is, if the present thickness of the ice is any indication. There are many reports of the remarkable thickness of the ice in the Rangeleys, and other celebrated trout lakes. Mr. N. G. Manson, Jr., hears from his guide, Mr. O. W. Cutting, that he wants a 5 ft. ice saw sent up to camp, at the head of Richardson Lake, since the old 4 ft. saw is not long enough to cut the summer supply of ice with, the ice being 4 ft. thick. Mr. John Newton, who has been putting in the ice for the Thayers' camps at Birch Lodge, and for Dr. Haven's fine new camp on the island, at the head of Richardson Lake, says that he has put in solid blue ice nearly 5 ft. thick. Without most remarkably warm weather it will require till nearly the 1st of June for the ice to get out of the Rangeley Lakes.

Boston Trout Opening Displays.

Messrs. Appleton & Bassett will not make their usual display of live trout in their window, on the 1st of April this year. On the contrary they will make as fine a show

of fishing tackle as possible. Messrs. Dame, Stoddard & Kendal will also make a fine display. Messrs. Appleton & Bassett have made a live trout display, on the opening of the season, for a number of years, but they have found that it attracts more of the attention of the rabble and the curious than it does of sportsmen and their customers.

A SAGINAW TROUT.

want to shoot partridges, and they want to shoot them in September, and why shouldn't they?" Grouse are decreasing rapidly in that State, under the shameful September slaughter, and it is done by the farmers' boys; the broods then being together and not fully grown. They fall an easy prey to the shotgun and mongrel dog of the country boy.

Early in the session Gov. Cleaves, finding a great number of bills and petitions for measures before the present Maine Legislature, asking for special protection on fish and game, for as many different localities, recommended that a general law be framed to cover all of this legislation, and that the whole matter be referred to the Fish and Game Commissioners, on petition of a certain number of

man, and the leader of the salmon fishermen in the celebrated salmon pool at that place, is very hopeful of the salmon fishing this year, though he expects it to be unusually late, since the season is very backward and the ice very thick. The first Penobscot salmon of the season has been received in the Boston market. It weighed 30 lbs. and sold for \$1.50 a pound. SPECIAL.

Pennsylvania Fish Protective Association.

PHILADELPHIA, March 22.—*Editor Forest and Stream:* At a large and enthusiastic meeting of the Pennsylvania Fish Protective Association, held at the rooms of the association, 1020 Arch street, Philadelphia, March 11, the subject of an extension of the present open season for taking brook trout in this State to Aug. 1, was discussed at length by the members, and the following resolution was adopted:

"Resolved, That it is the sense of the Pennsylvania Fish Protective Association that the open season in this State for the catching of brook trout should be extended to the first day of August, and we earnestly recommend such legislation."

Copies of the resolution were sent to the Senate and House of Representatives at Harrisburg.

Upon the appointment of a standing committee on fish and game by the Legislature of Pennsylvania the association appoint a committee to co-operate with the State Commission in bringing such influence to bear upon the committee of the Legislature as might aid in the protecting of fish and game of the Commonwealth. A committee was authorized to proceed to Harrisburg to oppose the passage of the law authorizing the placing of fish baskets in the streams of this Commonwealth and any other laws detrimental to the fishery interests of the State.

The association is daily in receipt of a large correspondence in reference to fish laws, applications for trout blanks, etc.; has lately received large additions to its membership and is altogether in a highly prosperous condition. M. G. SELLERS, Sec'y.

THE ADIRONDACK LEAGUE CLUB.

The new club house of the Adirondack League Club, on Little Moose Lake, Herkimer county, N. Y., has been finished at a cost of over \$25,000. It is probably the most complete and best appointed club home in the Adirondack region. Little Moose Lake, where it is situated, is on the northern border of the club preserve, near First Lake of the Fulton Chain, and is less than five miles from the Fulton Chain station of the new Adirondack & St. Lawrence Railroad. The club house will accommodate over 100 people, and is tastefully as well as substantially constructed. The pride of the architect is the great hall in the center of the building, 50x35ft., at one end of which is a huge fireplace, capable of burning logs 6ft. in length.

At the other or southern extremity of the preserve,

The club has secured the introduction into the Legislature of a bill removing the bounty on bears and placing a bounty on foxes in the counties into which its preserve extends, it having become evident that the fox is the deadly enemy of the rabbit and the partridge.

Among the lakes lying wholly or partially on the preserve of the Adirondack League Club are Honnedaga or Jock's, North, Little Moose, Clear, Panther, Pico, South, Little Woodhull, Canachagala, Jones, Deer, Otter, Engineer, Goose, Horn, Hardscrabble, Brook Trout, Spruce, Cedar, Twin, Rock, Little Rock, Sampson, Whitney, Gull, Jessups, Fawn, Fall, the West Canada Group, Little Salmon, Baby, Caswell, East, Deer and Lily, and innumerable smaller sheets. Waterways, navigable by small craft, thread the forest in every direction. The Lower Stillwater of West Canada Creek is navigable within the preserve for six miles without a carry.

THE "LOWER STILLWATER" (CELEBRATED TROUT STREAM).

twenty-five miles away from "Mountain Lodge," as the Moose Lake Club house is called, is "Forest Lodge," the club's other house on Honnedaga Lake. This club house has been in use by the members for the last two years and accommodates about seventy-five people. It is also a comfortable and well appointed house, and it is well liked by the members, being centrally situated for the best fishing waters of the whole Adirondack region. A. D. Barber is the steward and manager of the Forest Lodge, and Capt. H. G. Otis of Mountain Lodge. Both club houses will open to the members, their families and guests, on May 1 next.

Honnedaga, or "Jock's" Lake is six miles long and in beauty compares favorably with any of the Adirondack lakes, and in altitude exceeds them all, being 2,280ft. above the level of the sea. Honnedaga is the Indian name of the lake, signifying "clear water," so-called from the remarkable clearness and purity of the water. On many old maps it is similarly designated as "Transparent Lake." The club house on Honnedaga Lake is reached by a drive of twenty-eight miles from Prospect station on both the R., W. & O. road and the new Webb road, or from the station Honnedaga, on the Webb road.

The preserve of the Adirondack League Club is a vast tract in Hamilton and Herkimer counties, containing about 175,000 acres, an area eight times as large as Manhattan Island, and much larger than Staten Island. From its most westerly to its most easterly point is a distance of forty miles, and from north to south over twenty-five miles. It is practically a virgin forest, magnificently wooded, the merchantable timber being worth alone, on the stump, according to the estimate of Professor Fernow, of the United States Forestry Bureau, over \$1,000,000. The club derives a revenue of \$80,000 a year from the removal of the spruce above twelve inches in diameter, thus dispensing with all dues or assessments from the members. In fact, but for the application of the surplus revenue to internal improvements such as roads, or club houses, a dividend might be declared on each member's certificate.

The finest hunting and fishing in the North Woods are found inside the club's boundaries, the game being carefully protected and the fish each year propagated from the club hatchery on Honnedaga Lake. There are at least twenty-five good-sized lakes upon the preserve besides the celebrated trout streams, the West Canada Creek, Indian River, and the North and South Branches of the Moose River.

The Adirondack League Club has taken an advanced step in the way of protecting the fish and game within its preserve, with a result that both are more numerous each year. It prohibits entirely on its tract the inhuman practice of floating or jacking for deer and is also vigorously pushing a bill introduced by it in the present Legislature to prohibit such practices by State law. It has also shortened the hounding season and is now taking the vote of the members whether or not hounding shall also be forbidden. Another of the club rules prohibits the killing of does at any time.

No fishing is allowed upon the club lands until May 1, which postpones for fifteen days the legal season for salmon trout and for thirty days the legal season for speckled trout. The catch of each member is also restricted to ten salmon trout and 15lbs. of speckled trout in any one day.

Besides the deer the woods are full of other kinds of game, including partridge, snipe, ducks and geese, squirrels, rabbits, mink, otter and occasionally a black bear.

A topographical survey of the 104,000 acres of forest owned by the club was made last year under the direction of Dr. B. E. Fernow, chief of the Forestry Bureau, by the U. S. Coast and Geodetic Survey, and a map is soon to be published giving valuable information as to the topography of the preserve.

There are 500 membership shares in the Adirondack League, of which all but sixty are taken. Many of the members hold more than one share each, so that there are only 200 members. Each membership share entitles the holder to one five-hundredth interest in all the club's real

DOWN FROM HEAD OF HONNEDAGA LAKE.

estate and property, the right to hunt and fish upon the entire preserve, the use of the club houses and facilities, and in addition a grant in fee of a five-acre plot, with 200ft. of water front, for a private camp or cottage. Many of these cottages have already been built on Honnedaga or Moose lakes, where the private holdings have so far mostly been taken. The shares, originally \$1,000 each, are now sold for \$1,200 each.

Among the members are the Rev. Drs. Geo. Alexander, John R. Paxton, John C. Bliss, Wm. Irvin, Philip Schaff and Chas. A. Stoddard, of New York; A. V. V. Raymond, of Albany; Timothy G. Darling, of Auburn, and Samuel J. Nicolls, of St. Louis; Warner Miller, Wm. Brookfield, John H. Starin, Henry E. Howland, Warren Higley, A. G. Mills, Wayland Trask, Stanford White, John M. Toucey, Gen. Samuel Thomas, Spencer Aldrich, Clarence Andrews, Justus L. Bulkeley, Dr. Martin Burke, Prescott Hall Butler, Geo. G. DeWitt, John T. Lockman, Geo. W. Dillingham, Devereux Emmet, Chas. A. Flammer, Ulysses S. Grant, Jr., W. F. Havemeyer, A. Foster Higgins,

Dr. C. N. Hoagland, James Otis Hoyt, William Z. Larned, Walter S. Logan, General G. H. McKibbin, Norton P. Otis, William D. Baldwin, Edward S. Renwick, George H. Ripley, John A. Rutherford, Dr. Hugh M. Smith, Arthur W. Soper, J. Walter Spalding, Dr. Lucien C. Warner, R. F. Westcott, John N. A. Griswold, George S. Graves, William F. Hall, Peter A. Hege-man, Theodore M. Barnes, Thomas J. Davis, David Wolfe Bishop, William H. Boardman, Edmund Coffin, Jr., William G. De Witt, E. D. Griswold, Henry S. Harper, Mark M. Pomeroy, Henry C. Squires, George A. Strong, Nathaniel C. Fisher, John Greenough, Leonard F. Beckwith and William H. Hinchman, of New York; Prof. B. E. Fernow, Gardiner G. Hubbard and J. Walter Pilling, of Washington; B. W. Arnold and Henry Patton, of Albany; J. J. Albright, John Satterfield, Mills W. Barse, O. L. Snyder, George V. Forman, Daniel H. McMillan and Edmund Hayes, of Buffalo; Charles Fleischman and William L. Hunt, of Cincinnati; Alexander R. Harper, of Philadelphia; Hon. Henry Hitchcock, Judge George A. Madill, S. M. Dodd and Edward Mallinckrodt, of St. Louis; Frank S. Weigley, of Chicago; John Ickler, of St. Paul, and President James M. Taylor of Vassar College.

The officers of the club are: President, M. W. Barse; Vice-President, ex-Judge Henry E. Howland; Treasurer, Ole L. Snyder; Secretary, Robert C. Alexander. The other members of the Board of Trustees are A. G. Mills, Judge Warren Higley, Hon. Warner Miller, Henry C. Squires, Stanford White, Frederick G. Burnham, Dr. B. E. Fernow and Alexander R. Harper. The office of the club is at No. 203 Broadway.

Wyoming County Association.

It is well-known that within the borders of Wyoming county are some of the best trout streams in New York State, which are visited by sportsmen from different localities, who are not in the least particular as to the means used in catching fish. The streams are in consequence becoming rapidly depleted, notwithstanding the fact that great pains have been taken during the past ten years to stock them.

Our local sportsmen decided to put a stop to illegal fishing if possible, and called upon Mr. Frank Amsden of Rochester, of the State Game and Fish Protective Association, to assist in organizing a society in this county. A meeting for this purpose was held Saturday, of which J. A. McFarlane was chairman and Henry R. Bristol secretary. Mr. Amsden was present and explained the object of the county associations and the benefits which resulted from them. He said that the streams were being depleted and woods overshot, and that citizens were powerless to prevent this unless organized and united. He thought the present law regarding fish and game was the best the State ever had and that most of the violations were the result of ignorance regarding its provisions. Mr. Amsden said that the Fish Commission had refused longer to plant fish in counties where there was no organization, and the game laws were not enforced; but that where societies were formed all possible assistance would be furnished, and a special game protector appointed if it were desired; that any violations of the law were to be reported to Chief Game Protector Pond, at Albany, who would at once take proper steps for the prosecution of offenders.

By a unanimous vote of the meeting it was then decided to organize a Wyoming County Fish and Game Protective Association.

The following officers were elected: President, James Rafferty, of Java; Vice-Presidents, A. C. McCall, of Arcade; Augustus Smith, of Attica; Grove Barnum, of

Bennington; Henry Fuller, of Castile; Charles Cromwell, of Covington; Frank H. Wilson, of Eagle; Dr. J. O. Randall, of Gainesville; Gilbert Bishop, of Genesee Falls; Thomas H. Crahan, of Java; E. A. Durfee, of Middlebury; William Bauer, of Orangeville; Milo H. Olin, of Perry; G. S. Van Gorder, of Pike; Henry Leroux, of Sheldon; Javes R. Smith, of Warsaw; Theodore Hubbard, of Wethersfield; Secretary and Treasurer, Henry R. Bristol, of Warsaw; Executive Committee, Mr. Rafferty, Dr. G. R. Traver, of Perry; M. N. Cole, of Castile; N. S. Wells, of Warsaw; C. D. Wing, of Attica; Norman R. Howes, of Eagle; Ortaville Howes, of Middlebury.—*Warsaw (N. Y.) Times.*

It Teaches Them All.

"If the Senator will turn his attention to the FOREST AND STREAM, a paper which I have taken for many years and read with great pleasure, he will find that there is complaint made all the time that this will destroy the game."—Senator Teller's speech in the U. S. Senate March 4, Congressional Record, p. 2550.

SPAWNING OF GAIRDNER'S TROUT.

The largest river trout of North America is probably as little known as any other as far as its life history is concerned. It is, therefore, with pleasure that we publish the following recent information about the spawning of the species, perhaps better recognized under the name of steelhead salmon, which we owe to the courtesy of Hon. Marshall McDonald.

One of the salmon and trout stations of the U. S. Fish Commission is located at Fort Gaston, California, in the northern part of the State. This station is now under the charge of Capt. W. Dougherty, of the U. S. Army. Operations here are confined chiefly to Gairdner's trout and the rainbow, both of which are excellent subjects for artificial propagation.

Under date of Jan. 19, Capt. Dougherty wrote the Commissioner that the station would rely mainly for its supply of eggs upon the small hatchery at Redwood Creek, fourteen miles distant. The Klamath River canneries, sixty-five miles away, have exhausted the resources of Trinity River, and that stream is no longer a source of spawning fish. The ponds at Redwood, he believes, contain enough breeders to furnish 300,000, and he expected that by the first week in February 3,000,000 to 4,000,000 of eggs would be obtained from salmon ascending the stream.

We quote from his letter: "The small mountain streams on this coast that empty directly into the ocean, bank up their mouths by a sandbar that stretches entirely across during the summer months. The water flows over this in places to the depth of only a couple of inches, and sometimes seeps through the bank or bar without flowing until late in the fall. The salmon accumulate around the outside of this bar in myriads, waiting for it to open, which it does only when the water from the first heavy rain comes down and breaks it away, when the fish at once enter and go directly to the spawning grounds, traveling at the rate of about forty miles a day. These fish are then nearly ripe for stripping, and that is the opportune time for the first and unfailing supply of eggs."

"Sergeant Boyce has produced a hybrid between the steelhead salmon (female) and the rainbow trout (male). The salmon was stripped on the 29th of March last and the first eggs were hatched on the 28th of April. The product is a beautifully brilliant and distinctively spotted variety, very robust and gamy. About 500 have been kept in the pond, about 1,500 having been turned out."

Ten years ago Dr. Jordan stated that Gairdner's trout spawns later than the salmon, and is found in the river, spent, at the time of the spring salmon run. "Mr. B. F. Dowell has recorded its arrival in May in Applegate Creek, Oregon, for the purpose of spawning. At the falls in Willamette River, at Oregon City, Mr. Walter F. Hubbard found a few ripe females about the middle of May, 1892, but the bulk of the fish passed over the obstructions and made their way to the upper waters. Dr. Bean has collected female steelheads with the eggs so ripe as to run freely from the fish on June 10."

FOREST AND STREAM had an account last year of a steelhead captured at Put-in-Bay, Lake Erie. If this fine species can be made plentiful in that lake and others of the system, it will prove a veritable boon to the public, and there is apparently no reason why it should not do well in the Great Lakes since it is frequently and permanently land-locked in some parts of the West.

ANGLING NOTES.

A German Book.

I HAVE just received a very handsome copy of Herr von dem Borne's "Handbook of Fishculture and Fishing," and I say handsome, because it is printed on fine paper, bound in half seal leather and contains nearly 600 illustrations, making it altogether a sumptuous volume. Of living German fishculturists no one is held in higher repute as an authority at home, nor more esteemed abroad, for a knowledge of fish, fishing and fishculture than Herr Max von dem Borne, Chamberlain to the Emperor of Germany. Last year Herr von dem Borne issued from the press of Paul Parey, Berlin, the publisher of all his books, a volume upon angling, or rather a new and enlarged edition of a book which had passed through several previous editions, and I think I said at the time (if I did not I meant to do so) that there were many features of the book which might be adopted in this country with profit, and not the least of them was the credit the author gave to FOREST AND STREAM for information obtained in its columns. There are features of fishculture and fishing which might also be adopted in this country for the instruction of readers. The book is divided into four parts: The "Natural History and Life of Fishes," by Dr. Benecke, "Fishculture," by Max von dem Borne, "Sea and Lake Fishing," by E. Dallmer, and "Fresh-water Fishing," by Max von dem Borne. Dr. Benecke makes a feature of describing and illustrating the scales of such fishes as wear scales in a way that is not done in any American ichthyological work that I know, although two English works treat the subject briefly. The structure of fishes is minutely illustrated and described, as well as the ovaries and the development of the eggs. In fact the book is a mine of information in detail, as the Germans are in the habit of doing with what they undertake, from cover to cover.

An English Book.

My thoughts seem to turn to books to-day, and a glance at my book shelves awaken memories that have slumbered for a time, therefore I will gossip a bit about books. One morning, years ago, I left the office of FOREST AND STREAM with the late T. C. Banks, at that time the business manager of the paper, to meet Capt. Bogardus by appointment. When we found him, the late Greene Smith was with him, it being just after their curious pigeon match, one yard boundary, and we were soon joined by several other sportsmen and went to make various calls for various purposes in the lower part of the city. We were all in a well-known resort in Nassau street, when a seedy and beery individual entered with a couple of books in his hand which he offered to every one in turn, no one paying any attention to him until he reached me. I read the title, asked the price of one of the books, paid the money, \$1, and the man went out. Mr. Banks asked what I had bought and I replied that it was a bound volume of the *English Sporting Magazine* for 1794. The book was passed around and I was offered five times the sum I paid to part with it, but as every man had an opportunity to buy before I did I kept the book. A few years later

a discussion arose in FOREST AND STREAM concerning the terms upon which Col. Thornton sold his famous dog Dash. I think this discussion was started by "Canonicus," if I mistake not, a grandson of "Fox Hunting Evers." Anyway "Canonicus" took an active part, but none of the writers had the facts as they were, for I happened to find in the old *Sporting Magazine* (it is not at hand now) the details of the transaction written by one who was a party to the sale. The *Magazine* had contained a portrait, steel plate, of the dog, but it was removed before it came into my possession.

An American Book.

I tried for some time to get a copy of the first American edition of Walton's "Compleat Angler," edited by Dr. G. W. Bethune, and published in 1847. I wished the book for a particular purpose, and I wished also to get a perfect copy. I advertised for it and placed an order with a dealer in second-hand books without avail. One day I received a book by express, which proved to be a copy of the first edition of "Bethune's Walton," inscribed to me on the title page "from 'his brother of the angle,' Alfred M. Mayer." Prof. Mayer happened to see the book, bought it and sent it to me, never knowing that I had tried in vain to get it.

A Book to Guide Collectors.

Just ten years ago, when the last edition of "Bibliotheca Piscatoria," by Thomas Westwood and Thomas Satchell, came from the press, Mr. Westwood resided in Belgium, and sent me a copy from Brussels. A week or two later Mr. Satchell sent me a copy from London, and I noticed that on the fly leaf, in addition to the presentation inscription, he had written a brief history of the printing of the book to "account for but not excuse the blunders that it contained." He told that the printer was a man in small way of business, setting all the type with his own hand, and that each sheet was broken up before the succeeding one was printed off, and consequently there was no going back, etc. Having examined the first copy thoroughly there was no occasion for me to examine, closely, its fellow, and it was some little time before I discovered that Mr. Satchell, the dear old gentleman, had corrected the book from cover to cover with his pen, and had done the work so neatly that in most cases it required sharp eyes to discover the corrections, and in all probability I possessed a copy of the book that was unique, for if he corrected a copy for his own use it was not likely that he had written the history of the printing on the fly leaf.

A Pioneer Book.

One summer evening, a year or two "before the war," Dick Birch, an Adirondack guide, came to a lumber camp of my father's on the Cedar River with a sportsman that he introduced as Dr. Todd. I was at the camp fishing at the time and assumed that Dr. Todd was a doctor of medicine. That night the Doctor snored as I had never heard a man snore before, and I crept over to his bed and fastened a fish hook in his bed clothes and got into my own bed with the fish line fastened to the hook. When there seemed to be imminent danger of the shanty being unroofed I pulled the line and the bed clothes came off the guest. I kept this up until the Doctor discovered that he was hooked, and cut the line, but he said not a word. A year or two later I attended the morning service in a church in Pittsfield, Mass., and to my great astonishment from behind the reading desk the never to be forgotten face of Dr. Todd appeared to me, and for the first time I knew that he was a doctor of divinity. During my school days in that town I came to know Dr. Todd and to regret that I had pulled the bed clothes off of him. Many years after Hallock mentioned Dr. Todd as a pioneer writer upon the Adirondacks in a book with the title "Long Lake," and this interested me to search for the book. Mr. F. R. Ryer of New York had an extensive library of books upon angling and kindred subjects, and I asked him about this book and he told me he had searched far and wide for it but could not find it, and concluded from all that he could learn that no such book had been published. Other years passed, and one day in an old book shop Mr. Ryer found two copies of Dr. Todd's "Long Lake" and sent me one of them. It was published in 1845, and the book relates to visits made to Long Lake in 1841, '42, '43 and '44 by the author, when the region was indeed a wilderness, and I believe it to be the first printed volume relating to that section written by a visitor.

Second-Hand Books.

I have never been a book collector in the sense that I have been unhappy if I did not possess first editions and certain bindings, as I have only desired to own books that gave me certain information, or perhaps I should say that I thought might give me information, for too often when I obtained the books do not give information of any value. I wished to get a book devoted to artificial and natural flies, and as it was long out of print was obliged to depend upon picking it up somewhere, and just at that particular time it was not to be picked up. I made a regular search of the old book shops in Boston, and about the last went to the one under Old South. Taking a flaming torch, I went to the Milk street side of the cellar, which I knew well, and almost the first thing I found a copy of the book, but upon opening it I found that every plate was gone, and it was the plates that I especially desired. I was disappointed to come so near success, but as I put the mutilated book back on the shelf I noticed near it Pulman's "Fly-Fishing for Trout," published by Longman in 1851, a book that I had on my list and wished to possess almost as much as the other. The copy of Pulman had belonged to a gentleman in Glasgow, and bore his autograph and address, and now it bears mine in addition.

Other books on my shelves bring up other memories and I am tempted to let my pen run on and on, but the written pages warn me to cease; so one more and I am done. Driving to the railway station with Mr. William Blackmore, founder of the Blackmore Museum, Salisbury, England, after he had made a visit to the family, he said that he had written an introduction to a book in which he treated the Indian question, which he wished me to read. Then turning to another book, just issued, he said it was inaccurate as to its facts, and he would point them out in marginal in a copy on the steamer and send it to me, which he did. In the haste of his departure I got the books all mixed up in my mind, but I knew there was something about Indians that was not clear. I did not wish to ask him and confess that my memory was so poor, and still I had a feeling that I had left something undone not to my credit.

Several years after a mutual friend with whom Mr. Blackmore had left the book for delivery to me, sent it to me, after forgetting all about it for two years, and I found it was "The Plains of the Great West," by Col. Dodge, and then the conversation came back to me.

A. N. CHENEY.

PENNSYLVANIA ASSOCIATION.

THE annual reception given by the Pennsylvania Fish Protective Association to the Commissioners of Fisheries was held last Friday evening in the Association's rooms, No. 1020 Arch street, Philadelphia. Members and guests present were:

Messrs. M. G. Sellers, H. O. Wilbur, Robt. M. Mackay, Peter J. Custer, W. L. Powell, Geo. T. Stokes, John A. Shulze, J. Walker, Jr., E. C. Warg, M.D., Rev. Jacob Todd, James M. Scovel, Frank W. Cornman, M. Burkhardt, Thos. H. Stites, W. J. Sellers, Harry W. Quick, Cyrus S. Detre, Henry S. Williams, Dr. Bushrod W. James, R. F. Schwartz, Eugene Ufford, E. L. Datesman, W. C. Henry, George E. Heyburn, J. B. Goentner, Henry A. Ingram, Wm. C. Smith, J. R. Sypher, C. T. Colladay, J. C. Powell, C. H. Fitzgerald, Samuel E. Landis, Albert G. Green, Wm. Y. Carver, Thomas Massey, Geo. W. Morris, Harry Anderson, Chas. H. Siddall, Thos. T. Baltz, B. A. McDewitt, William A. Flanagan, D. Edgar Kern, Charles L. Kurtz, J. Brewster McCollum, K. Hancock, George W. Reader, Dr. W. W. McClure, Thomas B. Harper, B. W. Campbell, J. R. Thornton, Edwin Hagert, Fred. W. Brown, W. H. Burkhardt, D. W. Johnson, H. H. Treager, Wm. R. Nicholson, R. W. Fitzell, John T. Neath, Alex. M. Wiggins, Geo. H. Hill, Geo. W. Shaw, J. S. Wise, Wm. Gillespie, Jr., Jacob K. Smith, M. H. Carpenter, Mahlon K. Smith, Moses W. Van Gordon, Henry C. Ford, Chas. B. Reynolds.

In the absence of the president, Vice-President Fred'k G. Brown welcomed the guests of the evening, and outlined the work and aims of the Association as a protective organization. The society was founded by a few anglers, who recognized that something must be done to stay the wanton destruction of the Commonwealth's fish food supply; but to the original company of anglers has been added a large and increasing membership of public-spirited citizens who are not distinctively fishermen, but who believe in fish protection and are earnestly working to secure it.

President Henry C. Ford, of the Fish Commission, read an address which was full of suggestiveness, reviewing the work of the board and painting in glowing colors the future of fish protection in Pennsylvania. The address is given in its full text below.

Commissioner Powell referred to the destruction of fish by culm or coal dust, which is run into the streams in great quantities, and, as it settles, forms a crust, killing the insect life on which fishes live. He proposed a commission for considering the abuse and its remedy, the commission to consist of two coal operators, two members of the sanitary department and two of the Fisheries Commissioners.

Hon. Peter J. Christ, of Northumberland county, reported that there was unprecedented interest in fish and game legislation at Harrisburg in this session; and it could not be foretold how the many bills would fare.

Rev. Dr. Todd spoke humorously of the anglers who are, in their after-dinner speeches, prone to extol the beauties of nature. "It reminds me of Mrs. Partington," said he, "when she pooh-poohed the talk of the city people who said that they grew fat on the country air; it might be the air, but she believed it was the 'wittles.'" So it may be the 'beauties of nature' that anglers seek, but more likely it is fish. There is, to my eye, no 'beauty of nature' quite equal to a speckled trout safely landed on the bank; no music of nature like the twanging of one's line that tells of a big fish fast."

Mr. James M. Scovel, of Camden, related the joys of drum fishing at Anglesea. Hon. R. F. Schwartz, of Monroe county, pertinently inquired, if the bill forbidding sale of trout should become a law, what the city anglers would do, when they could no longer buy their fish of the barefoot boys of his county. Chas. B. Reynolds, of FOREST AND STREAM, referred to the fact that the history of the Pennsylvania Association, like that of every other fish protective society, showed that the anglers were always the first to recognize the necessity of protecting the waters, and had always been foremost in efforts to secure such protection.

Speaking for the Association, Mr. J. R. Sypher, of the executive committee, invited the co-operation of all persons interested in its work, whether residents of Philadelphia or of other counties or other States. The membership fee for associates is \$2 per annum; and it is the earnest desire of the Philadelphia members that the Association may have not so much the financial as the moral support of a large membership scattered throughout all the counties of the State. The secretary is Mr. M. G. Sellers, 1020 Arch street, Philadelphia.

President Ford's Address.

While thanking you for the courtesies extended to us to-night, the Pennsylvania Commissioners of Fisheries desire to give your Association and its guests some idea of the work that has been accomplished, and the benefit of their labors to Pennsylvania. The Pennsylvania Fish Commission has kept steadily in view the restoration of our rivers, streams and lakes to their old-time fecundity, or in other words, the increase and cheapening of the supply of food fish for the people. When the Fish Commission has been assailed, as it sometimes has been, the attack is due to ignorance on the part of its assailants of this great object.

The cry has sometimes been raised that the Fish Commission is working in the interests of anglers and sportsmen; that the chief production of its hatcheries is game fish, and that its efforts to make and enforce restrictive laws are the results of mandatory emanations from associations and clubs to whom angling interests are dearer than the public welfare. This charge has a certain influence with the thoughtless who do not trouble themselves to investigate the doings of the Pennsylvania Fish Commission.

But let us see what are the facts.

In the past three years the Pennsylvania Commissioners have deposited in the waters of the Commonwealth over 152,000,000 of fish.

Of this number only 9,000,000 have been strictly game fish, leaving 143,000,000 of food fish supplied to our rivers and lakes; shad, whitefish, pike-perch, all the commercial fish of these waters.

Before an exhibit like this the assertion that the Fish Commission labors for the benefit of any one class should cease.

And yet those who carp at the stocking our inland streams,

our mountain brooks and rapid rivers with game fish, alleging that it is for the benefit of anglers' clubs, would never make such statements if they knew the facts.

Of trout applications alone fully 90 per cent. are from farmers residing on the brooks. And why not? They know what is profitable to them. The people of our mountain counties would sadly miss the sums left with them by anglers and tourists, if they allowed their streams to be annually depleted, and neglected to apply to the Fish Commission to replenish them.

The farmers throughout the State are awakening to the benefit of restrictive laws.

The fish protective associations with objects similar to your own that have been formed in nearly every county in the State are not the offspring of the cities.

They are composed of farmers and the sons of farmers who are wide awake and who see that if they are to preserve their fish from pot-hunters and poachers they must make and enforce restrictive laws.

A comparison of what the Pennsylvania Fish Commission has done in the last 10 years, or rather, a statement of its output in 1882 (the year of the formation of the Pennsylvania Fish Protective Association), compared with that of 1892, will best show its progress.

In 1882 the distribution of the Pennsylvania Fish Commission was:

Of trout and other game fish.....	664,000
Of shad.....	None.
Whitefish.....	None.
Pike perch, etc.....	None.

In 1892 there were planted in the waters of Pennsylvania, as follows:

Pike perch.....	59,000,000
Whitefish.....	15,000,000
Trout and other game fish.....	4,000,000
Shad.....	9,500,000

Making a total of.....\$7,500,000

fish as compared with 664,000 in 1882. Since 1882 the Erie hatchery, that has done so much to keep up the supply of food fish in that great lake, has been established.

The hatcheries at Allentown and Corry have been doubled in capacity by the erection of new buildings, and, though producing trout to their fullest extent, cannot begin to supply the demand.

Since 1882 the code of protective laws has been revised and strengthened, and an interstate law protecting the Delaware has been passed by the States of Pennsylvania and New Jersey.

In 1882 there were over 500 fish weirs in the Delaware River between the New York State line and Trenton. The shad catch in that river, owing to the wholesale destruction of young shad in these fish weirs or eel baskets, had dwindled to a valuation of \$81,000.

In 1892 there was not an eel basket in the river. They were destroyed by the Fish Commission, and the annual catch of shad has risen in value to over half a million dollars.

There is a bill now before the Legislature asking for the restoration of these eel baskets to the rivers and streams of our commonwealth.

If the gentlemen who make our laws could see these eel racks in operation in times past, and could see, not only game fish, but thousands of dead shad fry taken from them to fertilize the land, they would pause before they would ever sanction a measure that would be a death blow to the work of the State Fish Commission.

To day the shad fishing industry in the Susquehanna is in as bad a plight as was that of the Delaware in 1882, and the Fish Commission is now endeavoring to redeem it. They are in treaty with the Maryland Commission for the abrogation of eel racks in the Lower Susquehanna, and they are endeavoring to secure an appropriation for fishways in the dams, so that the shad can again ascend to the headwaters of the river. It is hardly fair that the Fish Commission should have to contend with an act submitted to their own Legislature to legalize these eel racks.

The Pennsylvania Fish Commission has had to combat the forces of ignorance, self-interest and lawlessness. It has been opposed by those who, caring nothing for the future, are solicitous only for the profits of the day, and have no thought of making the world better for those who may come after them.

Fortunately it has on its side the aid of bodie, like your own, the support of all intelligent, thinking and far-sighted citizens.

And yet with threatening hostile legislation, and much that is disheartening to earnest endeavor, it may be sometimes permitted to the enthusiast in fishculture to prophetically read the far future.

In that mental panorama he sees our two noble rivers, the Delaware and Susquehanna, teeming with food fish for the people.

He sees the lowland streams again yielding their finny supply prolific as in Colonial days, while the mountain brooks, renewed with aquatic life, bring profit and sustenance to the dwellers on their banks.

He views, too, clear and sparkling waters freed from polluting influences and giving a longer lease of life to humanity, as well as to their finny inhabitants.

To-day this may seem as the language of a Utopian, but it is the dream of no visionary. It will come slowly, but surely, and when it arrives perhaps the people of Pennsylvania may awake to a more thorough knowledge of the arduous work of their State Fish Commission.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, March 25.—Col. John Gay, until last fall inspector of stations of the U. S. Fish Commission and long a member of the Pennsylvania State Fish Commission, is now in this city in charge of the Pennsylvania exhibit in the anglers' pavilion. He and Dr. Henshall are having very neighborly times of it just now. The Pennsylvania installation is now well under way in the preliminaries.

The Horton Manufacturing Company was the first firm to put a piece of furniture in place in the angling exhibit. Their large special display case is a work of art.

Gov. Altgeld's Wisdom.

Gov. John P. Altgeld deserves to have a large stone monument with red trimmings erected to his memory. This I suggest because I fear that if he does not put up some such landmark the thinking public of Illinois may neglect to enshrine him in its heart, and he may be forgotten after the brief laugh at his display of twenty-eight karat wisdom. Yesterday Gov. Altgeld sent a message to the Legislature recommending the abolition of the State Fish Commission as "a useless and expensive board." Of course, he can not frame a law to that effect, and a Governor isn't ace high in a Legislature anyhow, but he has put himself on record to the effect that he will gladly approve such a law if passed by both houses. Gov. Altgeld figures out that the Commission has cost the State of Illinois \$7,000 a year on an average. As he, John P. Altgeld, has not eaten \$7,000 worth of fish each year, he infers that no one else has, and so that the money has been wasted. This, of course, is good enough reasoning to suit his real purpose, which is to make a big political bluff at saving a whole lot of money for the State, with an eye on the voting situation among the ignorant and easily led voters when it comes to another run for the Governor's chair. Me, John P., I saved you \$7,000 to feed your motherless babes; vote for me, John P.; that is about the way the thing reads.

Now, with the \$7,000 which the Illinois Commission had, it saved and planted more fish, dollar for dollar, three times over than any other State in the Union ever did. It didn't hatch fish, and it didn't experiment. It just scooped young fish out of the drying sloughs, and planted them in running water. It enriched this State yearly, on the State's investment of \$7,000, to the value of not less than \$100,000, and very probably more than \$200,000. Gov. Altgeld does not know the commercial value of the fish trade of Illinois. He ought to study up on a good many things before he goes into the governor business.

Now, if the Commission be abolished that means a wide-open time for the market-fishers, and that means that in four or five years the wealth of our main streams is gone. It would take \$50,000 a year to put it back again. Nobody has been saving the little fish and putting them into the living water now, mind you. Things have been taking care of themselves. The market-fishers, ignorant and careless as children, have been destroying great and small fish, regardless of the future. A great source of the wealth of the State of Illinois has been ruined. It will cost \$50,000 a year to replace this wealth of \$200,000 a year. Who cost the State of Illinois that money, John P.?

The Facts of Fish Planting.

There is no guess work about this and no assumption of facts. The facts are at hand for any governor who wants them. Let Governor Altgeld go to Mr. A. Booth, of Chicago, the greatest market-fisher in the world, perhaps, and ask him about the value of fish planting and fish commissions. Mr. Booth will tell him that were it not for the continuous planting by the State Fish Commissions the whitefish of the Great Lakes would be extinct to-day this side of Lake Superior and the fisheries of the Lakes discontinued. Illinois plants fish even more cheaply than that, though only on a \$7,000 scale instead of a \$50,000 scale, as she should.

For Gov. Altgeld to ignore the examples of other States and the incontrovertible showing of their beneficent work, would be for him to deliberately forsake the company of intelligent men, and to ally himself with the ignorant, the vicious and the unthinking, those who by reason of their birthright of incompetency as citizens, their lack of providence and their carelessness of the property intrusted to their use, call aloud for the care, the protection, the forethought and kindness which any really wise Governor would feel bound to give them. Gov. Altgeld saves these people no money. He robs them, for he permits them to rob themselves, and this they will do as long as they are allowed so to do. When the ignorant and unthinking thus rob themselves, they rob us also. We lose sport. The people of Illinois lose money. Is it wisdom to cost this loss? Is it decency to call such loss a "saving"? I do not think the Legislature of this State will call this wise or decent.

E. HOUGH.
175 MONROE STREET, Chicago.

CURIOUS CULLINGS.

GENERAL WALKER, on his last trip to Lake Ridge (Lewistown Reservoir), caught a bass that had got away with the business end of his line during the summer.

Emerson McCance caught a small dual fish that was connected, Siamese-twin-like, with a fleshy cord midway of the bodies.

The fins of Japanese goldfish, whose bodies somewhat resemble small jugs boys drop their pennies into, are transparent films, and their tails shadowy, wavy, dual swallow tails.

Mr. Chas. C. Neereamer, of Columbus, in the excitement of seeing a wild goose swim by his boat at Lake Ridge, made a cast for him and caught him. Judge Ingalls likewise caught a mudhen.

Fishing on ship or yacht means to try to hold a camp stool in place on deck and drag a line in the wake of the boat. To bait for shark is to put on a large piece of fat meat, or even a bottle. Baiting with a bottle would catch a good many people nowadays.

Mrs. Wm. Pratchet, of Dayton, two summers since, and while enjoying a trip to Indian Lake (Lewistown Reservoir), first secured a bass that escaped and that got away from its ultimate captors three times before it was finally landed for keeps. Once he loosened a slat in a "live box" and escaped.

The angler-fish being slow of motion buries himself in the mud, and projecting from his snout is a fleshy bent

rod and line, with a shining, bony substance or scale at the end that lures the curiously inclined to certain destruction. In fact, danger lurks everywhere in the deep for the finny tribe, each pursuing each with a persistence the most cannibalistic. Eternal vigilance produces alone the shadow of rest.

Heavy gales this fall caused the catch of whitefish in Lake Huron to be but small.

Several black bass were taken from Indian Lake, Lewistown Reservoir, the past fall, that weighed good 8lbs. each.

Drillers for oil in the 60s above and about Oil City, Pa., found fissures in the rock through which flowed living streams, and from which eyeless fish came up in the "sand pump."

A boiling spring in a Nevada mine furnishes an eyeless fish.

There are eyeless fish in the Mammoth Cave.

During a run of bass last spring hundreds, yes, thousands, were caught below the bulkhead, at the Lewistown Reservoir; and to see them mirrored in the water as they went over the breast of the dam was a sight long to be remembered.

At Minorca fishermen simply dive to a depth of 70ft., with a weight in one hand to carry them down, while with the other they pick up as many oysters as they can and bring them to the boat.

A curious fish obtains in foreign waters that lights a certain portion of the darkness surrounding it as a firefly a summer's evening.

Fishculture.

Rearing Black Bass.

Editor Forest and Stream:

I have read with much interest what Mr. Wm. F. Page, of the U. S. Fish Commission, has to say on the subject of rearing black bass, and having had six years' experience in this line I wish to indorse all that he says.

While my experience was in a measure that of an amateur, if raising fish at my own expense and stocking public waters is so to be considered, the work was systematically and effectively done just the same. With the co-operation of Hon. A. C. Williams, afterward for four years State Fish Commissioner, assisted by other enterprising citizens, a pond of about one-quarter acre was established on a spring brook at Chagrin Falls, O., and stocked with small-mouth bass. In the shallows gravel was placed for spawning beds.

The fry were taken from the nests just as soon as they had risen from the gravel and before they had become scattered. They were placed in a small pond with ample shallow margins, and there kept and fed on clotted blood, rubbed through a fine sieve, which we found to be better than liver.

Our subsequent experience taught us that a better way was to plant at once, if the water to be stocked was near at hand, placing the fry along the shores in the very shoalest water, that not over half an inch deep being preferable, where we found by examination from day to day that they stayed for a week or more.

Streams which had never before contained a small-mouth black bass were so effectually stocked in this way that from one single pool in one of them, four years after the first stock, Mr. Williams and the writer took, in one month, with hook and line, 160 bass of from one-half to one pound weight, with which to stock the State ponds at Chagrin Falls.

No branch of fishculture is more simple than that of producing black bass fry in ponds, if pursued with a fair amount of intelligence, the statement of bigots in the business to the contrary notwithstanding. Of course, they cannot be furnished in millions, as with some other varieties of fishes, but the speed with which they assert themselves in suitable waters, even when only a small number are planted, makes up for this shortcoming in numbers.

J. J. STRANAHAN,
Supt. Put-in-Bay Station U. S. Fish Commission.
PUT-IN-BAY, Ohio, March 16.

Nepisquit Angling Club.

SITUATION OF PROPERTY AND REGULATIONS.

The lands and premises, fishing rights and privileges on the Nepisquit River, in the Parish of Bathurst, in the county of Gloucester, New Brunswick, particularly described in the several conveyances, and grants from the Crown, mentioned in a certain declaration of trust, executed by the late John H. Kinnear, and recorded in the office of the Registrar of Deeds for the said county of Gloucester, by the number 102, on pages 192, 193, 194, 195, 196 and 197 of the 34th volume of Records of the said county, are now held by trustees for James de Wolfe Spence, Simeon Jones, the executors and trustees of the late John H. Kinnear, and the devisees under the will of the late Major J. J. Forsyth Grant, jointly; the said lands comprising four several grants from the Crown of about 346 acres at Grand Falls, three several grants of about 500 acres at Pabineau Falls, two several grants of about 150 acres at Mid-Landing, and four several grants of about 600 acres at Chain of Rocks, in all about 1,546 acres; each of the said grants having a front on the said river. The trusts upon which the above lands and premises, fishing rights and privileges are held, are "for sport and pleasure, primarily for fishing, and not for business purposes," and such trusts are more fully set forth in the declaration of trust before mentioned. All rates and taxes, and expenses of protecting the river, and charges connected therewith, and with the general management of the property, including expense of filling club ice houses and other incidental expenses, are borne equally; each joint owner being liable for and paying one-fourth. Any owner may sell or dispose of his interest in the fishing rights and privileges, subject to existing trusts, but the purchaser of such interest must be accepted as an associate by the other three joint owners, or by a majority of them. Any owner may lease his season's fishing, as allotted to him. After many years' experience, the club have adopted a system of allotment of pools, which has been found most equitable; and the allotment for the season of 1893, herewith attached, which was drawn by ballot on the 4th of March, will explain the system, and show when and where each joint owner has the right to fish for the ensuing season. A majority of joint owners can, at any meeting duly convened, make any alteration in the distribution of fishing and allotment of pools.

Date.	Section No. 1. Pabineau Falls and Mid-Landing.	Section No. 2. Chain Rock and Grand Falls.

The sale will be on Wednesday, April 26, next. See advertisement elsewhere.—Adv.

WITH ROD AND CREEL.—The days approach when the sportsman will go forth with rod and creel. Where will he go? If wise, to the great trout and bass country along or tributary to the Grand Trunk Railway of Canada. Write for particulars to N. J. Powen General Passenger Agent, Montreal, Canada.—Adv.

Prizes for Catches of Fish.

THE Natchaug Silk Co., of Wilmington, Conn., whose braided silk lines recently put upon the market have met with such favor among fishermen, offer through our advertising columns \$300 in cash prizes for catches of fish taken during the season of 1893, with their lines. Every angler should read their liberal offer to be found in our advertising columns, and if possible compete for one of the prizes.—Adv.

The Kennel.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.

DOG SHOWS.

March 23 to 31.—Illindio Kennel Club, first show, at Indianapolis, Ind. Chas. K. Farmer, Sec'y.
April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

THE DETROIT DOG SHOW.

BUT few organizations have enjoyed such encouraging support at its first show as that with which the City of the Straits Kennel Club was favored on March 21, 22, 23 and 24, at Detroit, Mich. The support was not only in the number of the entries—418 according to the catalogue—but in their quality, and in the large attendance of spectators, the *élite* of Detroit. The dog show was a society event, and therefore a most liberal patronage was given it. Notwithstanding the low price of admission, twenty-five cents, and the stormy weather of the first two days, the expenses of the show were fully covered by the receipts on Thursday night. The receipts of Friday were consequently on the good side of the account. Undoubtedly fifty cents admission fee would have been as cheerfully and fully paid as was the twenty-five cents, for the class of people who favored the show would have as readily paid the larger price. However, the club had some unfavorable conditions to contend with, and possibly may not have felt quite secure. First, there was a show in the same week at Elmira, under the protecting wing of the American Kennel Club, second, the application of the club for membership to the A. K. C. was in abeyance pending investigation of the situation as between the old Michigan Kennel Club and the present club, hence there was the question of the wins being recognized by the A. K. C., a question which, by rather frequent recurrence, seems to have lost some of its terrors. In this connection it may be mentioned that the vitality and success of the City of the Straits Kennel Club was so palpably established that the old club dissolved its organization in favor of the new one.

In reply to the report of the A. K. C. Committee of Investigation, Mr. John E. Long, of Detroit, the latter received the following telegram:

"To John Long, in care of Dog Show: As explained to City of Straits Kennel Club Sub Committee, have no power to admit now, but on your statement will undoubtedly recommend admission and recognition of wins at next meeting of Executive Committee. (Signed) J. L. ANTHONY."

This seems to settle the matter for the present.

The Detroit Auditorium, in which the show was held, is simply a large hall, capitally suitable for a dog show. The light, however, is not of the best, owing to there being no skylights in the roof. The electric lights were amply sufficient to supply artificial light in the afternoon and evening. The aisles of the Auditorium were, in the afternoon and evening of each day, crowded to their utmost capacity, and it seemed as if at such times the sale of tickets would have to be stopped simply for want of space to admit the people. Briefly, the show may be called a success in every particular.

The judging was done by Messrs. John Davidson and Mason. The former judged bloodhounds, Russian wolfhounds, foxhounds, deerhounds, pointers, English setters, Irish setters, Gordon setters, collies, dachshunds and beagles. Mr. Mason judged all other classes.

The benching and feeding was done in a most satisfactory manner by Spratts Patent.

The bench show committee, Messrs. Geo. M. Hendrie, W. G. Young, Thos. G. Blake, Guy D. Welton, Louis N. Hilsendegen and C. A. Parkinson, were unceasing in their efforts to make the show a success and courteously attentive to the wants of exhibitors. The secretary also was diligent and obliging in executing his duties. There is no question but what the club can hold a big, first-class show next year.

The judging, as a whole, gave about the usual satisfaction. It pleased some more than it pleased others. Good feeling and good fellowship, however, was a prevalent feature of the show.

Some of the judging dragged slowly and was not finished till the late Wednesday or till Thursday.

RUSSIAN WOLFHOUSES.—There were but two, Groubian in the dog class and Loadka in the bitch class. Both are well known.

FOXHOUSES.—Only one, Ranger, appeared for judgment and he was ordinary and was awarded second. Afterward it was discovered that another one, Jack, had been by mistake entered in the miscellaneous class. He was awarded first. He has the appearance of having an English cross.

DEERHOUSES.—The first prize winner, Paul Potter, is quite a fair hound and was shown in excellent condition, and is a trifle light in bone. Brian II., second, is about an ordinary specimen. Olga had a walkover in the open class for bitches. She is quite a good bitch.

GREYHOUNDS.—In the challenge class, Gem of the Season was first, while Bestwood Daisy got the reserve. First in open dogs was won by King Dick, a large hound of a good deal of symmetry. His head is a trifle coarse. Raver, second, is coarse in head. Master Mennon, the reserve, is flat in ribs, light in bone. Wild Rose, recently described, won first. Chips, second, was described recently. Miss Mennon, the reserve, is ordinary. Lady Olivia, vhc., is too light in bone and muzzle.

POINTERS.—The pointer classes were well supported and were good in quality. Count Graphic won easily in the challenge class over Lord Graphic. In challenge bitches, the excellent bitch Lady Gay Spanker had a walk over. Open dogs, heavy weights, had ten competitors. Boxer, first, is heavy in shoulders and neck, and is somewhat coarse. His forefeet turn out. Head fairly good. Duke O., second, stands on fairly good legs and feet, has a good body and ordinary symmetry. He is heavy in skull and shows some coarseness. The dogs receiving letters were about an average lot. Six bitches were in the class for heavy weights. First and second won the same places as at Chicago, in which report they were described. The reserve, Fannie Graphic, is too wide in front. Her head is not clean out. Tilly and Lord Graphic's Gem were vhc. The former was shown too high in flesh. She is light in bone. The latter quite a good bitch, was in poor condition. Her head is too short.

Dogs, under 55lbs., had ten. Peter of Kent and John Kent Washenaw were absent. Glanorgan, first, is coarse, and rather ordinary. He is heavy in shoulders; has a good back,

s throaty. Wonderful Lad, second, is quite a good pointer. His head is not quite clean cut and his expression is sour. Legs and feet good, strong, well-shaped back and good body. Jumper, reserve, has a good head, excellent legs and feet, and good back and loin. Rock II., vhc., is too wide in chest and heavy in shoulders. King's Mark, also vhc., has good legs and feet, a well shaped body, and back, and fairly good symmetry. Stern rather coarse, head plain. Eight bitches faced the judge. Miss Rumor, well known, easily won first. Duchess, second, is plain in head, good in body, legs and feet, too short in neck. Count Graphic's Baby, reserve, is rather light in build, has good body, legs and feet, a fairly good bitch. Nell of Naso, vhc., is a bit stilty, but her legs and feet are good, head plain, good back. The kennel prize was divided, T. G. Davey and Dr. J. R. Daniels.

ENGLISH SETTERS.—There was a good lot shown. Cincinnati, in good condition, won first in the challenge class. His kennel mate, Toledo Blade, got the reserve, Cambriana, in the bitch class, won over Albert's Nellie, the latter not in the best of condition, she having recently weaned a litter of puppies. Quite a good dog, Washtenaw Grouse, won in the open class. He is not a year old and ought to improve a great deal with maturity. He might be better in body; legs and feet sound and good; clear-cut head; muscular quarters; good shoulders and neck. Second went to Matane, a well known competitor. Ben Hur of River View was the reserve. He has many ups and downs in competition; sometimes first in the money, sometimes not in it at all. Mack of the Elms, quite a good puppy; Bangham's London, a good dog, showing some coarseness; Pembroke's Royal Sport, too heavy in skull and not quite straight in front, and Monk of Furness Sting, too thin in flesh, were given vhc. In the hc.'s

GEO. M. HENDRIE.
President City of the Straits Kennel Club.

were some good dogs; there were five, Luke, Albert's Breeze of Washtenaw, Sir Bob, a dog carrying much lumber; Max Noble and Sultan. The bitches numbered 26, 8 more than the dogs. The class was a good one. A superior bitch, Lady Patch, won first. Her head has not quite sufficient stop, though it is of good shape. She stands squarely on good legs and feet; muscular quarters; lean neck; good shoulders; symmetrical. Toledo Queen, second, is too short in neck; muzzle light; body well ribbed; good quarters, legs and feet and fair symmetry. The reserve went to a cobby bitch, Queen of the Elms; light in bone, good feet and fairly good head, though her skull is narrow. She shows a deal of quality. In the vhc.'s were four, Monk of Furness Lill, shown too thin, Blida Blade, Nellie Breeze of Washtenaw and Doris C. There were some good bitches, most of them well known, which were in the hc.'s, namely, Belle Noble II., Liberty II., Daphne, Cleopatra, Amy Robsart and Bessy. The kennel prize was divided between W. B. Wells and Washtenaw Kennels.

IRISH SETTERS were a good lot. All the dogs and bitches in the challenge classes were owned by the Oak Grove Kennels. Kildare won first. Two bitches were in the challenge class. Norna won first. The special prize for best bitch was awarded to Queen Vic, better in head than Norna, but inferior to her in body, legs, feet, shoulders, quarters and symmetry. Norna is much the better. Blarney, Jr., in good condition, won first. Second went to Shamrock Bruce, neck too short, muscular quarters, good back, legs and feet. Tom Owen, reserve, is out at elbows, and loaded too much in shoulders. Of Larry C. and Prairie Tip, vhc., the former was thin in flesh, the latter stands badly in front, narrow muzzle. The bitch class numbered eight, two less than the dogs. Queen Vic won first. Marchioness, second, is light in bone in forelegs and shows some heaviness in shoulders. She moves well. Kildare Winnie, the reserve, has a light muzzle and bone. Katie O'Shea, vhc., has a poor front and a pinched muzzle. Countess Gypsy, hc., is flat in ribs and thin in flesh. The Irish setters were nearly all in excellent condition, and considering the journeys some of them have been on from show to show, they were remarkably well conditioned.

BLACK AND TAN OR GORDON SETTERS.—The challenge dog and bitch classes were respectively won by the well-known competitors, Ivanhoe and Duchess of Waverly. In open dogs a very good puppy, Louis S., won first. He is a trifle long in coat and light to a slight extent in body, which will disappear as he develops more fully with age. He stands squarely on good legs and feet, has a good head and the color is good black and tan. Duke, winner of second, is about average. Highland Kent, reserve, is a coarse dog, with smudgy tan. In bitches, of which there were six, one more than of dogs, Princess Louise won first. She has a plain head and is lacking in symmetry of form and excellent legs, feet, quarters and head of the winner of second. The reserve, Catherine, is high on legs, light in bone and muzzle. Dr. DIXON won the kennel prize.

SPANIELS.—These classes were well represented. Most of them, however, are well known competitors. In field spaniels challenge dogs Newton Abbott Torso won over Newton Abbott Laddie and Beau. In the corresponding bitch class Queen had a walk over. There were but two entries in the open bitch class. Daisy Dean first and Gipsy Queen second. In liver-colored dogs Bob II. had a walkover. He is high on legs and plain in head, light muzzle. In the class for dogs and bitches, any other color, the prizes were properly withheld. There was but one entry. In the challenge class for cocker spaniels Fascination, a well known winner, won first. He won over Black Duke, Bendigo, Brant and Brantford

Red Jacket. I Say won over King Pharo's Sister and Troublesome in challenge bitches. In the open dog class Woodland Prince won over Pickpania, the latter described in the Chicago show report. Black Crook, vhc., has a coarse head. In bitches Realization won first, Nora H. second. Clumber spaniels were very inferior. The prizes in the challenge classes were withheld, as also they were in open dogs. First was withheld in the open bitch class, second going to Lady Violet. The Irish water spaniels were better than the average. In dogs Dennis, a rather coarse dog, somewhat leggy, won first. Trouble, second, is a poor, coarse specimen. Marguerite, first, is quite a good bitch. Nora O'Donoghue, second, is a well known winner.

BEAGLES.—The exhibit was fairly good. Roy K. had a walkover, and Jude M. won over Emeline in the challenge class. In open dogs, Doctor, a dog about 16in. high, won first. He shows up well, but has partly a foxhound expression. Second went to Adam, head rather heavy, good legs, quarters, head and feet. Crowner, the reserve, is a shade too heavy at the shoulders, but he is a snugly-built, well made beagle. In bitches Lonely won first; she is excellent in legs and feet, body well shaped and ribbed well, good eye and leather; a good bitch. B. WATERS.

MASTIFFS.—The challenge class for both dogs and bitches had but one entry each, the former was filled by the well-known Elkon, who was not shown in the best of condition, his skull is not improving any and he has that same boundy appearance he's been afflicted with all his life. Lady Dorothy is small, and is besides a little off in her left hindleg, further comment unnecessary. The open class for dogs had seven entries, of which the chocolate dog, Prince Cola, proved himself an easy winner, beating at least one good one in Cardinal Beaufort, but in justice to the latter it must be said that aside from not being well his coat was in wretched condition; he was given second, however, a place he fully deserved; Prince Cola also won the special for best mastiff in show. Don Quixote, vhc., is small, light in bone and not deep enough in muzzle, he has a nice body and is a good mover, the balance do not call for special mentioning. A new face came to the front in the bitch class in Minnie Beaufort; she is a worthy daughter of Beaufort and Girda, and therefore a full sister to Beaufort's Black Prince; she has a wonderful skull, good eye, grand body, good set of feet and legs, in muzzle she is not deep enough, and she seems a little short on her front legs which makes her stand low at the shoulder, but she is a very easy mover considering her great size. Second went to Ethel, who is fairly good in head and nearly square in muzzle, but she is very open in coat, and no harm would have been done had she changed place with Belle of Detroit, who is her equal at nearly every point, and in this instance at least had the best of her in coat.

ST. BERNARDS.—There were no entries in the challenge classes. The open class for rough-coated dogs was pretty well filled with 11 entries. Of these Lord Dante proved himself the winner. He is rather small in skull, too long from eye to end of nose, but he has a very good muzzle, being both square and deep. He has also plenty of bone and is a good mover. He was shown light in flesh. Second went to Lochlin, who is of better color and face markings, but is a bit long in the middle; stop not well defined; a little more bone would do him no harm. Earl Douglas, third, is a fair-sized dog, but has his head and expression spoiled by too much white on one side. He is also light in muzzle and lacks shadings. Reserve went to Ben Hur, a small dog, curly in coat, light in muzzle, but he is fairly well marked. Scion Lomond, vhc., has lots of head character, though he has no shadings. He is a very large dog, with too much white on body and straight behind. Prince George, hc., I liked for third place. He has plenty of size and is not a bad dog all over; has plenty of bone and is a good mover. He has a nice coat and is of good color. His muzzle could be improved with more depth. Considering the time the judge spent on this class they were badly handled. Lady Taylor was placed first in the class for bitches. She is very deficient in stop, but is otherwise well marked in face. She is of nice size and in all is a very good stamp of bitch. Lady Hickley, second, is only a puppy that will never make a flyer. Her head and face will always be against her. Duchess of Lomond, third, was the proper bitch for this place. She is perfectly marked in face, has good coat and color, is of fair size; she could do with a little more bone. Actella, reserve, is plain-faced, flat-sided and light in bone. Lady Austin, hc., is small, open in coat, with a rather pleasing face, which could be improved with more depth in muzzle. In front legs she is not quite straight. The balance were not worthy of notice.

Both challenge classes for smooth St. Bernards were drawn barren. In the open class for dogs Alton II. was the only entry; he is of the same type as all the rest of the famous Alton—Judith litter. This dog was streets ahead of any St. Bernard in the show and should have won the special for best in show, but the judge saw fit to turn him down and gave the prize to Lady Taylor, a very ordinary bitch. There were two entries in open bitches, but Rosebud was absent, which left it a walkover for Sola, who is snipy, large staring eye, no markings, lacks character and is light in bone, second would be a proper place for her; and so the judge plodded along slowly to the next class, which were the

GREAT DANES.—Here he seemed more at home. The well-known Melac, looking in fine form after his long campaign, was alone in the challenge class for dogs, for both Imperator and Favor failed to put in an appearance. There were no entries in the corresponding class for bitches. The open dog class for brindle and fawns had four entries. Of these Major McKinley proved himself a rather easy winner, with Lord Wolverton second; the latter is a racy-looking fellow and wonderfully well-developed in thighs, in fact, in this respect, he has the appearance of a well-trained greyhound; he has a nice clean neck and a fairly good body for one so young—about 10 months—in head he is not perfect, too long from eye to end of nose, muzzle not deep enough and a trifle snipy, he is not a good mover behind, walking too straddling and stilty, in bone and feet he is good. Theseus, reserve, has been described before and Captain was not worthy of notice.

The brindle and fawn bitch class was even stronger. Here we find the grand bitches Neverzell, Charmion and Minerva. They were placed in the order named, and Senta got the vhc. card. The three former need no description here, as they have many times been described. All were shown in good condition. Senta, like her kennel companion, is a lean, racy-looking bitch; she has a beautiful long, clean neck, good body, legs and feet; she has a long, wolfish-looking head, with no stop, muzzle too light and long, eyes rather firm than intelligent. In color (?)—well, she has none; at least it would be hard to describe. On one side of body she is a striped brindle, on the other side a dirty fawn with no stripes. Young Pearl, the only other entry, the judge did not think worthy of notice.

The class for blue and harlequin dogs had but three entries, Tonney Marks was absent. Brutus, a nice, trim-looking blue, was an easy first over his kennel companion, Pascha II. The latter is too short and thick in head. Iris had a walk over in the bitch class. The entries in both classes were all blue, and they showed more or less type.

COLLIES.—Both challenge classes were drawn blank. The open class for dogs was filled with nine entries of fairly good quality. Scotsman, a black and white dog with a good coat and of nice size, won; he is hardly flat enough in skull, could be improved in bone and a little more frill would not be out of place. Second went to Finsbury Duke, plain in face, with a good coat, good bone and a nice, small eye. Stratham Lad, third, got plenty of coat but of the wrong sort, being a bit too kinky; rather poor in head, being too short and high

in muzzle; ears not well set. Laddie, reserve, lacks undercoat, no face quality, nice, small ear, coat too soft. Blake, yhc., has plenty of coat, fairly good head. Glen Davis, h.c., is small, badly carried, large ear of poor quality. Paris, c., has a round skull, fairly good coat. In bitches, Bernice, first, is too short in head, and the same must be said of her coat; her skull is a bit heavy, still she is of very good type, has good bone, legs and feet. Dawn, second, is of the same type, a bit better in head, short of top coat, nice set of legs and feet. Vanity, third, is weedy; she is light in bone, small and no coat. Nancy Brown, reserve, is also too small; ears carried too high; h.c. would have been her proper place.

POODLES.—Two very good ones were shown. Berri, the winner, beats Ben L. in size and coat.

BULLDOGS.—Aside from King Lud and Clinker, nothing of merit was shown, the former is well known. Clinker is a good large white dog with a fairly well broken up face, good layback underjaw fairly well turned up, a little high on legs and bad in stern. The bitches were too weedy to receive mentioning.

BULL-TERRIERS.—The dog class was drawn barren, there were two entries in the corresponding class for bitches, but Grove Duchess was absent, this left it a walkover for Attraction, who is too well known to our readers to need comment here. The open dogs were badly handled. Crisp, second, should have had first easy, much better in front and shoulders, is a larger dog and far excels Sir Monty II. in fire and terrier character, the latter excels in eye and expression. Duke of Wellington, third, is a big coarse dog bad in head, front and stern. Turk was unworthy of notice. Prince Gulley, Chatham Monarch and Chatham Prince were absent. The bitches could not be called a strong class though some good ones were shown. Edgewood Wonder, first, is small, she is good in head and expression, a little low on legs and light in bone. Burton Kit, second, is out of condition and lacks expression. White Gipsy, reserve, is of good bone and body, a bit chunky, not and quite square in muzzle; I liked her for second place. Queen of the Dale and Mermaid were absent, and the balance the judge did not think worthy of notice.

DACHSHUNDS.—Strange, with so many good ones of these little dogs in the country, hardly any were shown outside of New York; none were in at Washington, but here it is different; quite a nice lot put in an appearance in the class for dogs. Hundesport Bergman proved himself the winner; he is rather coarse in head, lacks the witch-shape in muzzle; he is good, and the same can be said of brisket and crook. Second went to Hundesport Zaenker; is light in bone and no face character. Milwaukee Jewel, reserve, is light in bone and deficient in crook. Diamond Joe, yhc., is plain-faced, no head character, good in brisket, with plenty of bone and length of body. Waldi, h.c., stands out at elbows, good body and coat, but snipy. The bitch class had but two entries; both are pretty well known. Lina K. rightly got first, but she only beats Lina L. in mouth; the latter has lost several teeth, which, of course, is bound to go against any dog that is supposed to destroy life in other animals. Both are rare good ones.

BEAGLES.—The challenge class for dogs, like that for bitches, had two entries each. In the class for dogs Roy K. had a walkover, Racer, Jr., being absent; he is well known. June M. won from Emeline in the challenge bitch class, the former was shown too high in flesh; both are rattling good, bitches of a nice size. The open class for dogs had several good animals; the Shrewsbury Beagle Kennels' Doctor, was placed first; he shows lots of quality, has plenty of chest room and legs and feet that are hard to beat. Second went to Adam, of nice size, with good coat, superior in head and just as full of quality. He should have had first, as he is a trim little dog all round. Crowner, reserve, is a sweet little dog, with a nice face, a bit light in bone and shallow in chest. Hawkeye, yhc., is a bit snipy, has good straight legs, better coat, deeper chest and in my opinion should have been placed higher. Pomp, h.c., is too heavy in shoulders. Joe was absent. In bitches nothing of great importance was shown, aside from Lonely, winner of first, and Snow, winner second; both these are well known. Little Spotty, reserve, is of fair type, but plain in face and shallow in chest. The balance were a fairly good lot.

FOX-TERRIERS.—Nothing in the challenge classes. The open class for dogs was not remarkable for its quality. My Fellow, first, is good in head and coat, fairly good ears and nice expression, good bone and feet. Second went to Belvoir Bacchanal, who is a nice little dog with rather blank expression and large ears, in bone and coat he is good. Belvoir Rambler, reserve, is plain in head, large in ear, with soft coat. Mack, h.c., got all he deserved. Blemon Stipend was absent. The bitch class had but three entries, of which Lady Roseberry was a rather easy first; she is high on legs and not too heavy in bone, her coat is short but of good texture, in head and expression she easily beats them all. Venus II. came in nicely for second place; she has a rather plain head, is a bit wide in front and soft in coat, capital legs and feet. Maggie H. got the reserve card. Mr. Mason called attention some years ago why a reserve card was given when there was no vhc. card awarded, as he was the judge in this case we will leave the answer to himself. Two classes for wire-haired were made, and both pretty well filled; in the class for dogs Eskdale Broom caught the judge's eye for first place; he is not right in head and has an open coat, but a nice, small, well carried ear, good legs and feet. Burlington Jack, second, is even worse in head and short of coat, he has very good bone. Reserve went to Adswood Jim; I rather liked this dog for first place, he has a nice clean head, good ear, plenty of bone, and a good hard coat. Suffolk Billy, h.c., has a coat more like a Yorkshire than a fox-terrier. In bitches Raper's Rosana won easily on account of her nice face and expression. Second went to Nettie Topper, a bit large in ear and weak in muzzle, she is also rather short of coat. Luna, reserve, is weak in muzzle and short of coat.

IRISH TERRIERS.—Jack Briggs had a walkover in the challenge class for dogs or bitches, and so did Salem Witch in the open bitch class. Manxman, the only entry in open dog class, was absent.

There was but one entry in the class provided for Dandie Dinmonts, and he, Rodger, was a very good specimen. The winning Skye terriers, Barnaby Rudge and Islay, are well known. Sir Stafford was absent.

A class was made for Challenge Bedlington, dogs or bitches, but the only entry, Qui Vive, was absent in the open class. First was rightfully withheld. Second went to Doctor A., a dog of good size, but without quality.

Black and tan terriers over 7lbs. challenge class, two entries, the well known Broomfield Sultan getting first. The open dog class had but two entries. First was withheld, and rightfully so. Second went to Dick, whose worst fault is his age. There was but one good one shown in the bitch class, Gipsy Girl. She is well known. All other prizes were withheld.

YORKSHIRE TERRIERS.—Quite a nice class was shown, Minnie York winning first over her smaller companion, Dick York. We preferred the latter for first place, being her equal in coat and color and better in size. Reserve went to Toody; she is poor in head and short of coat. Josh was not at home when we called.

There were three toy terriers shown, but not one of them a good one. First was withheld, second went to Midget, a little apple-headed black and tan, with no coat. Roxy, reserve, was bad in head and undershot.

SCOTCH TERRIERS.—Tiree of course was away ahead of his class, and for the Ashmont special he again came out victorious, beating everything in the show. Second went to Rhuduman, Ashley Plug getting the reserve.

PUGS.—Bob Ivy was alone in the challenge class and won

In open dogs nothing special was shown aside from Meddler; he has fair wrinkle, good skull and color; is a little long in back and high on legs. Princess May won with ease in the bitch class; her size favors her. Lady Clover came next; she is good in head, not quite broad enough in muzzle and a bit smutty in color. Little Duchess got the reserve card.

KING CHALES.—It was Royal Duke first and the rest nowhere; still both Lady Jane Gray and Prince Charley are good little spaniels.

ITALIAN GREYHOUNDS.—Two good ones were shown in the challenge class for dogs and bitches, Sprite getting the ribbon over Spring. The former is a bit the better in head. The open classes were well filled with a nice lot of dogs of a rather large size. As they were all bunched together it was impossible to tell one from the other. Most of the entries belonged to Dr. Lansing, whose wife is very fond of these beautiful and fashionable little hounds.

WHIPPETS.—There were two classes and each had two entries. Tipp, first in dogs, is a good, racy-looking little hound, shown in nice shape. Ben, second, is not much behind him. In the bitch class a glaring mistake was made.

A. T. KNOWLSON, VICE-PRES.
CHAS. F. RACKUS, TREAS.
W. G. YOUNG, B. S. COM.
GUY D. WILTON, SEC'Y.
C. A. PARKINSON, B. S. COM.
L. N. HILSENDEPEN, B. S. COM.

CITY OF THE STRAITS KENNEL CLUB.

Winnie should have won over Boston Model hands down. The latter is soft and flabby and out of coat besides, where Winnie is in beautiful coat and fine racing order.

The miscellaneous class had a little of everything, from the Mexican hairless to the big, curly-coated so called Newfoundland, but nothing worthy of note was shown, except a very fair Newfoundland, and he was given first.

HARRY L. GOODMAN.

Full list of awards follows:

MASTIFFS.—CHALLENGE—Dogs: 1st, Edwin L. Kimball's Elkon. Bitches: 1st, J. J. Lynn's Lady Dorothy.—OPEN—Dogs: 1st, Dr. G. E. Holcomb's Prince Cola; 2d, J. J. Lynn's Cardinal Beaufort; 3d, Win Connor's Bford Mut. Very high com., W. J. Wilson's Don Quixote High com., R. S. Miller's Fannie New. Bitches: 1st, Dr. L. Younghouse's band's Minnie Beaufort; 2d, B. F. Lewis's Ethel; 3d, Tracy Bros.' Belle of Detroit.

ST. BERNARDS.—Dogs: 1st, C. J. Bousfield's Lord Dante; 2d, Mrs. J. E. Dager's Lochlin; 3d, Anna M. Griffin's Earl Douglass. Very high com. reserve, F. C. Boles's Ben Hur. Very high com., G. H. Carlisle's Seion Lomond. High com., C. A. Pratt's Prince George. Bitches: 1st, C. J. Bousfield's Princess Gilda; 2d, Detroit St. Bernard Kennels' Lady Hickley; 3d and high com., C. A. Pratt's Duchess Lombard and Lady Austin. Very high com. reserve, Anna M. Griffin's Atella. Com., J. C. Guillot's Royal Mona.—SMOOTH—Dogs: 1st, C. A. Pratt's Alton II. Bitches: 1st, H. Gorman's Sola.

BLOODHOUNDS.—1st, withheld; 2d, R. G. H. Huntington's Jack Shepard; 3d, E. J. Burrell's Sailor.

GREAT DANES.—CHALLENGE—Dogs: 1st, Cumberland Kennels' Melac. BRINDLE OR FAWN—OPEN—Dogs: 1st, Illwis Kennels' Major McKinley; 2d, J. W. C. Glynn's Lord Wolverton. Reserve, Cumberland Kennels' Theseus. Bitches: 1st, Osceola Kennels' Neverzell; 2d and reserve, Cumberland Kennels' Charmion and Minerva. Very high com., J. W. C. Glynn's Santa. BLUE AND HARLEQUIN—OPEN—Dogs: 1st and 2d, Dr. G. Nicolai's Brutus and Pascha II. Bitches: 1st, Dr. G. Nicolai's Iris.

RUSSIAN WOLFHOUNDS.—OPEN—Dogs: 1st, C. S. Hanks's Groubian. Bitches: 1st, C. S. Hanks's Loada.

FOXHOUNDS.—Dogs: 1st, F. Herbert's Jack; 2d, K. C. Craigie's Ranger.

DEERHOUNDS.—OPEN—Dogs: 1st, Mrs. D. McLean's Paul Potter; 2d, W. H. Muir's Bruor II. Bitches: 1st, W. H. Muir's Olga.

GREYHOUNDS.—CHALLENGE—1st and reserve, A. W. Purbeck's Gem and Bestwood Daisy.—OPEN—Dogs: 1st, C. W. Sarvis's King Dick; 2d, Mr. Ireson's Rawer. Reserve, W. J. Tuck's Master Merton. Bitches: 1st, A. W. Purbeck's Wild Rose; 2d, Wawatang Kennels' Chips. Reserve, Mr. Ireson's Miss Mennon. Very high com., C. W. Sarvis's Lady Olivia.

POINTERS.—CHALLENGE—Dogs: 1st and reserve, Dr. S. R. Daniels's Count Graphic and Lord Graphic. Bitches: 1st, T. G. Davey's Lady Gay Spanker.—OPEN—Dogs (55lbs. or over): 1st, Dr. J. R. Daniels's Boxer; 2d, A. Spencer Johnson's Duke O. Very high com., Washenaw Kennels' Quick and Fred. W. Shaw's Donovan. High com., H. Curtis's Curtis's Count. Com., T. G. Davey's Jingo Jim. Bitches (55lbs. or over): 1st, T. G. Davey's Josie Bracket; 2d, Tim Donoghue's Sal 2d. Reserve, George W. Jackson's Fannie Graphic. Very high com., A. J. VanPatten's Tilly and Dr. J. R. Daniels's Lord Graphic.

Gem. Com. Forest Kennels' Forest Nell. Dogs (under 55lbs.): 1st, L. A. Bidan's Glamorgan; 2d, Kalamazoo Kennels' Wonderful Lad. Very high com., Charles Cornell's Rock II. High com., Fred. W. Shaw's King's Mark. Com., W. S. Smith's Brighton Don. Bitches (under 55lbs.): 1st, T. G. Davey's Miss Rumor; 2d, Dr. J. R. Daniels's Duchess. Reserve, A. J. Davies's Count Graphic Baby. Very high com., George B. Thomas's Nell of Naso. High com., W. A. Predhomme's Rosy P. and W. C. Donaldson's Lady Windsor. Com., Harry Van Dusen's Tracy Bell.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st and reserve, J. E. Dager's champion Cincinnati and Toledo Blade. Bitches: 1st, W. B. Wells's Cambria. Reserve, Washenaw Kennels' champion Albert's Nellie.—OPEN—Dogs: 1st, Washenaw Kennels' Washenaw Grouse; 2d, W. B. Wells's Matane. Reserve, F. G. Taylor's Ben Hur of River-view. Very high com., Washenaw Kennels' Albert Gladstone of Wash and T. Donoghue's Monk of Furness Sting. High com., W. B. Wells's Luke, Washenaw Kennels' Albert's Breeze of Wash, T. Donoghue's Pembroke's Royal Sport. E. C. Smith's Max Noble, Harry Northwood's Sir Bob and Forest Kennels' Sultan. Com., Orchard Lake Kennels' Toledo Bee. Bitches: 1st, Dr. J. Kime's Lady Patch; 2d, C. A. Rathbone's Toledo Queen. Reserve, Northern Kennels' Queen of the Elms. Very high com., T. Donoghue's Monk of Furness Lill, J. E. Dager's Blida Blade, Washenaw Kennels' Nellie Breeze of Wash and Maumee Kennels' Doris C. High com., E. Haug's Belle Noble II, T. G. Davey's Liberty II, W. B. Wells's Daphne and Cleopatra, H. Northwood's Amy Robsart and Mr. Hunter's Bessy. Com., F. A. Kowley's Belle Kowley's Washenaw Kennels' Nellie Gladstone of Wash and C. F. Backus's El Cielo.

IRISH SETTERS.—CHALLENGE—Dogs: 1st and reserve, Oak Grove Kennels' Kildare and Duke Elcho. Bitches: 1st and reserve, Oak Grove Kennels' Norma and Rose Sarsfield.—OPEN—Dogs: 1st, Townsend Sharpless's Blarney, Jr.; 2d, D. L. & A. Carmichael's Shamrock Bruce. Reserve, Frank K. Owen's Tom Owen. Very high com., G. H. Martz's Prairie Tip. High com., J. H. Wittelsberger's Pilot Medium. Com., George Battersby's Blackthorn. Bitches: 1st and reserve, W. H. Beardsley's Queen Vic and Kildare Winner 2d, Oak Grove Kennels' Marchioness. Very high com., C. W. Wolfertz's Katie O'Shea. High com., J. A. Smith, Jr.'s Countess Gypsy.

GORDON SETTERS.—CHALLENGE—Dogs: 1st and reserve, Dr. Samuel Dixon's Ivanhoe and Leo B. Bitches: 1st, Dr. Samuel Dixon's Duchess of Waverly.—OPEN—Dogs: 1st, George Meister's Louis S.; 2d, Dr. S. G. Dixon's Duke. Reserve, Highland Kennels' Highland Kent. Very high com., Ed Horne's Gunner. Com., N. Bimberg's Grouse. Bitches: 1st and reserve, Dr. S. G. Dixon's Princess Louise and Catherine; 2d and very high com., George Meister's Fly M., and Olive P. and Zetella.

FIELD SPANIELS.—CHALLENGE—Dogs (over 28lbs.): 1st, G. Bell's Newton Abbott Laddie. Reserve, T. Donoghue's Newton Abbott Torso. Bitches: 1st, J. A. Spracklin's Queen. BLACK—OPEN—Bitches: 1st, J. Spracklin's Daisy Dean; 2d, W. G. McCollagh's Gipsy Queen.—LIVER—1st, J. A. Spracklin's Bob II.—ANY OTHER COLOR—Withheld.

COCKER SPANIELS.—CHALLENGE—Dogs (not over 28lbs.): 1st, G. Bell's champion Fascination. Reserve, Luckwell & Douglass's champion Black Duke. Bitches: 1st and reserve, G. Bell's champion I Say and Troublesome.—BLACK—OPEN—Dogs: 1st, Luckwell & Douglass's Woodland Prince; 2d, Jersey Cocker Kennels' Pickpatria. Reserve, Brant Cocker Kennels' Capt. Brant. Very high com., J. Sorenson's Black Crook. Bitches: 1st, G. Bell's Realization; 2d and com., Jersey Cocker Kennels' Norah H. and Lady Dufferin. Reserve and very high com., Brant Cocker Kennels' Brantford Flirt and Brantford Zebba. High com., J. Sorenson's Medde and Luckwell & Douglass's Woodland Daisy and Woodland Cricket.—ANY OTHER COLOR—Dogs: 1st and very high com., Brant Cocker Kennels' Brantford Redstone and Brantford Rufus. Reserve, Jersey Cocker Kennels' Brownie B. High com., G. Bell's Red Ragland. Bitches: 1st, Brant Cocker Kennels' Red Rose; 2d, E. Wiles's Mar Jorie. Reserve, G. Bell's May, Queen of Scots. Very high com., Luckwell & Douglass's Bessie Warner.

CLUMBER SPANIELS.—CHALLENGE—Withheld.—OPEN—Bitches: 1st withheld; 2d, Brant Cocker Kennels' Lady Violet.

IRISH WATER SPANIELS.—Dogs: 1st, I. C. Nichol's Dennis; 2d, Mr. Fink's Trouble. Reserve, T. A. Carson's Dan Rice. High com., Thos. W. Mills's Willie Reilly. Bitches: 1st, I. C. Nichol's Marguerite; 2d, T. W. Mills's Nora O'Donohue.

COLLIES.—OPEN—Dogs: 1st, McEwen & Gibson's Scotsman; 2d, Sanders & Mighon's Finsbury Duke; 3d, S. H. Wickes's Streahtam Laddie. Reserve, W. Glendening's Laddie. Very high com., Saunders & Mighon's Blake. High com., D. W. Corbett's Helen. 2d, Oak Grove Annie C. Jagerley's Paris. Bitches: 1st, Thyme & McFadyen's Bernice; 2d and 3d, McEwen & Gibson's Dawn and Vanity. Reserve, D. W. Corbett's Nancy Brown.

POODLES.—1st, L. A. Biddle's Birn; 2d, Dr. S. N. Durell's —.

BULLDOGS.—Dogs: 1st, Illwis Kennels' King Lud; 2d, W. P. Hamilton's Clinker. Bitches: Prizes withheld.

BULL-TERRIERS.—CHALLENGE—1st, F. F. Dole's champion Attraction.—OPEN—Dogs: 1st, Chautauqua Kennels' Sir Monty II.; 2d, R. J. Withers's Crisp; 3d, W. Hammall's Duke of Wellington. Bitches: 1st, F. F. Dole's Edgewood Wonder; 2d, F. L. Deaver's Burston Kit. Reserve, Chautauqua Kennels' White Gipsy.

DACHSHUNDS.—OPEN—Dogs: 1st, reserve and very high com., W. Loefler's Hundesport Bergman, Milwaukee Jewel and Diamond Joe; 2d, C. F. Gentz, Jr.'s Hundesport Zaenker. High com., E. F. Benard's Waldi. Bitches: 1st, W. Loefler's Lina K.; 2d, C. F. Gentz, Jr.'s Lina L.

BEAGLES.—CHALLENGE—Dogs: 1st, Rockland Beagle Kennels' champion Roy K. Bitches: 1st, G. D. Wilton's Judge. Reserve, Rockland Beagle Kennels' Emeline.—OPEN—Dogs: 1st, Shrewsbury Beagle Kennels' Doctor; 2d, Middleton Beagle Kennels' Adam. Reserve, D. O'Shea's Crowner. Very high com., Rockland Beagle Kennels' Rockland Boy, W. G. Harding's Hawkeye, G. D. Welton's Pomp. Bitches: 1st, Rockland Beagle Kennels' Lonely; 2d and very high com., Middleton Kennels' Snow and Fanny M. Reserve, C. Harris's Little Spotty. High com., J. L. Younghouse's Ruth Bannerman, Middleton Kennels' Little Fraud.

FOX-TERRIERS.—SMOOTH—Dogs: 1st, A. D. Stewart's My Fellow; 2d and reserve, R. Gibson's Belvoir Bacchanal and Belvoir Rambler. High com., L. H. Collins's Mack. Com., G. B. Nichols's Peck's Bad Boy. Bitches: 1st, Toon & Symonds's Lady Roseberry; 2d, R. E. Fishburn's Venus II. Reserve, D. B. Hibbard's Maggie H.—WIRE-HAIRED—Dogs: 1st, 2d and high com., G. M. Hendrie's Eskdale Broom, Burlington Jack and Suffolk Billy. Reserve, Battersby Kennels' Adswood Jim. Bitches: 1st, Battersby Kennels' Rosana; 2d, George M. Hendrie's Nettie Topper. Reserve, W. Hammall's Luna.

IRISH TERRIERS.—CHALLENGE—1st, Toon & Symonds's Jack Briggs.—OPEN—Dogs: Absent. Bitches: 1st, Toon & Symonds's Salem Witch.

DANDIE DINMONT TERRIERS.—1st R. Wanless's Rodger.

SKYE TERRIERS.—1st and 2d, C. R. Smith's Barnaby Rudge and Islay.

BEDLINGTON TERRIERS.—1st, withheld; 3d, L. R. Baldwin's Doctor A. Reserve, D. O'Shea's champion Zulu.

BLACK AND TAN TERRIERS.—OVER 7lbs.—CHALLENGE—1st, Rochelle Kennels' Broomfield Sultan; 2d, withheld.—OPEN—Dogs: 1st, withheld; 2d, Mrs. Sarah Hunt's Dick. Bitches: 1st, Toon & Symonds's Gipsy Girl; 2d, withheld.

YORKSHIRE TERRIERS.—OPEN—1st and 2d, N. E. Oliver's Minnie York and Dick York. Reserve and com., Mrs. J. Wright's Toody and Pet. Very high com., Ed. Etzensperger's Josh.

TOY TERRIERS.—OTHER THAN YORKSHIRE—UNDER 7lbs.—1st, withheld; 2d, A. Roesch's Midget. Reserve, Mrs. G. Nicolai's Roxy.

SCOTCH TERRIERS.—1st and 2d, Toon & Symonds's Tiree and Rhuduman. Reserve, K. Elliott's Ashley Plug.

PUGS.—CHALLENGE—1st, Dr. H. M. Cryer's Bob Ivy.—OPEN—Dogs: 1st, E. Adams's Meddler; 2d and reserve, S. H. Slifer & Son's Othmar and Billy Bousor. High com., E. C. Gazoun's Requet. Bitches: 1st, Toon & Symonds's Princess May; 2d and reserve, S. H. Slifer & Son's Lady Clover and Little Duchess.

KING CHARLES.—1st, F. G. Boesger's Royal Duke; 2d and reserve, J. B. Lander's Lady Jane Gray and Prince Charley.

ITALIAN GREYHOUNDS.—CHALLENGE—1st, Joe Lewis's Sprite.—OPEN—Dogs: 1st, 2d, 3d, reserve and high com., Dr. Lansing's Blackie, Pawn, Dick and Ginger. Bitches: 1st, 2d and reserve, Dr. Lansing's Beauty, Goldie and Tippi.

WHIPPETS.—OPEN—Dogs: 1st, Myrtle Kennels' Tipp; 2d, Wood Campbell's Ben. Bitches: 1st, George Thomas's Boston Model; 2d, Wood Campbell's Winnie.

MISCELLANEOUS.—1st, John Condon's Surpass; 2d, T. G. Boesger's Portsmouth Minnie.

DETROIT, March 25.—After the closing of the City of the Straits Kennel Club show last night, the officers and bench show committee were called in the ladies' parlor by request of the exhibitors and handlers, and the following resolution was read by Mr. Stewart on behalf of the American and Canadian exhibitors:

"We, the undersigned exhibitors of the City of the Straits Kennel Club show, beg to tender our thanks and appreciation to the officers and managers of the club for the kind

way in which we have been treated and the care and attention that has been given to our dogs and the excellent manner in which the show has been conducted throughout." (Signed by fifty-two exhibitors and handlers.)

The following sales have been made in addition to the ones given to Mr. Waters, also a number of dogs were claimed at the listed prices: Jas. J. Lyn, of Port Huron, Mich., sold his St. Bernard Lady Martin to Belle Isle Kennels, of Detroit. McEwen & Gibson sold their collie Helle, by Metchley Wonder out of Holly, to Carl Sheldon, Houghton, Mich. Tim Donoghue sold his English setter bitch Monk of Furness Lill to T. G. Davey, also English setter bitch Pembroke's Royal Sport to L. C. Smith, Marshall, Mich. J. J. Spracklin sold to Jersey Cocker Kennels Brantford Ruf.s, red cocker. J. H. Herbertson sold to J. J. Spracklin Nancy Hanks, whippet. George Bell has sold a good cocker to New York parties on private terms. H.

ELMIRA DOG SHOW.

THAT the general run of exhibitors have not that blind adoration for wins to count that many suppose was fully demonstrated last week. With the above show held under A. K. C. rules the entry amounted to little more than two hundred, while Detroit, going it alone, mustered more than double that number. There was little difference in the prize money offered, though the special prize list at Detroit was certainly much more enticing than that at Elmira. The class of dogs shown at Elmira was, on the whole, poor. Of course there were exceptional breeds that through the appearance of teams from certain well known kennels saved the club from having a very mediocre exhibition. This is all the more to be regretted from the fact that two or three members of the club, like the secretary, Mr. C. A. Bowman, and President Ray Tompkins, have thrown themselves into the work of getting up a good show with every enthusiasm. A show at Elmira should open up a new country and be the means of inducing many sportsmen and others in that section of New York to take an active interest in dogs. The show was held in the old armory, on Carroll street, March 23 to 25, and we can scarcely think of a worse building for the purpose. The room, it is little more, could not hold more than 200 dogs comfortably, and with the low ceiling and very awkward approach, being on the third story of a sort of business block, it reminded one greatly of the memorable Cincinnati warehouse show in 1888. The benching was of the old style of heavy wooden stalls, and though this is naturally clean and healthy for the dogs we have become so accustomed to the light, airy benching supplied by Spratts Company, that anything else looks "dowdy" and out of place. We believe from inquiries made that there is little difference in the price, and if there is, this slight difference is more than made up by the enhanced appearance of the show and increased facilities for disinfecting. A good, solidly fenced ring was set apart in one corner for judging. The judges were Messrs. J. Otis Fellows and A. C. Krueger, the latter a prominent beagle exhibitor all through the 80s. The judges, more especially Mr. Fellows, were greatly handicapped by the carelessness with which the catalogue was compiled, the numbers on the tags of the dogs and identification tickets not comparing with those in the judge's book or catalogue. This led to a good deal of confusion, but we believe that the awards will be found about correct. Mr. C. S. Wixom was superintendent, but as he did not arrive till the night before the show, his duties simply consisted of doing the best he could with what he found in the building. There was no steward or member of the club around during the first day to act as such, and Mr. Oldham for part of the time officiated as steward. We do not like to find fault, but coming from the other shows lately held, all these little things strike one more forcibly, and if the Elmira Club intend giving another show these shortcomings should be brought to their attention and remedied in the future.

Very few attendants were supplied, and these were not of a savory order. A dog show should be run on lines of neatness and order, and nothing conduces more to the neat ensemble of a show than to have attendants in some sort of uniform. Have a plain canvas shooting cap and coat, if nothing else; these are distinguishable both to the public and exhibitors.

Among the exhibitors present we noticed Messrs. H. C. Usher, owner of Manatang Kennels; W. L. Washington, F. F. Dole, W. J. Higginson, E. M. Oldham, Fred Schmitt, F. W. Chapman, W. Brodie, E. H. Morris, Will Connors, of the Seminole Kennels; Donald Munro, of the Rutherford Kennels; W. Turner, of the Seacroft Kennels; Andy McGregor, of the Muscovite Kennels; Barney Bros., J. W. Roberts, etc. The dogs were fed on Spratts biscuits and Sanitas disinfectant was used. Judging commenced about 11 A. M. on Wednesday and continued throughout the day; and but for the delay in getting dogs in and confusion of numbers, could have been completed the first day, but two or three of Mr. Fellows's breeds were left over and completed on Thursday. The weather was not at all good, and the first day a heavy snow storm fell and during the day hardly a score of people attended, but in the evening a few more came in. During the week, however, the weather cleared and the attendance was much better, though it is hardly thought that financially the show would be successful.

MASTIFFS (*J. Otis Fellows, Judge*).—Mrs. Chas. Wallack's Merlin, after an uninterrupted run of firsts since New York, now found himself in the challenge class, but there was nothing to say him nay and he took the ribbon. He stands his campaigning well. F. J. A. Beier's Beaufort's Beau also won a bloodless victory in the open bitches. These were the only mastiffs shown.

ST. BERNARDS (*J. Otis Fellows, Judge*).—If America can show a worse lot of this breed we don't want to investigate, for with the exception of Roland, Jr., Lady Bountiful and Guess Noble there was nothing at all that ought to hope for recognition at the hands of any judge. Challenge classes were drawn blank, and in open dogs (4) Fred Schmidt's Roland, Jr., had a walkover, though some other dogs were noticed. Mr. Fellows should have turned them out of the ring. We have found fault with Mr. Fellows for being severe, and if there is any one whom we hate to criticize it is "Uncle Dick," for he always takes it so much to heart, still we must say he erred too much the other way this time. To allow such runts to be bred to on account of their winning will do more harm than one can imagine. To go on with the class; second went to Tracy Gould's Mauprat, very poor, weak-muzzled long head, fair ordinary body and coat. Vhc. to Tracy Gould's Ben Hur Senior, a runt, with a head and expression like a Thibet mastiff, scarcely any markings and straight behind. In bitches (3) Fred Schmidt's Lady Bountiful, a shadow of her former self, won easily. Norma, same owner, second, has a head very like a small Clumber, body deep, short and fat, a very poor one. Reserve to Niagara Kennels' Lady Terry Bute, of whom we should, from her breeding, have expected better things; she has a very narrow boundy head, and is straight in hocks and small-sized, good bone. Tracy Gould's Cigarette, vhc., is about as much like a St. Bernard as her namesake is to a "Perfecto." She is by Ben Hur Senior. It is a pity that Cato, his sire, did not die in his youth, for he is responsible for more bad St. Bernards than any dog I know of. In novice class (5) a really nice headed one in H. S. Chamber's Harold Saxton won easily; he is faulty hind and front, and narrow chested, still he shows lots of St. Bernard character. Second went to Norma and reserve to J. H. Kaiser's King Wilhelm, a fairish sort. Tracy Gould's Blarney, vhc., is another Ben Hur Senior dog, and Lord Bute IV., a son of Lord Wilton, is snipy and none too good on legs.

The only smooth dog was Fred Schmidt's Guess Noble, shown thin and moved lame; she is well known.

Although the breeds were not judged according to their order in the catalogue, several dogs not arriving in time, we will take them in the usual order.

GREAT DANES (*J. Otis Fellows, Judge*).—There was little judging needed in open dogs, as A. B. Strange's Wenzel was so far ahead of Magnus Shults's Shults's Nero that little time need have been wasted over them. The former is well known. Shults's Nero, a harlequin, is dish-faced, as broad as a ham in skull, and his forelegs would do credit to a dachshund, though even that animal would be ashamed of his open feet. In body he is fairly good. C. S. McChesney's Heppern Apollo, though small, was infinitely superior, and should have been second. In bitches there was again much needless delay, for A. B. Strange's Juno won easily from a nondescript sort of black bitch with one white foreleg and a miserable head and front. It is probable the judge was undecided whether to withhold the prize. Lufra was absent.

NEWFOUNDLANDS (*J. Otis Fellows, Judge*).—Gair Kennels' Prince George and New York Lass, as named. In the dog's present condition the bitch should have won well and prize have been withheld from George.

There were no bloodhound entries.

DEERHOUNDS (*A. C. Krueger, Judge*).—In the absence of Alpiu, Capt. John Phelps's Rhoderick, the Washington winner, claimed the ribbon. He is woefully short of coat, light in loin and flat-ribbed. There were no bitches, and this dog also won in novice class.

GREYHOUNDS (*A. C. Krueger, Judge*).—L. C. Whiton's Lord Neverstill, entered in Mr. Huntington's name, was the only challenge aspirant and H. C. Usher's Heumore King was alike treated to a walkover; both have been seen out frequently lately. Marguerite, from the same kennel, in Maud Marion's absence, had no opposition in taking first.

RUSSIAN WOLFDOGS (*A. C. Krueger, Judge*).—Here we got something better, the principal kennels having their usual full complement. We do not think we have met Mr. Krueger at any show lately where these dogs have been shown and therefore expect they were an entirely new breed to him. He, however, acquitted himself well and made no mistakes. H. W. Huntington's Argoss had a walkover in challenge dogs and the same owner's Zerry and Princess Irma were placed as named; beautiful head and quality as Princess Irma shows, Zerry's superior rib, loin and quarters put her well to the front; Zerry has a very slight twitching at the shoulder in the stall, but does not show it in the ring. In open dogs (2) there was a new competitor, Mr. Hanks's fine pup Peter the Great, that won at Brooklyn, coming against Mr. Huntington's Osslad. Peter won rightly, beating in size, skull, bone and arch of loin. In bitches (4) the decision that put Vinga over Flodeyka, both from Mr. Hanks's kennel, was easily accounted for; both have been commented on before. Hornell-Harmony Kennels' Olivia took reserve, though not showing the quality of Modjeska, vhc.; she is better in loin, quarters and second thighs, and a much larger animal; her forelegs and feet are not good, the latter being flat and open here in front. Modjeska, though not very good herself, has the advantage. In novice class (3) Olivia, not shown on catalogue, beat Mr. Huntington's Krimea and Lobedya, the well-known pups; she does it in size and substance behind, besides having a longer, cleaner head, though she loses much in front to both.

There were no Chesapeake Bay dogs.

FOXDOGS (*A. C. Krueger, Judge*).—Few entries, but several of the well known. In challenge class, with Elite and Modest Girl the aspirants for honors; the latter, more on English type, beats in ribs, loin and legs, but is badly beaten head and neck and shoulders, being stout and heavy. In open dogs the well-known Dan T., a very fair sample of an English hound, was placed over the well-known Pason. Dan's feet are large, otherwise is fairly made all round, but has not the front of a specimen or Denmark. In the ladies' division first was withheld from an indifferent specimen, whose feet are bad.

POINTERS (*J. Otis Fellows, Judge*).—Several of the entries are well known, but of the others we cannot speak very highly. The challenge dog entry, G. W. Lovell's Pontiac, was absent. W. H. Hyland's Lady Graphic represented the bitches. In open heavy dogs (2) the frequent winner Harry Dutton's Duke of Kent II., who must be getting dangerously near the challenge class, won easily from A. W. Stevens's Graphic Dan, the only other entry present, Duke of Dexter being absent. Dan has a short, cloddy body, faulty in feet but big bone, good, nice skull and ear, muzzle plain; should be better in hocks and is heavy in shoulders. Hillside Pointer Kennels' Christmas Vic won in bitches 50lbs. and over (2), Howard S. Payne's Albani second. Neither are good and it is a toss up between them. Vic has a short, thick neck, is snipy in muzzle, nice skull, shoulders, heavy, poor front but good body. Albani is faulty in skull but has well-formed muzzle and nice ear; shoulders not oblique enough, loin flat and quarters drooping. Open dogs (5) under 53lbs. saw the winner in John W. Carrol's Wag, whose very bad feet should put him back; he has a fair head and his bone and forelegs are pretty straight. R. A. Wales's Nemo Snow came second, not so good in head as the other but better in feet. R. K. Moore's Grouseade is a better formed dog all round, while if it was not so snipy and his eye was darker his front is wretched but behind the shoulders he is good. A. D. Wallace's Donald W. he, stands with elbow out and feet together; muzzle good but skull too broad; expression poor. In light weight bitches (3) the winner turned up in J. F. Langworthy's Beppo Lass, in not very clean condition, throaty, fairly formed head and nicely turned body. Forrester Kennels' Forrester Lady, second, loses in head, being dish-faced, stands back on pasterns and feet flat and turned out, and is not bent enough in stifle and hock; a much inferior bitch. In novice class J. E. Langworthy's Beppo's Fly beat an unnamed son of Christmas Vic, belonging to Hillside Pointer Kennels, in body principally if at all as her face is dishd, though the other would do with more stop, but she has good bone and front. Beppo's kid has the best head but is flat ribbed.

ENGLISH SETTERS (*J. Otis Fellows, Judge*).—Challenge classes a blank. In open dogs (3), A. J. Lewis's Prince L. could not be denied laying over the other two in quality and head especially. A. C. Krueger's Rob Roy II. is not a bad sort, liked him better in legs than winner; same owner's Pasha, reserve, should have more stop and his forelegs are bad, rather plain orange and white dog. The only bitch entered, Flora V., was absent. In novices, Rob Roy and Pasha were the winners. Seminole's Sir Frederick was wrongly entered here but was absent.

IRISH SETTERS (*J. Otis Fellows, Judge*).—These were good; the Seminole Kennels and W. L. Washington's dogs being on hand. In challenge dogs only Seminole Kennels' Pride of Patsey put in an appearance, their champion Tim being reserved for specials. Patsey looked well and at last had a chance to carry out a blue ribbon; a lot of good dogs in this breed have had to look on at the fun this season. Our old friend Seminole Kennels' Laura B. walked demurely in for a ribbon in the next class; she looked exceedingly well. Open dogs had three present, Henmore Shamrock and Montauk, Jr., being absent. After a good deal of examination without moving them, the judge gave equal firsts to W. L. Washington's Duke of Kildare and Seminole Kennels' Tim's Dandy, always an unsatisfactory way and in this case wrong. Duke beats Tim, a good dog though, in depth of chest and proper width in loin, quarters and thighs, is not so good in skull or muzzle nor so true in front, Duke should have won. Howard and Harden's Ray is thick in skull, a poor head, is not bent enough in stifle, and has a faulty set on of stern and is loaded in shoulders. Our criticism on Duke at Philadelphia is wrong as he is not a coarse dog, benching together may

have led to the mistake. In bitches (4) first went to Delphine, mentioned before her fine muzzle and straight face are against her. Belle of Kildare, second, lays over the other in head, chest and bone, loses in legs and color, the decision should be just reversed. Seminole Kennels' Rose Morton, reserve, is short in neck, plain head, good color and body. C. F. Parks's Lady Park, vhc., is fat and showed herself badly. C. T. Thompson's Fly was absent. In novices (2), W. L. Washington's Queen of Kildare won from D. E. Rice's Patsey Ohune, who is coarse.

GORDON SETTERS (*J. Otis Fellows, Judge*).—The challenge aspirants were Rexmont and Becky Sharp, a class for each. Open dogs (2) E. H. Morris's Freenont, who seems to have caught his tail in a door and left some of it behind, won; he is the Washington winning pup. James D. McCann's Fritz is smutty in tan, light in body, too tucked up in flank. In bitches (2) Mr. Morris won with the pup Balmont, but really taking into consideration C. W. Jones's Clot's much superior head, really a fine one, better tan and general substance and build, though in whelp, and coat inclined to curl, she should have won. In novices, in Druid Dick's absence, E. H. Morris's Fairmont walked over.

SPANIELS (*J. Otis Fellows, Judge*).—Only two field spaniels on hand and both out before many a time. E. A. Wilson's Brantford Mohawk in challenge bitches, wrongly classified. In open dogs, Owahgena Kennels' Sorry Jake, better in head than body, took the ribbon. Cocker spaniels mustered a little better. Geo. Bell supplied both challenge winners from his second string, King of Obos in dogs and Amazement, not in good shape, in the other sex. In dogs there was such a muddle of dogs and numbers that the judge had to go by names. H. H. Loring's Woodstock Dick proved the winner, when found to be under weight, is good on his legs but too high in skull, long in body and drooping in quarters; Luckwell & Douglas's Woodland Duke, second, I like better, though plain in head, better body, and good legs and front. C. T. Sackett's Prince W. and Geo. Bell's Leo were at Washington; both better type than winners. In bitches (three), Woodstock Dora won over A. Z. Brown's Jet, who is plain in muzzle, light of bone, not straight in front, neither is the winner, dips behind the shoulder. Geo. Bell's Miss Rabbi, vhc., has a good front, snipy muzzle, light in bone and body not deep enough. In any other color, Geo. Bell's Rudolph, a red, won from E. C. George's Bosco Gr., which is curly in coat and very much no good. The largest and only show of Clumbers out this season turned up here, owned by J. W. Roberts principally. In dogs, J. W. Roberts's Dash won alone, fair front, rather long in head but not badly shaped, body not deep enough and tucked up. Three bitches came forward, and while G. W. Edminster's Nancy Hanks had slightly the best of it in type of head, when the judge moved them there was no hesitation in giving J. W. Roberts's Flossie, though in whelp, the blue ribbon; the other had sores on loin and was faulty in hindlegs. Flossie is rather a well-made bitch, take her all round. Flirt, same owner, is light and shelly throughout. No Irish water spaniels entered.

COLLIES (*J. Otis Fellows, Judge*).—The Seminole Kennels' The Squire and Metchley Surprise furnished the challenge winners. No open dogs entered. In bitches (3) equal firsts were given to Seminole Kennels' Gypsy Maid and Lambert Stansfield's Highland Flossie; the latter is very much better in length of head, ear and expression, not so good in thickness of coat but better texture; I thought she just won from the other. Crissy, well known, had to be content with third. In novices, Gypsy Maid, in the absence of four others, had a walkover.

POODLES (*J. Otis Fellows, Judge*).—The winners are well known. In challenge class the familiar face of Dexter appeared. In open dogs Wm. Hitchcock's Lion, the New York and Washington winner, took another blue ribbon.

BULLDOGS (*J. Otis Fellows, Judge*).—These were not difficult to judge. No challenge entries, and in the open Dudley Winthrop's Leonidas had only Capt. John Phelps's Lord Sheffield (by the way, the last bulldog poor Ed. Porter owned) to beat, and this he did without trouble; Lord Sheffield looked as if a square meal would do him good. A. B. Graves's well-known bitch Addiscombe Gypsy was the only entry in her class, and Lord Sheffield won in novices.

BUL-TERRIERS (*J. Otis Fellows, Judge*).—With a good classification an excellent entry put in an appearance. Though there were no challenge dogs, F. F. Dole's Starlight upheld the honor of her sex in her division. Open dogs over 30lbs. had three entries. A smart young dog, W. J. Higginson's Billy Bulger, beat W. Brodie's John L. Sullivan. Both get their tails up. Billy has a little too much stop, but is cleaner in head than John, who is cheeky, thick in skull and fine in muzzle; not enough rib and is open in feet. P. C. Pettit's Aristocrat, well known, took reserve; he is heavy in front to the others and cheeky. Over 30lbs. bitches had four entries, William Hummel's Vesper, Belle winning easily from Mitchell's Maggie Clive and Castle Point Kennels' Fidget, as last week. In light weight dogs F. F. Dole's White Duke had the class to himself. In the corresponding bitch class W. J. Higginson's Lady Dinah again proved her superiority by beating Castle Point Kennels' Early Rose in front, body and head. F. F. Dole's Rosemary was reserve. In novices John L. Sullivan beat W. J. Higginson's Nellie Harper, who was too bulky in front, too much stop and short in head, but well formed behind that.

Some fairly good Boston terriers were shown, C. F. Sullivan's Tobey winning in dogs and in bitches C. F. Sullivan's Cling and Countess were placed as named.

BASSETS (*A. C. Krueger, Judge*).—J. E. Barbour won again, beating F. W. Chapman's Rodiem, a very moderate specimen, as we once before remarked, in head, ear, length and forelegs and chest. Dachshunds were absent.

BEAGLES (*A. C. Krueger, Judge*).—The classes in this breed were well filled; in fact, better than any other in the show, and Mr. Krueger handled them quickly and very satisfactorily. There were several new faces out, but competition was not very keen, and, outside of half a dozen well-known animals, the quality could not be called high class. Tricotrin beat Racer, Jr., in challenge dogs over 13lb. The latter beats in head and correct length of body, but Tricotrin is so much better formed and stronger behind, if he does get his brush up too gaily. Elf, a wreck of her Brooklyn form, had nothing against her in the next division. To look at her there one would never suppose she stood a ghost of a chance with Royal Krueger or Lon, still she beat them both in my estimation at the Brooklyn show. In open dogs (3) that capital little dog Hornell-Harmony Kennels' Sherry won again, beating Roger W., same owners, in head and hind legs, where the latter is a bit straight. He has also not the depth and spring of rib of Sherry. F. W. Chapman's Bravo Bannerman is too long in body, slack in back and feet out; faulty front. In bitches Shrewsbury Kennels' Prudence beat F. W. Chapman's Gypsy A. This we can hardly indorse, though neither are good. Gypsy has the shorter head and better shaped body. Hornell-Harmony Kennels' Daisy Corbett gets her brush over, but has a nice, sweet type of head and had the best front in the lot, but is unfurnished in body yet. Same owners' Winnie K. is a bit heavy in front, good body and quarters, but fat. In the small challenge class the Rockland Kennels' The Rambler won, Royal Krueger being out for specials only. In bitches, in the absence of ch. Lou, Glenrose Beagle Kennels' Butterfly, as pretty as a picture, indulged in a *pus seal*. In the next class Glenrose Beagle Kennels' Paderewski played first to Hornell-Harmony Kennels' Little Wonder, which is snipy, faulty in front and gets his brush over, a pretty little thing, but not much substance. The bitch class (7) was the biggest in number in the show. Shrewsbury Beagle Kennels scored again, this time with Fannie Read over Hornell-Harmony Kennels' Evangeline, and this was right. The latter is a

little high behind, but nice type. The owner of Fannie Read was delighted with his sudden success, as his Doctor won at Detroit same week. Glenrosa Beagle Kennels' June Bud, reserve, is faulty in pasterns and feet and bone not straight; nice head and ears; needs more rib. Hornell-Harmony Kennels' Flora K, vhc., is a bit cloddy and faulty in hooks. Same kennels' Velda has a plain head, red nose; should be straighter in front; good body and coat. Barnes Bros.' Hazel Weller, hc., and Hillside Pointer Kennels' Topsy are rather weedy. In novices Hornell-Harmony Kennels' Velda beat Barnes Bros.' Dot B., so we cannot speak very highly of Dot B.

FOX-TERRIERS (J. Otis Fellows, Judge).—These classes were also well filled and very satisfactorily judged. The Rutherford Kennels brought out some new stuff. Cambridge Kennels' Dusky Trap, almost forgotten and a wreck of his former self, especially in loin and quarters, but keeping well in forepart, was alone in challenge dogs, while the same must be said of C. S. Hanks's Grouse II. In dogs the order was C. Rathbone's Beverwyck Punster and L. & W. Rutherford's Warren Daysman. Both have been out before. Hennyett Kennels' Mark Twain, reserve, is not true enough in forelegs, fair head, little pinched in muzzle perhaps. F. C. Weeks's Springhill Pirate, vhc., would have found a c. too much for his merits. The other entries were absent. In bitches the order was L. & W. Rutherford's Warren Duty and Warren Tongs, the former beating in front, head, and only needs a little more rib to do well yet. C. S. Hanks's Damson, reserve, and Seacroft Zarnia, vhc., deserved their letters. The latter is short and weak in muzzle. Wires were drawn blank. In novice dogs, L. & W. Rutherford won with another new one. He beats F. W. Weeks's Springhill Pirate all over. In bitches Warren Duty was again to the fore, and Seacroft Myrtle beating Zarina in bone and head. F. J. Byrne's Raby Nettle, vhc., is by no means a credit to her sire, Dominie. Dandie Dinmonts were drawn blank.

SCOTCH TERRIERS (J. Otis Fellows, Judge).—The Toon & Symonds syndicate furnished both entries, Scotch Hot in dogs and Gypsy Jet in bitches; the latter was out of coat and weak in hooks.

IRISH TERRIERS (J. Otis Fellows, Judge).—Several entries in these classes. In challenge class W. J. Comstock's ch. Boxer IV. Open dogs, first quite wrongly to W. J. Comstock's Hanover Boy, who loses considerably in front and cleanness of shoulder, neck and head, especially skull and eye and expression, to the younger dog, W. Brodie's Canadian Ambassador; Toon & Symonds' Paddy Doolan, reserve, is very leggy and coarse in skull and not straight in forelegs. There were no entries in bitches, and novice class saw Cana-

GORDON SETTER FLY M.
Owned by Mr. G. Meisters.

dian Ambassador put again over Paddy Doolan. I. Baldwin's Patsey is a weed.

BLACK AND TAN TERRIERS (J. Otis Fellows, Judge).—Only two of them, as well known as their owner, Frank Dole; Salisbury in open dogs and Queen III. in the tender sex.

BIDDLINGTOSS (J. Otis Fellows, Judge).—Only one, and this soft in coat, I. Chalmers' Tallyho, good top-knot, could be better in forelegs and has not arch of loin enough.

Woodbury Kennels' Lovet won in Skye dogs, and H. D. Carner's Fendelife Maggie in bitches.

Yorkshire terriers had an entry in each sex, Barnes Bros.' Brownie, short of coat, but fairly good in tan and body color; then Mischief, a silver, took the prize in bitches.

The toy terrier Shannon's Tip won, but may be passed over.

PUGS (J. Otis Fellows, Judge).—With the exception of Seminole Dixie and J. Brombach's Bradford Rowdy in challenge dogs, and Seminole Kennels' Midget in challenge bitches, there was no merit if I except Brombach's Frisk in open bitches. In dogs J. Christen's Beauty is on the way to be a mastiff. In bitches, first, J. Brombach's Frisk winning easily, the others too large and coarse; second, reserve and vhc., J. Christen's Mabel, Tootsy and Lulu.

KING CHARLES SPANIELS.—J. Brombach's Duke of Wellington was alone; he had well formed head.

ITALIAN GREYHOUNDS.—No dogs, but open bitches had J. Brombach's well known Golden Rod, who is big.

SCHIPPERKE (?)—A very fair make up in Barnes Bros.' Jack was given first. Its only pretension to form was the loss of its tail, ears down, soft coat, no frills and none of the chic of the real article.

In miscellaneous a fair Mexican hairless was shown. This completed the awards. H. W. L.

SPECIAL AWARDS.

St. Bernards.—Best kennel, Hell Gate Kennels. Best St. Bernard, Mr. E. H. Moore's Silver Flask. Irish Setters.—Best kennel, Seminole Kennels. Spaniels.—Best kennel, George Bell. A. S. C. special for best cocker, Amazeant. Best Clumber, Flossie. Collies.—Best kennel, Seminole Kennels. Bull-terriers.—Best kennel, F. F. Dole. Fox-terriers.—Best kennel, L. & W. Rutherford. Pugs.—Best kennel, Jos. Christen. Beagles.—Best kennel, Hornell-Harmony. Best beagle, Royal Krueger. Best bitch, Elf. Best in show exclusive of challenge winners, Hornell-Harmony Kennels' Sherry. Ditto bitch, Shrewsbury Kennels' Prudence. Best dog in show winning record, Glenrosa Beagle Kennels' Gypsy A. Best with field trial second, Royal Krueger. Best two in novice classes and sweepstakes, Hornell-Harmony Kennels' Evangeline and Velda. Best greyhound, L. C. Whiton's Lord Neverstill. Best Russian wolfhound, H. W. Huntington's Argoss.

The Fancy in Noses.

Editor Forest and Stream:

For the last two years I have been watching the size of the nose of every dog fancier. In meeting some prominent breeders and seeing photographs of many others I have about made up my mind that without a single exception, a good true dog fancier must have a large, generous nose. The subject is too delicate a one for me to be too personal, but for those who would like to look it up I refer them to the last few numbers of the FOREST AND STREAM, which show cuts of many breeders and judges.

DAGO.

During Washington show Mr. H. L. Goodman bought the so-called Welsh terrier Mephisto Dick from Hornell-Harmony Kennels and also a couple of fox-terriers for raiting purposes at his Tennessee home.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

Manitoba Field Trials.

CHICAGO, March 25.—I have received the following clipping from the able secretary of the Manitoba Field Trials Club, Mr. E. D. Adams:

"A meeting of the Manitoba Field Trials Club was held on Saturday evening, March 18, at the Clarendon, the object being to adopt suitable running rules for this fall's trials, and to revise by-laws. The meeting was largely attended, and great interest manifested in this year's work. Running rules similar to those of the United States Field Trial Club

SAM. W. STEINMETZ,
President Washington City Kennel Club.

revised for 1893, were adopted. These rules are known as the 'spotting system,' and leave matters in the hands of the judge, to select the best dogs in each State. A new entry blank was also adopted, which is a great improvement on those used in the past. This closed the club's arrangement for the 1893 trials, and the following is a synopsis of what will take place:

"The trials will be run at Souris, beginning Sept. 12, and will consist of three events.

First—Derby Stake, for setters and pointers whelped after Jan. 1, 1892, with a purse of \$350; 1st prize \$100, 2d \$115, 3d \$75. Entries for this stake close June 1.

"Second—All-Age Stake, for setters and pointers who have not won first place at any recognized field trial in any previous year. Purse \$450; 1st prize \$225, 2d \$125, 3d \$100. Entries for this stake close Aug. 21.

"Third—Amateur Stake, for setters and pointers. Dogs to be eligible must be the property of members residing in Manitoba and the N. W. T., and handled by owner, or other amateur member. Prizes suitable for this stake are being arranged. Entries close Aug. 21.

"Mr. Wm. Tallman, New York, has consented to come and judge. A number of entries have already been guaranteed, both from the United States and Canada, and the club intend to leave nothing undone to make this event one of enjoyment to those who attend."

In addition to the foregoing, Mr. Adams informed me that I have been elected an honorary member of the club, and I beg to acknowledge the honor conferred on me.

The entry blank referred to is neatly gotten up, gives all the conditions of each stake, time and place of holding the trials, blank spaces for the name, color, breed, sex, pedigree, name and address of the breeder, and the stake in which the dog is to run. The rules governing the running are mentioned and there is the printed contract at the bottom, and all other necessary information. In short, it is a model entry blank.

Sales at Detroit.

Quite a number of sales were made at the Detroit show. Mr. F. E. Fisher, Ypsilanti, sold Washtenaw Grouse, winner of first in the English setter class, to Mr. John Mandt. Mr. T. G. Davey, London, Ont., bought two setter bitches, Cornelia G. (Gladstone—Cornelia) of Mr. J. E. Dager and Monk of Furness Lill (Monk of Furness—Sue of Hatchie) of Mr. Tim Donohue. Mr. F. G. Boesger, Cleveland, Ohio, sold the King Charles spaniel Royal Duke to Mr. Marvin Preston, Detroit, price \$100. Brant Cocker Kennels sold Brantford

VICE-PRES. J. H. HUNTER, MAJ. J. M. TAYLOR,
Washington City Kennel Club. Judge Washington City K. C.

Redstone to Mr. Geo. M. Hendrie, the president of the club, price \$50. Jersey Cocker Kennels sold the cocker Brownie B. to Brown Bros., Detroit, price \$75. There was great interest manifested in dogs and there will be a boom in canine matters in that section which will be permanent. Mr. Chas. W. Sarvis sold his greyhound King Dick, winner of first in open dogs.

Mr. John Davidson, the well known judge, had a remarkably good English setter at Detroit, named Donald Dane (Dick Boudhu—Western Belle), not, of course, entered at the show. He is a muscular dog, symmetrical withal and graceful in carriage. He will do some winning, I predict, if shown. By the way, when the exhibitors learned that the veteran judge had been ignored by the bench show department of the World's Fair management, expressions of indignation were common, and they were not bounded by any factional lines.

A peculiar and possibly serious accident occurred at the Detroit show to Mr. J. B. Way's mastiff dog Grip. While exercising in the ring he slipped and fell. He appeared completely paralyzed from the shock for several minutes, he being perfectly helpless. Dr. Nicolai said it was temporary

paralysis from shock. I did not learn whether or not the dog recovered.

Mr. J. J. Spracklin will settle in the near future at Chatham, Ont., and will break setters and pointers for field work and prepare and handle dogs at shows, as in the past.

The following protest was circulated at Detroit:

To Mr. W. I. Buchanan, Chief of the Department of Agriculture, Chicago, Ill.:

We, the undersigned owners, exhibitors and handlers, do hereby protest against the manner in which the judges for the World's Fair bench show were appointed. We also protest against the selection of some of the judges, in that they are not personally, as judges, acceptable to us; in that they were appointed by a clique centering in the American Kennel Club, and in that more popular and more competent judges were ignored.

In this connection we, the undersigned, as emphatically assert that the advisers of Mr. Buchanan in the matter of judges of the bench show were not representative of the exhibitors' interests, nor were they in any manner deputed to represent them. Neither have the owners, exhibitor and handlers been consulted directly or indirectly as to their wishes or preferences by the World's Fair management of the bench show.

We respectfully ask for a reconsideration of the appointment of the judges in which we at least may have an expression of our preference for judges and the selection of ones more suitable. (Signed) Harry L. Goodman, T. Donoghue, G. S. Thomas, Jos. Lewis, Jas. J. Lynn, E. Marshall, B. F. Lewis, John H. Naylor, John Mandt, Geo. B. Thomas, Wm. F. Senicke, Hcs. Milkins, D. G. Revell, A. D. Stewart, Thomas Blake, Fred W. Shaw, T. G. Davey, Edwin L. Kimball, Guy E. Holcomb, Geo. Bell, W. G. Young, Geo. Meister, C. W. Sarvis, C. Ruhl, W. O. Byrnes, Abe Peancose, Cecil Harris, A. S. Johnson, T. P. Stone, L. Younghusband, A. A. Roberts, Wood Campbell, S. C. Smith, John Baechum, E. W. C. Glynn, Erwin C. Smith, O. W. Gothke, H. A. Predhomme, W. C. B. Moll, Dan O'Shea, Louis N. Hilsedeegen, Jacob Klein, Geo. M. Hendrie, E. H. Gillman, J. J. Spracklin and J. Johnson.

It is said that the protest will have more names at Indianapolis. B. WATERS.

The World's Fair Show.

We do not know what the World's Fair dog show is going to amount to, but unless some action is taken more practical and better calculated to meet the views of dogmen, the show will not have the importance and *éclat* attached to it which such an affair should have. Mr. Mortimer has been appointed superintendent over a numerous list of applicants for the position, and provided he is allowed to handle the affairs in his own practical manner, and than whom, owing to his experience with the Westminster Kennel Club show no man is better fitted for the task, exhibitors would have con-

ENGLISH SETTER TOLEDO GUERN.
Second, Open Class, Detroit, 1893. Owned by Mr. C. A. Rathbone.

fidence in the undertaking. Mr. Mortimer, however, is told that they, the World's Fair people, will attend to the clerical work, and he can arrive in time to take hold of the rest of the business. A pretty mess there would be, to be sure, if this happened. The proper arrangement of the catalogue and the knowledge of the dogs, their owners and names constitutes one of the most important features of a thoroughly experienced manager. Put this work into the hands of ordinary inexperienced, from the dogly view, clerical help, and where will a show of such magnitude find itself? The running of a show after the dogs arrive constitutes but a part, and in our mind a secondary one to the preliminary work.

Then take the premium list, it is an impracticable arrangement anyhow. Mr. Mortimer, we understand, wrote Mr. Buchanan to that effect, and suggesting another one, but up to a week since had received no answer. The specials and their proper distribution and classification alone will form no small item of preparatory work.

We are drifting measurably near the time of the show and no general and authentic list of the judges has been sent out, and until we see it on the official premium list, which we have never received, we shall simply give the list for what it is worth, Mr. Mortimer not having acquainted this office with the particulars. Miss Whitney, St. Bernards and Newfoundland; Major Taylor, English setters; Jas. L. Anthony, pointers; Dr. Jarvis, Irish setters; Dr. H. C. Glover, Gordons; T. S. Bellin, fox-terriers and bull-terriers; John E. Thayer, bulldogs; R. F. Mayhew, bloodhounds and some terriers; Pottinger Dorsey, bassets, foxhounds and beagles. Exhibitors and handlers who control important entries are not impressed with the medal and sweepstake arrangements. Most of the valuable dogs are in the East, and it costs money even to go to a World's Fair show, and they seem to think that there should be some tangible, specified money prize in view. The next few weeks should develop important results. We shall see.

That Sheepdog Picture.

Editor Forest and Stream:

The inclosed letter from Mr. Bowden effectually clears your kennel editor and myself of all blame in regard to the sheepdog picture, and I therefore send it without other comment than that it is presumed, those writers and the publication making insinuations concerning it, will now have the sense of justice to withdraw them. EDWIN H. MORRIS.

HACKENSACK, N. J., March 23.

Editor Forest and Stream:

My attention has been called to remarks made in an American paper regarding the picture of sheepdogs at work which appeared in the FOREST AND STREAM some time ago. I would say that the photograph was lent to Edwin H. Morris in answer to a request for a picture of the dogs Wallace and Nell he purchased from me, and I therefore consider any attack made upon the publishers of this picture most unjustifiable.

At the time Mr. Morris wrote for the photograph of the two dogs, Nell was away in Wales and I could not have her photographed, but I had a photograph by me which had been done some time, of the dogs Wallace and Fly, which I sent, but I must have forgotten to say they were the last named dogs, and Mr. Morris took the photo as that of Wallace and Nell; I may say Fly and Nell are much alike and more so in a picture. GEORGE F. BOWDEN.

SOMERSAL SPRINGS, Derbyshire, England, March 7.

National Beagle Club Meeting.

THE quarterly meeting of the National Beagle Club of America was held at the Astor House, New York city, on Monday, March 20. The meeting was called to order by President Kreuder at 4:45 P. M. Present President Kreuder, Vice-Presidents Schellhass and Appleton, Secretary and Treasurer Laick; Executive Committee, Rogers, F. W. Chapman, Pease, Tallman, Roberts and Lozier. Minutes of previous meeting were read and approved.

The secretary read his quarterly report, which shows the club in a healthy financial condition. Delegate Schellhass stated that the A. K. C. would not consider the matter in relation to having the winnings at the first bench show held by the N. B. C. recognized, and it was voted that the matter be dropped. Mr. Kreuder, as a committee on game laws, reported progress. The committee appointed to purchase suitable articles for special prizes for the Philadelphia, Baltimore, Washington, Elmira and Boston bench shows made their report and placed before the members present some very handsome pieces of silver they had purchased. The report was on motion accepted and a vote of thanks tendered the committee. The report of the auditing committee was read and referred back to the committee with the request that they give a clearer account of some items in their report. Messrs. J. O. Wedell, W. C. F. Hoffmann, W. S. Gates and W. S. Diffenderfer offered their resignation from the N. B. C., and the resignations were accepted. The secretary of the A. K. C. in a communication asked the N. B. C. of America to forward him the names of official judges of the club. It was voted that the secretary forward to each member of the club a list of membership, with the request that they select and check off six names from the list, said members to act as judges for the club. A communication was read from the New England Kennel Club requesting the N. B. C. of America to forward the special prize that was donated by the club, so that they could have it placed on exhibition with other prizes. The committee was instructed to forward the prize as soon as convenient. Voted that no special prize be given to the Indianapolis bench show. Messrs. Col. De Laney Kane, Knickerbocker Club, New York; A. D. Lewis, Hempstead, L. I., and G. B. Post, Bernardville, N. J., were elected to membership. Meeting adjourned at 6:45 P. M.

TARRYTOWN, N. Y., March 24.

A New Year's Eve Fox Hunt.

He dreamt as he lay on the marble hall,
Of hunting days when he led the van;
And he uttered a low and plaintive whine,
As before his brain in succession they ran.

—Foxhound's Reverie.

TO-NIGHT, as I sit smoking my meerschaum, and dreamily muse on scenes of bygone days, I see, through the woof of wreathing smoke, my spurs and hunting horn hanging on the wall, and my thoughts wander back to a scene almost similar to this, during the Christmas holidays. 'Twas the night before New Year's Eve, and C. and I were sitting before the open fire laying our plans for the morrow, when suddenly the bell rang and a note was handed in to us. It ran—"You are cordially invited to participate in an old time fox hunt in Lingamore Hills, Saturday (New Year's Eve), at 9 A. M. Hastily, Col. B."

Here was the solution of our problem, and throwing all other plans to the winds, we retired that night to dream of baying hounds and ringing horns, in sweet anticipation of the morrow.

The next morning we were up betimes, and having quickly dispatched a hot breakfast, repaired to the stable to find the ponies saddled, and impatiently pawing to be off. We were soon in the saddle and away for the appointed rendezvous, and on the road we discussed the powers of our bronchos, a pair of keen-limbed sorrels, to take the inevitable jumps. Of their speed and bottom we were fully assured, but their ability to take a fence over four feet two was to be proved that day.

It was a typical hunting day, cold and gray, with a strong suggestion of snow, the chill northwest wind sending the blood coursing through our veins with increased vigor, and made the ponies buck and pull as if our weight was but a trifle and the five-mile journey a preliminary warning. When we arrived at the meet we found the rest of the party already assembled, and pausing but a moment to tighten our girths, we joined them just as the hounds were cast off. We first beat a clump of pines and dwarf locusts, but without success, and then rounded up on the side of a little knoll covered with long broom sedge, a grand place for "His Slynness" to take his morning sun bath.

The hounds were working on the other side of the hill, when a low cry from one of the party showed us reynard less than 50 yds. away, sneaking across the bottom, his bushy tail flattened against the earth, and his every motion indicative of stealth and subdued activity. In a moment the hounds are blown in, and Music, a grand old black and tan, with the wide bushy thighs and long arched neck of the true foxhound, is the first to catch the scent, and bounds away, opening at every jump upon the trail of the now thoroughly frightened fox. Quickly the rest of the pack breaks into full cry, causing the woods to echo and re-echo with the deep ringing music that rolled and vibrated through the bottoms in enchanting harmony, music that thrilled our very souls like the rich pealing of an organ 'neath a master's hand.

As we dashed away in hot pursuit we saw before us a sight, the remembrance of which will cling through a lifetime. The old leader bounding along through the frost-silvered grass, behind him the other hounds running so well bunched that they could have been easily covered by the proverbial blanket, their sonorous notes blending in a grand chorus of melody that made the echoes ring again, and the horsemen, now thoroughly imbued with the spirit of the chase, galloping along with reckless disregard of unhappy consequences, striving almost in vain to hold in their excited mounts. Soon we have left the bottom and cross a piece of plowed ground, so frozen that our progress is considerably retarded, and the hounds get a lead of almost a half a mile. When this had been crossed, and we were endeavoring to overtake the dogs an accident occurred that came within an ace of resulting seriously.

One of our number, the hero of many a chase, was galloping ahead, mounted on a gallant old hunter, when suddenly his mare struck a stone and fell, throwing her rider heavily forward. We hastened to his assistance, and though considerably stunned, he bravely remounted and was once more in the lead, crossing a marshy field that yielded 'neath our horses' feet and bspattered us with half frozen mud.

Jump after jump was tried and successfully taken, and though occasionally somebody would come to grief, still, the mishaps were only trifling, and only served to make those whom they befell more cautious. Our ponies jumped most creditably, and took the worst ditches like veterans, soon dispelling the doubts we at first entertained concerning their ability as hunters. Our course now lay through a level stretch of woods, thickly sprinkled with pines, whose mossy carpet deadened the footfalls of our horses, and enabled us to press on with renewed vigor, for we had run almost eleven miles and surely the end was not far off.

Away in the distance we could hear the baying of the hounds, and, as it swept through the pines, now high and clear like silvery chimes, now low like deep muffled bells, each one of us felt that buoyant sense of exhilaration, and that thrill of utter unrestraint that only a fox-hunter can ex-

perience. But reynard well deserved his name of "le subtil," and, true to nature, chose a course that led up through the foothills, in whose rocky fastnesses he effectually distanced both dogs and men.

When we reached the cross roads on the top of the ridge, the snow, that had been threatening all day, was now falling briskly and warned us to end the chase, not without a feeling of keen disappointment on our part. We hastily built a rousing fire, and a strange group we made as we gathered about its cheerful blaze, way up in the heart of the mountains.

Our horses picking at the scanty herbage, their manes and foretops thickly sprinkled with the flaky snow, and we regaling ourselves with "Maryland Club," that mellowed the clear notes of the hunting horns as they recalled the baffled dogs, and without which a fox hunt is indeed incomplete. And oh, what music can compare with the sound of those fox horns as they rang out on the wintry air, their liquid notes pouring forth in a flood of golden melody that was caught up and re-echoed from every crag and peak of the wild, fine woods, and held us spellbound with its magic charm.

At the quail supper that followed that evening many a health was drunk to the gallant fox that had run so nobly, and though he did escape us, we one and all voted it the survival of the fittest.

That night we sat around the blazing hearth "fighting our battles over" until the sound of the bells ringing out to the "flying cloud, the frosty light" announced the close of the dying year, and warned us to take our rest. Truly it was a fitting way to end the old year.

FREDERICK, MD.

Self-Hunting Dogs.

EUREKA, Cal.—*Editor Forest and Stream:* On page 59, Jan. 19, your answer as to self-hunting dogs gives no remedy other than restraint, which I believe to be true. I would advise a restraint which I devised for a pair of setters which were a source of much trouble to me, and while the device did not prevent exercise it did stop running away. I had tried a chain with a log attached in the yard, with result that log became detached, dog with chain went hunting, his mate came home after four days, dog was found in field self-fastened, very hungry and dry. As the younger would only go with the older, I placed on the latter a strong, wide collar, $\frac{3}{4}$ in. wide heavy single leather, on opposite sides securely fastened a $\frac{1}{2}$ in. iron ring with straps from each $\frac{1}{4}$ in. wide by $\frac{1}{4}$ in. thick and about 8 in. long, a turned hickory stick with

A, collar. B B, $\frac{3}{4}$ in. rings. C C, $\frac{1}{4}$ in. straps. D, hickory stick, largest in middle, 15 in. long, $\frac{1}{2}$ in. middle, taper to 1 in. at ends. E E, shoulder to prevent strap slipping.

round ends, 15 in. long by $\frac{1}{2}$ in. in diameter, 3 in. from each end a depression was turned $\frac{1}{4}$ in. long by $\frac{1}{4}$ in. deep, the ends of the straps were passed around and riveted in these, so the stick could turn but not get out. This hanging under the neck at such a height that the dog could walk or trot, but any attempt at running it would swing and hit him on the forelegs in such a manner as to discourage the most ardent hunter. In a few days the dog, which, like most of his blood had an almost human knowledge, learned that in order to run he must stop the motion, and when following the carriage, which he invariably did, if pressed from a trot would lower his head till the stick rested on the ground, seize it in his mouth and keep his pace with the team; but this knowledge of how to carry it was never used to go hunting. Whether the pride inherent in all good hunting dogs, caused shame to be found hunting with such a device in his mouth, or if the excitement of the chase caused forgetfulness and dropping of stick, sore shins, I know not, but I do know that I never had any trouble when the stick was on and nothing but trouble when off, and my dog had plenty of exercise. The measurements given only apply to one dog. Any one will find the proper height from ground by trial, and straps can be made adjustable in neck rings, but not at the stick, as it would make a place to get brush and sticks caught in. A good spread of straps on the stick is desirable, as it prevents the stick from swinging around end-wise. I send a diagram, that my description may be more easily understood.

Excuse the length of this my first contribution. I suffered long from this trouble, and while not a cure, it is the only relief I ever found, and at same time give freedom to the dog, and if my brother hunters find any relief in it I am paid.

S. F. BALCOM.

Where Is the Cocker as a Sporting Dog?

Editor Forest and Stream:

The letter signed "Cocker" in your last issue is, to say the least of it, refreshing. But what a shame it is for such a writer to write under a *nom de plume*! Why not give us poor spaniel men a chance to write him privately for the best means to have the cocker made to "Cocker's" liking instead of keeping us guessing as to who this most learned Solomon could be.

And what a dear, harmless little letter it is, to be sure, surely dictated by one of the dear little boys, for of a verity no granddaddy fond of a cocker could be so very ignorant as to write of the cocker spaniel of to-day as "little saucy-faced black things done up in cotton and silks, and look at their snub noses, snarling faces!" Can this well informed lover of spaniels have attempted to cross the muddy Hackensack and caught a wee snitching, or has he been reading some of the writings of well known writers and thought, so long as we had had lots of abusive criticisms, sympathetic criticisms, and last but not least, effervescent criticisms, that it was high time to have a refreshing criticism on a breed, and then following the prevailing custom, picked out the breed he knew least about to write most upon.

Can you wonder, Mr. Editor, that I dare not attempt to answer "Cocker's" letter very fully on this occasion, but I will promise him that if he will stop such nonsense as the sample I have given above, and write fairly, giving his reasons for favoring the old type of cocker, that there are those who will be glad to point out to him where the modern cocker is in many points superior to the ancient one.

SOLUS.

INDIANAPOLIS DOG SHOW.

INDIANAPOLIS, Ind., March 28.—*Special to Forest and Stream:* Show opened this morning, with good attendance, especially this evening. Mr. Roger Williams is ill and his classes were judged by Dr. Van Hummel. Several Eastern handlers are here with good strings. The entries number 310.

AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, Wallack's Merlin; 2d, Bunn's Ormonde. Bitches: 1st, Bunn's Miss Cautious.—OPEN—Dogs: 1st, Bunn's Marquis; 2d, Burnham's Grover. Bitches: 1st, Younghusband's Minnie Beaufort; 2d, Bunn's Minna Minting.

ST. BERNARDS.—OPEN—Dogs: 1st, Bonsfield's Lord Dante; 2d, Anderson's Elmer. Bitches: 1st, Bonsfield's Lady Taylor; 2d, Tuxedo Kennels' Constance.—SMOOTH COXY.—Dogs: 1st, Pratt's Alton II.; 2d, Fornof's Lawrence Gaze. Bitches: 1st, Tuxedo Kennels' Nun Nicer.

BLOODHOUNDS.—1st, Huntington's Jack Shepard.

GREAT DANES.—CHALLENGE—1st, Cumberland Kennels' Melac.—OPEN—Dogs: 1st, Studebaker's Major McKinley; 2d, Anderson's Sandor. Bitches: 1st, Osceola Kennels' Neverzall; 2d, Cumberland Kennels' Charmion.

RUSSIAN WOLFDogs.—CHALLENGE—1st, Hanks's Svodka.—OPEN—Dogs: 1st, Huntington's Osslad; 2d, Hanks's Peter the Great. Bitches: 1st, Hanks's Vinga; 2d, Huntington's Lobedy.

GREYHOUNDS.—CHALLENGE—1st, Purbeck's Pious Pembroke.—OPEN—Dogs: Withheld. Very high com., Manatag Kennels' Heumore King and Watcher. Bitches: 1st, Purbeck's Wild Rose; 2d, withheld. High com., Manatag's Marguerite.

POINTERS.—CHALLENGE—1st, Daniels's Count Graphic.—OPEN—Dogs: 1st, Daniels's Boxer; 2d, Proctor's Spotted Boy. Bitches: 1st, Donoghue's Sal II.; 2d, McGuffin's Mad of Ossian.—LIGHT WEIGHTS.—Dogs: 1st, Hackwail's Rush of Lad; 2d, Biddle's Glamorgan. Bitches: 1st, Kuch's Kent's Pearl; 2d, Daniels's Duchess. Large entries in these classes.

ENGLISH SETTERS.—CHALLENGE—Dogs: 1st, Dager's Cincinnati. Bitches: 1st, Washtenaw Kennels' Albert's Nellie.—OPEN—Dogs: 1st, Williams's Paul Hill; 2d, Taylor's Ben Hur of Riverview. Bitches: 1st, Lewis's Viatrix Jewelllyn; 2d, Washtenaw Kennels' Nellie Breeze.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Oak Grove Kennels' Seminoe. Bitches: 1st, Beazell's Queen Vic.—OPEN—Dogs: 1st, Sharpless's Barney, Jr.; 2d, Carmichael's Shamrock Brice. Bitches: 1st, Oak Grove Kennels' Marchioness; 2d, Dixon's Lady Cleveland.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, Dixon's Ivanhoe. Bitches: 1st, Dixon's Duchess of Waverly.—OPEN—Dogs: 1st, Lewis's Duke; 2d, Overman's Bob. Bitches: 1st and 2d, Dixon's Princess Louise and Catherine.

FIELD SPANIELS.—CHALLENGE—1st, Donoghue's Newton Abbott Torso.—OPEN—Dogs: 1st, Hilderbrand's Glencair Rooter.

COCKER SPANIELS.—CHALLENGE—1st, Jersey Cocker Kennels' Pickpaula.—OPEN—Dogs: 1st, Fields's Brantford Jet. Bitches: 1st and 2d, Jersey Cocker Kennels' Lady Dufferin and Nora II.—ANY OTHER COLOR.—Dogs: 1st, Jersey Cocker Kennels' Brantford Rufus. Bitches: 1st and 2d, Panceast's Brownie and Ditton Brevity.

CLUMBER SPANIELS.—1st, Cobb's Our Joan.

IRISH WATER SPANIELS.—1st, Fink's Trouble.

COLLIES.—CHALLENGE—1st, Long's Charleroi.—OPEN—Dogs: 1st, Hawkes's Sir Walter Scott; 2d, Mueller's Scollia IV. Bitches: 1st, Maple Grove Kennels' Dot II.; 2d, Argyle Kennels' Sparkle.

NEWFOUNDLANDS.—1st, Coudon's Surpass; 2d, Springstein's Pluto.

POODLES.—CHALLENGE—1st, Biddle's Berri.—OPEN—1st, Carter's Black Jack; 2d, Hatcher's Parisian.

BULLDOGS.—No entry.

BULL-TERRIERS.—CHALLENGE—1st, Dale's Attraction.—OPEN—Dogs: 1st, Lugbora Kennels' Crisp; 2d, Chautauqua Kennels' Sir Monte. Bitches: 1st, Brison's Countess of Dufferin; 2d, Chautauqua Kennels' White Gypsy.

DACHSHUNDS.—1st and 2d, Loeffler's Hundesport Bergmann and Lina K.

BEAGLES.—CHALLENGE—Dogs: 1st, Glenrose Kennels' Fitzhugh Lee. Bitches: 1st, Glenrose Kennels' Butterfly.—OPEN—Dogs: 1st, Roberts's Doctor; 2d, Harding's Hawkeye. Bitches: 1st, Rockland Kennels' Lonely; 2d, Glenrose Kennels' Gypsey A.

FOX-TERRIERS.—CHALLENGE—1st, Hanks's Grouse.—OPEN—Dogs: 1st, Biedinger's Cincinnati Boy; 2d, Argyle Kennels' Belvoir Nan. Bitches: 1st, Toon & Symonds's Lady Rosemary; 2d, Fishburn's Venus.

IRISH TERRIERS.—Dogs: 1st, Toon & Symonds's Jack Briggs. Bitches: 1st, Toon & Symonds's Salem Witch.

BLACK AND TAN TERRIERS.—Dogs: 1st, Foote's Sultan; 2d, Toon & Symonds's Prince Regent. Bitches: 1st, Toon & Symonds's Gypsey Girl.

YORKSHIRE TERRIERS.—1st and 2d, Alliser's Dick York and Minnie York.

TOY TERRIERS.—1st, Englehart's Daisy; 2d, Grady's Nellie.

SCOTCH TERRIERS.—1st and 2d, Toon & Symonds's Teal and Rhudaman.

PUGS.—CHALLENGE—1st, Cryer's Bob Ivy.—OPEN—Dogs: 1st, Englehart's Trot; 2d, Lake Shore Kennels' Duke Howard. Bitches: 1st, Toon & Symonds' Princess May; 2d, Hardy's Miss Penrice.

KING CHARLES SPANIELS.—2d, Saunders's Tags.

ITALIAN GREYHOUNDS.—CHALLENGE—1st, Lewis's Spring.—OPEN—Dogs: 1st and 2d, Englehart's Guy and Rob Roy. Bitches: 1st, Englehart's Psyche; 2d, Mack's Queen.

WHIPPETS.—1st, Thomas's Boston Model.

SKYE TERRIERS.—1st and 2d, Smith's Barnaby Rudge and Islay.

Judging concluded. Awards follow in order, first and second.

H. W. LACY.

About Dogs.

THE editor of the *Meadville, Pa., Republican* is a man after our own heart, and even the free list would not be good enough for him. He loves a dog, we are sure, because it is a dog. This is what he had to say about the W. K. C. show: "There was a great dog show in New York a few days ago, and it was one of the wonders of the world. We have looked at the illustrated report of it, and are astonished at the innumerable shapes into which men have succeeded in fashioning dog meat. It resembles what might be called in music 'Dog with the variations.' There is the natural dog, as a base to begin with; the animal we played with when a boy; the pup which bit our bare heels as we tried to run away from him; the grown-up dog which holed the woodchuck and helped dig him out and did all the work killing him; the faithful companion which followed us through the woods and over the hills a mile away, led by the tinkle of the cowbell, as we gathered in the roaming herd for the evening's milking, and treed the squirrel or pheasant a quarter of a mile out of our way, and would have been barking to this day if we had not responded to his notice that he had 'im. This dog was, and is the ideal dog, the natural dog from which we diverge to find the dog of the dog show. As in the music with the variations, whatever may be the variation, it always winds up its contortions in a return to the old tune, so the dog of the dog show, though he may get almost away from his class, still has in his make-up enough of the natural dog that we can know he belongs to the same class as the dog of our boyhood. His nose may be banged up as if he had run against the fence when he was in a plastic state; his ears may be cut off square or bias, or stretched down, or pulled back; his tail may be long and bushy, or bare as a rat's tail, or may be clean gone; it may curl and lay over his back, or stand up straight in the air, or point straight to the rear; his legs may be straight or knock-kneed or as bow as a bulldog; he may be tall or low, wide or narrow, long or short, and of any one of the hundred or more shapes into which the fancy of the fancier has drawn him, and still through all his disguises we can see the dog of our boyhood. It is a matter of great wonder to us what this dog manipulation all means, over and above a desire to find how many possible combinations may be made in the dog gamut, how many variations may be made in dog harmony without entirely losing the old tune started with at the beginning, the original ideal dog we know and loved when a boy."

DOG CHAT.

The Maryland Kennel Club.

The Maryland Kennel Club practically scored a success at their late show. A loss of \$100 is reported, but this is a mere bagatelle to their loss two years ago. Nothing succeeds like success, and already there are many applications for membership. The club intends to secure a permanent club room. The members also think of working actively for the preservation of game and the observance of the game laws. A crusade against illegal hunting will be taken up and under the club's charter this can be done. This is something that all kennel clubs in the country should interest themselves in. While there are many members of such clubs that do not shoot personally, still there is no man who is not sportsman enough to feel that the game laws of his State should be upheld, and if it is not the province of a kennel club to advance all interests which tend to the improvement of dogs for the field we have formed an erroneous idea of their usefulness.

Boston Show.

The Boston entries foot up 808, and comprise 19 mastiffs, 55 St. Bernards, 10 great Danes, 4 bloodhounds, 11 deerhounds, 14 greyhounds, 7 barzois, 5 Chesapeake Bays, 84 pointers, 73 English setters, 41 Irish setters, 20 Gordon setters, 47 spaniels, 60 beagles, 12 dachshunds, 5 bassets, 16 foxhounds, 46 collies, 18 poodles, 13 bulldogs, 27 bull-terriers, 56 Boston terriers, 56 fox-terriers, 6 Dandie Dinmonts, 15 Scotch terriers, 29 Irish terriers, 6 black and tan terriers, 4 Skye terriers, 3 Yorkshire terriers, 1 schipperke, 7 toy terriers, 7 pups, 11 toy spaniels, 7 miscellaneous, 8 selling class; total, 808. The following express companies will return dogs free from the show when full rates have been paid one way, provided there has been no change in ownership: Adams, American, National, New York and Boston Dispatch, and all railroads running to Boston will carry free in the baggage cars three dogs with each ticket when accompanied by owner or care taker.

New England Field Trial Club.

There will be a meeting of the New England Field Trial Club in Boston, at the Hotel Thorndyke, on Wednesday, April 5, at 7 P. M. The meeting will be followed by a dinner at 8 o'clock. Arrangements have been made for the dinner at \$1.50 per plate. All members are strongly urged to attend both the meeting and dinner. Notice is hereby given that certain changes in the constitution of the club will be recommended by the board of governors. It is hoped that members will present the names of one or more applicants for admission at the next meeting of the club. Blanks for application can be had of the secretary, William M. Lovering, Taunton, Mass.

Rosecroft Kennels.

NEW HAVEN, Conn., March 23.—The association of the undersigned in the Rosecroft Kennels has been terminated by mutual agreement. Mr. Osborn retains the name of Rosecroft, which he has used for more than 20 years. Mr. Fiske is entitled to whatever credit accrues and to whatever prizes have been or may be awarded to the kennels as breeders of the Rockingham-Donna strain. Respectfully, G. EDW. OSBORN, WILSON FISKE.

Bridgeton's Little Dog Show.

The first annual dog show of the Bridgeton Kennel Club closed March 20. The following dogs are some of those that received first prizes: Mastiffs, Chas. Barth's Lion; St. Bernards, Harvey Barth's Sallie; pointers, William Johnson's Shot; setters, Frank Scuder's Nell; foxhounds, Bacon Bright's Maud; bulldogs, Jacob Mengel's Ben; bull-terriers, Claude Vansyckle's Rose; pups, William Week's Satan. The show was well attended and created a great deal of interest. About sixty dogs were benched.

Columbus Dog Show.

At the local bench show to be held at Columbus, O., this week, the superintendent will be Mr. H. A. Bridge, well known as a setter man. The judges will be A. E. Pitts and T. A. Howard, both shining lights in pugdom. Mr. Bridge will also officiate. Classes are provided for all the important breeds. Prof. J. Stone's dog circus will provide the fun.

Mr. George F. Mooney has purchased the pointer bitch Luck's Own Daughter, by Luck of Goat. Mr. Mooney is secretary of the Columbus Fanciers' Club.

We are told that the N. E. R. C. will introduce a novelty at dog shows at their show in Mechanics' Hall, Boston, next month. A sort of stand will be erected round the rings, so that an uninterrupted view of the judging can be had. We scarcely see the advantage, as the rings are so large at Boston that on judging day, when the crowd is never large, the fence is only comfortably surrounded. Such a stand would, no doubt, be welcomed for the dog circus performances, which have become such an interesting feature of our shows. The judging rings are to be 75x50ft.

Rumor has it that certain prominent dogmen in Boston and vicinity are contemplating the formation of another kennel club. The kennel world do move these days.

Not pleased with the indifferent showing the greyhound Lord Neverstill has made owing to inferior condition, Mr. Whiton will send him on to Mr. Lowe, his former owner, with the idea, if possible, of having him restored somewhat to his former self. The dog evidently had some grueling work last fall, for he has gone to pieces wofully since Chicago, 1891 and 1892.

Mr. C. D. Webber, of Newark, N. J., lost, on Monday, March 20, his valuable greyhound, St. Leger (champion Balkis—champion Mother Demdike). From analysis made of the stomach the animal was poisoned. Mr. Webber is using every effort to find the guilty parties and bring them to justice.

The Illindio Kennel Club have secured special prizes to the value of \$500 from the merchants of Indianapolis.

An interesting discussion took place at a meeting of the Illindio Kennel Club, at Indianapolis, March 18, in which the subject of advertising the show came up. The result may be of interest to other similar organizations. Two of the members were opposed to newspaper advertising, believing that posters displayed at country stations and in the city was the thing. The president, as a newspaper man, gave his idea, he said that already, counting the space at advertising rates, the newspapers of the city had practically made a donation of \$3,000, and he said that advertisements in the dailies would reach more people all over the State quicker and at less expense than all the posters they could think of. Another member said that he once expended \$3,100 in advertising for a trotting association. Only \$150 was divided between the three leading papers, but it did more good than all the balance. This settled it, and Dr. Van Hummell will look out for the newspapers.

A Dog's Protective Association.

Editor Forest and Stream:

The second meeting of those interested in forming a dog protective association met March 10, pursuant to adjournment, and organized with about fifty charter members.

A constitution and by-laws were adopted and the following officers elected: Charles H. Annin, president; George D. Sisson, Vice-President; W. D. Pugh, Secretary; Geo. H. Newell, Treasurer; Executive Committee, W. D. Pugh, Dr. F. W. Temple, R. C. Wharton, Eber Rice; the president is a member *ex-officio*. Eleven new members were elected and we are now ready for business.

Letters of inquiry are already coming in from surrounding cities and we think we will soon have a strong Michigan league, at least, when it will be pretty hard to run one of our dogs out of the country. The fraternal feeling engendered has already brought on bench and field trial talk and will certainly evolve something of the kind in the future. I inclose herewith a copy of our constitution and by-laws, the publishing of which may result in much good.

We will soon have printed copies and will take pleasure in sending them to inquirers.

W. D. PUGH, Sec.

GRAND RAPIDS, Mich., March 21.

Spaniel Club Meeting.

THE executive committee of this live organization met on Thursday evening last at the Hotel Bartholdi. Realizing with the average soldier that the very worst weapon to settle momentous questions with is an empty stomach, it has become customary to precede the meeting with an informal dinner, at which much chaff floats around, and dogs of the day in general and spaniels in particular, are discussed. A well known legerdemain artist put in an appearance with the coffee, and though he did not succeed in making a field spaniel into a cocker and *vice versa*, nor yet in elucidating the mystery between a cocker and a field spaniel head, he did succeed in effectually impressing upon us the fact that the quickness of the hand deceives the eye, and even Mr. "Dookie" Oldham. Those present were Mr. A. C. Wilmerding in the chair, D. A. Foster, Dr. Kitchell, E. M. Oldham and secretary R. P. Keasbey. The meeting was called to order and minutes of last meeting read and approved. The treasurer reported progress in the matter of subscriptions to the World's Fair trophy. Mr. F. H. F. Mercer tendered his resignation as a member of the club, and it was accepted. Moved and carried that the president appoint a committee of one to draw up a suitable resolution on the death of Mr. J. M. Tracy. Mr. Oldham was appointed and drew up the following resolution, which was unanimously adopted and will be forwarded to the bereaved family: "It is with the greatest regret the American Spaniel Club hears of the death of Mr. J. M. Tracy, and therefore he it resolved to convey to his family its sincere condolence. As an artist and a sportsman his memory will always be held in the highest esteem by the members of this club." New members were elected as follows: Frank F. Dole, New Haven, Conn., proposed by E. M. Oldham and seconded by Mr. R. P. Keasbey. H. W. Lacy, New York, proposed by E. M. Oldham and seconded by A. C. Wilmerding. Geo. R. Preston, Jr., Calumet Club, New York, proposed by E. M. Oldham, seconded by D. Kitchell. Voted to allot the field spaniel cup to the Toronto fall show as a token of the good feeling and endeavors of the Industrial Association to further the cause of the spaniel by liberal classification and appointing club judges. The president was also instructed to solicit further specials for the Toronto show. Mr. E. H. Morris was dropped from the club for non-payment of dues. Several questions were informally discussed but no action taken, and the meeting adjourned.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Can Can Mason and Ossafied. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dogs, whelped March 6, 1893, by Eberhart's Cashier (champion Kash—Lady Thora) out of Gladys (Sir Loris—Phyllis II.).

BRED.

Prepared Blanks sent free on application.

Baby Ruth—Eberhart's Cashier. C. J. Mischler's (New Orleans, La.) pug bitch Baby Ruth (champion Penrice—Mint) to Eberhart Pug Kennels. Eberhart's Cashier (champion Kash—Lady Thora), March 13.

Queen Zip—Black Jack. Eberhart Pug Kennels' (Cincinnati, O.) poodle bitch Queen Zip (Carlo—) to R. L. Carter's Black Jack, March 10.

Bell O'Rourke—Brave Boy. Standard Stock Farm's (Westfield, Mass.) foxhound bitch Bell O'Rourke (Major O'Rourke—Gypsy) to Mr. Mason's champion Brave Boy (champion Brave—champion Bernhard), Dec. 10.

Bonnie Buzz—Le Logos. C. A. Sumner's (Los Angeles, Cal.) fox-terrier bitch Bonnie Buzz to W. H. McFee's Le Logos, March 7.

Kismet—Blenion Volunteer. Dr. Rowland's (Pasadena, Cal.) fox-terrier bitch Kismet (Blenion Vesuvius—Foto) to C. A. Sumner's Blenion Volunteer (Result—Diadem), Feb. 4.

Bonnie Belle—Blenion Volunteer. A. P. Robinson's (Los Angeles, Cal.) fox-terrier bitch Bonnie Belle (Blenion Vesuvius—Bonnie Bess) to C. A. Sumner's Blenion Volunteer, March 1.

Bonnie Belle—Blenion Volunteer. C. A. Sumner's (Los Angeles, Cal.) fox-terrier bitch Bonnie Belle to his Blenion Volunteer, March 8.

Burlington Diadem—Raby Mixer. H. W. Lacy's (New York City) fox-terrier bitch Burlington Diadem (Suffolk Coronet—Bacchante) to Hillside Kennels Raby Mixer (Raby Mixture—Richmond Olive Bud), March 16.

Debonair Juno—Stormy. A. L. K. Murray's (Warren, Va.) beagle bitch Debonair Juno to Debonair Kennels' Stormy, Jan. 20.

Ray's Rosey—Stormy. Debonair Kennels' (Gloversville, N. Y.) beagle bitch Ray's Rosey to their Stormy, Feb. 18.

Royal Rosey—Stormy. Ed. Ross (Scheneectady, N. Y.) beagle bitch Royal Rosey to Debonair Kennels' Stormy, Feb. 20.

Dot Smirle—Stormy. Debonair Kennels' (Gloversville, N. Y.) beagle bitch Ivy Leaf (Hardy's Little Duke—Flossy) to their Stormy, Feb. 9.

Grove Duchess—Carney. H. M. Howes's (Somerville, Mass.) bull-terrier bitch Grove Duchess (champion Baron—Dutch Rose II.) to Tubby Hook Kennels' Carney (Gully the Great—Rose), March 14.

WHELPS.

Prepared Blanks sent free on application.

Jessie. Multnomah Kennels' (Portland, Ore.) Chesapeake Bay bitch Jessie (Doc—Jess), March 10, seven (three dogs), by G. E. Rockwood's Jake (Drake—Kate).

Gladys. Eberhart & Mack's (Cincinnati, O.) pug bitch Gladys (Sir Loris—Phyllis II.), March 6, two dogs, by Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora).

Bonnie Bess. C. A. Sumner's (Los Angeles, Cal.) fox-terrier bitch Bonnie Bess, March 3, four bitches, by his Blenion Volunteer.

Dot Smirle. Cortkown Kennels' (Ottawa, Ont.) cocker spaniel bitch Dot Smirle (Bob Obo—Tough), Feb. 9, five (two dogs), by their Black Jacket (champion Brant—Woodstock Dinah).

Mosses. Black, white and ticked foxhound dog, whelped July 1, 1892, by Dash out of Dott, by B. R. Holcomb, Westfield, Mass., to Standard Stock Farm, same place.

Beauty. Black, white and tan foxhound bitch, whelped July 1, 1892, by Dash out of Dott, by B. R. Holcomb, Westfield, Mass., to Standard Stock Farm, same place.

Ben H. Black, white and tan foxhound dog, by Standard Stock Farm, Westfield, Mass., to Connecticut Valley Kennels, Northampton, Mass.

Dash, Jr.. Black, white and tan foxhound dog, whelped January, 1892, by Dash out of Fanny, by B. R. Holcomb, Westfield, Mass., to Standard Stock Farm, same place.

Dinah Brock. Black cocker spaniel bitch, whelped April, 1892, by Bouncer out of Coy, by Mr. Donovan, Boston, Mass., to Standard Stock Farm, Westfield, Mass.

Bell O'Rourke. Black and white foxhound bitch, by Major O'Rourke out of Gypsy, by Standard Stock Farm, Westfield, Mass., to Connecticut Valley Kennels, Northampton, Mass.

Also. Orange, white markings, St. Bernard dog, whelped May 15, 1892, by Sir Herbert out of Myrtle II., by G. W. Patterson, Lake View, Mass., to Mrs. J. M. Nicholson, Albany, N. Y.

Youngblood. Orange, white markings, rough St. Bernard dog, whelped May 15, 1892, by Sir Herbert out of Myrtle II., by G. W. Patterson, Lake View, Mass., to A. L. French, Chapin, Ill.

Peggy Pryde. Silver fawn pug bitch, by Eberhart's Cashier out of Flossie II., by Eberhart Pug Kennels, Cincinnati, O., to Bellevue Kennels, Newport, Ky.

Douglass II. Silver fawn pug dog, by Douglass I. out of June, by Eberhart Pug Kennels, Cincinnati, O., to Bellevue Kennels, Newport, Ky.

Little Wrinkle. Silver fawn pug bitch, whelped Sept. 1, 1889, by Joe II. out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to C. V. Griffith, Anderson, Ind.

Robin Goch. Blue belton English setter dog, whelped April 28, 1892, by Rockingham out of Myrrha II., by John Brett, Northvale, N. J., to D. J. Peters, Hoboken, N. J.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications on other matters connected with Kennel Management and dogs will also receive careful attention.

F. L. A. Galesburg, Ill.—We should say your best plan would be to write to Mr. W. H. Ashburner, of Yeoman, Pa., for information as to Jack's pedigree. If it has been wrongly given we would like to have the particulars. We have no record of the dog in the stud books.

SACREDNESS.—I. Is there any record of a pointer dog, Fly, that was imported from England? If so please give pedigree, etc. 2. Is it advisable to feed a bitch about to whelp raw meat? 3. What is the best treatment for a dog bitten by a rattlesnake? Ans. 1. We can find no record of one by that name. 2. Yes, chopped fine. 3. We have no experience in the matter.

J. E. B. Watertown, N. Y.—I have a very fine foxhound that has a bad head or ear. His ear discharges and smells very bad. His ear and skin seem to be all right. Everything looks fine, but the ear which discharges is very thick and sometimes on the blood color. I have tried everything that you have prescribed in the paper for canker in the ear, but it does no good. He has been so for four or five months. Ans. Wash the ear daily and when dry fill up with powdered boracic acid. Use the powder twice a day.

H. L. W., Adrian, Mich.—You can tell very little as to the future cleverness of cocker spaniels eight weeks old, and you cannot expect much in the way of training at that age. We should say, choose the smaller one, if it is healthy and is not in any way stunted. We can find no mention in the stud books of Qui Vive, according to the information you give us. Although we can find no Bellina Bondhu registered, there is a Belle Bondhu (12,405), and if that is the bitch you mean, the following pedigree will be all you require for canker in the ear. Belle Bondhu, by Qui Vive out of Belle Bondhu, by Gus Bondhu out of Lynie, by Dash III. out of Isabella; Gus Bondhu by Dash Bondhu out of Novel, Qui Vive by Dash III. out of Donna, by Ranger II. out of Lassie; Dash III. by Dash II. out of Old Kate. The fee is \$1 for registration, and if you write to the secretary of the A. K. C., 44 Broadway, New York, he will mail you a registration form, which gives every information. The above pedigree is correct, only supposing the dog's dam to be Belle Bondhu, and also that the Donna given is the correct one, as there are two Donnas registered.

Business.

LOST WITHOUT IT.—Adrian, Mich., March 15.—Inclosed find \$2 to renew my subscription, which will expire the 7th of next month. I have taken your paper one year and would feel lost without it. Very respectfully, H. L. W.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their boats, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1892-93.

COMMODORE: LIEUT.-COL. W. H. COTTON, Kingston, Ontario, Canada.

SECRETARY-TREASURER: R. EASTON BURNS, Kingston, Ontario, Canada.

ATLANTIC DIVISION.

Officers:

VICE-COM: J. R. Lake.
REAR-COM: H. L. Quirk.
PURSER: F. Duane, B'klyn, N. Y.
EX. COM: C. V. Brokaw, W. E. Lawrence, W. E. Dodge.

EASTERN DIVISION.

Officers:

VICE-COM: Geo. L. Parmele.
REAR-COM: F. A. Sears.
PURSER: F. B. Lewis, Box 89, Hart'd.
EX. COM: Paul Butler, W. C. Lawton, H. Apollonio.

CENTRAL DIVISION.

Officers:

VICE-COM: T. H. Stryker.
REAR-COM: W. C. Witherbee.
PURSER: F. F. Wardwell, Rome, N. Y.
EX. COM: C. V. Winne, W. R. Hunt-ington.

NORTHERN DIVISION.

Officers:

VICE-COM: J. N. MacKendrick.
REAR-COM: F. M. Minis.
PURSER: W. G. MacKendrick, Tor.
EX. COM: C. E. Arr-hald, J. H. Car-pegic.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Applications sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—G. M. Munger, Eureka, Kan.

Vice-Commodore—F. W. Dickens, Milwaukee, Wis.

Secretary-Treasurer—F. H. Huntington, Milwaukee, Wis.

Executive Committee—G. H. Gardner, W. H. Crawford, S. N. Maxwell.

Regatta Committee—G. P. Mathes, J. H. Warr, G. G. Case, M. D. Smer in.

Applications for membership should be made to the Sec.-Treas. on blanks which may be obtained from him, and should be accompanied by \$2 initiation fee and dues for the current year.

FIXTURES.

JUNE.

3. Red Dragon, Delaware River. 17. New York Ann., Bensonhurst.
10. Brooklyn Annual, Bay Ridge. 24. Marine and Field Club, Bath
13. Atlantic, Ann., New York Bay. Beach.

JULY.

1-15. At Div. Meet, Captain's Island. 15-30. W. C. A. Meet, Ballast Island.
29. Red Dragon, Delaware River.

AUGUST.

11-28. A. C. A. Meet, St. Lawrence River.

SEPTEMBER.

4. Ianthe, An., Passaic River. 16. Red Dragon, Delaware River.
4. Holyoke, Fall, Holyoke, Mass.

Atlantic Division Meet.

The programme for the coming meet of the Atlantic Division at Captain's Island has been arranged as follows by the regatta committee:

The races will be held on Wednesday, Thursday, Friday and Saturday, July 5, 6, 7 and 8.

PROGRAMME.

1. Paddling and sailing combined: Half miles, alternately; total 3 miles. Time limit, 1½.
2. Paddling: Half mile straightaway.
3. Sailing: 4½ miles, same rig and ballast as in race No. 1. Time limit, 2h.
- (These three races to constitute the record races.)
4. Paddling: Open canoes, ¼ mile straightaway, canoes to weigh not under 55lbs. Single.
5. Paddling: Club fours, open canoes, ¼ mile straightaway.
6. Paddling, tandem: Open canoes, ½ mile straightaway.
- (Single blades to be used in all open canoe races.)
7. Paddling tandem: Decked sailing canoes, ¼ mile straightaway.
8. Paddling upset: Usual conditions, no special appliances.
9. Hurry-scurry: Run, swim and paddle.
10. Trophy sailing: For the Elliot cup. No limit to rig or ballast, 9 miles. Time limit 3¼h.
11. Sailing: 2 miles to windward and return, no limit to rig or ballast. Time limit, 1½h.
12. Sailing, club race: 4½ miles, usual conditions. Time limit, 2h.
13. Passenger sailing race: 3 miles, canoes to carry two men. Time limit, 1½h.
14. Sailing upset and maneuvering: Usual conditions.
- EXTRA EVENTS.
15. Sailing unclassified: To be sailed under the rules of the Corinthian Mosquito Fleet.
16. Sailing: For old type cruising canoes, 3 miles. Time limit, 2h.
17. Paddling: War canoe.

CANOE NEWS NOTES.

The annual meeting of the Tatassit C. C., of Worcester, Mass., was held on March 20, the following officers being elected: Com., Howard Frost; Vice-Com., F. A. Mann; Purser, W. N. Brooks; Sec'y, W. B. Walworth; Fleet Capt., F. P. Dean, Historian, F. W. Johnson, Executive Committee—T. P. Kendall and G. A. Goddard. Membership Committee—Dr. A. F. Townsend, C. S. Day, A. E. Davis. House Committee—T. H. Blood, W. F. Robinson and G. C. Halcott. After the meeting a lantern slide exhibition was given by F. R. Dean and Fred Willis.

After many efforts to that end, the New York C. C. has at last been incorporated, the following members signing the articles of incorporation: William P. Stephens, William Whitlock, J. R. Lake, John C. B. Burchard, William Willard Howard, C. Boyver Vaux, B. Farquhar Curtis, John E. Plummer, A. H. Johnston, H. C. Wad, Everett Masten, Walton H. P. Versey and M. T. Bennett.

The latest volume of the "All-England Series" of books on sports is now ready, and will bear the name "Canoeing with Sail and Paddle." The author is Dr. John D. Hayward, of Liverpool, late Vice-Com. of the B. C. A., and an old canoeist and canoe-yawler, at present owner of the canoe-yawl Parie. From the prospectus the book promises to be a valuable addition to the canoeist's library.

Dr. Joseph Bovmann, who was at the Jessup Neck meet in the canoe-yawl Bessie with Mrs. Bovmann, is building a handsome canoe-yawl, 19ft. 6in. long, at Rigby's shop, Canarsie. The new boat will be very completely fitted for cruising.

Mr. T. C. Zerega has presented to the New York C. C. a handsome silver-mounted penknife as a special prize for some competition to be decided on later. Last year Mr. Zerega gave a very handsome mug for a similar prize.

A canoe club has been formed at Sparrow Point, Md.

A. C. A. Membership.

Eastern Division: Percy S. Gates, Springfield, Mass.; George A. Goddard, Worcester, Mass. Northern Division: George W. Marshall, Cor. C. C., Toronto; E. W. Waldron, Kingston.

OCTOBER.

- 7-8. Cor., San Francisco, Cruise.
14. Cor., San Fran., Closing Day.

For the twelfth time Mr. Ogden Goellet has made his handsome donation of \$1,500 in prize cups to be raced for in the annual race which bears his name, and which is pre-eminently the event of the yachting year. This year there is every promise of a hot and exciting contest in each division; the four new single-stickers should all be in racing form by the beginning of the cruise, in fact this race is likely to be the first assembly of the entire quartette. The two-sticker division should be equally interesting with Lasca, Alena, Iroquois and the new Emerald and Ariel, together with others whose entry is yet uncertain.

Poor Mr. Carroll has fallen in hard luck almost at the outset of his enterprise. He has incurred the serious disapproval of the Boston Herald. Its discovery of Mr. Carroll's real reputation among his associates in the New York Yacht Club is probably the most startling of the important (if true) facts with which it has recently favored the yachting world. So far as we have heard, this dire calamity has not induced Mr. Carroll to give up entirely the proposed transatlantic trip.

The question of secrecy in building, which has come so prominently to the front of late, is discussed at some length in the last issue of the *Yachtsman*, as will be seen in another column. The "Man at the Wheel" is, however, very far off his course in regard to the *FOREST AND STREAM*'s position in the Thistle matter. We have been compelled to allude many times in the past five years to the circumstances attending the construction of that yacht in a closed shed, but while we have condemned such a course as unwise and impolitic in the extreme, we have at the same time explained the peculiar circumstances which justified it; the blunt and absolute refusal of the New York Y. C. to enter into any agreement with the Royal Clyde Y. C. as to a common length of challenger and defender. In view of such a refusal it was not to be wondered at that the indignation of the Clyde yachtsmen led them to what was then an unprecedented step, and we, at least, have never joined in the general denunciation heaped upon them by American journals. At the same time we considered the move a foolish one, as it was so used as to create a great deal of prejudice against Thistle and her owners, and to rob them to a certain extent of the popular welcome extended to Genesta and Galatea, while, as events proved, the concealment availed nothing but to intensify the mortification of defeat. Looking at the matter now, after the lapse of five years, it is probable that Mr. Watson himself and his fellows would admit that it would have been far better had Thistle been built in the open, like Volunteer and Mayflower.

AGAIN the *Yachtsman* is equally in error in assuming that we have excused or justified the position of the Herreshoffs in concealing every detail of the new boats building at their shops. Naturally, we look at the matter from a different point of view from the designers, owners and many yachtsmen; but assuming that a newspaper is a necessary evil that no one could do without in these pushing times, the yachting editor or reporter has a right to his side of the question, as much so as the designer or owner. The leading yachting journals on both sides of the Atlantic, daily and weekly, are conducted by men who have held their positions for many years, who are well known to yachtsmen, and especially to the designers, and who do, or should, possess the confidence of the latter gentlemen. The first duty of the newspaper man is to furnish news; his readers, who may safely be assumed to include the entire yachting community, pay for news and expect it. At the same time there are very few indeed of the recognized yachting writers who do not fully admit the rights of the designer to the sole knowledge of certain facts, or who fail to respect these rights. However unwilling he may be to recognize it, the designer is under constant obligations to the writers; to him fame means money, and what makes his fame is not alone what his boats do, but what the papers say that they do, and good or ill-will of even an influential paper may have a material effect on a designer's fortunes. Considering how prone yachtsmen are to follow a few leaders or to take up a prevailing fashion, we venture to say that no designer today is so situated that he can disregard entirely the comments, favorable or otherwise, of the press.

The task of the honest and conscientious writer is at no time an easy one, his opportunities for observation in any one of a dozen different branches of yachting are necessarily much less than those of the designers and yachtsmen who are making a special study of this one branch; and yet he is expected to be fully informed in every detail, and not infrequently is he compelled to pose as an expert. Work as he may, in these progressive days it is no easy matter to keep pace, especially in the hurry of other incidental work, with the progress of design and construction; to post himself so fully as to enable him to report accurately and to discuss intelligently the occurrences of the year. The greatly increased number of new yachts in the past eight years, and the many advances in design and construction, have added enormously to the work of race reporting. It was one thing to note the doing of one or two new boats in a fleet of old ones, for instance of Bedouin against Gracie, Fanny and Mischief; but it is a very different matter to follow a fleet like the 21-footers of last year, the 46-footers of 1891 or the 40-footers of 1889, and to gauge even roughly the merits of the various types and models.

DIFFICULT as the writer's task has been of late, it promises to be far worse this year, as his opportunities for acquiring even a superficial knowledge of each boat are precisely those of the average yachtsman, his reader. He is rigidly barred from a view of the new yachts until they are in the water, and if he is lucky enough to get a sight at one when docked, it is only because of the impossibility of fencing in the large drydocks and railways. At the same time he is expected to set before his readers the latest news and the most careful discussions, to know and comment on everything in the yards, the drafting rooms and the clubs.

It is not to be denied that there are among yachting writers some who are no credit to the profession, but the majority, with reputations to sustain, are not such fools, to put it no higher, as to publish all that they know. Keen as he may be after "news," every writer understands that, even from a newspaper standpoint, it is far better to know a good deal and publish only a portion of it than to know very little and print it all. Those who have had any experience in journalism are constantly alert to make up a newsy and attractive story and yet to reveal nothing which will close the source of information to them. In the case of a yacht this is an easy matter; it is possible to go over a vessel carefully and write a long and interesting description, all that the average reader demands, and yet say nothing of the essential elements, the displacement, the exact dimensions, the location of the centers and such secrets of the designer. Of course at the present

time the circumstances are peculiar, as the "freak" features play an important feature of most designs; but, even allowing for this, there is little to justify the present attitude of the Herreshoffs and other designers toward the press. As a matter of purely personal advantage, apart from any love of his work there is no one who works harder for the advancement and prosperity of yachting than the yachting writer whose living depends on the sport, and no one reaps more from the result of this labor than the designer, who profits in a still greater degree from any boom in yachting. The interests of the two are in this sense identical, and we question both the wisdom and the justice of a course which closes the shops and yards to the yachting press, or at least to writers of known reputation.

SO FAR as the actual benefits derived from absolute concealment, we believe that they are slight; the practical result is that yachtsmen at large, the non-technical portion of the yachting world, are deprived of a general knowledge of the new boats which would add vastly to the interest in comparing their performances, but would work no injury to the designer, while the really vital facts are seldom successfully concealed from the very ones who should not possess them, the rival designers. We venture to say now that the prevailing ignorance in regard to the exact dimensions and features of the new boats, American and British, is not shared by the designers, but that each has a very tolerable idea of what the others are doing. We may mention in this connection a fact well known to yachting writers, that even the most secretive of designers at times make an exception to the rule, they favor the fullest publication of details—of the other fellow's boat. The man who will look a reporter straight in the eye and fill him with the most astounding statements about his own boat will with the next breath inquire eagerly and earnestly as to what is doing in his rival's yard or drafting room.

In taking the side of the designers our contemporary looks at the question from the British standpoint, but things are very different on this side of the water. Americans want the news, often a great deal more than they have a right to, and they generally get it, whether in politics, social life or yachting. The files of any of the American yachting journals for the last forty years will furnish a complete record of yacht building and of the course of design, as well as of the racing, the work of an able body of yachting writers who have now almost entirely passed away. The English papers, on the contrary, have for many years refrained from publishing technical details of yachts. A look through their files will disclose complete and careful reports of races, which are valueless from the fact that no details other than the tonnage of the yachts are given, no indications of type and model and of successive changes and improvements. It may be that American papers must follow the same model, but we doubt whether such a course would be acceptable to American readers. The *Yachtsman* itself is an example of this—young, enterprising and "sassy," with plenty of yachting news of a certain kind, one searches its pages in vain for accurate and definite descriptions of the modern British racers.

ANOTHER statement of the *Yachtsman* to which we must oppose a positive objection is that relating to the "science" of yacht designing. So far from the successful designing of yachts being nothing more than a mere copying of extraneous or "observable" features, our observation is that the exact opposite is true. The merest tyro can draft an exaggerated snout or a heavy fin keel, but, so far from being a success, the result of a blind copying of these "observable" features, regardless of the hidden mysteries of the balance of the various centers, would be a disastrous failure. In our estimation, the secret of designing, whether it be art, genius, "science" or hard horse sense—it is probably a mixture of the four—lies first in the selection of the crude qualities of the design, the dimensions, displacement and sail area, and secondly, in the proper adjustment of the centers; without these essentials, the mere copying or even originating of freak features will avail nothing.

ACCORDING to the latest news from the Clyde, Mr. Will Fife has gone to the extreme in his 86-footer, making her a fin-keel of 25ft. beam and 130ft. over all. She is of composite construction, the steel frames extending downward to form the fin. While all the new British cutters will approach the fin-keel in general type, the Fife boat will be the only absolute bulb-fin.

A Vacation Voyage.—III.

[Continued from Page 263.]

As we drew nearer to the object of interest we saw that she was fast on the reef, heading north, with the great wrecker Favorite alongside. A few minutes after the tug with the gang of Indians, half-bred and dock-bollopers from Harbor Springs had arrived and discharged its load, we swung round her stern and anchored alongside in two fathoms. She was the Cuba, Merchants' Line, Hamilton, Can., bound from Chicago to Kingston with a cargo of grain loose in the hold. Then her gangways were cleared, and all on board but the passengers, who were gathered aft on the upper deck, formed in line with buckets and worked with feverish zeal to heave out the cargo. To starboard a great bucket, operated by steam, was throwing out the valuable grain fifty bushels at every dip.

"Say, that fellow by the for'd gangway there, must be the second mate, is beckoning for us to come up. What a lark it would be to take a load of corn and sell it," said Dan.

"We might as well drop alongside anyway; peak up the foresail and raise the look."

The mate, a very agreeable "Blue Nose" boy, said that she had gone on twenty-four hours before in the fog. "As soon as we lighten her some, the tug will try to yank us off stern first. I don't know what it's worth but you boys might as well fill up with this corn. You can get rid of it most anywhere, and your cockpit will hold a lot. That's a per-looked shipmate there," pointing at Yag.

"So we dropped under a gangway where the yellow corn was falling almost in a steady stream, and soon our boat was full to the top of the centerboard box. As there was no immediate prospect of seeing the great wrecking tug operate, we shook hands with our new friend and filled away on the port tack. We found her rather too low aft, but she stood up well and the unusual weight was no detriment in working to windward. After sailing a short distance we went in stays and headed southeast. This was a long leg, and it was noon when we fetched in close with the land near Cross Village.

By this time the sky was clear and the wind steady, though still dead ahead. So all the rest of the day we kept reaching up the shore, keeping in a narrow streak of wind. We were within sight of the old white church at Middle Village, that marks the entrance to Little Traverse Bay at the north, when the wind quite gave out.

"There's a full moon to-night, and we can't count on getting very far."

"Boys," said the White Elephant, with tragic air, "I've poked into every locker and there's nothing good on board but a half loaf of Vienna and a few crackers."

"I thought we were running short; expected to grub up at Mackinac, but we left Sunday. We'll bring what there is and let the morrow supply its own hardtack." So it was divided into four parts and speedily put where it would do the most good.

A watch that night was of no more interest than if the anchor were down. All through the long, still hours we lay with sails set, but no steerage-way. And now, though the sun had climbed far from the horizon, the strange white church still had the same bearing by compass. Like a painted spot the flora rested motionless on the glassy surface. The skipper and foremast hand were still enjoying their watch below when they overheard the hungry mate soliloquizing:

"This is one of those things that you read about. I didn't start on this cruise for an Arctic expedition, and why should it come to this? Ah, I know now now what drives crews to piracy. Alas! what a mockery of man's power, that a boat engaged in the transportation of food stuffs should not keep its own crew from starvation!" Then his voice indicated resignation as he continued: "No, Yag, you needn't get up and go for'd. Are we Indians or Chinamen? You're too tough and would make us sick. Besides, we haven't the facilities. Petoskey is in sight and still no wind! These canvas shoes of mine would make thin broth, but I believe that's the orthodox thing before casting off."

The placid surface could not forever remain thus. Off to the north-west a dark streak appeared. Then it extended till a large segment of the horizon felt its mysterious influence. Finally a cat-s-paw sent first impulses of the wind touching the lazy canvas, and it swung out to port and to starboard. The joyous swirl of the water under the bows, the lifting, straining sails, the music of the rushing keel, and the draft of fresh, pure breeze from the open lake were truly inspiring! It was a day

"Whereon it is enough for me
Not to be doing, but to be!"

And so, straight as shaft from the bowstring, the Flora sped into the bay.

We were not long in negotiating a sale of our cargo. "Quick sales and big profits," said Dan, but as we had come by the grain by no risk or trouble to ourselves we disposed of it at a price generous to the buyer and still netted a handsome sum, as it appeared to us at the time.

"Who'd have s'posed she could carry forty bushels," laughed Dan, as the stalwart mate swung the heavy ton to the dory. Then we added a few more, and each selected all he could think of. It was amusing to note how the Elephant, with all the arts known to the "connoisseur," as the crew called it, sought to discover the true inwardness of a certain watermelon.

We had finished cleaning out the bilge when a boy arrived with a loaded wheelbarrow and inventory of its contents and inquired if we were "the ducks as had bought out the grocery?" And so the long-anticipated sale was consummated.

"No, matey," murmured Dan; "no more, if you love me. I'm just 'hors du combat.' I think I'll retire to the 'boodwa.'" The skipper, too, cautiously withdrew at this juncture. But still the Elephant continued, and when finally he did desist the board presented a scene of saddest desolation.

How delightful a locality is that for the summer vagrant! No more beauty is the Bay of Naples, we believe, than the view one obtains of pleasant shores and blue water from the cliffs at Petoskey. And the city itself, named after the old converted chieftain! We had read of him, we had fished in the valley where tradition locates his birthplace, and now we knew the home of his later days, grown to be foremost of idler's resorts. There is that in the very air of Petoskey that chases away all gloom; it seems a perpetual carnival.

"No, matey," murmured Dan; "no more, if you love me. I'm just 'hors du combat.' I think I'll retire to the 'boodwa.'" The skipper, too, cautiously withdrew at this juncture. But still the Elephant continued, and when finally he did desist the board presented a scene of saddest desolation.

We delighted to spend the nights in the snug haven across the bay. But Harbor Point, with its haughty, exclusive air and its signs of "No dogs allowed," was not for us. So the morning breeze would wait us back to the slip at the boat house.

When if we were tired of the very excess of life and gaiety at Petoskey, there was her modest sister to cultivate. The reader will not find Bay View on his map. It has sprung up almost as did the fabled palace of Aladdin, in a single night. A curious place, a city of cottages, and already become the Chautauqua of the West. Some of the avenues that begin at the pebbly beach extend quite into the pine-needle forest. Though but a mile distant, it contrasts with its livelier neighbor. We had friends spending the season here who did much to add to the pleasures of the yachtsmen ashore. I remember well what horror they feigned when they discovered some of the amenities of our careless existence. Little did they suspect, charming innocents, that we had a single reef tied down when they took a spin on the bay with us. "Only a capful of wind," the skipper explained, but it seemed to them more than the breeze they required.

We were late Saturday afternoon and the yacht lay moored in the little cove at Frank's boat house. In the cockpit, master and mate were stretched at ease, when suddenly Vag appeared at the landing, soon followed by Dan, who stepped aboard with the remark: "Here's a letter for you, Skip, that I've had in my pocket for two days."

The skipper accepted the apology and the crumpled missive with bad grace. After turning the envelope over several times and thoroughly scrutinizing its post marks, he betthought himself to open it and then his face lighted up.

"Hello, fellows, here's high jinks or I'm a seacock. You know I told you that my cousin, Len Gould, was going to cruise south with his governor on the Laura. Well, they changed their minds and came north about a week after us. It's queer we didn't come across them somewhere. Len wrote the letter here and said to tell Old Mackinn and then followed us here. Just let me read it:

"Petoskey, etc. Dear old fellow, I suppose you think we are at the head of the lake, but we came north instead. I hope this will find you if we don't meet. We stopped at Charlevoix, and old Caldwell, the builder, you know he's an old friend of dad's, told us all about that crab at Harbor Springs on the Fourth. I am just aching to see the prize mug you took. Will you confer the honor of a look at it? The Laura is so lucky for you that the Piasco carried away her topmast before she finished. I suppose you fellows are quite stuck up now. The Laura will stay about three days. Well, so long, Len," and the skipper concluded the letter.

"Better be born lucky than rich," laughed Dan.

"Now steady, boys; let's plot our course. I'm beginning to see through this matter; the mate's slow. First, that letter is in my pocket. There's a great rivalry between Frank here and that wily old builder at Charlevoix. Now, when Caldwell got back with no prize to show, he had to have some excuse. So he tells them that he set tops' in that wind. That accounts for the condition of his spar and the loss of the prize very nicely. But the rub is right here; it wouldn't do to have it get out that his recognized competitor cleaned them all out, so he just made up that pretty little yarn about the Flora. She's the 'dark horse' that entered at the last moment and scooped the mug."

"Well, that's the milk in the nut, and in this case it accounts for the hair on the outside. Better be born lucky than rich. On to Charlevoix!" The crew was exultant.

"Of course Caldwell never expected that we would touch at Charlevoix going home, but he don't know these 'niggers.' No use taking a vote on the question," the skipper said. "On to Charlevoix!"

[TO BE CONTINUED.]

Secrecy in Designing.

"Much sarcastic comment has been bestowed of late upon the secrecy preserved as to the leading features and dimensions of would-be celebrated racing yachts. We have indulged in a poetic sneer at this *fin-de-siècle* feature of yacht-designing, but the license universally accorded to this hard must be our excuse for a spasmodic expression of opinion which we certainly cannot and never did uphold. In the contrary, we consider that every yachtsman is fully justified in protecting his latest ideas from piracy on the part of rival artists so long as he can do so.

"The whole so-called 'science' of yacht designing lies in the faculty in pirating the good features observable in celebrated yachts, or in yachts designed by celebrated draughtsmen. Yachts cannot be 'celebrated' until they have been tried and not found 'amazing' by the general hand, the designer being similarly tried may be reasonably expected to have at all times 'something up their sleeves,' i.e., some improvement upon the model of what has proved to be 'last season's best.'"

"Now there can be no concealment of the general features of any yacht which is actually racing throughout a season, although owners and designers alike betray a certain inclination to enshroud successful yachts with as much mystery as possible. This, however, is usually a somewhat thankless task. But it is only fair that the ideas conceived by any designer should be his own inalienable property until such time as, in the nature of things, they must be made public; and any measures taken to secure this end, in face of the pardonable trying curiosity of the press, should be respected rather than ridiculed."

"Ridicule is hardly a sufficiently strong word to use as indicating the attitude of the American press with regard to the use as indicated in the case of 'Tiptoe'—'abuse' might be more applicable—and this peculiar position was taken up in America, not by the sycophantic daily papers only, but by FOREST AND STREAM, a journal which we regard as being the one and only exponent of true American yachting opinion."

"In curious contrast to the Thistle animadversions, FOREST AND STREAM has, perforce, been fain to publish the precautions taken by Messrs. Herreshoff toward concealment of the 'features' of their coming flyers. 'Night watchmen' have been hitherto unknown on this side of the Atlantic. At all events no advertising publicity has been given to them, and in this respect it remains for America once more to 'out-Herod Herod.' But now that the sin, if sin it be, lies with our cousins, we are treated to elaborate articles on the difficulties imposed by the Messrs. Herreshoff, without one word of castigation for the fact that their difficulties have been imposed. The truth is that in America the latest 'bright particular' must ever guide the public, and if the late Mr. Burgess did that, all else was wrong; while if the Herreshoffs did this, nothing but this is right, for 'this' comes at a later date than 'that.'—The Yachtsman.

MESSRS. S. S. THORP & CO., who are known to FOREST AND STREAM readers as advertisers in our yachting advertisement pages are hard at work filling a contract to supply 5,000 flags for the World's Fair.—Adv.

New York Y. C.

The second general meeting of the New York Y. C. was held on March 23, with Com. Morgan in the chair. In addition to the regular routine business, the house committee was empowered to charter a steamer on the occasion of the naval parade next month and also to arrange for the annual dinner. In regard to the annual cruise, it was decided to rendezvous as in the last two years, at Glen Cove, at some time between Aug. 1 and Aug. 14, the selection of the exact date being left to the officers and the regatta committee. The uncertainty as to the date of completion of the new Cup defenders makes it desirable to leave the date open for the time being, in order to make sure that the four will be present on the cruise. An invitation was read from the secretary of the reception committee of the Viking ship, soon to arrive from Norway, requesting the club to take part in the heavy coming ceremonies at Alesund. The matter was referred to a special committee to be appointed by the commodore. Com. Morgan vacated the chair temporarily in order to propose that the club should present to ex-Com. Gerry a service of silver as a recognition of his work for the club during the seven years in which he was commodore. A motion to this effect was passed, and the matter referred to a committee to be appointed by Com. Morgan. The following letter from Mr. Ogden Goelet was read:

J. V. S. Oddie, Esq., Secretary New York Y. C.:
DEAR SIR—I have much pleasure in offering the following prizes, viz.:
One \$1,000 cup, to be sailed for by the schooners of the New York Y. C. and

One \$500 cup, to be sailed for by the sloops of the New York Y. C. These prizes to be competed for at Newport on the cruise during the month of August next. The day to be selected by the flag officers and announced on or prior to the date of the rendezvous for the annual cruise, and the course to be decided by the regatta committee. The race to be sailed under their jurisdiction according to the rules and with the time allowance of the New York Y. C., as in former races for the cups, but with no limit to the time in which the race is to be made.

Yachts shall have the right to enter up to 8 o'clock on the morning of the date of the race.

Should any foreign yacht be in our waters during next summer, I beg to reserve the right to allow any one or all of such vessels to enter for this race. Very respectfully,
New York, Feb. 23, 1893. OGDEN GOELET.

Secretary Oddie was requested to write to the Board of Aldermen in favor of retaining the summer ferry to Bay Ridge. The following gentlemen were elected to membership, making the total number of members 918: Henry L. Hotchkiss, John G. Gibbons, Henry A. Carey, William James, Richard N. Young, Henry G. Campbell, J. G. Richardson, J. Norman Whitehouse, John Fox, Jr., J. G. DeForest, Jr., Chas. P. Buchanan, Delavan Bloodgood, E. V. Robert A. Grannis, Oliver H. Belmont, Oswald Sanderson, Edward T. Hunt, Harry Kingsley, J. C. Wright, Jr., William Cowley, Theo. C. Zerega, Louis C. Clark, D. Crawford Clark, Richard Kalish, Capt. John R. Bartlett, U. S. N.; J. E. Reayburn, Capt. Francis J. Higginson, U. S. N.; Henry B. Howell, Dudley L. Pickman, James Rutherford, Jr., Mayhew W. Bronson, O. G. Jennings, Brayton Ives, Richard H. Williams, Samuel T. Peters, William A. Parke, John H. Cole and James A. Garland, Jr.

Large Cutters of the Past.

At the time when the Maria was filling the imaginations of young American yachtsmen—as a matter of fact, yachting was only a few years pastime in the United States in 1844—the "Big Alarm" cutter in this country had an equal hold on the minds of our yachtsmen; but the Alarm was a very different style of craft to the Yankee clipper, and was a sort of cross between the revenue cruiser and the smuggler of the period. She was of 193 tons, Thames measurement, although of only 79ft. load line, her beam being 24ft. She had very taunt spars and large sail spread. A comparison of some large cutters of the last half century will be interesting:

	L.W.L.	Beam.	Main Boom.	Gaff.	Main-sail Area.	Total Sail Area Y.R.A.	Rating Y.R.A.
	Ft.	Ft.	Ft.	Ft.	Sq. Ft.	Sq. Ft.	
Alarm.....	70.0	24.0	73	40	5,100	11,900	130
Maria.....	97.0	26.5	95	51	5,850	10,700	190
Oimara.....	95.0	20.0	73	40	3,900	9,250	150
Irex.....	83.6	15.0	7,650	106
Genesta.....	81.0	15.0	68	43	3,090	7,445	104
Galatea.....	87.0	15.0	73	45	..	8,500	124
Thistle.....	95.4	20.3	81	51	4,945	9,957	144
Iverna.....	83.5	19.0	77	47	3,856	8,453	113

Mr. Clarke's big cutter will come somewhere between the Maria and Oimara, and will possibly have a mainsail something like the former's, so far as area goes; but most likely her total area will be much smaller, as these are not days of long bowsprits. If this gaintess in any way approaches expectations formed of her, the Clyde-built craft will have a hopeless chase after her over any Channel course.—Field.

Corinthian Y. C. of San Francisco.

In marked contrast to the apathy which has afflicted the large yacht clubs of San Francisco, the young Corinthian Y. C. is planning an unusually lively season, with a frolic of some sort for every week from April to October. The full programme, certainly a varied one, is as follows:

April 22, opening day; April 23, cruise in squadron; May 6, rendezvous at Sausalito, reception at S. F. Yacht Club house; May 7, cruise in squadron accompanying S. F. Y. C. fleet; May 13, cruise to Vallejo; May 14, return; May 20, annual regatta; June 10, rendezvous Corte Madera Creek (R.R. bridge, "jinks" tendered Principal Yacht Club); June 11, return; June 24, annual summer cruise; June 25, rendezvous at R.R. bridge, south shore; Aug. 27, return; Sept. 9, channel cruise; Sept. 17, race; Sept. 23, rendezvous Corinthian Cove; Sept. 24, Corinthian games; Oct. 7, rendezvous Paradise Cove; Oct. 8, return; Oct. 14, closing day.

New Yachts.

The Paine boat is now well in frame and the work is going ahead smoothly. The Stewart & Binney boat has been laid down at Pusey & Jones's yard, in Wilmington, and the moulds made. She will be rigged by Billman, and Wilson & Silsby will make her sails. The bad weather has interfered with the work on Navahoe, but the rigging will soon be completed. The Rogers boat is about plated up, and the keel of the Morgan boat has been laid in the north dock. The "Enterprise" is now in the yard, the building of the Hayden steamer Louise, 105ft., and the stock yacht, 92ft. long, the Kalohai, as well as the Enterprise launch.

At Lawley's yard the steamers and small boats are rapidly nearing completion.

YACHT NEWS NOTES.

The committee of the Chicago Yachting Association has submitted the following proposition to the World's Fair management: Your committee respectfully submits that the only available location for a yacht harbor is a portion of the present outer harbor and includes the erection of a breakwater on a line 1,350ft. east of the present dock line—the breakwater to extend 1,500ft. north from a point opposite Park row, thence running west to the shore, leaving a gap in the latter portion for an entrance. This would produce a basin in which about 500 yachts could safely moor in any weather. Your committee has called on many of the gentlemen connected with the merchant marine and is assured that they are heartily in favor of this plan and that it conflicts in no way with their interests. A copy of the original authority of the World's Columbian Exposition Company, showing the right of the company to put in piling, etc., has been furnished us by Capt. Marshall, Corps of Engineers, U. S. A. President Higginbotham, of the World's Columbian Exposition, has been interviewed by your committee, and requests that the Chicago Yachting and Rowing Association make other data for the use of the Association, requirements, cost and plans of a yacht harbor in this location, to be submitted to the Fair directors, together with such other data as this Association may have bearing on this subject. Statements showing the number of gales during the last five years of sufficient violence to endanger yachts in the present harbor have been secured as evidence of the necessity of protection to the yachts which will visit us during the coming season, together with other data for the use of the Association, relating to the cost and construction of the harbor—which is unnecessary to embody in this report. Your committee recommends that the efforts of the Association be expended solely in this direction at the present time, as being the only feasible plan of securing adequate protection with the limited time at our disposal.

Judging from present appearances there will be two, if not more, additions to the local pleasure fleet this year, but they will be small steam craft, not sailing yachts, in which our people took so much pride and pleasure a few years ago. Both will be by the same designer, Mr. "Jack" Robbin, a mechanic of much ingenuity and skill, who has turned his attention to yacht designing and building with very promising results, as shown in his first effort, a small steamer for Mr. E. B. Barnell of this city. The hull, which has been planked, caulked and painted, is of a handsome model, which promises both speed and stability, the bow being fine on the waterline, and carried up to a half clipper stem, while the run is clean. In construction the craft is light, yet strong. Her keel is oak, 3in. x 3in., with keelsons 3in. x 4in.; frames of oak, bent, 15in. x 23in., 13in. centers; garboard is oak, 14in. thick; sheer strake 1in. thick. All fastenings are galvanized screws, not a nail below the covering board. The decks are of black walnut and cedar, alternate strips. The dimensions of the yacht are as follows: Length of keel, 23ft.; length over all, 35ft.; length of waterline, 29ft. 6in.; extreme beam, 7ft.; draft of water, 25in. She will be driven by an engine of 10 horse-power, vertical compound, keel condenser. The boiler will be of steel, 34in. diameter, 50in. high, with 150 flues of 1 1/4 and 1 3/4 in. each, and a speed of at least 10 miles per hour is expected. The entire draft, if not to be added, boiler excepted, is the work of Mr. Robbin, who will build another of somewhat greater size when the vessel under notice has been completed.—PORT TACK (Bellevue, Cal.)

The St. Augustine Y. C. sailed its first race of the year on March 16 the being being:

Miranda, scht., is now ready for sea but has not left New London. Her crew was shipped on March 22, and on the same evening a fight occurred on board, the police being called in and two of the new men finally discharged. On Friday another mishap occurred; the captain's son, Alexander Betts, 17 years old, had with him a friend, Harry McCaffrey, of New Haven. Young Betts picked up a loaded pistol in the cabin and pointed it at his friend with the command to "throw up his hands." When he pulled the trigger a ball struck McCaffrey in the right cheek, wounding him seriously. Betts was arrested. Capt. Richard C. Hooker will be in command, with Capt. Betts as navigator. The yacht will sail as soon as word is received from Mr. Coleman, who is now in Florida. Mr. George Cormack, who intended to sail in her, will not do so. She will probably go by way of Cape Horn.

The Williamsburg Y. C. has elected the following officers: Com., William Martain; Vice-Com., Theodore Meyer; Post Capt., Larry Rice; Sec., George Simmes; Asst. Sec., Henry F. Ruper; Treas., Alfred Smith; Meas., William Rexter; Judge Advocate, James Clifford; Steward, John Taves; Sergt. at Arms, Gabel Barker; Board of Trusts, Joseph Northrup, William Stebbins, Patrick Monahan, Melville Waters, John Essman; Reg. Com., Gus F. Burkard, Henry Ruper, George Belk, Jr., Thomas Ellison, Edward Brown; Delegates to N. Y. Y. R. A., Henry Roth, James Schuessele.

The annual meeting of the Oswego Y. C. of Auburn, N. Y., was held on March 21, and the following officers and committees were elected: Com., F. I. Allen; Vice-Com., G. C. Smith; Sec'y and Treas., O. Stroug; Meas., D. Beardsley. Regatta Committee, C. E. Thorne, N. B. Burr, W. F. Hopkins, C. Chedell, Canoe Committee, E. Jennings and F. C. Jones. The club is in a prosperous condition, and has decided to offer some valuable prizes for this season's races. There are several additions to the fleet this year, and the members are looking forward to the races with increased interest.

The annual meeting of the New Bedford Y. C. was held on March 21, the following officers being elected: Com., Frank C. Haskell; Vice-Com., Edward M. Whitney; Rear Com., John B. Rhodes; Sec., Alfred S. James. Treas., F. A. Booth; Directors, R. H. Morgan, E. B. Anthony, E. B. Hammond, H. K. Snow, Horace W. Warren, J. H. P. Haskell, W. A. T. A. Holmes, A. W. Forbes, Fred R. Fish. The club has a membership of 158 and a fleet of forty-five yachts, with a cash balance of \$600. A contribution of \$20 to the Cuttyhunk fund was authorized.

The Bayonne City Y. C. has filed articles of incorporation at the county clerk's office, the incorporators being the board of trustees—William Elsworth, Edward Van Buskirk, Philip Mooney, Frank Elsworth and Philip Van Buskirk. The following delegates have been chosen to the New York and New Jersey Yacht Racing Association: Edwin H. Betts, Capt. Joseph Elsworth and John O'Neill. The club was organized last year and a small club house built on an island in New York Bay just off the Bayonne shore at Thirty-sixth street.

The Toronto Skiff Sailing Club has elected the following officers: Com., H. M. Pellatt; Vice-Com., T. A. E. World; Capt., A. Skimmer; Hon. Sec'y, F. C. Paterson; Hon. Treas., W. E. Fensom; Hon. Meas., A. R. Taylor. Executive Committee—R. Livingston, E. Apted, E. Webb, J. Buchanan, A. Cook and Wm. Anderson. Sailing Committee, G. F. Bumbard, D. World, T. Sauer, J. Stoddard and F. Flannery. House Committee—Price, A. Livingston, L. Levy, W. Edwards and R. H. Northcote.

At the annual meeting of the Plymouth (Mass.) Y. C., on March 21, the following officers were elected: Com., N. Morton; Vice-Com., T. N. Eldridge; Fleet Captain, H. P. Bailey; Sec'y, A. L. Barnes; Treas., G. E. Benson; Meas., C. F. Bradford. Executive Committee, N. Morton, G. D. Bartlett, A. L. Bailey, W. T. Eldridge, A. O. Fay. Regatta Committee, N. Morton, T. N. Eldridge, A. O. Fay.

The Cedar Point Y. C. has elected the following officers: Com., K. C. Eno, M. D., Slip Imperia; Vice-Com., Edward Thorne, Slip Commodore; Sec., W. J. Thomas; Treas., Edwin C. Smith; Meas., O. J. Allen; Reg. Com., A. D. Sanford, O. J. Allen and E. C. Smith. The opening regatta will be sailed on May 31. The club may hold monthly races through the season.

Thomas A. Welch, of the tug F. W. Devoe, who was convicted of manslaughter in the second degree on Oct. 30, 1891, for sinking the yacht Amelia, and who was released on bail through the efforts of the Association of Licensed Pilots after being sentenced for five years, has been surrendered by his surety and re-arrested. It is alleged that he was about to leave for Chicago.

The steam yacht Emily, Jacob Pulver, of Albany, has been hauled out on Watling's ways for general repairs, including engine and boiler. On the morning of March 19 she was discovered to be on fire, and the inside and deck were badly burned before the flames were extinguished. Oriva, cutter, was lying on the ways beside her, but escaped without injury.

The Philadelphia Y. C. has announced the following fixtures for the season of 1893: Opening cruise, May 27. Annual regatta, Monday, June 5. Open regatta, June 17, open to 15ft. open boats. Club cruise, June 30 to July 13. Pennant races and sweepstake, July 19. Open race, all classes and all clubs, Saturday, Sept. 16.

The Cleveland Y. C. has elected the following officers: Com., George W. Gardner; Vice-Com., Percy W. Rice; Rear Com., W. H. Huntington; Sec'y and Treas., J. O. Gardner; Regatta Committee, W. P. Francis, William De Moy and Luther Allen; House Committee, P. P. Wright, E. W. Radder and C. W. Kelly.

At the annual meeting of the Olympic Y. C., of Brooklyn, on March 20, the following officers were elected: Com., Geo. Harkins; Vice-Com., F. H. Bohland; Rear-Com., James McNamara; Sec'y, R. Orr; Fin. Sec'y, A. Muller; Rec. Sec'y, James Burns; Treas., Wm. Dement; Meas., L. Holmstr.

The Carolina Y. C., of Wilmington, N. C., has elected the following officers: Com., Geo. W. Kiddie; Vice-Com., Geo. D. Parsley; Flag Capt., H. L. Fennell; Purser, J. McK. Cowan; Meas., D. McRae; Marshal, H. McL. Green; Governing Board, W. R. Barksdale, F. A. Lord and W. N. Harris.

The Southwark Y. C., of Philadelphia, has elected the following officers: Com., James Irvin; Vice-Com., J. M. Crean; Rear-Com., A. Bennett; Treas., Isaac Sharp; Sec'y, J. R. Stevens; Asst. Sec'y, Robt. Marsh; Steward, John Snyder.

The Mobile Y. C. is preparing to build a club house, and has appointed a committee to select a site. The club is greatly interested in a proposed race between the 40ft. Nepeunthe, of New Orleans, and the Annie, a club boat.

The final smoke talk of the Fall River Y. C. took place on Nov. 30, Mr. Jefferson Borden, the yacht designer, lecturing on the subject of the challenges and defenders of the America's Cup.

Alert, scht., J. N. Luning, arrived at Staten Island on March 24, in charge of Capt. Corkum. She left Bermuda on March 15, the whole passage from Gibraltar taking 44 days.

Hazard, sloop, of Newburyport, has been sold by Messrs. Moody and Pierce to G. P. Wadleigh, of Portsmouth. The yacht is well known on the Eastern coast as a racer.

Marguerite, scht., R. S. Palmer, will haul out at Lawley's this week preparatory to fitting out and will take part in the naval parade at Norfolk.

Gertrude, sloop, built for the late H. B. Pearson, has been sold to Arthur G. Earle, N. Y. C., who has retained her Zingara.

Sagamore, steam yacht, Edgar Scott, arrived at Matanzas on Nov. 11 from Nassau and sailed on Nov. 12 for Havana.

Comet, steam yacht, sailed from Savannah on March 21 and reached New York on March 25.

Rosalia, cutter, the Burgess 30-footer, has been sold by H. F. Smith to Frederick Ayer of Boston.

Chaos, cutter, the 30-footer designed by Mr. L. M. Phillips, has been sold to a Portland yachtsman.

Liris, cutter has been sold by C. W. Wetmore, to Walter Tuckerman, Seawanhaka C. Y. C.

Iroquois, schooner, returned to New York on March 21, from her Southern cruise.

Crusader, schr., Messrs. Swift and Goodwin, will be altered and overhauled at Reillon's.

The Audubon Y. C. has been admitted to membership in the New York Y. R. A.

Rifle Range and Gallery.

Cincinnati Riflemen.

CINCINNATI, O., March 25.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended. Conditions, 200yds., off-hand, at the standard target:

The Miller Rifle Club.

HOBOKEN, N. J., March 25.—*Editor Forest and Stream:* The reason given in last week's issue of *FOREST AND STREAM* by the "Eagle" for his statement some weeks ago to the effect that the Miller Rifle Club was about to disband, I think is a very weak one. The Newark papers he speaks of only advised the Miller Rifle Club to disband. Now as regards to our club shooting for money only, this is untrue, as the side bet they generally ask for goes toward paying for refreshments, fare, etc. Now we do not deny saying that in the event we would arrange a match with the Hudson River Club, should we accede to their request to bar our New York members from shooting in the match, we would not have such a strong team as we are known to possess. As far as that goes we can shoot a team against their of fifteen or twenty men a side if necessary. We did not refuse to meet them in a seven men team match for fear of them, but because we have never made it a practice to shoot less than ten men a side. Another thing, I will wager that I can name the party who gave the alleged information to the Newark reporter, and also that I can name the latter. It is at the most only an outburst of long-concealed jealousy at the victory of the Miller Rifle Club in the *FOREST AND STREAM* recent tournament, by which the Miller Rifle Club won the New Jersey championship. The reason Capt. Fischer refused to shoot a match with C. E. Bird a few months ago was given in *FOREST AND STREAM* at the time. Business would not allow him the time to shoot the match, and furthermore, Mr. Bird wanted to shoot three matches of 100 shots apiece for \$5 a side, then he turns around and says in *FOREST AND STREAM* that the stakes would be \$100 a side in case a match would be arranged. Kindly publish and oblige,

MILLER RIFLE CLUB.
(J. H. KRUSE.)

[No good is likely to come of prolonging this discussion. The one thing that the public cares to see is an actual standing up at the score.]

New York Central Schuetzen Corps.

WASHINGTON PARK, New York City, March 23.—The New York Central Schuetzen Corps opened its season shoot for the year 1892 in this park to-day. The attendance of the members was highly satisfactory to the board of officers. The shooting of Gus Zimmerman, upheld his reputation as a champion shooter. The champion medal went to Gus Zimmerman; the first class medal to Aug. Rohde; the second class medal to ex-Capt. C. F. Gennerich; the third class medal to H. Holsten; the fourth class medal to W. Schueweineiss.

Man target.—The best scores on this target were made by 1st, Aug. Rohde; 2d, F. Schueweineiss; 3d, Gus Zimmerman; 4th, C. F. Gennerich; 5th, F. S. Schroeder; 6th, F. E. Schmidt; 7th, F. Schmidt; 8th, A. Roos; 9th, J. Jordan; 10th, H. D. Müller; 11th, E. Berkman. Point target.—1st, Gus Zimmerman; 2d, F. Schueweineiss; 3d, H. Young; 4th, H. D. Müller; 5th, F. Schmidt; 6th, N. Brendel; 7th, G. Lowe; 8th, E. Berkman; 9th, J. Foersch; 10th, W. Fayer; 11th, W. Bergener; 12th, L. Groth. Ring target.—The best scores on this target were: 1st, F. Schueweineiss; 2d, F. Schueweineiss; 3d, H. Young; 4th, F. Schueweineiss; 5th, F. Schueweineiss; 6th, H. D. Müller; 7th, F. Schmidt; 8th, A. Roos; 9th, J. Jordan; 10th, H. D. Müller; 11th, E. Berkman; 12th, W. Fayer. W. Fayer, 14th, H. C. Ganneman; 15th, F. Luhrs; 16th, H. Holsten; 17th, E. Berkman; 18th, J. Lowe; 19th, L. Groth; 20th, W. Bergener. F. BAUMANN, Sec'y.

Bundes Fest and International Shoot.

The call for a meeting of delegates from the various shooting societies in and about New York, to take place on Friday evening, March 24, at 12 St. Mark's place, was responded to by representatives from a large number of the societies. The following societies were represented at the meeting: The New York Schuetzen Corps, New York Central Schuetzen Corps, New York City Schuetzen Corps, Zettler Rifle Club, Newark Shooting Society, Brooklyn Schuetzen Corps, Williamsburg Schuetzen Corps, Manhattan Schuetzen Bund, Albion Rifle Club, Austrian Schuetzen Corps, Hoboken Schuetzen Corps, New York Schuetzen Bund, Independent Germania Schuetzen Bund, Harlem Schuetzen Corps, Ex-Capt. Fred Groth, of the New York Schuetzen Corps, was chairman of the meeting, and in the absence of Mr. Gus Nowak, the secretary of the previous meeting, Mr. C. F. Roedel, secretary of the New York City Schuetzen Corps, was elected to fill the vacant chair.

After the minutes of the previous meeting had been read and adopted the object of the present meeting was laid before the delegates by the chairman. The previous meeting of these delegates had been called for the purpose of deciding whether the shooting societies of New York would respond to the invitation of the Chicago Schuetzen Verein to take part in the Columbia Festival at Chicago this summer or not.

The prospectus of the shooting programme, as submitted to the meeting, was in so far as the prizes went, very satisfactory, the prizes being liberal. But there was one feature of the programme that was decidedly unique. The prospectus proposed to have the festival open on a Sunday and close in the evening, and remain closed until the following Sunday, when it would open again as on the first Sunday, to be closed again in the evening, and thus it was proposed to carry on this festival through the Sundays of six months. This feature in the programme was a stumbling block from the outset, and a request was

forwarded to the Chicago Verein, to change the programme so as to have the festival held from one to three weeks continuously. The request of the New York shooters accomplished little, however. The only modification that the Chicago management would consent to was to add one day in the week to the programme, making two days per week, Sunday and Monday, and restricting the length of the festival to three months, from June 1 to Sept. 1.

The impracticability of holding a shooting festival for three months (two days per week) continuously was so apparent to all, that on motion of Mr. Schmitt, of the Manhattan Bund, it was decided that the New York societies would not participate in the Chicago festival.

The decision of the meeting in the Chicago matter having been settled, the next question to come up was, shall the New York societies form a new Bund for the purpose of holding a festival in New York in 1894.

This question brought Mr. F. Baumann, secretary of the New York Central Corps, to his feet. He advocated the forming of a Bund, and said that he could guarantee the united support of the New York Central Corps.

Mr. Baumann was followed by Capt. Rehm, of the New York City Corps; ex-Capt. Geb. Krauss, of the Williamsburg Corps; Capt. Offerman, of the New York Corps; Capt. Witte, of the Brooklyn Corps; President Ad. Ludwig, of the Manhattan Bund; these gentlemen were all strongly in favor of a Bund, and as the last speaker resumed his seat there were cries of "Que ion!" from all parts of the room; and upon the question being put to a vote it was unanimously decided to form the Bund.

It was also voted to send out another invitation, which, it is hoped, will reach every shooting society in the vicinity of New York. The next meeting will be held at No. 12 St. Mark's place, on Friday evening, April 21. This meeting will be of great importance, and upon its result will in a large measure depend the success of the Bund.

From now until April 21 it will be well for the societies to canvass the merits of all the prominent names who are likely to be brought forward for permanent offices in the Bund. The success of a Bund rests principally with its board of officers.

A Haverhill Score.

HAVERHILL, Mass., Feb. 18.—Inclosed please find target made by J. Busfield, of the Haverhill Rifle Club, in off-hand practice match. It was made on the evening of Feb. 16., at 25yds. range, in an improvised

Score: 9 10 9 10 10 10 10 8 9 9—95.

gallery where some of the members get a little winter practice. The rifle was a Maynard and ammunition the long rifle .22 cartridge, and the shooting was in presence of H. E. Tuck of the club.

J. P. M. GREEN, Sec'y.

Excelsior Rifle Club.

GREENVILLE SCHUETZEN PARK, Jersey City, March 22.—The Excelsior Rifle Club opened the season of 1893 with an informal shoot here this afternoon, weather conditions being anything but favorable for good scores, a strong southeast gale driving heavy banks of rain-laden clouds in from the ocean, which made the light very changeable and tricky. However, the shooters made the most of their opportunities and succeeded in putting up some fairly good scores.

The following scores are the results of the day's practice, 10 shots per score, possible 350, distance 200yds.:
W. J. Channing, Stevens 25-30.....19 21 14 21 21 24 31 22 25 22—210
L. P. Hanson, Ballard 38-55.....22 21 21 22 21 23 23 23 10 14—207
John Speicher, Ballard 38-55.....22 22 18 21 17 19 23 19 22 21—202
J. O. Boyce, Ballard 40-65.....23 22 21 16 24 17 21 18 23 14—199
James Hughes, Ballard 32-40.....15 21 19 16 23 18 17 24 22 19—194

Excelsior Rifle Club.

The regular weekly gallery handicap shoot of the Excelsior Rifle Club of Jersey City for the class medals was held at the club's headquarters on Tuesday evening, March 21. The following appended scores were made by the members in their respective classes:

J. Speicher, 243+6.....	249	W. J. Hennessy, 238+4.....	242
L. P. Hanson, scratch.....	246		
C. L. Pinney.....	230	T. Hughes.....	222
J. O. Boyce.....	229	J. Hughes.....	221
C. Thomas, 237+6.....	233	R. H. Duff, scratch.....	230

Port Chester Rifle Club.

PORT CHESTER, March 25.—The following scores were made at the regular weekly shoot of the Port Chester Rifle Club, 200yds., off-hand:
Rudd.....7 5 7 10 9 10 9 9 9—84
Smith.....7 8 10 8 8 8 9 5 7—80
Bell.....6 9 5 8 8 9 5 7 6—68
Boeger.....6 2 5 7 9 6 9 7 4—72
Kierian.....6 3 9 5 5 3 7 10 6—65
McNeil.....3 9 5 6 4 8 4 9 4—55

Easter Prize Shoot.

The German American Shooting Society will hold an Easter shoot, on the ranges of the society, at No. 12 St. Mark's place, on April 2 and 3. The programme is as follows: 24 prizes, open to all comers; 25-ring targets, tickets 35 cents each, or 3 for \$1; 3 shots per ticket; two best tickets to count for the first 10 prizes.
Prizes: 4 gold medals; one prize of \$12, \$10, \$9 and \$8; two of \$7, \$6, \$5 and \$4; three of \$3, \$2 and two of \$1. Premiums for the most rings made or tickets shot: 1st premium \$5, 2d \$4, 3d \$3, 4th \$2 and 5th \$1.

Turtle Bay Rifle Club.

A FEW members of the Turtle Bay Club met at their headquarters, in Fort-second street, on Thursday evening, March 23, for regular practice. The following scores were made by the members competing:
10 shot scores, possible 350, distance 200yds.:
G. E. Jantzer.....245 245 245 W. Steine.....225 225 223
H. W. Tamm.....230 234 229 J. Oberle.....220 229 226
J. Ochs, Jr.....239 242 240 G. J. Gillig.....231 236 211
H. Walther.....234 243 244

Winans Trophy.

MR. THEO. E. BUCH, of Newark, N. J., has written to this office formally withdrawing his challenge to shoot for the Winans trophy against W. E. Petty, the present holder, naming business obligations as the reason for this step. Mr. Beck adds: "I will withdraw and make room for the other gentlemen, and later on I will enter into the competition." Mr. Abe G. Heintz, of New York, whose challenge is next in order, will be the next contestant. The match will take place at 12 St. Mark's place, New York, Thursday evening, April 13, and some good shooting may be expected.

Zettler Rifle Club.

THE Zettler Rifle Club held its weekly gallery shoot at headquarters, 210 Bowery, on Tuesday evening, March 21. The following appended scores were made by the members competing for club prizes, 10 shot scores, possible 350: M. Dorrier 245, C. G. Zettler 245, R. Busse 247, Henry Holges 247, G. W. Plaisted 246, Fred. Schmidt 245, B. Zettler 244, B. Walther 243, Gus Nowak 243, M. B. Engel 242, F. C. Ross 240, J. Heintz 237.

Trap-Shooting.

Communications for publication relating to business should be addressed to the *Forest and Stream* Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

Oct. 19-20.—West Newburg Gun Club fall tournament, at Newburg.

DRIVERS AND TWISTERS.

The live bird tournament of the Interstate Manufacturers' and Dealers' Association to take place at Dexter Park, Long Island, next Wednesday, Thursday and Friday, promises to be one of the big events of the season. A large number of New York, New Jersey and Pennsylvania shooters have guaranteed to be on hand. The grand American handicap, to the entries for which the Association will add \$300, will have a big field of entries, Mr. Penrose being confident that the number will exceed 50. With 50 entries the first money will be \$325. Entries will not close until the shoot begins. It must be remembered that the handicaps have been reduced to \$25. The handicaps will be from 32 down to 21yds. The boundary will be 21yds. from each trap. Ten bore guns are barred. Twelve-bore guns must not exceed 8lbs. in weight. In all except the above particulars modified Hurlingham rules will govern. To reach Dexter Park, take Brooklyn Bridge, Union Elevated Railroad to Alabama station, East New York, then electric cars to grounds, or via Twenty-third street or Roosevelt street ferries.

At the supper shoot of the Onondaga County Sportsmen's Club at Maple Bay, March 19, the teams were captained by George Mann and A. C. Ginty. 30 birds were used. The score stood: Captain Mann's team—G. Mann 23, G. Luther 23, D. M. Lefever 27, E. D. Hudson 22, H. L. Lansing 21, A. E. Spangler 21, E. D. Robins 16, C. Dugard 23, C. Gardiner 12, total 198. Capt. Ginty's team—A. C. Ginty 24, C. Mowry 31, D. Walters 22, H. Ayling 20, C. Howell 12, W. E. Hookway 17, J. Cool 23, Wm. Prellie 13, W. S. Barnum 24, total 176. W. T. Barnum, of the Maple Bay Hotel, provided the supper, and a good one it was.

The opening shoot for 1893 of the Connecticut Trap-Shooters' League will be held on the Park City Gun Club grounds, at Bridgeport, tomorrow, and the prospectors expect a big turnout. The main event will be that at 30 targets per man, for members of league clubs. There are twelve entries in all on the programme, eight at 10 targets each, three at 15 each and the league shoot. All except the 30-target event and event No. 5, which is a merchandise shoot, will be under the "Jack Rabbit" system. Targets will be 2 cents each.

The Roxborough Gun Club and the Forest Gun Club shot a match at Roxborough, Pa., on March 18, the teams comprising eleven men each and each shooting at 25 targets. The scores: Roxborough—Willard 24, Hoagland 20, Taggart 18, Cowan 17, Brown 17, Egan 16, Free 16, Heffelfinger 16, G. Bloduin 14, A. Weir 13, Evans 7, total 178. Forest—Mills 22, Greenland 22, Hothersall 20, Wetzel 20, Rowencroft 16, Bender 16, Morrison 15, Van Nort 14, Riotti 13, Foster 10, Smith 9, total 177.

All those wishing to shoot in the Grand American Handicap, which takes place next week will please make their entries at once. This will be by far the largest shoot ever held in America, and the man who is fortunate enough to capture one of the three purses will have velvet for the entire season. The entries will close at end of first round. Shooting commences at 10 o'clock.

At the monthly badge shoot of the Wawaset Gun Club, of Wilmington, Del., the scores out of a possible 25 targets were: H. Buckmaster 22, I. Wright 21, R. Miller 21, E. Camp 19, G. Huber 19, H. Miller 18, F. Martin 18, C. Springer 17, J. Caldwell 17, J. White 16, E. Melchoir 14, J. Huber 13.

The Central Gun Club, of Duluth, Minn., recently organized with a charter membership of 25. The following officers were elected for the ensuing year: J. W. Nelson, President; A. Harvey, Vice-President; H. L. Heisler, Secretary; L. A. Gunderson, Treasurer.

The Mountain Brook Gun Club, of Lykens, Pa., will hold a ball in Odd Fellows' Hall on April 7. On the same day a shooting match will be held, and the gun clubs of Tower City and Williamstown will be present.

H. A. Penrose was in town last week looking after Keystone target and Interstate Association business. He is well and hearty and confident of a big season for Keystone targets.

The annual meeting of the Garfield Gun Club, Chicago, will be held in the club room of the Sherman House, Saturday, April 1, at 8 o'clock. P. M. A full attendance is requested. Geo. H. Brown, Sec'y.

John Dixon, a veteran gunner of Lawrenceville, Pa., recently defeated Ed Hickey in a 15-bird contest, killing 14 to Hickey's 12. The match was for \$50 a side.

The Wawaset Gun Club, of Wilmington, Del., is willing and anxious to pit a team of twenty of its members against a like team from any club in the State.

President Eaton has presented a gold medal for competition to the North Montana Fish and Game Protective Association.

C. W. Delp and C. H. Shappell, both of Cressona, Pa., will shoot a 25-bird match at the Long Run Hotel on April 4.

Harry Thurman, better known perhaps as "Old Father Time," was looking up friends in New York last week.

Whitehall, N. Y., has a new rod and gun club, of which W. B. Travis is president.

The Laughlin Gun Club, of Wheeling, W. Va., has begun its season's shooting.

Don't forget the Interstate at Dexter Park, Long Island, April 5, 6 and 7.

The Wilmington (Del.) Rod and Gun Club is looking for new grounds. The Diamond Gun Club, of Dayton, O., has forty members.

O. H. TOWNSEND.

off, and the one of them who kills most gets first money and the other nothing or they divide first money. Ans. A. is right. In case of a tie, if an agreement to divide is not reached, the tie is shot off, and no one but the winner is entitled to a share of the prize money. This rule is one established by long precedent.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because
the author gives explicit and intelligible directions for preparing such dishes as he has him-
self actually tested in camp and on a cruise. This is just where the recipes differ from the
aburdly impracticable dishes given in some so-called camp cookery books. The cooking
outfit is described, and numerous hints on camp economy add to the value of the work.
Cloth. 98 pages. Price \$1.00.

THE ART OF SHOOTING.

An Illustrated Treatise on the Art of Shooting, with extracts from the best authorities.

By CHARLES LANCASTER.
London, 1891. Price \$3.00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz.: the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

MESSINGER, Proprietor.

NIMROD HALL,
Bath County, Va.

OPENS APRIL 1ST FOR TROUT FISHING.

EDWARD A. WATSON, Proprietor.

At the New Fishing and Hunting Resort

ATTEAN LAKE

You can get more game and larger trout than anywhere else in northern Maine. No stage or buckboarding. First-class table, new camps, boats and canoes. Only 19 hours from New York; 15 hours from Boston. Write for circular giving rates, etc., to

ITHAMAR HOWE, Prop., Moose River, Me.

CAMP PHENIX

At Garden of Eden, Nova Scotia,

will be open for sportsmen and hunters from May 1 till end of season. No better trout fishing or moose hunting can be found in Canada. Forty lakes with finest of trout fishing within a radius of five miles of the camp. Write for circulars.
M. SJOSTEDT, Garden of Eden, Nova Scotia.

GOOD SHOOTING at AVOCA, N. C.

Notwithstanding past few weeks of extreme weather, our covies are in good condition and plenty of birds. Turkeys plenty. Nineteen hours from New York.
W. R. CAPEHART.

GRIZZLY BEARS.—SHOTS AT THIS GAME guaranteed in May and June. Saddle, pack and camp outfit furnished. Terms and references on application.
SCHULTZ & JACKSON, Piegan, Montana.

A BLANK DAY.

BUT IT WAS NOT ON THE

ILLINOIS  CENTRAL

RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbounded woodlands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

A. H. HANSON,

Gen. Pass. Agent, Illinois Central R. R., Chicago.

N E W F I S H I N G F O R H A U N T S
W F I S H I N G H U N T E R S

In Montana, Idaho, British Columbia and Washington, a wide territory just opened to easy access by the completion of the GREAT NORTHERN RAILWAY from St. Paul and Minneapolis to Puget Sound.

The New and Short Transcontinental Line

The splendid fishing and hunting grounds of Minnesota and North Dakota are also reached from the lines of the Great Northern.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, APRIL 6, 1893.

VOL. XL.—No. 14.
No. 318 BROADWAY, NEW YORK.

DELMONICO PAYS \$450.00.

THE end of the notorious Delmonico woodcock case has been reached, and it is a triumph for game protection in this State, for Game Protector Kidd, for the sportsmen of New York, and for FOREST AND STREAM.

The Delmonico concern, for the offense of serving woodcock out of season in July, 1890, have settled up by paying a fine of \$450.

As reported last week, the case was set for trial Wednesday, April 5. But when Dr. Kidd, with his witnesses, went to the District Attorney's office yesterday, he was met by Assistant District Attorney Townsend with the same old story that the case had been set for the day but would not be reached until some time in the future. As a matter of fact it was not on the calendar for the day at all, and never had been.

Thanks to the persistency of Protector Kidd acting on the suggestion of the FOREST AND STREAM, Judge McCarthy of the City Court promised that it should be brought up to-day.

At last the Delmonico woodcock suit and the unwilling officials of the District Attorney's office had been pushed to the point where the case must be tried. The July woodcock restaurant concern's counsel were advised that it could not be postponed beyond to-day. Then they did what we have always told Dr. Kidd they would do whenever they should be convinced that District Attorney Nicoll and his subordinates really meant business—they settled up, and were not slow about it either. They paid down the cash, \$25 per bird for eighteen birds, \$450 in all.

There was nothing else for them to do. Dr. Kidd has never lost a case, and has told us that this was the strongest case he ever had. Not only could he swear to having found the woodcock in Delmonico's in that July of 1890, but there were present yesterday Messrs. Odell and Van Nostrand, of Newburg, who were with him at the time. He had also two of the heads of the Delmonico birds served to him, and there were present yesterday Messrs. D. G. Elliott, of the American Museum of Natural History; Wm. A. Dutcher, of this city, a well-known ornithologist, and Mr. Wilnot Townsend, to identify these as heads of American woodcock. The case was perfect. There was no good reason under heaven, except only its culpably shiftless mismanagement by District Attorney Platt, of Westchester county, and District Attorney Nicoll, of New York county, why this final result should not have been reached months and years ago. That it has been reached at all is due to the perseverance and tenacity of Protector Willett Kidd and to the activity of the FOREST AND STREAM. Without the agency of this journal the Delmonico woodcock case would have been lost sight of long ago.

When we began this fight, it was said by more than one, who had had experience with these affairs, that we never would accomplish what we had set out to do; that Delmonico would never pay his fine. But he has paid it.

That justice has at length been meted out to the Fifth avenue purveyor of callow game birds out of season is a distinctive and honorable triumph of sportsmen's journalism. We congratulate Dr. Kidd and the sportsmen of New York and of the country that after all these months the final victory has been won.

The result is a demonstration of the fact that with the vigilant co-operation of such a journal as this, game and fish suits may be forced to trial and offenders, however rich and influential, may be punished, in spite of the tortuous ways of district attorney offices. And it is a result for the attainment of which the FOREST AND STREAM may always be depended upon to do its full part.

"DANVIS FOLKS."

THE characters who play their parts in Mr. Rowland E. Robinson's new series of chapters, "Danvis Folks," will need no introduction to the many readers of FOREST AND STREAM, who six or seven years since followed with such delight and interest the records of rural life of fifty years ago, in those remarkable and admirable papers, "Uncle Lisha's Shop," and "Sam Lovel's Camps;" nor to those who possess the two notable volumes into which the chapters were gathered. That these simple hunters and fishermen will be greeted with a cordial and sincere welcome we have no doubt. Indeed this has already been assured by the numerous letters received since our announcement of the third series by Mr. Robinson. For the benefit of new readers to whom these old-fashioned Vermont folk are strangers, it may be told that Uncle Lisha was a shoemaker and the little shop was the exchange where his gossiping, story-telling neighbors met to discuss news, and, as they phrased it, to swap lies. Here came Sam Lovel, the hunter; Joseph Hill, son of the veteran Josiah Hill, whom Arnold had aided in taking Ticonderoga; Solon Briggs, a man addicted to the use of great and heretofore unprinted words; Antoine Bisette, an expatriated hero of the Canadian rebellion; Pelatiah Gove, the youngest of the frequenters of the place, and occasionally others who need not be named.

After long yearning for their only son, who had married and settled in far-off Wisconsin, Uncle Lisha and his wife sold their house and shop and little farm and went to live with their first-born. But the new home did not prove a happy one, nor the prairie soil congenial to aged trees that were nourished in the stony earth of the hills; and now, at the time of the opening of this new series, overcome by a longing for old Vermont, they have set out on their return to the Danvis home. Hither they come, and having made their bows and curtsies to you, these kindly, homely folk of fifty years ago most earnestly desire that they may not have estranged old friends, but may have made some new ones when the candle shall be blown out and the shop be closed for the long night.

MARRYING INTO THE TRIBE.

CERTAIN of the newspapers came out the other day with a story of the discovery of a great wall somewhere down in southwestern Texas, said to rival in immensity the great wall of China. In due time we shall learn that this is a figment of the "fake"-maker's fertile fancy. But as most sportsmen, who have been shooting in Maryland, know very well, there are Chinese walls in profusion there, and the curious feature of their existence is that no one appears to think them anything strange or out of place in this period of the union of the United States. A Maryland correspondent sends us some particulars of them, which are printed elsewhere, as an illustrative commentary upon our remarks the other day respecting the un-American nature of non-resident discriminations.

These grotesque Maryland statutes have certain comical aspects. One pointed out by our correspondent is that a duck, on its way from the North to the South, may at a certain point in the air, in its passage over Maryland waters, be lawfully shot by one citizen of the State, while another citizen of the same State, but aiming his gun from across a county dividing line, may shoot the same bird at the same place and at the same instant, only at the risk of forfeiting \$50 or going to jail.

Among the non-resident laws of thirteen several Maryland counties is the highly-complicated statute of Dorchester, which we commend to Mr. Rowland E. Robinson, or some other equally ingenious writer of stories flavored with a dash of romance and the incense of sporting brands of gunpowder. Under the working of this special law this chain of events would be quite possible: A Vermonter, say Sam Lovel from Danvis, a stranger in Maryland, is caught shooting partridges (which are ruffed grouse in Vermont, but are quail in Maryland) in Dorchester county without first having taken out his \$5 license; he is arrested, haled before the local justice of the peace and convicted and fined \$25. Not having the

money to pay his fine he is about to be led away to the lock-up for ten days' imprisonment, when he recognizes in the signature of the justice affixed to the commitment paper the name of a Marylander who is a cousin of his Danvis deceased wife's sister's husband; and forthwith the Yankee claims his liberty, asserting himself to be "a connection by marriage of a *bona fide* citizen of said county," and as such, according to the letter of the statute, exempt from the non-resident shooting law, its pains and its penalties. The facts of the connection by marriage being proven to the satisfaction of the magistrate, the prisoner is not only discharged, but with true Maryland hospitality is invited to accompany the justice home and puts in a week of partridge shooting, at the close of each day's sport fervently blessing his deceased wife's sister for having married a *bona fide* resident of Dorchester.

There was once a time when a trapper or fur trader in the Indian country might find it advantageous to marry into the tribe. Dorchester county, Maryland, is perhaps unique as the only division of a civilized country, where, to assure himself immunity from imprisonment for partridge shooting, the non-resident sportsman would do well to connect himself directly, or through his sister, or his cousin, or his aunt, by marriage with some of the *bona fide* natives.

ANIMAL PORTRAIT SUPPLEMENTS.

WE print to-day the fourth of a series of five American animal portraits by Mr. Ernest E. Thompson. These are given as full page supplements, with the first issues of the months as follows:

Jan. 5.—THE WOLF.
Feb. 2.—THE WHITE GOAT.
March 2.—THE COYOTE.
April 6.—THE ANTELOPE.
May 4.—THE FOX.

The dates of the former series (of which copies can be supplied) are as follows: Sept. 8, 1892—The Panther. Oct. 6—Ocelot. Nov. 3—Canada Lynx. Dec. 1—Bay Lynx.

SNAP SHOTS.

MR. WALTER L. GILBERT, of the Old Colony Trout Ponds, Plymouth, Mass., is made of good stuff, and we admire his spunk, much as we believe him to be showing it in a hopeless cause. Having failed to secure from the Massachusetts Legislature a revision of the present law, by which he might sell in close season his cultivated trout, Mr. Gilbert has now set about the task of testing the constitutionality of the statute, which, as he puts it, "declares a business that is legal for a portion of the year unlawful during the rest of it." He has sold trout out of season, has caused himself to be arrested for this, and announces that he will carry the case up to the Supreme Court. Having the fullest confidence that the law will stand the test, we sincerely trust that Mr. Gilbert may live to fight this thing through, and may be blessed with perseverance to stick to it to the bitter end. There have been so many unfulfilled pledges to carry game and fish cases up to the courts of last resort that we have become decidedly skeptical in such matters.

The Governor of Maine has appointed Mr. T. H. Wentworth, of Bangor, to fill the vacancy in the Fish Commission caused by the death of E. M. Stilwell. The new commissioner, we understand, represents the game interests rather than those of fisheries, and as Mr. Stanley is chiefly interested in fish the Commission is in this respect well balanced. The appropriation for the Commission has been increased this year to \$12,500, with penalties added amounting to \$3,000 or \$4,000, and in this respect the Commission is in better shape than ever before.

We would like to see Gov. Flower name as one of the new forestry commissioners, Gen. D. H. Bruce, of Syracuse. There would be an appointment of the right man to the right place. Gen. Bruce is deeply interested in the Adirondack Park undertaking and in the subject of forestry. As a commissioner he would render intelligent, capable, and public-spirited service.

Maine sportsmen repudiate the non-resident license fee project; they declare that it did not come from them and does not represent their attitude. Indeed, no one appears to know clearly where the brilliant scheme originated. Now that the Legislature has adjourned without acting on the matter, let us hope that we have heard the last of it there.

The Sportsman Tourist.

DANVIS FOLKS—I.

Two Returning Pilgrims.

A HOMESICKNESS that time could not cure nor alleviate, became so insufferable to Elisha Peggs and Jerusha his wife, that after enduring it for three years, they bade farewell to their son and daughter-in-law and to the grandchildren who had been the strongest tie to hold them to their uncongenial Western home, and set forth on the long journey to their native town of Danvis.

At first they voyaged on the Great Lakes, beset with the alarms and qualms that would attend such old inland bred folks, then with greater comfort on the Erie and the Champlain Canals. Their journey on the canal packet brought them frequently into a stir of busy life, wonderful and bewildering to their unworried wisdom, and often had a pungent flavor of trivial incident and accident not always pleasant in present experience, yet always accounted of future value in the story to be told to the untraveled home folks whom they were soon to meet. At intervals, they made brief passage through commercial towns whose stir and bustle of traffic set their quiet brains in a whirl and rang in their ears long after their boat was again gliding through the quietude of farms and woodlands.

Now, they were voyaging more pleasantly, beyond the turmoil of towns, the bickerings of rough-mannered boatmen, the snarl imprecations of imish drivers and the pain of seeing jaded horses always before them on the tow path, to whose toil they were adding a moiety of burden. A lively and industrious little steamer that never gave sign of weariness was now towing the long, narrow canal packet out of the marshy windings of Lake Champlain's upper channel into widening waters. A restful home feeling began to come upon them with a sense of proprietorship in the landscape. For here on their right hand lay their own beloved Vermont, with its eternal mountains and its homesteads grown gray in the possession of generations of one name, and bawling teamsters with plodding oxen plowing snugly fenced fields, Morgan horses trotting along the highways, and flocks of merino sheep dotting the tawny pastures with flecks of amber and streaking them with devious lines of pathway often tending toward gnawed and nibbled stacks that looked like immense mushrooms growing in the dun fall fed meadows. Such familiar scenes, thinly veiled in the ethereal web of an Indian summer day, gladdened their homesick hearts as they sat on the deck.

The tide of travel was setting westward, and in its feeble backflow this old couple found themselves with but few companions, and these not very congenial ones. They were all people who had not known their people. Most of them were returning from spying out the land of promise, to sell their gear at any price and remove their families to the region of unlimited possibilities, which they were continually vaunting, while the impossibilities, except in the direction of poverty, of their New England birthright, were as continually set forth, to the disgust of Uncle Lisha's loyal Yankee soul.

"It's a dirty bird 'at fauls his own nest," was his reply to their disparagement of his beloved stony soil. "I druther hev the little chunk o' Vermont sile 'at's goin' to kiver my ol' bones 'n tu hev the hull splatteration o' yer West."

"There aint room enough 'mongst your hills to lay you down level," said a dapper little man who was the acknowledged wit of the company.

"Wal, then, let 'em stan' me up in a post-hole. I druther hev the top on 't 'an a hull perary. Don't you tell me baout your fever 'n agny, flattened-aout humsick West, I ben there. Go tu that dumbd pancake of a country 'f you wanten, but le' me stay nigher to God A'mighty's maountains."

"I n-er see sech a harnsome country," declared one enthusiastic pilgrim, "why, I rid more'n a hunderd mild an' never see one hill higher 'n a hay stack. An' sech crops o' corn an' wheat. More on one acre 'n you c'n git on five here."

"Honh," Uncle Lisha snorted contemptuously, "As ef it was a vartu in a country to be so flat, water do' know which way tu run. Blast the crops, the ha' no heart in 'em 'f they be big. I druther hev a peck o' Burton, yis, er Tuc-et, than a bushel o' their dumbd hoss-tooth corn, wi' no more taste in 't 'n moonshine. I tell ye, the's one crop raised 'mongst these maountains 't can't be beat, 'n that's stiddy, ol'-fashioned hum-bidin' men an' women. Not but what they're in su-h a ternal hurry it makes me tired, an' the everlastin' flatness makes me humsick."

There was also a land speculator, in shabby clothes and a pervading uncleanness, with a portfolio of plans of unbuilt cities, which he persistently spread before every eye that would follow his dirty, talon-like forefinger as it pointed out the most desirable lots and traced the lines of traffic that were surely to be established. "I'll guarantee to make any man rich, yes sir, forty men rich, if they'll follow my advice and buy as I tell 'em."

"Good airth an' seas," cried Uncle Lisha, returning his spectacles to their steel case and shutting it with a spiteful snap after a brief inspection of the maps. "Why in thunder don't you make yourself rich, an' buy you some store clo's an' a hunk o' soap an' wash ye, hey?" And this severed their intercourse.

Presently the hoary ruins of Ticonderoga confronted them on the western shore, and it was as if its self-vaunted hero, Granther Hill, had come to welcome them to the dismantled fortress. Then Chimney Point and Fort St. Frederic's shattered walls swung apart before them and they passed into the broad expanse of calm, blue water that between pleasant shores stretched far away into the pearly haze, where rock-anchored, purple islets and white sails of laggard craft hung alike moveless on the undefined verge of lake and sky. Then far away to the north-east, silently welcoming them, in ghostly grandeur, the landmarks of their State, Mansfield and Cane's Hump, towering through the film of haze, and what warmed their hearts still more, the lesser peak of their own Danvis mountain in whose shadow they had dwelt so many years.

Now the ragged escarpments of Split Rock Mountain began to respond with the sharper, quicker echoes than the low shores had given to the regular tireless pant of the steamer. The sun was low in the west and they

beheld the miracle of rapidly-recurring sunsets as the red, rayless disc sank from view behind the bristling silhouette of a pinnacled peak, then emerged in the rugged scoop of a gorge, then sank and rose again, and at last refreshed their long weariness of prairie life with the abiding and deepening shadows of the mountain.

Then the steamer turned eastward and entered the river, passing the peaceful grass-grown ramparts of Fort Cassin, and began plowing with prow and headlight, her devious way through the dark water and the thickening shadows. The incessant thunder of the falls came in a low murmur to the voyagers' ears, until it swelled to a sullen roar, and at length the lights of the town shone down from the hill, and beacon lanterns on the wharves glittered across the black eddies and white foam-streaks, and then amid much confusion and shouting of orders from steamer, canalboat and shore, the packet was got into her dock. The two old people eagerly scanned the illuminated group of bustlers and idlers for some friendly face. Over and over all the faces their eyes went again and again, but found not a familiar one nor one that brightened at sight of their own.

"Good airth an' seas," cried the old man in sorrow and vexation, "haint the one 'on 'em 'at cared 'nough 'baout us tu come so fur tu meet us? I wisht I was back in West-constant, I du."

"Oh, father, you don't nuther," said Aunt Jerusha, ready to cry with disappointment, herself. "They haint never got aour letter, I know they haint."

"Mebby," he admitted, "but I don't see haow they c'd help gettin' ont. I tol' the post-office feller tu send it right stret along."

"They haint never got it," she reiterated, "fur 'f they hed, Samwel er some on 'em would ha' ben here. An' who knows but what they're all sick er suthin," she suggested.

"Sho, 'taint no ways likely 't they be, the hull caboodle on 'em all tu oncte," he answered. "Wall, anyways, the' haint no use o' s'misin' er tewin', we'll git there some way, tu-morrer. Le' me see, haint tu-morrer Tuesday? An' that's the day the mail goes tu Danvis, an' we c'n gwup in the mail wagin ef the' haint no other way turns up. Come, le's go 'n' git ontu aour shelves oncte more an' go tu sleep. It mus' be as much as ha' past eight."

So saying he turned to lead the way below, casting as he went a last look on the group still lingering about the wharf. The change of position brought into view a figure which before had not caught his eye, but now suddenly arrested and held it. It was a man rotund of form and feature who, in the background, leaned against the side of a stor-house, while he turned his slow, wondering gaze now on the steamer, shrilly singing herself to sleep in her berth, now on the almost deserted packet. Uncle Lisha stood still a moment, then caught his wife's arm with one hand while with the other he pointed to the newly revealed figure.

"Good airth an' seas, Jerushy, ef there haint Jozeff Hill," he cried joyfully, and in the next breath roared so loudly that all eyes were turned toward him, "Jozeff, Jozeff Hill, come here!" while Aunt Jerusha, too shaken with surprise and joy to speak, could only beckon frantically.

Hearing his name called, Joseph Hill stepped hesitatingly forward a little, then stared at him on either hand and behind, till at last, with dawning recognition, he became aware of the two figures on the canal boat and quickened his steps. "Why, if 't haint, no 't haint nuther, yis, 't is tuther, Sam Hill! Uncle Lusher an' Aunt Jerushy!" he said in bewildered joy, and then was shaking hands with both old friends at once across the low gunwale of the boat.

"Git aboard, git aboard," cried Uncle Lisha, changing the hand-shaking to a lusty pull, "an' then we c'n be kinder soci-rible."

"Wal, no," said Joseph, carefully examining the narrow space between the boat and the wharf, "guess I don't need no board; seems 'ough I c'd step right on 't the boat. It won't tip, will it?" he asked as he stepped carefully on deck. "An' naow, where did you come from an' why didn't you seddaown an' write you was comin' fore you started so 's 't some on us could ha' met you, hey?"

"Why, haint you met us, Jozeff? Wal, what more's wantin'? But you don't say Samwel never got nary letter?"

"Nary letter, that is tu say, not 'thin tew three mont's; I d' know, mebbey taint more'n tew mont's, an' it's on'y jest a happen-so 'at I'm here. I come daown wi' a lhud o' saved spreuce shingle fer Morrison, an' 's long 's I hed tu stay over night and hedn't nothin' tu du, thet is, nothin' perticlar, I thought I'd come daown an' kinder see the shippin' an' things. No more idee o' seein' you 'an I hed o' seein' wal, Noer an' his wife on the ark, I don't b'lieve I hed. But I'm gladder tu see you'n I would have, a dumb sight. An' now 'f you c'd ride on a hay-riggin', I've got buffalos an' blankits, I c'n take you right hum tomorrer."

"Good airth an' seas, we c'd ride on a stubboat 'at was goin' tu Danvis, an' glad o' the chance. But le's go daown int' the cabin where it's more comfortable."

"Why, yis," Joseph assented, "if you'd ruther go daown sullen 'n tu stay on the ruff, I'd jest 's livs, I do' know but I had, though I du kinder spleenagin gittin' nigher the water. I got sunk in a o' she boat oncte, clear the hull len'th o' my laigs."

"Where on airth did you find water deep enough?" Uncle Lisha asked with a chuckle as he glanced at his friend's short nether limbs and led the way into the cabin. The strange interior with its tier of berths, its many chairs and its long vista of carpeted floor, filled Joseph with astonishment.

"An' haow be you?" he inquired when he regained coherent speech. "Do' know but I ast you but don't seem's 'ough I did. Fact on 't is, meetin' you so unexpected put me all about so I didn't scarcely know which eend my head was on."

They in their turn asked him much faster than he in his slow, undecided way could well answer, first, concerning the welfare of every friend and neighbor, and then, what events, public and private, had lately stirred the placid current of Danvis life. So they sat talking for an hour, when an irrepressible drowsiness made them aware it was late bed-time, and Joseph arose to go, still talking as the two groped their way to the deck. Uncle Lisha saw Joseph safely on the deserted wharf, where he lingered to repeat his promise to come for them with his wagon "jest as soon arter breakfus as he could hitch up," and

then plodded away to his lodgings. The sounds of human voices and footsteps had dropped out of the night and the continual dull thunder of the falls alone pervaded it as the old voyagers climbed into their berths for the last time and presently fell into a more restful sleep than had come to them for many a night, for now they were almost home and assured of the well-being of their friends.

ROWLAND E. ROBINSON.

BEARS IN THE CYPRESS.

It has long been my desire to kill a bear. Bear hunters say it is great sport; and that after having killed one you will want to kill another, and still another, until you have become renowned as a bear hunter.

Bear hunters also say that, except in rare cases it is not dangerous sport after the black bear, which we have in the South, and that after you have become an expert you can go to bruin with intrepidity, and standing by his shoulder, throw your arm across his neck and stab him on the opposite side. A sportsman prefers to stab a bear on the off side, so that when the bear throws his head to the side from whence the pain proceeds, he finds nothing but vague emptiness to crunch between his strong jaws.

My first opportunity to kill a bear was not a very good one. I was with Bill Sellers, who was considered about the best still-hunter in the lower end of the Mississippi Yazoo-Delta Swamp. We were up on the Big Sunflower River, about 120 miles above Vicksburg; and on that particular day were looking for cypress timber. We were traversing a basin, circular in shape, and about eighteen miles around. This basin was, much of it, very low and marshy. It was entirely surrounded by cane. Between the cane and the low ground was an open swamp, with some vines and much palmetto. It was in this palmetto that we were walking from necessity, the cane on our left being almost impenetrable, and the low swamp on our right being too boggy for comfortable walking.

It was a pretty large body of woods, and we had slept in it one night away from our snug camp, having been lost. It was my first sleep in the woods as a lost man. Sellers said it was not his first, and he seemed to be less annoyed by it than I. I did not enjoy it all. The fact of our having spent one night under such circumstances added somewhat to our anxiety concerning this eighteen-mile circumscribed basin. In fact, we were not so sure that the basin was circular and surrounded by cane, though we had surmised as much, and were proceeding upon that theory.

The points of the compass and the timepiece were closely watched as we proceeded rather slowly through the thick palmetto and around or over numerous logs, clumps of vines, etc.

We had left camp early in the morning and expected to consume the entire day in making the circuit. According to theory, at noon we should be half-way around and traveling in a course about at right angle to the direction to camp. If we were not pursuing about such lines, there was a disposition on our part to get demoralized and take the back tracks. And Sellers was just about as keen in this idea as I was, notwithstanding he did not mind getting lost and sleeping on wet chunks by a smoky fire!

But the basin made the turn according to theory, and by 1 o'clock we were bending back toward camp, where there was a snug bed, savory provisions and other comforts. It was half-past 1 o'clock.

"What you say that is?" Thus spoke the old bear hunter, pointing to a large oak tree with two stout wooden pins about 2 ft. above the ground and 1 ft. horizontally apart, and projecting about 1 ft.

I looked at the tree, cogitated and said it was an oak tree with two pins in it.

"But what were those pins put there for?"

I gave it up.

"I'll tell you. Five years ago I bored two holes in that tree with a 2-inch rafting auger, made those pins and drove them in there, then got some sticks and made a seat. That night I sat there an' killed a large bear."

"Well, how did you know that a bear would be there on that particular night?"

"Oh, that was easy enough. Just out there 10 yds. or so from the tree I had found his 'stepping path.'"

"Stepping path! What's that?"

"A stepping path is the path the bear walks in. He travels at certain times in the same path, and is so particular about it that he even steps accurately in the same tracks he made the first time he went along. In constantly doing this, often when the ground is wet, the foot prints get to be 3 or 4 in. deep. Generally his stepping path is made as he goes from his bed to his water hole. As a rule he likes to sleep in dense cane, but as the cane grows on ridges he can get no water there, and must go to low land for a drink. I figured that this old chap slept in that brake over there, and that he drank at a clay-root over toward the low swamp."

"Clay-root, what's that?"

"A clay-root is a tree that has fallen by the root. The hole thus made in the ground by the roots and dirt taken from the ground is generally full of water even in the driest weather."

"Oh, that's it, is it? Then Mr. Bear goes down to the clay-root to quench his thirst?"

"That's what, and I followed the stepping path down through the woods a piece. The tracks went no further, and I just said to myself, 'Old fellow, you are enjoying a fine nap, no doubt, just now over there in the cane, but I'll see you later.' So I prepared that seat, being careful to get it to the leeward of the animal when he would come along, for rest assured that the bear has a strong smell. He depends on his nose almost altogether, and scarcely believes his eyes at all. Why, if you stand perfectly still a bear will come sometimes quite close to you, but let him get a scent of you, however faint, and he will lumber off through the woods at a great rate, making as much noise as a yoke of oxen on a stampede over the same ground."

"And, Sellers, you say you killed this particular bear?"

"Well, I sat there and got tired waiting, but about 10 o'clock I heard him making a little noise back there and I knew he was coming, and got ready. Just as he came opposite me, in that open space there, his huge form loomed up and looked larger than it really was. He was walking along, and it was almost too dark for a sure shot, there being no moon, and only starlight. I made a quick shot, when the beast staggered and fell just behind that large sweet-gum you see. I heard him cry in a plaintive way and knew that he was mortally wounded."

"Did you go to him, then?"

"Not much. I have no use for a bear killed at night until next morning after good light."
 "Next morning what did you do with him?"
 "I went to the plantation on the Sunflower, got a mule and dragged him to the river, loaded him on the first down stream boat and sent him to Vicksburg."

And thus Sellers and I conversed, he as instructor and I as pupil in the first rudiments in bear lore. We walked on perhaps half a mile further, when the old raftsman, for that had been his lifelong business, stopped and began an examination of the ground. To the uneducated eye there was no visible sign. He scraped the leaves away and there was a slight depression.

"Let's follow this a way and see where it leads to," saying which Sellers led off toward the low swamp. At distances of a few yards he would remove the leaves, at each operation exposing a depression similar in shape to the first. On going further the ground became moist and the signs gradually grew deeper, until they were 2 or 3 in. deep. After walking about 200 yds. we came to a "clay-roof" with water in the hole made by the uprooted tree.

"Ah! as I expected. Now, these tracks we have been following is a bear's 'stepping path,' and this fallen tree, with water hole, is a clay-root. The sign is fresh, and bruin at this moment is back yonder in the cane asleep, no doubt."

"Let's kill him. I want to kill a bear, I must kill a bear. How is the best way to proceed?"

The best way to proceed is to proceed slowly. We can't kill him to-night."

"Why?"
 "Simply because, in the first place, we are about eight miles from camp, without a bite to eat, and to attempt the job to-night is too great an undertaking on an empty stomach, and in the second place we must get a 'needle' gun for the work."

"Why a needle gun? What is the matter with this 9 lb. 10-gauge of mine?"

"Oh, it would be too much risk shooting a bear with that gun."

"It shoots buckshot splendidly and I have a couple of cartridges heavily loaded. I could blow him into smithereens with one such charge."

"Yes, and wound him and be chewed into smithereens by him. I'm not going to monkey with a bear with a load of buckshot. There are hunters who take risks of that kind, but just now I have a valuable family that is in very much need of me for support. I prefer to deal out to bruin unmitigated death the first shot with a .50cal. chunk of lead."

"Well, Sellers, you are years older than I as to age, and as to experience in bear hunting your are centuries old, while I am yet in the nursery; and, while I am anxious, very anxious is more befitting, I must accede to your judgment. But it makes me sick to leave this neck of woods without some bear meat. If we must go to camp, let us move along or we will sleep another night in the woods away from camp."

An hour or so after leaving the fresh stepping path Sellers became interested in a cypress, and as it was not a prepossessing tree and we having passed hundreds of much better looking ones, I was curious to inquire the cause of his interest in this particular one.

"Why, don't you see those scratches on this tree; look at this, and that higher up," replied S. as he pointed over the body of the tree.

"Well, who did that you reckon? No telegraph or telephone line through here is there to cause linemen to climb up there?"

"Oh, no. That's another bear's stepping path."

"Has he got a clay-root and a water-hole up there?"

"He has got something up there that will draw him further than water."

"A pair of cubs? Let's go on to camp. Isn't a female with young somewhat on the fight?"

"This cypress is a bee tree. There is or was honey in this tree and the bear has been going up there to satisfy his sweet tooth. He smelt the honey while he was rambling through the woods and has trailed it up with that fine nose of his. As a rule he don't like to climb a tall tree like that, but if there is anything on earth that would make him do it, it is honey, as he is very fond of it."

"Let's take a stand here and kill him. Sellers, I must kill a bear. You go on to camp. I'll risk my gun on this fellow."

"How long would you be willing to sit for him?"

"About a week."

"Well, you would have to stay here about eight months and probably longer, to get a shot at that fellow. He has already robbed that hive up there, and will not be back until the roses bloom again."

"Then, what in the tarnation is the sense wasting time on a useless stepping-path like that? We had better be pushing for that nice bed we made so inviting. You know the cover is already turned down."

And sleep on that bed we did, but not until after a prodigious supper, which our long tramp made us relish to an amazing extent.

The next morning, while yet under the blankets, S. and I entered into a conversation as to plans for bringing the bear to bag. Sellers would go over to the plantation during the day and borrow the deadly needle gun. The next day we would go to the stepping-path, and taking a favorable location, wait for the game. I was to do the shooting, and have the glory of bringing the game to bag. S. was simply to be an onlooker, and further than that was to take no part.

Having arranged the matter, I became considerably elated over the prospect, and in anticipation I could hear old bruin back toward the cane, making a slight noise at first, then more distinct, and presently could see him, when very soon he was opposite me in full view, when I raised the long and unwieldy needle gun and let drive. A fearful rush, a crashing through the woods for a short distance, then a fall, and the piteous cry, and I knew the work was done.

Did I say in anticipation? I must have gone to sleep again and dreamed it, the picture was so natural.

We did not rise early. The long tramp around the basin had made us tired and stiffened our joints. It took some time to make a roaring fire, and much longer to prepare a warm breakfast. It must have been nine o'clock before the dishes, such few as we had, were in order, and everything about camp in shape for the day's outing,

"Well, now for the needle gun?" S. remarked as he took a twist on his camp stool toward me.

Well, why do you put that with the rising inflection?"

"That is your bear now and I am at your service."

"And you propose to serve me by going four miles for a gun and back again, eight miles?"

"Just so."

"And then you propose to go with me to-morrow eight miles to the bear, carrying provisions and blankets for sleeping out all night; after having seen me kill the beast returning the next day to camp? That's two days and one night at my service; you are a very clever old chap and I appreciate it. Say, after having killed the bear how will we get him home?"

"Go to the plantation, get a mule and haul him out."

"Why not get the mule and take him with us?"

"Oh, let's get the bear first."

"Get the bear first, that's best. It would be rather a nice joke on us to get the mule and then fail on the other part. S., have you figured on this thing? Four miles to Sunflower River, four back, that's eight; eight miles to the game, that's sixteen; eight back, twenty-four; now repeat the performance for the mule and we have a grand total of forty-eight miles. And you say the bear has to be killed after night?"

"Exactly. He will come out between dusk and 10 o'clock as sure as the sun goes down."

"And you have suggested that I might not kill him?"

"Certainly, and that is why I prefer to go along. You also have an interesting family that leans upon you for a support. Should you make a mess of the business by an awkward shot you might need the help of an old hand about that time. I would not like to go home to your family with your mangled remains."

"Is a bear vicious that way?"

"When he has an ugly wound."

"And is he hard to kill?"

"He must be shot in a vital spot."

"Well, suppose you kill him then?"

"No, no; that's your bear. I have turned him over to you. You must do the shooting."

"Sellers, I think it's going to rain."

"Likely."

"And turn cold."

"Probably."

"And snow."

"It has done the like."

"Wouldn't it be fearful out in that palmetto swamp without cover in such weather?"

"I have been out in such."

"To kill a bear?"

"Yes."

"Well, it is different with you. You are robust and have been used all your life to exposure. I am different, rather unhealthy, unused to the rigors of severe weather. I am very sorry, for I want that bear. Gracious! why didn't he locate on our side of the basin. I could have showed you then something about my marksmanship. I could kill that bear too dead to kick."

"And ain't you going to kill him after all?"

"Have you got a two-inch auger?"

"No."

"And we can't have a seat. That settles it. Why didn't you say before you had no auger? What are you laughing about?"

"You remind me of a little story about another fellow who wanted to kill a bear fully as badly as you, and if you don't mind I'll tell it."

"Well, let's have it."

"He was something of a novice in the woods and had never killed anything larger than a fat squirrel, and as he was literally spoiling for big game, he was taken into the woods by an experienced hunter, who after some search, found a favorable location about one mile back from the clearing. About sundown he was shown a large log which spanned a bayou. Certain tracks like those I showed you out yonder led up to this log at one end and away from it at the other. 'Now, my friend,' began the old hunter, 'you sit right here on this log. It is the certain crossing of bear. These woods are full of them, some very large. You will not have to wait more than two or three hours before one will cross here or attempt it. He is as sure to come here as it is to get dark. I'll bid you good-night.' Well, the young would-be bear slayer sat down and his companion left. When the sun goes down the woods very soon grow dark. At such times the surroundings become very lonely, even to us old campers who have spent many a night without company in these solitudes. Soon, very soon, no doubt, the man on the log grew restless. The birds hushed, and not a sound could be heard as night came on. He turned about on the log several times in an uncomfortable way. After a bit it occurred to him that bruin would probably be due in a few moments. About that time he heard a slight noise away down in the black swamp. It was only a stick that cracked, but it was enough to get his attention. Quite soon he heard another crack, and apparently a little closer. He looked at his gun, turned on the log again and got up. If the bear had come then and been very quick about it he might have lent aid to a disturbance at the crossing. But it would have taken a mighty quick bear to have been there on time. There had been too many preliminaries. Just then the amateur sportsman had urgent business in the direction of the clearing, and if he was not there on schedule time it was no fault of his. It was a rather peculiar tale he told about coming out of the woods without a shot so early in the evening, and the smile that went around the fireside as he told it could have been heard a long way off."

"Sellers, that fellow was a grand coward. I would rather been eaten up alive than to have fled so precipitously. Gads! if you could find me a log like that, and so near habitation, and such weather, I'd sit there and shoot bears all night. To blazes with the vast solitudes of the woods, with hushed birds in the foreground, and cracking of sticks in the background. You go get a log like that."

"Yes!" came from my companion, with an inflection of sarcasm, and ending further controversy.

In extenuation of the farcical affair, I will add that within an hour after closing the colloquy, a heavy rain set in which continued without cessation for twenty-four hours. It then changed to a sleet with a biting wind out of the northwest. That night a freeze set in which continued for three days. I thought such unfavorable conditions ought to have excused me, but my companion purposely seemed to avoid any conversation concerning his

bearship on Conner Bayou. Evidently he was not greatly impressed with the vast quantity of pent up bear killing proclivity which I contained.

Natural History.

THE SENSE OF DIRECTION.

It is difficult for us to imagine what a sixth sense may be like, but that is no argument against its existence. It is said that a sixth sense, properly speaking, requires an organ, but this seems doubtful. The sense of touch has no specific organ. Though principally developed in the skin, it doubtless exists elsewhere.

That all animals preserve in their movements an impression of the relations of distance and direction between various points is perfectly clear. This power is developed to a limited extent in man. It is doubtless very closely related to memory, but is it memory? If it were its processes would be somewhat along the line of a surveyor's chart. We should recall that we traveled in such a direction so far, then turned to right or left at a certain angle, continued in the new course to a certain point, etc.

But do we, even unconsciously, follow up such a chain of recollections? I think those who have had experience in field and forest will bear me out in the opinion that it is only when we suspect that we have lost our bearings that we begin to try to map out our movements, and that even then we usually fail. Especially if we are "lost," as it is called, the mistaken verdict of our sense of direction (let us call it that for the present for lack of a better name) will successfully give the lie to any but the most outright evidence. In such a state we will take the wrong end of a familiar road, or will doubt the evidence of the compass and even of the sun in the sky.

This judgment seems to be an unconscious process. It is a natural endowment which some possess in a higher degree than others, and while it seems capable of some development there are individuals who can never possess it except in the very lowest form. To be properly called a sense it should have both a physical and a mental side. Although rather difficult of analysis, it would seem comparatively easy to establish that this condition is fulfilled.

It is a matter of common observance, no doubt, that one "loses his east," as the Spanish has it, more readily in a vehicle than on foot, and more readily in a closed than in an open vehicle. From this we may infer that in man the physical elements are a sort of muscular perception of movement combined with and corrected by the products of the sense of sight. That we need the latter element is apparent from the fact that it is almost impossible for a blindfolded man to walk in a fixed direction. But the former is also important, as we see by the ease with which we lose our bearings on shipboard or on a train, although we may have a perfectly unobstructed view of all the surroundings. Its results seem to depend almost entirely upon the violence of the movements and the sensations which accompany them. When movement is without sensation we are unconscious of its direction and even of its existence. This torpidity of our natural endowment has taught the eye and ear to be ever on the alert to supplement with their products its uncertain results.

Animals, however, in a state of nature seem to have little need of sight. Shut up in a baggage car a dog will make a long journey without losing the bearings of his home. I can hardly believe that he follows a conscious course of reasoning. Something within him gives him the capacity to perceive the relations of each place in which he may find himself with that home upon which, perhaps, his mind is all the time brooding. This something is a result of his consciousness in contact with the various objects which surround him, taking note of their change of place by some peculiar sensitiveness which baffles our analysis. Why not call it a sense?

Some might prefer to call it an instinct. And in so far as it appears most perfect in a state of nature, even diminishing as animals rise in the scale of intelligence, it certainly has points in common with those mysterious faculties which we call instinct. But this is true of nearly all physical functions. It is common, moreover, to limit the word instinct to those lines of action which are incapable of development, and which admit of absolutely no physical explanation. But this power of judging direction doubtless has a physical element. Darwin found that it could be frustrated in bees by rapidly twirling the closed boxes in which they were carried away from the hive. Its products, then—the rapid and usually unconscious appropriation of certain peculiar impressions, which may perhaps be most naturally attributed to a sort of muscular correlation—must be very closely allied to sense products.

The fact that we cannot analyze the process and locate the seat of this sense is hardly a sufficient argument against its existence. Highways, signboards and gregarious traveling have so long made it useless to us that nature has quietly disposed of most of our original ability in this line. But we all have an instinctive feeling that that there ought to be such a sense, as witness the efforts which one makes to "feel of himself" in order to decide in which direction he is being carried by a slowly moving train. His dog would doubtless know perfectly, and without effort.

Indian Partridges for America.

NEW YORK, March 29.—On board the steamer Cufic, which has just arrived from Liverpool, there are a dozen partridges consigned to my care for Dr. W. O. Blaisdell, of Macomb, Ill. They were shipped from Karachi by Mr. James Cunie, the U. S. Consular Agent of that place, and are being imported by Dr. Blaisdell for the purpose of cross-breeding with our native birds. This is the second importation which Dr. Blaisdell has made. They will be shipped to the West by express this afternoon.

Otters in Pennsylvania.

OIL CITY, Pa.—Let me tell your correspondent "Ony-jutta," of Juniata county, that we have otters within a few miles of Oil City. P. Carpenter, eight miles up the Allegheny River, caught two some time ago, one a very fine specimen.

BARNEY.

SOME ANTELOPE CHARACTERISTICS.

Editor Forest and Stream:

Have you ever seen a band of antelope wending its way over mountain and valley? If not you have missed a charming scene.

The antelope (*Antilocapra americana*) is a small animal weighing from 60 to 100lbs.; dark yellowish sides and front, with white legs and rump patch; small, slender legs and a small hoof. Their eyes are large and expressive, and their ears are fans which catch every sound of danger. They are a cautious yet curious animal, and when alarmed almost invariably circle back to the point from which they were started.

Antelope usually perform a seasonal migration to and from their different feeding grounds. Those of western Wyoming winter on the Colorado desert. As the snow gradually recedes, they wend their way back to the mountain basins, where the grass starts late and is green and tender throughout the summer. They stay here until the fall snows come, and then work back to the desert as fast as the snow compels them.

While young they are easily captured and domesticated, and the prevalent idea that they will not breed in captivity has been proven an error by a gentleman who has some in a park on the Mississippi.

But if you want to see how agile and fleet they are, suppose yourself watching some of the bands we came across on a trip over the mountains last fall. Once we came over a high hill only to find on the other side a deep ravine. The horses started, snorted and turned from the trail, and the cause of this disturbance was a band of twenty or more antelope. They saw us at once and we waited and watched them. Like the wind they were off, going up the steep mountain side as if they had wings, an old doe in the lead. They offered splendid shots, but we had all the meat we needed, and no true sportsman would kill such an animal merely for sport. We crossed this ravine and on gaining the summit saw them standing on an eminence beyond watching us, ears erect, eyes dilated, nostrils quivering, and on the ridge just ahead was the old doe acting as advance guard. When she had satisfied herself that we were not of the dangerous kind of humanity, she uttered a peculiar whistle and started to the leeward of us, and the whole band followed.

Their fleetness of limb even when wounded is something remarkable. I saw my husband attempt to rope one that had its left foreleg broken near the shoulder. He was mounted on a good horse, but the little animal seemed to fairly fly, the broken limb flapping from one side to the other; and although it had but the three legs it got away from him. I tried to join in the chase, but it was too hard riding for me to enjoy.

We saw these graceful creatures day after day in bands of all numbers, from three to one hundred or more; but their number is fast being diminished by the wanton war made upon them by the Indians. The red man's thirst for intoxicants leads him to skin-hunting, and this method is fast decimating the game.

CORA, Wyoming.

MRS. IRA DODGE.

Woodcock in Town.

LAST week we recorded the taking in New York of two woodcock which had injured themselves by flying against a building. Our correspondent "Flin" sends us another instance as recorded by him in the *Independent*:

Reaching our office last Saturday morning one of our employes handed us a pasteboard box perforated with a dozen holes, with the injunction not to open it till a closed room had been reached. When the cover was removed out sprang a woodcock, and with a tremulous whistle flew against the further wall. It seems that the bird had been seen to fall to the pavement in front of our office, and being rescued from the thoughtless feet of the crowd, had been placed within a box temporarily. A careful examination showed a slight bruise on the base of its bill, made apparently by flying against a telegraph wire, but otherwise the bird appeared uninjured and strong. The present writer confesses to many October days allied with gun and dog; but these same days, rich in woodland color, in purity of view and in sentiment of surrounding, teach a sportsman many things besides when to pull the trigger, and it was a genuine pleasure to carry the box in the afternoon to Prospect Park in Brooklyn, and then to give the woodcock his liberty. With a clear whistle of thanks he burst into the air, and before long doubtless had plunged his parched bill deep into some spring-softened bog, preparatory to resuming his migratory flight northward.

He adds: "Despite the slight injury to the bird's bill, his whistle was as clear as usual. I noticed when he escaped from the box in our office that the whistle was distinct as he rose to the ceiling, and after he struck the window shade as he fell to the floor fluttering, but was not heard by me as he was flying across the room. Is it possible that the noise, if made by its wings, results only when the bird's wings strike the air at certain angles?"

Moulting of Ducks.

FOR some years I have kept in confinement and bred many of our beautiful wild ducks and have observed the following facts with regard to their moulting. The wood duck, Chinese mandarin, pintails, green and blue-winged teal moult twice each year, June and October. In June the males discard their handsome plumage and assume that of the females, even the red on the bill of the drake of the wood duck fades, and in a wild state the drakes flock by themselves at this time. In October the drakes above named have wholly, or in part, resumed the breeding dress. I am speaking of semi-domesticated birds that have been bred by me for several generations from wild stock and have wintered out of doors on snow and ice on Long Island.

I had some coots (*Fulica*) which were kept for three years, but never bred. I was never able to tell the sex of these (six birds) and never could see any change of plumage, although dropped feathers showed a moult in summer.

COLD SPRING HARBOR, N. Y.

Vermont Bluebirds and Robins.

HIGHGATE, Vt.—Bluebirds made their first appearance here this season March 20, and robins the 31st.

STANSTEAD.

A New-Subscriber Offer.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

STRENGTHS OF CAPS.

NEW YORK, March 30.—*Editor Forest and Stream:* No topic has been of greater interest to our sportsmen and trap-shooters, than the discussion on the merits of various kinds, makes and strengths of primers used in connection with the now so generally used nitro powders.

When Schultze and E. C. powders were first put on the American market, all the shells procurable were made by the American shell manufacturers, namely the U. M. C. Co., the Winchester Repeating Arms Co., and the U. S. Cartridge Co., and all shells contained a so-called No. 2 primer, interchangeable on account of exact size and dimensions. Although the fulminate and strength of these three makes of primers differed somewhat, none of them was suitable for nitro powders. All of them lacked sufficient strength to explode Schultze and E. C. powders promptly, and to cause a perfect combustion of a charge of these powders. Even by a layman the detonation of the cap could be distinguished before the explosion of the charge took place, and sometimes very bad, even dangerous hang-fires would occur where the charge of powder would only explode after the gun had been removed from the shoulder.

Imported shells suitable for the nitro powders were procurable only of a few firms making a specialty in fine imported ammunition, and the cost of such shells was almost prohibitory.

It was, therefore, necessary to prime the American-made shells with a little fine grain black powder to increase the initial heat, flash and strength of the primer. This led to all sorts of experiments and subsequent abuses, and created the impression that the new powders were difficult to load and unreliable in action, which is by no means the case.

It was not long, however, before the cartridge manufacturers, recognizing the importance of the new powders, set to work to improve their primers. Various samples were submitted to me for trial, some being an improvement, some which showed no perceptible change, and others which seemed worse than regular goods. The manufacturers while experimenting put out different lots which worked well in some respects, but were found wanting in others.

The main drawback and difficulty in making the No. 2 primer suitable for E. C. and Schultze powders was the fact that, when the fulminate in the primer was of sufficient quantity or strength, the ordinary thickness of copper was not sufficient to prevent their "blowing back" or bursting, and when the thickness of copper was increased miss-fires were apt to occur.

The greatest difficulty experienced was, however, the want of proper ways and means to accurately determine and measure the strength and heat of various caps, and manufacturers as well as everybody else relied upon the "feel" as well as upon the general execution and result of the loaded cartridges to tell whether the primers were right and suitable.

Even the shell and cartridge manufacturers in Europe encountered difficulties, although they were not handicapped as much to suit their caps to the standard powders as our manufacturers, because the construction of the shells and size and shape of primers in use in Europe were arranged so that the strength of fulminate could easily be increased, and the flash of cap was brought in more direct contact with the charge of powder and covered a large surface of the charge. Still the manufacturers could not always be relied upon to furnish even primers, and I speak from experience when saying that the primers, though excellent in one shipment, would sometimes be actually bad in another.

Two years ago many sportsmen in England complained about an apparent unevenness of E. C. and Schultze powders, never suspecting that the trouble was caused by uneven shells and primers. Both Mr. Griffith and the Schultze Co., and Mr. Borland of the E. C. Co., set to work to prove that the shell manufacturers were at fault and succeeded. The latter called in all their faulty shells and made the necessary improvements.

The outcome of the primer controversy at the time was a very neat instrument to absolutely test the strength and evenness of various gun caps.

As soon as the cap-testing machine was perfected I ordered one, and some months ago received it from London, and at once made a series of very interesting experiments.

The principle of the machine is as follows:

The primer shell is placed in a steel cylinder constructed like a gun chamber. By means of a screw top, which has a movable firing pin, the shell is held firmly in place. From the lower part a steel tube with a sharp knife edge is run up into the shell, encircling the cap hole, and this tube is firmly pressed into the wad in the head of the shell by screw power. A tight-fitting plunger with a conical base, running up the whole length of above described tube, is placed directly over the flash hole of the cap. Between the other end of this plunger, which has a flat surface, and a flat surfaced screw, working through an arch on one end of steel block holding the shell, is placed a solid pure lead cylinder $\frac{3}{8}$ parts of an inch high, $\frac{1}{4}$ of an inch in diameter, weighing exactly 25grs. avoirdupois. The cap is exploded by means of a weight dropped from an arm, which can be moved up and down a steel column fastened to the frame, into which the cylinder holding the shell is placed. This drop can be regulated from 1 to 16in. By means of a very ingenious gunlock tester, which Von Lengerke & Detmold have in use, I can easily figure to fractions the force of a blow, compared with a given weight dropped a distance of $\frac{1}{4}$ of an inch, a condition nearest to that of an average gunlock blow.

When dropping the weight and exploding the cap there is not the slightest sound audible, so hermetically and perfectly is the primer and shell inclosed. The whole force of the gases generated by the explosion of cap is exerted against the plunger, which in turn crushes and reduces the lead cylinder. The heights of these crushed cylinders are then measured by a micrometer to thousandth parts of an inch.

This test is unfailing and gives us the exact force of a cap. All parts of the instrument are of course of the finest and most minute fit and adjustment, and the weight and measurement of the lead cylinders are wonderfully exact. Of some hundred weighed, I have not seen any very one-tenth part of a grain. All parts of the machine must be scrupulously cleaned and oiled after each discharge.

The following are results of some of my experiments, and as similar experiments have never been made before by anybody in this country, the E. C. Co. only having a similar machine in the United States, they should be of interest not only to the sportsmen, but also to cartridge manufacturers:

It will be seen that the Bachmann shells made in Brussels are the most powerful. Next to these are the No. 3 primers made by the U. M. C. Co. Then the Eley Bros., London large cap and small, U. S. C. Co. No. 2 primer, Kynoch, Winchester Repeating Arms Co. No. 2, and the U. M. C. Co. No. 2 primers follow in the order named.

Never before have either the manufacturers or sportsmen known the exact comparative strength of these primers. Manufacturers have told me in bygone days that their primers were the strongest and stronger than others and strong enough, etc., and although knowing from the actions of the loaded nitro powder ammunition and crude tests that they were mistaken, I had no means of disproving their assertion.

A primer may be too strong and yet not strong enough for standard nitro powders. I consider the Bachmann primer too violent for even results with heavier charges of nitro powders. I also think that the most excellent U. M. C. No. 3 primer can be improved for general usefulness by a slight reduction in strength. A primer with a crushing force of .065 will cause a prompt ignition of E. C. and Schultze powder, and at the same time a satisfactory combustion of the charge of powder, providing other conditions, such as the construction of the shell itself and the manner of loading, are suitable.

In connection with these experiments, I have satisfied myself that a former theory of mine was correct. According to above experiments the U. S. Cartridge Co.'s Climax shells used by me should have given satisfactory results with these powders. This was not the case, however, and the conical base of the shell is the cause. It may seem inconsistent, but the fact remains that although by bringing the powder, or a few grains of the powder, nearer to the cap through a funnel-shaped base and thereby facilitating a prompter ignition, the heat of the cap and the gases generated in the bottom of the funnel can only act in one direction and have very little burning surface. They overcome the inertia of shot and wads, increase the space in which combustion is taking place, decrease heat and confinement and prevent a sufficient, thorough combustion of the whole charge of powder. With Schultze powder this action is most noticeable, but the same applies also, though in a less degree, to E. C. powder. Other makes of shells, with practically the same strength primers, but with a raised dome-shaped battery cup in bottom, will average from 100 to 200ft. greater velocity, with otherwise exactly alike loading. By reversing the shape of base the U. S. Cartridge Co. will much improve their shells for use with nitro powders.

In point of regularity and evenness of the various makes of primers, the U. M. C. Co. easily leads the field. The stronger the cap the greater are the actual ranges of variation in strength. By comparing the greatest variations of each kind and make of caps tested to their total average crushing power, the following is the result:

GREATEST VARIATION COMPARED TO AVERAGE STRENGTH.	
U. M. C. Co. No. 3 primer.....	.30%
Bachmann.....	.35%
Eley new large cap.....	.43%
Winchester Rival No. 2.....	.54%
Eley old large cap.....	.64%
Kynoch.....	.70%
Eley small cap, 1892.....	.82%
U. S. Cartridge Co. Climax.....	.84%

It will be seen that the U. M. C. No. 3 primers run re-

markably even." The same comparative regularity has been remarked at trials made at the E. C. Powder Co. and also in England. This completely disproves the assertion of the makers of a leading American gun, that the unevenness of the U. M. C. No. 3 primers has been the cause of trouble with their make of guns.

I would consider a primer with a force of about .090 to .095 crushing power as near perfection for general nitro powder use as can be made, and think that the U. M. C. Co. will adopt such a standard.

There may be slight comparative variations of effects on nitro gun powders between the actual explosive energy, the crushing force of a primer and the heat or flame it generates. To test this, I had an arrangement made by which a single layer of powder grains were exposed in a tube through which the whole heat and flash of the primer was forced. By gradually removing this powder further from the primer, the actual igniting power was found. My past experiments have, however, not satisfied me that the comparative and actual igniting power of caps differs much from their comparative general force as per above tables, though I think some slight differences are noticeable.

JUSTUS VON LEMBERKE.

FATHERS AND SONS.

HASTINGS, Mich., March 22.—*Editor Forest and Stream:* It has been my misfortune to have been confined to the house by a long sickness since last November, and never before have I so looked forward to the days when "our" FOREST AND STREAM was expected to come to hand, giving a sick man untold pleasure.

Now, I would like to say a word about boys, the sportsmen of the future. I began to teach my boy the use and care of the gun at 10 years of age, first the air rifle, then the .22cal. Remington, after which I bought a 20-gauge single-barreled Remington. Now he can use a .38cal. Winchester repeater safely and accurately.

Of course I have had to cultivate patience and some little sacrifice at times, by giving him the best opportunities of shots at game. To his often repeated, "You shoot, pa, for I don't believe I can hit it," as the dog pointed or the beagle hound ran a rabbit to us, I would say, "Now, go ahead, son, I'll take my chances." But I confess there were often times when I was tempted to shoot first instead of to instruct, and the tears would come in his eyes as at first he missed a bird on the wing or a rabbit on the jump. For it was often the case that the second opportunity, that was my share, was a miss also. But I had set out to train the boy to be cool, true of eye and quick of hand. And now it is done. Two years have done it. Last fall and winter, while I was on my back in bed, he brought to me many a rabbit shot fairly before the little beagle, while in season I often dined on quail on toast. And as he sat on the foot of the bed he hunted and shot them all over again for my benefit. Then I forgot about the shots lost while prompting him in the days gone and the time spent in teaching how to handle the gun with care and forethought; how so called accidents came to pass, and in fact hundreds of items of advice, some of which came to me second-handed, while others were gained by experience.

Folly with Firearms.

One day last fall two young men were gunning. A squirrel had been killed and hung in the limbs of a tree. One held his loaded gun, butt against the tree, muzzles pressed against the pit of his stomach, while the other climbed on the gun and stood on it. Result: A terrible death for one, untold sorrow for the widow and children, and grief and remorse for the comrade.

Once in days gone by I saw a sportsman blow the top of his companion's head off, the head being taken for game in a large marsh. Two men have I seen dead in one fall in Roscommon county, this State, killed by mistake for deer. Once in my boyhood days a visiting cousin and myself were sitting in the kitchen wiping the rain from our muzzleloaders, having just come in. My gun was lying on my knees pointing right at him, both hammers full cocked. Without a thought of him I raised the gun, muzzle to ceiling, and in letting down the right hammer pulled the left trigger. A stunning report was the result, also a hole size of silver dollar through ceiling, floor and roof. Again, while hunting one cold winter day with mittens on I attempted to uncork my gun. My thumb slipped off and a load of No. 6 tanneled a hole in the air. This was the last so-called accident with me. Although I was only a boy of 15 it set me to thinking, and ever since I have held firearms in the deepest respect. Several times I have had narrow escapes from careless companions. The closest call was when a .45cal. rifle ball went through my soft hat and cut a slight furrow in my scalp. It came from the gun of a badly rattled deer hunter—a safe fellow enough when he was ten miles distant from you. Another time I had the drum of one of my ears almost burst by a dude from Detroit City, who could not wait for me to get out of his way, he was so anxious to shoot some ducks while I was in the bow of the boat. I could see people open and shut their mouths, but could hear nothing for several days. Once a rifle ball hit a tree 18in. from my chest as I stood against it. It was fired by a careless hunter and was intended for a deer which I was still-hunting. The papers are full every hunting season of accidental shooting. Now, to my mind, we should (as one of the brotherhood has written) tell of errors and accidents of our hunting experience. This would open a train of thought on carelessness that would be of great gain to many.

Teach the Boys.

Above all we should give the advantage of our experience to the boys who will be with us, and remain to take our places in the future. Some will think as I once did of the bother. As a class we are in the habit of hunting with our equals in age, "don't want to be bothered with boys or tenderfeet." The result is that your boy (if he has any taste that way) will go off on a hunt with some friend of equal age, sometimes several of them, with no knowledge or experience whatever of a gun, and of the great danger by careless handling. Even if he is a careful lad the risk is great from others, or if he is alone it is as bad if not worse, for in case of serious results of carelessness he would be alone in his trouble. No one to run for help. Now, from my own experience, a well trained lad is no hindrance with yourself or your more mature companions. Of course, some boys are almost a nuisance; then again, so are many men of forty or fifty years.

I mean this for your sons and younger brothers. Take them into your confidence, advance them to your own sphere. Make boy-men of them in the field and forest, on the water, in the camp. If necessary for you to leave home, you who live in the country will feel better if the son or sons you leave behind are familiar with the rifle, shotgun or revolver. On your return the boy or boys from 12 to 16 may tell you with pride of the hawk, owl or four-footed vermin that was shot in the attempt on your hen yard. The mother and sister will feel protected from the tramp or night robber if they know that Tom or Jack is quick and sure with gun or revolver.

The boy will learn more readily to rely on himself, feel that he must act in a more manly way if he knows that his father feels toward him as an equal and confidential friend. This companionship, if the parent is of the right sort, will prove of great benefit to the younger, while it gives youth to the elder in living over again, as it were, the days gone by. And I also know from the written statement of others in FOREST AND STREAM and my own feelings that if the wife, mother, sister and children were more frequently in our camps by forest and stream, so much more joys would be added to our vacation pleasures.

BRYAN THE STILL-HUNTER.

NOTABLE SHOTS.—VI.

Pathfinder and the Gulls.

CHICAGO, Ill., March 23.—Speaking of killing two woodcock at one shot, I have a cousin down in Maine who killed two deer at one shot—a doe and a fawn. The doe only was exposed. The ball passed through her and struck the fawn, killing both in their tracks. And that's the truth.

I was once an ardent admirer of Cooper, and in due time I read "The Pathfinder." Pathfinder was a good shot; above the average you might say. He was on the shore of a lake one day, watching the flight of gulls as they skimmed over the water. He observed two which were continually passing one another. To show his companions his skill with the rifle, he waited until the flight of the gulls again crossed, and bored them both through and through with a single bullet. Cooper's reputation is established, and no one doubts or takes exceptions to any of his statements. It was a good shot, and that's a fact.

OLD AVALANCHE.

A Queer Combination.

WASHINGTON, D. C., March 13.—Observing the interest shown in the accounts of "Notable Shots" published in FOREST AND STREAM encourages me to make brief mention of a peculiar incident in my own experience. A friend and I started half a dozen ruffed grouse ("pheasants" in the vernacular of our dark hills) in a buckwheat field, four or five of which took refuge in a neighboring woods. We followed them up and soon my peerless pointer Rover was standing, solid as one of the famous lions of St. Mark's, in front of a big iridescent cock. Taking position, I gave the word "go in," when he sprang forward, flushed the bird, and dropped like a stone. To avoid the dense underbrush my bird fluttered upward, and as he took a horizontal position I cut him down. I sent Rover to retrieve him, and the proud dog came back bringing two warm dead birds. The explanation was disclosed when I met my friend. He had been watching a grouse on the limb of a tree, and seeing it fall on the discharge of my gun, he loaded up with ugly adjectives to fire into me for indulging in barnyard sport. On learning that I had killed the bird I saw and one I did not see, amicable relations were restored, and he produced something from his pocket.

JERE. WILLIAMS.

How Many Were Killed?

PHILADELPHIA, March 29.—While out with a friend a few days ago after snipe, we were hunting over a marshy piece of ground when two snipe got up about 25yds. ahead of me and 6ft. apart. One flew after the other and I killed them both at one shot. How many have done that? My friend said that it was not a true sportsman's act, as I left him no shot. I think they were mates, for when dressed one showed signs of laying soon, while the other did not.

C. F. S.

[Two birds shot in the spring, one of them with developed eggs, may not be computed by the numeral 2.]

Duck and Sucker.

LEXINGTON, Ill., March 27.—Our local paper this week records a notable shot: "John Moon was in town yesterday with a fish which he had removed from a wild mallard duck which he had killed the day before on the Mackinaw above Selma. The duck was a large-sized one and in beheading it Mr. Moon noticed something sticking out of its neck, and pulling the object out discovered a "sucker" fish 8in. long which weighed 10oz. Two other smaller fish were found in the duck's craw. It's a rare chance a hunter gets a fish and a duck at one shot."

W. W. G.

Upland Plover and Cottontails.

BELFAST, Me.—One afternoon in the fall of '91 I had been out in company with a prominent physician of Augusta, for a try at the grouse. When on the way home we espied a couple of upland plover in a field to our right, 200yds. distant. It fell to my lot to try them, so alighting from the buggy I walked cautiously toward them, but they appeared very shy, and when I was within about 100yds. of them they got up, circled a couple of times and lit again 200yds. or so further on and close to a large pile of compost. I saw an advantage in this, so walking back to the road and up until I had the pile between myself and the birds I crawled toward the pile as rapidly as possible, and reaching it without the birds arising I quickly stood upright; the birds saw me and took wing, both being directly in line, but all of 10yds. apart, the nearest bird to me being all of 20yds. distant. I fired, and they both dropped dead birds. As the upland is a very shy bird in this part of the country, this shot was very satisfactory, to say the least. The birds haunt open fields, consequently are very difficult to approach, and lucky indeed is the shooter who gets one at a shot.

On another occasion I made a very queer shot. It was while on a collecting trip in the Mt. Diablo country, Cali-

fornia, in the spring of '85. I had gone out along toward evening in quest of a couple of cottontails for supper, as the camp larder was getting low, and had made my way toward a chapparral cover not far from camp, which I knew to be a favorite haunt of the rabbit. On reaching the edge of the brush I saw a cottontail run directly across me along a sheep trail, and about 25yds. up a small hill, but before I could shoot I saw that the rabbit would be behind a clump of sage brush. Noticing at the same time that the top of this clump was rather thin and scraggly, I thought I might be able to get him by shooting through the brush, so I fired just as the rabbit passed out of my sight and was somewhat surprised to find, on moving up a few steps, that I had bagged my game, as I had not seen the rabbit when I fired. You can imagine my astonishment when, as I stopped a moment to throw another shell into my gun, there came tumbling down to my feet a large jack rabbit which had been fatally hit by the same charge, so there were two rabbits of different species killed by the same shot, and at the moment of firing neither were in sight. The jack must have been sitting just above the trail and in a line with the cottontail when I fired.

C. M. H.

An Old-Time Pigeon Shot.

OIL CITY, Pa.—Some of your correspondents are telling of two woodcock at a shot. My way is generally to get the shock of two barrels and no woodcock. But I have killed 61 pigeons with both barrels of a 7-pound muzzle-loading gun in the night. Now, some one yell "pot-hunter!" But not so; they were not for market, and were not wasted. This was done years ago.

BARNEY.

THE MARYLAND TAG SYSTEM.

THE WHEATLANDS, Md., March 25.—*Editor Forest and Stream:* I read with much interest your editorial in FOREST AND STREAM of March 23 entitled "Tags Are Un-American."

Entertaining the views you do, what, let me ask you, do you think of our local laws (so-called game laws) in Maryland, where nearly every county has a law compelling not alone non-residents from States, but non-residents from other counties in this State, to take out a license to enable them to shoot in the different counties of the State, some of them to such an amount as to be entirely prohibitory.

For instance, Charles county has a local law by which non-residents of the county are required to take out a license of \$25 annually before they can shoot partridges (quail) and \$20 additional before they can shoot wild fowl in the "waters of Charles county." Talbot county and Caroline county have each a non-county resident law. These counties are separated by a narrow creek in part and it is quite possible for a resident of either county to shoot across this stream in places. Now, is he violating this law if he stands on the shore of his own county and kills a duck on the other side? Or, take the reverse of this proposition, suppose a Caroline man sees a bunch of ducks on the Talbot side of the channel, shoots and kills one or more, has he violated any so-called law? The case is still more absurd in regard to upland game, where the boundary line are merely imaginary one.

It cannot be claimed that these laws are in any sense for the protection of game, since they only designate the class who shall kill the game and are gotten up by resident shooters to keep the shooting in their own hands. Of course after the first ones were passed the lever used at Annapolis was: "If a county keeps us out we will keep her out," and so these absurd laws are in the code for nearly every county in the State.

While the non-resident State laws may possibly stand the test of constitutionality (which I doubt), it is very certain that these county laws are not in accordance with the Constitution and Bill of Rights of the State of Maryland, in so much as they are class legislation, granting the property of the State free to one class of citizens and taxing others for the use of it. While this is bad enough as regards upland game, it is still worse in regard to wild fowl, claiming to apportion the waters of the State, and in many cases the waters of the United States, to the different counties for the purposes of these ridiculous so-called laws. There is of course no doubt that the State could say that no one should shoot any game at any time. That puts all classes on an equal footing. But to say that Mr. A., who lives just across an imaginary line from Charles county, cannot shoot ducks in the Wicomico River, unless he pays \$20 annually to the clerk of the court for Charles county, while his neighbor adjoining has the same shooting for nothing, is to me the height of absurdity, and in no sense protective.

The evil result of all these so-called laws is to bring into contempt all game laws. The laws are a dead letter until some one who has a spite against his neighbor in an adjoining county, catches him across the line, or if the neighbor should have a friend visiting him, when it gives a chance to "get even" for some grudge.

Now you will naturally ask why are such absurd laws allowed to remain on the statute book? or why does not some one take an appeal to the Court of Appeals of Maryland? Try to repeal them. If you are from Charles, St. Mary's, Talbot, Caroline, or any of the other counties, you will be met with county jealousy at once; "the other counties all have these laws and they can't shoot in our county."

Now take the Court of Appeals issue. Gentlemen who go from home to shoot, go for pleasure. To test any of these laws we would first be arrested by a constable and carried before a magistrate; from his decision he would have to take an appeal to the county court, and thence carry the matter to the Court of Appeals, as our circuit courts, will avoid a decision on any point of constitutionality if possible; and in the event of its decision either way by the county court, it would have to go to the Court of Appeals to decide the matter. To engage in a series of law suits is not what we go on a shooting trip for.

My object in writing this article is, if I can, to call for an expression of opinion from the gentlemen sportsmen of Maryland (who go from their own counties to others to shoot, or who live in Baltimore and other cities of the State), as to their views on these local laws. As I think you know, I am heartily in favor of all laws for the protection of game and fish, and have been an amateur sportsman all my life, and I will add an inveterate and enthusiastic one.

SINK BOAT.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Scolopaxal Territory.

CHICAGO, Ill., March 31.—Mr. Ben O. Bush, of Kalamazoo, Mich., writes me under date of 27th:

The festive snipe will soon be here, and would you give me pointers on good grounds in Indiana with addresses of persons with whom communications may be held as to arrival of the birds. There is so much good snipe ground in Indiana that a person could hardly go amiss, but I want to find a place where I can give a friend from New York some good sport for at least three days.

Old man Koutts, who lives near Koutts's station on the Chicago & Erie road, is near what is very probably the best natural snipe marsh of the Kankakee. This is where Ed Irwin comes every spring to shoot all the way from Chautauqua, N. Y., and he has told me he knew of no snipe ground so good anywhere in the country. There is some good bog just back of Thayer, across the Kankakee River from Water Valley and Shelby, or one can go to Shelby (on the Monon road) and walk about two miles east on the "Three Is" track, turning to the right on the black hummock ground across the river. This is warm ground and the snipe appear here earlier than anywhere in the Water Valley country. There is a lot of snipe ground about five miles north of Shelby, near the Fuller Island section of the marsh. The above are good grounds, but it is simply impossible to say when the shooting will be good there, or how long the birds will remain after they drop in. The jacksnipe is very uncertain. Ordinarily, however, April 15 should see some good shooting at the localities above named.

Query: Why do so many people call the snipe the "festive" snipe? The editor of FOREST AND STREAM asked me this the other day and I couldn't answer.

Chickens and Other Things.

Mr. Frank Conger Baldwin, of Detroit, Mich., unnecessarily apologizes for writing me as follows. I am glad to help any one as I can to sport who will not abuse the privileges he may obtain. Mr. Baldwin's letters is dated March 26 and is as follows:

Your dissertation in this week's FOREST AND STREAM upon the sportsman photographer has brought me to the point. It would be impossible for me to tell you how many incidents, pleasant and otherwise, you have called to my mind. I have lugged a camera thousands of miles and then ruined all my work. I carried a 5x7 tripod outfit and twelve dozen glass plates through the Piegian Reservation and 300 miles northwest of Great Falls, Montana, only to find that all my exposures were made upon a batch of plates with faulty emulsion. But that subject is too painful to dwell upon.

I have over a hundred perfectly successful snap shots from a No. 2 Kodak, made during a pedestrian trip in Europe, and am now enjoying my eighth (and D. V. may be) camera, a 5x7 folding Hawkeye. It is only fair that I should inform you that I am a fair type of the all-round crank, delighting in all that pertains to water sport, from trout fishing to handling a racing canoe; a dabbler for ten years in photographic mysteries and a devotee of shotgun and setter. You are beginning to wonder why I do not come to my point. Well, here it is: Can you tell me of some "pocket" where I and my cousin, a chap of kindred propensities, can obtain good chicken shooting next fall? Some place in south Minnesota near the Iowa line would be desirable, or a good spot in lower Wisconsin would answer. We would like to find a farmer who would take us in, away from the beaten tracks of civilization. If there should be any convenient lakes which would afford any duck shooting, it would be the more acceptable. I would be willing to try southern Illinois, but I fear it is too much shot over now.

I want to find some place where two weeks may be profitably spent, and at the same time be attended with some degree of comfort, for I am a poor hand at camping after Sept. 1.

I would not advise Illinois for outsiders, especially if the chicken law be made Sept. 1, as is likely. There are some few prairie chickens left in the State, but they are jealously guarded and mostly safely shot long before the season opens—on that highly philanthropic, rational and sportsmanlike ground so commonly urged, to the effect that "if I do not shoot before the law opens, some one else will." This same great rational principle actuates the Governor of Wisconsin when he says: "I won't sign a law stopping spring shooting unless Illinois does." This noble and logical spirit also animates the spring shooter of ducks, who says: "I'm not going to stop until the others do." Of course, all the others are going to stop precisely at the same time, some time. When that time comes we may have some birds in Illinois again.

There are no prairie chickens of any consequence in Wisconsin, and they cannot be hunted with a dog in that State. Iowa is better, but uncertain, having good and bad years. Ruthven, Iowa, used to be a splendid place to go to. No one can at this date predict next fall's chicken crop. If I wanted to be sure to have good chicken shooting next fall I would go clear up to northern Minnesota and get off, say, at Hallock, or some of the stations around there. One is then in a country sufficiently wild. There are birds there or just across the Manitoba line. Address of local farmers can easily be obtained. The way to do is to pull out direct for the best central point, and then hustle quarters on the grounds. The chicken situation in Iowa and lower Minnesota is much the same as it is here. Northwestern Nebraska has still a good many pinnated and sharp-tailed grouse. The country there is of the rough sandhill sort.

Marked Personal.

A gentleman from a Western State writes me a letter which I would publish in full if it were not marked "personal." It reads as follows, minus names and localities:

Would you not like to make a trip this year to shoot doe birds? We have not had a very good flight for two years, but look for a good one this season, and as we are right in the section of the country they stop, if there is a good flight there will be fine shooting. They only light in a small section of the State, and we are right in the center of it. Would like to have you come out if you can do so, and if you like can wire you when the birds come. We look for the flight to commence about April 30.

Life in the gay metropolis of the World's Fair this year promises to be a busy one, and I fear I shall not be able to go out and try this new sort of sport, but my friendly correspondent—whom by the way I have never met personally—will confer a great favor on myself and many readers of FOREST AND STREAM if he will give us a description of this style of shooting as practiced in his section of the country. I do not remember to have seen any such communication at any recent time.

Couldn't Punt.

Mr. Oswald Von Lengerke, with some friends, went duck shooting out on the Kankakee at Water Valley last Saturday, and one of the party, who claimed to be an expert at the push paddle, managed to get the boat wrong end to and wrong side up. It was only in a ditch, how-

ever, and a good wetting was the most serious feature of accident. Eleven ducks constituted the bag.

Ducks are now up all over this part of the country and far to the north. At this writing the weather is quite warm and the snipe will soon be along.

Growing Up.

It occasioned me some surprise to learn that Mr. R. S. Cox, of this city, had not long since gone West to Seattle, Wash., to again grow up with the country. Mr. Cox takes with him his justly celebrated glad, bright smile, a young and happy disposition, a good constitution and several kegs of coin of the realm, which latter he will lend out for a time for a consideration. I am pleased to state also that Mr. Cox has resumed his old law partnership with Teddy Haller, of Seattle, and the last letters received from the firm would indicate that the duck shooting is very good this spring. A reunion of kindred souls is a pleasant thing to contemplate.

Mr. Elwood Hofer, well known for years to FOREST AND STREAM readers as the Yellowstone Park correspondent of the paper, in which capacity he did some really very fine journalistic work, especially in his photographs of wild animals at large in their native homes, is not to see the mountains for a few months now. He is in Chicago, where he will have charge of the cabin of the Boone and Crockett Club. This will be as congenial an occupation as he could have. Mr. Hofer formerly lived in Chicago, and has a brother residing here now. He says Chicago now seems to him to be a very dusty, dirty place. There is no city so clean and sweet as the mountains.

E. HOUGH.

175 MONROE STREET, Chicago.

MICHIGAN FISH AND GAME INTERESTS

[From the report of State Game and Fish Warden Chas. S. Hampton.]

Public Sentiment Supports the Laws.

I AM gratified to state that the work of securing a proper observance of the fish and game laws of our State, so auspiciously begun by my predecessor, Hon. Wm. Alden Smith, has been crowned with at least a fair measure of success during the past two years. My experience verifies the statement of my predecessor in his last report, that the sentiment of the people as a whole is in favor of the enforcement of our laws for the preservation of fish and game. That these laws are often violated is true, but it is equally true of all our laws. And experience proves that where the fish and game laws are violated with impunity, and it is impossible to enforce them, there is a corresponding disregard for all law. Indeed, I believe that there are no laws in regard to any misdemeanors which are more carefully regarded and cheerfully obeyed than those for the preservation of fish and game. It would not be creditable to the intelligence of our people if such were not the case. For all must recognize the fact that the only way to preserve for ourselves and posterity the wealth of animal life in lake and stream, forest and field, is to restrict the destruction so that it shall not exceed the natural increase.

The Effect of Better Enforcement of Law.

The gratifying result of the better regard for the fish and game laws, noted in the warden's report two years ago, is even more apparent now. Notwithstanding the large number of quail that were killed last year, they were more plenty this year than ever before. In the counties where the warden's efforts have received proper support from the people, deer have never been so plenty since the settlement of the country as they were this fall, and the same is true of all protected game except partridge, which have suffered from the extensive forest fires for three consecutive seasons. The increase of trout in our streams is due as much to the restriction put upon their destruction as to the remarkably successful work done by the State Fish Commissioners in propagating them, and although, owing to defective laws, there was practically no protection of our inland lakes until last year, the reckless spearing and netting of fish has now been stopped, and a year or two will prove the wisdom of the legislature in amending the law.

The Practical Value of Fish and Game.

The great importance of our commercial fisheries is so well understood by all, and has been so frequently presented in the reports of the State Board of Fish Commissioners, that it needs no argument to show the necessity of better laws than we have yet had for their preservation, and the most efficient system of enforcing such laws. But preservation of game and of fish in inland waters has usually been looked upon as being merely for the enjoyment of lovers of the rod and gun. Without wishing to ignore the importance of preserving such sources of enjoyment for our citizens, I desire to call attention to their practical value. In neglecting the opportunities for fish culture offered by a thousand beautiful lakes and the streams which traverse every township in Michigan, we are throwing away one of the greatest resources of our State. The amount of food fish produced by our inland waters can be almost indefinitely increased by restricting the catch, and seconding the Fish Commissioners' efforts to stock them with the fish for which each lake and stream is best adapted. It only requires judgment and self-restraint to insure a crop from our inland waters which will very materially add to the income derived from the products of our fields.

Game is another unappreciated source of profit. The interests of the sportsman and farmer are identical. The latter should protect the game because he can make it pay him; the former because of his love of sport. Every true sportsman respects the farmer's rights to his inclosed lands, and is anxious to assist him in putting a stop to lawless shooting. And every sensible farmer should realize that the law-abiding sportsmen are their strongest allies in preserving and developing one of the most profitable sources of income. Every patch of woods, every copse and stubble field may be made to yield a revenue by the intelligent protection of game. The only reason why our woods and fields are not alive with game is because of that same selfish recklessness which has destroyed the pigeons, buffalo and other birds and beasts which were once so abundant. If the farmer does not himself care for sport, he can readily get a good price for his game, by selling the privilege of shooting to those who will not abuse it. In the newer portions of the State, there are vast tracts of land from which all the timber has been stripped, and which all attempts to profitably cultivate

have thus far proved unsuccessful. The rapid increase of deer under the protection offered by the confessedly imperfect system of the last six years, affords a hint of how nature may restore a value to such so-called worthless lands, providing a check is placed upon man's heedless destruction. The limits of this report will not permit any extended comments, but I consider the practical value of fish and game a matter worthy the thoughtful consideration of the legislature.

PENNSYLVANIA GAME AND FISH BILLS.

CLEARFIELD, Pa., March 27.—*Editor Forest and Stream:* The long, hard winter that has hung so long over this mountain region is beginning to break and the coming of the robins and the bluebirds tells us that spring is near. They call this an "old-fashioned winter." Well, I'm "not stuck" on old-fashioned things, much less on old-fashioned winters, and I shall be glad when the last snow drifts are gone and the arbutus and the hepatica have taken their place.

Owing to the deep snow and the heavy crust the winter just closing has been a very hard one on our game supply. Rabbits and other small game have frozen by scores, and the foxes and wild cats, owing to the inability of the hunters to pursue them, have had a royal feast. Deer are reported fairly numerous in the green woods, and in spite of the many hunters and hounds of last fall and the hard winter just ended some deer, at least, are left. The sportsmen of this Alleghany region are exceedingly anxious to see what the Pennsylvania Legislature will do for us in protecting the deer and other game of this State. So few of the statesmen sent to Harrisburg to make our laws have any time, outside of riding their own hobbies, to look after the interests of their constituents that I fear very little will be done to help us this year. The Pennsylvania State Sportsmen's Association at Harrisburg gave us to hope last fall that something would be done this winter in the interest of game protection, but if that association can succeed in securing a good game law from among the medley of bills offered they will do better than we expect. What is necessary in a good legislator is to know an evil and how to provide a remedy. Let the members of the Legislature who know nothing about our game and game laws and who are too smart to take advice from men who do, keep their hands off. One intelligent, high-minded sportsman like Judge Greene, of Oregon, can do more than a carload of so-called statesmen who do not know the difference between a grouse and a shitepoke.

I see by the Philadelphia Press that a bill has passed the House at Harrisburg to prohibit the killing of deer for three years. That method of protecting deer would be all right if all our deer hunters were honorable men and disposed to obey the law. But they are not. If such a law be passed the honorable sportsmen of Pennsylvania will obey it, but all through the deer ranges of this State there is a class of outlaws who live in the backwoods who kill deer at ticks during the summer time and in every other unlawful way during the fall and winter, who will pay no attention to this three-year law, but will go right on killing deer while the rest of us have our hands tied out of respect to law. But what would be gained by such a law, even if it could be enforced? During the three years of protection deer would certainly increase in great numbers; but just as soon as the law was off there would be such a slaughter of the innocents that the surplus would be wiped out in one season. I tried the same theory in the protection of our trout streams. As fish warden for our county I stocked many of the streams which, under the law, were then protected for three years. But what happened at the end of the three years? Hordes of fishermen came here from every direction, and those very streams were whipped to death inside of a month.

You cannot protect our game and fish supply in that way. It's all a delusion. The game and fish are here, and if given half a chance they will protect themselves. I repeat what I have suggested before; we must limit the open season for all kinds of game, make the seasons for all kinds of game as nearly uniform as possible, and as to deer, limit the number to be killed in any season by any one man, and keep hounds out of our hunting woods and camps.

Then after this is done let the Legislature provide for the enforcement of our game laws by the appointment of game wardens who will do their duty and be paid for it. Let the \$30,000 that is proposed to be spent in taking the Legislature on a junket to the World's Fair, or a portion of it at least, be appropriated to the propagation and protection of the game and fish of this great State, and I am sure it will do the people more good. I have thus written very plainly because I am intensely interested in this subject; I am tired of this eternal demagoguery and tinkering that results in no practical good to any one. I trust if the Legislature should succeed in passing such a law as the one suggested, that Governor Pattison will veto it.

I am very grateful for such a paper as the FOREST AND STREAM, clean, able and independent; it furnishes a medium through which we can at least express our views and have the assurance that they will be read by a host of the best sportsmen in the country.

FRANK G. HARRIS.

Editor Forest and Stream:

How unreasonable are our Pennsylvania sportsmen! Just now, with fair chance of getting a sensible game law, a committee doing all that is possible, with the most favorable conditions for legislative action, the committee of sportsmen, the game committee of the lower House and individual members are beset with advice and commands to amend the season to suit each and every one, instead of standing by the committee, who are trying to get a law that will protect our game, give the law-abiding shooters an equal opportunity with the lawless, and have game plenty if the season is short. One season for all local game is essential; and better to sacrifice the woodcock shooting than all the rest. But from July 4 to Aug. 4 should satisfy woodcock shooters. At that time no grouse are found in cock covers. Dec. 15 is late enough for the game season to close, if protection is what we are after. But sportsmen must agree to get the best law possible, not what each one thinks is best or wants. It discourages the workers, after having the consensus of sportsmen all over the State formulated, to have it antagonized. The suggestion to divide the northern and southern portions of the State I think is unconstitutional.

JUNIATA.

THE MONGOLIAN PHEASANT.

Editor Forest and Stream:

There has been much written of late years regarding the Mongolian pheasant in Oregon, and thus readers of FOREST AND STREAM doubtless know the facts regarding their introduction and the success attending the same. For the enlightenment of those not familiar with the facts I would say the birds (ring-necked Mongolian pheasants) were imported from China some eight or ten years since. Quite a number were liberated in the Willamette Valley and the Legislature of the State passed an act protecting the birds for a period of years. This protected period expired last September and the birds may now be shot during the same months the State allows for the killing of native grouse. Despite the fact that the birds have been under the protection of the law since their introduction, of course hundreds and thousands fell victims to pot-hunters and farmers. Harassed as they were the birds have been a great success and there are now thousands of them to be found from one end of the valley to the other.

With the fear before me that I am perhaps telling an old story, I would like to say a few words regarding the breeding and game qualities of these beautiful birds. The Mongolian pheasant is as nearly as I can determine identical with the famous pheasant of merrie England. The birds are very prolific and often rear from two to three broods during a season. The full grown male is a magnificent bird with a large tail and a plumage rivaling the rainbow. The mature male weighs about four pounds, but the female is smaller and of much more sombre plumage. The birds live in prairie and brushy country, and have no use whatever for the dark pine and spruce woods. They will always be found in country sufficiently open to allow of easy, fair shooting, and as sprinters they rival the wild turkey. I cannot say the birds will lie to the dog as well as does the ruffed grouse and Bob White, but the fact remains that a rapid and cautious dog will mark them down without trouble. They will then often allow the gunner to fairly kick them from the cover, and despite the fact of their brilliant plumage they very effectually secrete themselves in short grass and stubble. In flushing they do not make such a bustle as does the ruffed grouse, and in flight they are not so rapid as that bird. Knowing the great success these birds have been in Oregon, Eastern sportsmen have of late been making many inquiries with a view of introducing them into their respective States. But there has always been a serious doubt—and it is expressed by nearly every one who writes to me regarding the birds—will they stand the rigors of the Eastern winters? This question is what prompts the writer to inflict this letter on the readers of FOREST AND STREAM. Our weather this winter has been much more severe than is usually the case. The temperature was not so very low, not worse than zero, but we had from 1 to 2 ft. of snow, which remained on the ground about a month. I was very much afraid that the long continued and deep snows would be very hard on the birds, and that the larger part of them would perish.

I took the trouble to correspond with several of my acquaintances in different parts of the valley, and I now know the condition of affairs. I learn that the birds of the river bottoms and brushy localities had no trouble in finding a living, but that those of the prairies and more open country did not fare so well. Such birds were driven to the farmers' hay and straw stacks, and they also gather about the barns and follow the stock. Here they pick up a living, and if the farmers' boys do not mercilessly pot the birds they will easily survive. I know of a party in Canada who has successfully reared some of these birds, and he reports that they can stand a temperature of from 15° to 20° below zero. This, to my mind, clearly demonstrates the fact that if food is provided for the birds they will survive the coldest and roughest weather. The gaily dressed foreigner is difficult of capture, for he is suspicious and cautious; but the late deep snows have doubtless resulted in the taking alive of a good many. I regard this Mongolian pheasant as the coming game bird of this country, and I want to see them in every State and Territory.

Several months since I published a notice to the effect that I knew of several parties who made a business of capturing and breeding the birds and offering to furnish to any one sending me a stamped and self-addressed envelope the names and addresses of the above-mentioned people. I received many letters from Maine to Mississippi; and regardless of the fact that some of them were unaccompanied with stamps I have always given the desired information and a courteous reply. Live birds are scarce and expensive, but in the spring and summer numbers of wild eggs can be procured at a nominal cost.

Regarding the shipment of eggs I would say this. Last summer I obtained from a gentleman in this city one dozen eggs and carefully packing them in excelsior I sent them per express to a correspondent in Mississippi. Now it is a long distance from Oregon to the above-mentioned State, but my friend writes that the game hen under which he sat the eggs hatched 70 per cent. of them and that those unhatched were apparently not fertilized. Unfortunately, his country was visited by a protracted rain about the time the young birds were hatched and they became wet and perished.

Until about a month old the chicks are delicate, but from that on they are hardy and thrive. They must be kept dry and given suitable food. The eggs I sent my friend were from semi-domesticated hens and were perfectly fresh, but I am afraid wild eggs would not hatch so successfully. I would earnestly advise those who wish the birds to try some eggs, however, for I have known people who upon finding a wild nest of eggs and transferring them to a chicken have hatched and raised nearly all of them. Eggs are comparatively cheap, and if but three or four of a dozen hatch the sportsman may get a start and then all is well.

I would advise those who have large and valuable preserves which they wish to stock with the long-tails to buy a number of the birds and keeping them in captivity hatch their eggs under domestic chickens. Two hens owned by the party from whom I obtained my eggs laid in one summer 243 eggs. I now desire to again make the offer to furnish information as to how to obtain these birds to those who will address me and send stamp for reply. I have no individual or pecuniary interest in the matter, but in the interest of the sportsmen of this country I will go to the trouble of making answer to those who care to write me.

THOS. G. FARRELL.

PORTLAND, OREGON.

Spring Shooting and Large Bags of Game.

MATLOCK, Ia.—I notice in the columns of the FOREST AND STREAM many articles on the evil effects of spring shooting. I agree with them in some respects, but "circumstances alter cases." Where there are marshes and breeding grounds for ducks, no one will deny that spring shooting is an injury. On the other hand, in this region it is spring shooting or none. No ducks breed here, and they do not stop here on their way South in the fall and only for a short time in the spring. The result is that you must take advantage of them while they are here or shoot ducks in your dreams only. I believe most heartily in game protection, but not in such protection as will prevent all shooting.

I also notice in your columns, as well as in other papers, reports of large bags of game. In your issue of March 9 Mr. Hough, in speaking of Mr. C. E. Willard's Southern trip, says he killed in one day 113 quail, and in another day 269 doves. Is this sport—true sport? Most decidedly it is not. Such shooting is, to my mind, simply slaughter. I believe the amount of game killed should be limited by law. Any sane man should be satisfied with a bag of 25 to 40 birds, and if he has not the qualities of a true sportsman about him to stop when he has made a reasonable bag, then there should be a law to compel him to stop. Do not let this wanton and useless slaughter go on under the name of sport, and at the same time condemn the man who shoots a half dozen ducks in the spring and call him a pot-hunter.

UNION MACHINE.

Rifle Shots at Geese.

FREDERICKSBURG, Ia., March 26.—Ducks and geese are very plentiful here this spring. We had lots of snow last winter, and going off this raises the streams very high. The Wapsie, our nearest river, is all over the bottoms, and the ducks settling near the center are very hard to get at without a boat. The geese often alight in the cornfields. To-day, as I was sitting up-stairs reading, I heard the *honk, honk*, we all know so well, and going to the window saw a large flock circling around back of the barn. I rustled down-stairs, threw on my coat, and went out and climbed up on the windmill to see if they would light. They flew around toward the cornfield, and settled near the edge on a plowed field about 60 rods from a large snowbank on the edge of our grove. I "came off my perch" and ran in the house to get my .32 Winchester repeater with nine cartridges in the magazine, and then sneaked out behind the snowbank. The geese were scattered around three or four in a bunch. Hastily raising the sight two notches I lined up on the largest bunch and fired. They all flew up. This made me so mad I pumped the other eight shots as they rose. At nearly the last shot one set his wings and came sailing to the ground. May be I didn't make the mud fly getting to where he fell. He was stone dead, the bullet going through him lengthwise. An old goose hunter would have thought nothing of this, but it was my first goose, and it would have taken a hat two sizes larger to fit my cranium just then.

F. J. C.

You Can Get the Sense of It.

THE following interesting and queer piece of composition was received recently by Sam Cornell, of this city. The writer is a full-blooded Sioux Indian and puts in his time hunting and acting as a guide for hunting parties. It was in the capacity of a guide that Mr. Cornell met him. His education was procured at an Indian school on the reservation near his home. The letter is given in its quaint and original makeup and here it is:

WOLF POINT, Mont., Feb. 12, 1893.—Friend Sam: Your letter of Jan. 6th, and I was very glad to hear from you, that you was got some elk skin; well, I never get hold of any elk teeth my life, no elk in this our country & some bears in little rocky mountain. But I never go up there, and some sheeps too. Plenty of deers & elvies too and I have killed 7 nice dose & 15 elvies & redfox. Deer skins 20c lbs. Some of the skins weigh 7 or 9 lbs. We have hards winter we ever know of, I think we have get down this spring, to dam deeps snow; just above my knees of snow. We have colds and storms and hale 12 days. I think we get warm next time. I was out of hunter four weeks; I got just home one leave. I take trips of little rocky mountain until I hear from you again. Some time ago I use to go hunting with Proctor, and we saw one old Black-tail buck he standing alongside the little creek; and Proctor shot 2 times; he missed, I shot one knock down. I think Proctor remember for that. Yours friend, PETER MATTHEWS.

The Proctor spoken of in the above letter was one of the party which Mr. Cornell was hunting with when he met Matthews.—Youngstown, O., *Evening Vindicator*.

Out of Winter Quarters.

JUNIATA COUNTY, Pa., March 25.—Our interesting friend of the wood, the coon, has again been brought out of his retirement by the warm, murky evenings of the past week. A few evenings since, just before dusk, I heard one of his tribe, out of his retreat, noisily welcoming the coming spring. He was in a woods of old oaks but a few hundred yards from the house, and he kept up his peculiar solo for an hour or more. One of our teamsters last week bagged an old coon by hiding (so his story runs) behind a wood rank and catching its hindlegs as, with three young ones, it came trooping down the mountain. Of course it was not edible at this season, and the man received at the store but 35 cents for the coat.

ONYJUTTA.

Deer and Railroad Train.

PHILADELPHIA, N. Y., March 27.—While the passenger train that leaves Philadelphia for Watertown at 5:45

F. and S. April 13, 1893.

Stories told
on One Another
by a
Country Parson
and his Deacon.

P. M. on March 25 was climbing the steep grade a-half mile from the depot a doe was struck and badly wounded. It did not die till the next morning and the manner of its death is questioned.

The doe was badly crippled by the passenger train, but was still alive—according to the crew of the freight train that stopped to pick it up. Not caring to run the risk of prosecution by the game protector, they—according to their story—placed it on the track and ran over it with the train. The deer was run over less than 300 yds. from the depot.

If the deer was still alive when the freight train ran over it—as the freight train's crew said it was—it must have had an extraordinary vitality, for its throat had been cut and its viscera removed before being mutilated by the cars.

Its body was warm at 9 o'clock on the morning of the 26th. The hind and forward quarters had disappeared at 12 M., having probably been taken by some villager, the meat not having been mutilated except just back of the foreshoulders where the wheels had divided it. The deer had been seen several times lately by farmers and others in the country hereabouts.

Robins appeared on March 18, while crows and woodpeckers have been here for several weeks. A bird was seen carrying a string probably for its nest this morning.

RAYMOND S. SPEARS.

Game Notes from the Pecos Valley.

EDDY, N. M., March 23.—F. D. White, a stockman who has a pasture of some 30,000 acres on the Staked Plains, east of Eddy, came in the other day and reports that there are a great many large gray wolves on his range, and that they are killing a good many calves and colts. He states that mountain lions are also numerous, and is anxious to have some hunters come out and help thin them out. He says there are thousands of antelope on the plains between here and his range, and some 300 in his pasture. They are confined by the wire fence and can not get out.

A lady who lives on a homestead fifty miles up the valley, says that one morning in the latter part of February she got up and found several hundred antelope within a quarter of a mile of the house. There had been a snow-storm the day before and the antelope had drifted in and taken refuge among the brush in an arroyo that crosses the farm.

Some prospectors who drove up the valley a week or so ago saw a coyote catch a jack rabbit. They stated that the chase was a long and exciting one; that near the close of it the jack cut and doubled, and at each turn the coyote gained on him until he finally picked him up. Two other coyotes that had been watching the chase and ready to take a hand in it came in at the finish for their share of the lunch.

Duck shooting has been good along the Pecos River and the big canal all winter, and several good bags have been made. The varieties most numerous here are canvasbacks, redheads, mallards, widgeon and teal. G. O. SHIELDS.

Small Game Preserves.

ANN ARBOR, Mich.—I inclose a mite for the "Nessmuk" memorial. His game laws are the only ones to be trusted—his and those of the Indian before him—namely, limit the killing to the physical wants of the person or persons concerned. No one has a "right" to kill 75 wild ducks a day, or any such number, on his own grounds, or anywhere else. The private preserve is meeting opposition. It will some day meet the question of what rights of killing it gives the owners, only to find that it does not convey the right of unlimited, exclusive slaughter. The wild, barbarous red man (Indian) had better game laws than our "civilized elegancies" can boast.

I am reminded in this connection of a fact, often insisted on in FOREST AND STREAM, that even a small, strictly "preserved" area is of the greatest benefit in keeping our wild neighbors from total extinction. In a village I know of there is a little group of large forest oaks where the Pennsylvania fox squirrel has been safe for 30 years. In consequence he is safe now in the whole village. He lives in the trees on the streets and in the dooryards. He seems to be doing quite well in the world, too.

Once, years ago, I saw in the grove above referred to perhaps 250 or 300 of these squirrels gathered on a few trees, four or five large white oaks, racing and chasing each other about at a rate that brings the rattle of the bark to my ears now.

J. B. D.

Shooting by Proxy.

"PISECO" writes from Port Royal, S. C.: "This has been a very good season for snipe, mallard and teal, which have been abundant in the fresh water marshes and ponds of several of the sea islands, and a number of good bags have been made, rather the best that I know of by myself, shooting, as I usually do in these autumn days of my career, by proxy. My proxy is a first-class one. Our arrangements are that I furnish gun, ammunition, etc., and he attends to the sport. He is a dead shot and I find this is really a comfortable method. I wish I liked to shoot birds as well as I do to catch trout."

Horrible Nuisance in a Blind.

I HAVE just noticed "Podgers's" appeal for a remedy for the "wretch" who makes puns. From the example given, this looks like a very severe and chronic case. A friend of mine was in the habit of taking advantage of me when we were together in a duck shooting blind. Each pun caused me to miss the next shot, and as entreaty was of no avail, I was in despair. I at last struck an unfailing cure. Every time he got off a pun I proceeded to give him a long explanation as to the point of his joke, and where the point—if there happened to be one—came in. After one or two treatments the patient was cured.

DOCTOR.

North Carolina Quail.

MARCH 20.—I have just returned from a week's quail shooting in North Carolina, and notwithstanding that it was the last week of the open season, I enjoyed fine sport. I was extremely comfortably housed and very well treated at the Renfro Inn at Mount Airy. I believe this place was advertised in FOREST AND STREAM this winter. I shot over good dogs and had the use of a competent guide, and all in all I can most strongly recommend the place.

T. DE C.

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

WHEN JACK AND I WENT FISHING.

'Tis years ago since Jack and I
Went fishing here together;
For I would go when Jack would go,
In rain or pleasant weather.

I'd often watch him when at school,
And knew that he was wishing
He had his hooks, could drop his books,
And go with me a-fishing.

Sometimes we'd run away from school,
But dad made little kicking
When he found us out, for he liked trout,
Which saved us from a licking.

When looking back to those bright days
It seems almost a dream,
And yet, in memory sweet, I hear
The ripple of the stream.

I scent the incense in the air
Of flowers, so gently springing
From mossy bank, and, in the wood,
I hear the bluebirds singing.

How plain I see Jack's old straw hat,
His face so brown and freckled;
His string of fish—I only wish
I had some, crimson speckled.

But Jack has changed, and so have I,
With the little brook of ours;
The trout are gone, the bluebird's song
All vanished, like the flowers.

And though I'm old, I can't forget,
I still keep hoping, wishing,
That Jack and I, before we die,
May once again go fishing.

CHAS. STUART RILEY.

THE CHUNKY LITTLE BASS.

I HAVE heard a great deal said and have read something about the gameness of this fish and the stubbornness of that, but the chunkiest little fellow I ever heard of was a little white bass which was caught in White Lake, Mich., last summer.

Tom and Bill (these names will answer just as well as their baptismal ones) were out on the lake and had been having lots of fun with white bass and had a good mess. Bill was tired, had enough, wanted to go in, but Tom wanted more. Bill was handling the boat and fishing a little in a careless, listless manner. He laid his rod down, one-half of it outside of the boat, hook in the water, to hand Tom "just one bait more." Something took Bill's bait with a good strong pull and overboard went his rod. Down, down it went in 20ft. of water, out of sight long before either man made a move or could catch their breath.

Well, they dragged and dragged until their stock (limited) was exhausted. There was a \$26 rig down there somewhere, but down there they were obliged to let it remain, as no amount of dragging or probing would touch it.

There probably have been fishermen in a better state of mind than these two were in as they rowed toward the landing. Bill was as sore as a bran new boil at having lost his rig, while the sensitiveness of said boil was not mitigated any by the thought that he had been urging Tom to go in for the last half hour. This, added to the guying he got from Tom for not "having sense enough to hang on to his rod," was enough to make any saint in the calendar red hot, saying nothing about the uncalendared ones.

Nevertheless, after a good substantial dinner, a refreshing nap and a grief-subduing smoke Bill rigged up another outfit and the two started for the "mouth," three miles away, for a fresh supply of bait, Bill with an unusual amount of emphasis affirming that "He would not row a single stroke and that smarty might have full swing; he would stick to his rod."

An hour's rowing brought them to the life-saving station, where more bait was obtained. Each fisherman having hooked on a fresh bait they pushed out into the channel through which White Lake discharges into Lake Michigan. Bill's hook had been in the water not more than three minutes when he felt what he termed a "snivelling sort of a bite," a cross between a small twig and a little perch. But as the snivelling continued he pulled up, when lo and behold, instead of having hooked a fish, he had caught a fish line. Dropping his rod into the bottom of the boat and firmly planting a No. 12 boot on it, emphasizing that with 165lbs. of himself, he care fully, hand over hand, pulled up the captured line. About 50ft. of the line was in the boat when Bill, with a scream that fairly made the boat shiver, yelled "Eureka!" Then with another screech, which made the alarm bell in the station yard ring and brought every member of the crew on to the pier in double-quick, he lifted his lost rod and reel out of the water.

There being yet life at the other end of the line, it was carefully reeled in. At the end Bill found the cause of all his trouble and anxiety in the shape of a little white bass which would probably weigh a pound or a pound and a quarter, but as full of fight as Satan's wife. The gamy little chunk had pulled from the spool a good hundred feet of line, and then dragged the whole business three and a half miles; and when caught was evidently on his way out into the big lake, where he would have more sea room and better water to enjoy it in.

Tom said, "Let's keep him as a curiosity and send him to FOREST AND STREAM's museum." But Bill from the fullness of his joyful heart said, "No. He has behaved so grittily, I am going to let him go in hopes he will reproduce his kind extensively."

The hook was very carefully removed and the fish gently slid into the water, with many expressions of good will hopes that his little lark was satisfactory to him and that he would multiply and his whole race prosper.

A. W.
GRAND RAPIDS, MICH.

EVOLUTION OF THE TROLLING SPOON.

THERE has been some discussion recently in the columns of FOREST AND STREAM in regard to the inventor of the trolling spoon now so commonly used for the capture of game fish. Priority of invention has been claimed for several, but the name of the originator of this kind of lure remains to be mentioned. In the exhibit now being prepared for the World's Fair by the J. T. Buel Company, of Whitehall, N. Y., may be seen the germ that resulted in the modern spoon bait. It is an old broken-handled brass spoon, corroded with age, to which an antiquated style of hook has been soldered. With it the late Julio T. Buel caught fish more than sixty years ago, and it is an incontrovertible fact that his was the first patent ever granted in this country for trolling spoons and spinning baits, and that he was the first to engage in their manufacture. A brief account of the life of the pioneer of this style of fishing may not be uninteresting.

Julio T. Buel was born in Vermont in 1812 in close proximity to the famous Lake Bomosee and many of the finest trout streams in that State, and he early familiarized himself with the habits of fish. Standing one day on the bank of a stream he threw some small white pebbles into it and noticed that trout would rise to them. This fact suggested to the lad that game fish would take any bright moving object. He tried the experiment with bits of tin and found the fish eager to strike them. He then soldered a hook upon a piece of bright tin, and after twisting it so that it would revolve when drawn through the water, caught a fine bunch of fish. It was not until he reached the age of eighteen, however, that he made the first "spoon bait," as the article became known later. While eating his lunch on the lake on day he accidentally

JULIO T. BUEL.

dropped a teaspoon overboard, and as it sank he noticed that it made peculiar twists and turns through the water, and was suddenly struck by a large fish before it reached the bottom. The boy was filled with a new idea. Might not a common spoon with a hook soldered to it prove more killing than all his former inventions? He was not long in getting an old brass tablespoon, and, after polishing the convex side of the bowl, he soldered a hook upon the small end of it and tied the line to the broken handle.

Young Buel's first efforts in Lake Bomosee with this rude construction was a revelation to all the fishermen in that county. The size and quantity of fish he took from the depths of the lake had never before been approached. In fact, many of the old residents thereabouts continue to use what is known as "Buel's spoon" in its original shape, and will not believe that any improvement can be made in it.

But Buel was not contented until he could perfect the finest details of construction for strength and wear, and devise little niceties of distinction for fish of different

THE FIRST SPOON BAIT.

habits. This seemed so important to him that he spent hours and hours lying perfectly still watching their habits. No item of detail escaped his notice because he found that failure often resulted from the slightest defect. Sometimes it was a faulty hook; sometimes it was the shank of a fly spoon, and sometimes it was mere appearance that failed to lure the wily fish. One by one he studied out these details, sparing no pains or expense. He had bright polished treble hooks made to his own order because the black japanning in common use could hide a flaw that might cause failure at a critical moment. Experience has proved the wisdom of Buel's bright hooks. Black japan treble hooks were not only driven out of the market, but bright polished ones became known to all fishermen throughout the land as "Buel hooks."

He bought the finest steel piano wire costing from \$1 to \$2 a pound, to use in the place of the cheaper and weaker brass wire, and this was plated by him to prevent rusting. Even the swivels in common use were not good enough for him. They were easily made of soft wire, but he had them made of hard wire, as being less liable to bend and stop the revolution of the bait. And when it came to the selection of feathers for the flies, those of waterfowl alone were used, which, being adapted to the water would not lose their shape when submerged. No material was too good or too expensive if it only answered exactly the purpose he had in view. He selected pure silver for his artificial lures as being nearest the color of the live fish's belly. Instead of electro-plating he used a more durable rolled plate, and even this was burnished instead of being polished in the usual way, because burnishing hardened the surface and made it more durable. Little things in themselves, but together necessary for the perfection at which he aimed, they have made his name a synonym among fishermen for excellent and honest work, and it is worth noting that these details to-day are faithfully followed in the manufacture of everything bearing his name. In about 1854 he removed to Whitehall, N. Y., and en-

gaged in the furrier business, but this location was so tempting to a true fisherman that more of his time was given to fishing and devising attractive lures with which to catch fish than to the manufacture of hats. Only six miles away was Lake George, swarming with trout of enormous size, while Lake Champlain, in the vicinity of Whitehall, was a famous feeding ground for muskellonge, bass and pike, while less than a day's journey would take him into the heart of the Adirondack wilderness. He made long trips to the Adirondacks, the lakes and rivers where these different species lived, in order to thoroughly test his latest devices. When satisfied with the working of one, he would secure a patent upon it, lay it away, and go to work upon a new one.

Lake George, on account of the great clearness of the water, was one of the best places to test them, for he could see the motions of the bait at a great depth, as it was drawn past him by another person.

It was in Lake George that Buel first caught fish by deep trolling. He used some 200ft. of line, a half-pound sinker, a long fine steel leader, and one of his silver specimens that initiated a wounded fish when drawn through the water. With this tackle he would take large trout from the bottom of the lake in deepest water. For a long time Buel used to say that he had no idea of making the manufacture of trolling baits a business, but the sportsmen he met on these trips through the Adirondacks and elsewhere, as well as his neighbors, whom he fully supplied with his spoons, soon spread the reputation of his devices for taking fish, and orders and requests poured in upon him from every part of the country. The result was that the manufacture of trolling baits was begun by him at Whitehall, N. Y., in 1848, and since that time the great bulk of fishing lures which have delighted the hearts of all scientific fishermen, have come from that place.

SPOON BAIT.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Illinois Fish Commission.

CHICAGO, Ill., March 31.—Governor John P. Altgeld's recommendation for the abolishment of the State Fish Commission came up in the Senate yesterday and was referred to the Senate Committee on Judiciary. The judiciousness of the judiciary is not yet determined, but the commission is likely to stay where it is.

Fly-Fishing for Bass.

W. H. Graves of Detroit, and Mr. L. M. Russell of Sackson, Mich., were in Chicago this week. Mr. Graves is an old bass fisherman on the St. Clair Flats grounds, and has also a good knowledge of other Michigan waters. He told me that the Grand River, at or not far from Grand Ledge, Mich., was about as good a water for fly-fishing for black bass as any he knew. He also spoke very highly of the Huron River, which flows in the opposite direction, or to the east. The Grand empties into Lake Michigan, just across the lake from us here. Mr. Graves tells me that fishing on the Flats is not thought sportsmanlike until after the spawning season, well on through June, at least. I wish as good fishing morals prevailed through all this section.

At the Fair.

Mr. S. A. Hones, manager of the Osgood Portable Boat Co., of Battle Creek, Mich., spent some time this week at the World's Fair grounds, arranging for the extensive exhibit which his firm will have in the anglers' pavilion of the Fisheries building.

Capt. Collins now has his hands about full in looking after the exhibits which are piling into his departments at the Fisheries. The Norway space is now well filled with odd-looking boats, and with divers preserved, pickled, or bottled fishes of wild and impressive contour. Somebody has in a lot of beautiful birch bark canoes. Somebody else has some mounted salmon and lake trout. Indeed, there is much of interest in every corner down there now.

Last Tuesday the sun came out warm and the ice in the lagoon moved out, leaving the part near the Eskimo village open. Two or three of these odd folks improved the occasion and sallied out in their long and narrow skin kayaks, which they paddled with a pole a trifle flattened at each end. They handled their tipsy craft with great ease, and one hardy Corinthian had a passenger on the deck behind him. The passenger lay out at full length on the deck, with his head against the cockpit and his toes trailing in the water behind. His position would have made the ordinary citizen a trifle apprehensive, but the passenger seemed to enjoy the sunshine which beat down on his sealskin back.

Easily Done.

One high in authority writes thus: "For fear that you might not recognize it, I thought I'd point out to you that in the 'Cotton Fishing House,' of March 23, FOREST AND STREAM had a piscatorio-historico-expositiono-news beat of the first quality."

Of course it had. FOREST AND STREAM does those things right along, does it often and does it easily. If FOREST AND STREAM's competitors were not so horribly easy to beat in a journalistic way, it might be more worth while to occasionally call attention to such succulent scoops. As it is, there isn't anything much for a pace-maker, these days.

E. HOUGH.

175 MONROE STREET, Chicago.

Alaska Fly-Fishing.

PORTLAND, Ore., March 28.—The statement has been many times published, and is generally accepted as true, that there is no fish in Alaska that will take the fly. Some time ago I took occasion to dispute the assertion in the columns of FOREST AND STREAM, and was happy to have so good an angler as "Podgers" come to my support.

Now I have additional evidence. To-day I had a long talk with Mr. A. B. Ford, a heavy cannery-man of that far-away country. He told me that he had seen not only trout but salmon taken with the fly at Yes Bay, near his home. For cumulative testimony he referred me to Lieutenant Emmons, in charge of the Alaska exhibit at the World's Fair; Carl Spulm, president Alaska Packing Co., Concord Building, Portland, Ore., and Paymaster Webster, of Seattle, Washington. Is it not about time that people should quit talking such nonsense as that no fish in Alaska will take the fly?

S. H. GREENE.

THE BIG SUCKER OF BOYHOOD.

I was pleased with Mr. Cheney's recent article in defense of the "brook sucker," not that I would care to be put on record as an enthusiast over the fish, yet it is a fairly good fish when properly cooked, and when taken from a clear stream in the early spring months. He is a fish that has perhaps suffered more ridicule than any of his fellows, and when spoken of by anglers is classed as hard to catch and good for nothing when caught. I will confess to a weakness for suckers, owing, perhaps, to the fact that my first real thrill of joy as an angler was caused by my capture of a splendid specimen when I was but 8 years old.

Near the farm on which my father lived ran a large creek, the real headwater of Munasquan River. My mother, careful old soul, would as soon think of allowing me to smoke grapevine cigars in the haymow, as to listen to my pleading to fish in that creek. So I had to put in what time I had fishing for "sunnies" in a shallow brook in our meadow. But one day my longings overruled all my fears of future consequences, and armed with a three cent cotton line, a small hook and a white birch pole, I started for that enchanted stream. For had I not seen real monsters, glorious bullheads, almost impossible eels and great strings of suckers brought from that same stream by the men and large boys? I was not a great while in finding the favorite fishing point, the "old maple swamp" at whose foot the waters had worn a deep pool. Stringing on a goody-sized worm I crawled out on the stump, adjusted my cork float to the proper distance on my line, and for the first time in my life cast a bait where I could not see bottom. And with what anxious pleasure I watched that cork as the waters swirled it to and fro, till presently a nibble, then another and then it ceased altogether. How disappointed I felt lest it should not prove a bite. I did not know suckers then so well as now. Again that nibble, and with all the strength at my command, I yanked boy fashion. Horror of horrors, I was fast to a root; oh, the chagrin and despair for a moment. But, a tug tug at my line and a swift motion down stream told me I had a fish. How I landed him I never knew. I have a dim remembrance of a splashing and surging object, a whip-like pole bent in all manner of shapes, and finally a real live fish at my feet. How I danced and halloed. No prince ever possessed more priceless trophy. I shall never forget the pace I set for home that hot afternoon. Bare-foot though I was, I never halted for briars

or stones, until breathless and the sweat streaming down my face, I held up my prize to my astonished father, who was plowing corn. I guess my first sucker proved my mascot, for I escaped my deserved thrashing, and thereafter had the liberty of the creek whenever my time could be spared. He weighed just 3½ lbs., and I carried his tail and fins in my pocket a long time as a relic. Since that time I have fished many streams, both salt and fresh; am regarded as an angling crank; and have caught almost every variety of fish indigenous to our waters, but of all the scaly prizes that have been killed on my hook none have given me the thrill and hilarious joy that did my first sucker. And even yet, surrounded on all sides by good salt-water fishing, I cannot forego the temptation of at least one day in the spring at my early stamping grounds on the fresh-water creek. While Mr. Cheney's method of the heavy sucker is very good I have what I consider an improvement. I use a very light but thoroughly tested lancewood rod, a small combination rubber and German silver reel, and nine-thread Cuttyhunk line. After carefully grading the depth of my pool I set my float so that the bait will just clear the bottom, then having stationed myself at its head, I carefully pay off the line until the entire length of the pool is traversed, repeating this until either success crowns my efforts or failure convinces me that the fish are not there. But in no case do I use more than one worm at each baiting, and leave as much as possible of its length to wriggle free at the end of the hook. I have taken both trout and suckers in this manner, while the ice water was still running in the creeks.

LEONARD HULIT.

Burbot in the Mississippi.

On March 18 Dr. S. P. Bartlett saw a burbot 14 in. long, which was caught at Canton, Mo., twenty miles above Quincy. This is the second fish of the kind known by him to occur in that region, and as his acquaintance with the fisheries is extensive, it may be accepted as a settled fact that the burbot is an uncommon species near Quincy.

The most southern locality reached by the fish thus far known is Kansas City, Mo. In the Great Lakes, the upper Missouri, and throughout British Columbia and Alaska the burbot is a common fish. As a representative of the cod family its permanent residence in fresh water is unique and interesting, but as a food fish, except in a few places, it is not esteemed.

At Quincy the fishermen were afraid to handle the

specimen seen by Dr. Bartlett on account of its eel-like appearance and its formidable mouth. A figure of the fish is to be found in the "Fishery Industries" and in the report of the Pennsylvania Fish Commission.

UNCLE BILLY.

It was early in the season, about May 10, and I was whipping the open water between the lily pads at the head of the lake with fair success, fish rising freely and ranging from ½ to 1½ lb. It was an ideal spring morning, with just breeze enough to create sufficient ripple partially to conceal the angler, and no jarring sounds had broken the music of the feathered tribe, when suddenly and just as I landed a fish of about 8 oz., a derisive laughter vibrated on the morning air. I glanced in the direction whence the sounds appeared to come, but my view was obstructed by a clump of willows on a prominent point of the shore. My next cast was rewarded by a fish a trifle larger than the average, and as I landed it, I heard, or imagined I heard, a soft chuckle. To my next cast I had a double rise and both fish proved to be small fry and were returned. Before this could be done, however, very derisive and most aggravating laughter shook the air; and when I looked up I saw a little stoop-shouldered, gray-haired and gray-whiskered old man gazing at me through a pair of steel blue eyes full of contempt and merriment. He said, "Take no notice of me or my peculiarities, stranger, but go on and fish, if that is what you call it; or if you feel so inclined, come with me a short way and I'll show you what I call fishing and sport."

I was too mad for civilities and told him to lead on.

He brought his skiff around the point and led the way to a stretch of abrupt rocky shore, where the water was deep, and commenced proceedings by raising a 16 ft. cane from the bottom of the boat and baiting a 4-0 hook with

The dog would rise to a sitting position, gaze at the bullet, wag his tail and lick his chops, whereby he not only expressed his pleasure at being addressed, but also his intimate knowledge of what was meant by "another one," at least so his actions were translated to me.

Uncle Billy fishes for the market, but would no more think of fishing for or handling fish under 1 lb. than he could be induced to kill a doe out of season, even if he were out of meat and the animal stepped into his cabin. A buck, however, as soon as well in flesh and fat, I fear would stand less chances. Take him all in all, he comes nearer my standard of a gentleman sportsman than the majority of us who pretend at a claim to the title.

Mux.

SAN DIEGO, CALIFORNIA, FISHES.

PROF. CARL H. EIGENMANN has prepared, and the National Museum has published in its proceedings, an account of the fishes of the southern part of California, or more especially, of San Diego and vicinity. One hundred and seventy kinds are enumerated in his list, and a very large proportion of them bring forth their young alive.

"San Diego Bay is about eighteen miles long by one to several miles wide. Its shores are sandy or muddy. There being no streams emptying into it it contains pure sea water. False Bay is much smaller and shallower, and in winter receives the water of the San Diego River."

Fish are caught in these bays by seines and gill-nets, and the seining has proved so disastrous as to threaten the speedy ruin of the fishing. Trolling lines and hand lines are used off shore, the former in the capture of Spanish mackerel and barracuda, the latter for taking whitefish and rock cod. The whitefish is not like our common one of the Great Lakes, and does not belong to the same family; it is related to the famous tilefish of the Atlantic, and takes the hook with equal readiness. The rock cod are brilliant spiny-finned fishes of the same family as our Eastern rosefish or red perch. These fishes are abundant and furnish almost endless amusement for anglers all along the west coast. Young mackerel, Spanish mackerel and barracuda enter San Diego Bay, sometimes in great schools. Large fish, as a rule, are found in deep water.

"The color of the same species of bottom fishes inhabiting the bay and the outside varies greatly, and even the same species at different depths or on different bottom show remarkable changes." One of the rock cods

"varies from flesh color to the brightest scarlet and olive." A sculpin found both in the bay and on the fishing banks shows similar variation. Specimens in the bay are dull colored, chiefly brown and mottled, while examples from the banks have the brown replaced by vivid scarlet.

In the list of the fishes may be recognized nearly two score of the familiar species on our east coast, including such forms as the spined dogfish, the shark, hammer-head shark, thresher shark, shark ray, devil fish, lady fish, striped mullet, remora, swordfish, thimble-eye mackerel, Spanish mackerel, tunny, porcupine fish and sunfish. The rainbow trout is the only member of the salmon family in the fresh waters. It abounds in the streams rising in Smith Mountain, tributary to the San Luis Rey River, and occurs also in mountain streams east of San Quentin, Lower California.

The barracuda is one of the most valuable food and game fishes of the region. It becomes abundant about the end of March, spawns early in July, and departs upon the approach of winter.

The swordfish has been seen on the Cortes Banks and northward, but is not brought in to San Diego. Two kinds of weakfish are found in San Diego Bay, one of which reaches nearly 4 ft. in length.

In crab holes under rocks at Point Lorna lives a remarkable little blind fish of a beautiful pink color. On mild days, when tides are very low, many of these fish may be found by overturning the stones, and sometimes the fish live out of water on damp gravel and sand under the rocks. Although the eyes do not serve for seeing, the skin is super-sensitive, and when food comes in contact with that of the head especially it is readily seized. The fish will live in a small quantity of water for several weeks without change. The eggs are bright yellow and are often attached by threads forming clusters like bunches of little grapes.

The rock cods are found in bewildering variety and number, twenty-eight kinds being mentioned by Dr. Eigenmann. Many of them are large and very handsome, and all of them take the hook freely.

Among the most interesting of the fishes are the viviparous perches, which produce from about twelve to fifty young, fully developed before they leave the bodies of the females. These perches extend northward to Alaska, and it is expected that living specimens will be obtained by the U. S. Fish Commission in Puget Sound for the World's Fair.

ADIRONDACK LEAGUE CLUB.
MOOSE LAKE - NERKINER CO - N.Y.

"MOUNTAIN LODGE," NEW CLUB HOUSE ON MOOSE LAKE.

a grub about the size of my thumb. After carefully lashing the bait to the hook he nodded to me, cast to within about 6 in. from the shore, and gradually drawing his bait in, as the heavy sinker threatened to lodge it. The first cast was a failure. To the second, however, after the bait had reached a depth of 6 ft., a fish responded. The old man struck and not without some effort landed a trout of about 3 lbs.

He never looked in my direction, but adjusted his bait, and in about 45 minutes caught seven fish weighing 18½ lbs. He then asked me how many fish I had. I counted twenty-three, weighing 8 lbs. and did not know what to reply, when the old fellow, looking at me reproachfully, said: "Why could you not let them live till I would have caught them. They would have weighed 40 lbs. at least. See what you wasted."

Thus I made the acquaintance of "Uncle Billy," a '49er, and about the queerest and nicest old fellow I ever met, and I vowed that, early in the season, in this lake I would not cast another fly, but become a convert of the virtues of the 4-0, the grub and a 9 oz. lancewood bait-rod.

About a week after our first meeting, I noticed Uncle Billy in his boat approach a point in the shore where I was lounging; and I decided to watch him for a few minutes to see whether he would not now and then take in a small one. After rowing to within about 30 ft. from shore, he raised his rod, looked critically at his bait and went to work, making several casts without a strike; he then came closer in and cast to deep water, bobbing his bait Indian fashion, and being almost immediately rewarded by a strike and disappointed by a miss. He slowly lowered his bait again, struck and missed a second strike: that was too much for the old hero; he got on his feet, lowered his bait, and with considerable color in his face and set teeth muttered: "Take it again; there take it," and with emphasis crescendo, "I dare you to take it again, you coward." I had to leave my point of observation for fear that I could not suppress my merriment, but concluded that it was worth while to cultivate the old gentleman's acquaintance.

With this object in view I paid Uncle Billy a visit and was introduced to his 45-70 Marlin, his 8-gauge America trigger action and his three hounds, one of which is his owner's pet and understands every word addressed to him. I was told, and felt inclined to believe, after witnessing what followed. Uncle Billy was casting bullets; and whenever a nice full bullet would drop from the mold he would point it out and exclaim: "There is another one."

BOSTON AND MAINE.

Massachusetts Trout.

BOSTON, April 3.—The trout season opened April 1, and the day was one of the finest and the mildest of the season. But the weather had been unusually cold, so that the streams in the western and the northern part of the State were scarcely clear of ice and were full to the brim, many of them with snow water. Hence but little angling has been done in these waters. Mr. L. Dana Chapman of Dame, Stoddard & Kendall, had two invitations to go trouting in private waters, one in Orange, and the other down on the Cape. He decided to put off both trips till this week, and then take the one to the stream on the Cape. Mr. E. C. Paull of Taunton, and a member of the Boston Chamber of Commerce, was to try the trout streams in the neighborhood of Cotuit and Fall River. He was informed that one or two trout brooks in that section were well open, but as to his success I have not yet been informed. Gov. Russell is always first and last with the trout, and his success is always marked. With Mr. A. H. Wood, he was early on the trout brooks in the neighborhood of Sandwich, and both are reported to have taken seven fine trout. According to a dispatch from Buzzard's Bay that day, they were called upon to witness a far more disagreeable sight than usually comes to the trout fisherman. This was the burning of "The Crow's Nest," actor Joe Jefferson's beautiful cottage at that point. They were fishing in the vicinity and seeing the flames, were soon at hand and rendering all the assistance possible. Mr. Jefferson himself, a great lover of angling, was absent on a California trip.

The Gilbert Trout Bill Defeated.

The Gilbert trout bill was refused a passage in the Massachusetts Senate on Tuesday, by a tie vote of 17 to 17. The following day a reconsideration was called for. But the measure was defeated hard and fast by a vote of 19 to 16. This ought to end the matter forever, so far as the legislature is concerned. But Mr. Gilbert has an amount of fight in him worthy of a better cause. Now he proposes to test the matter in the courts. He has sold some of his trout to one of his neighbors, Maj. W. W. Cook, doing this the last days of March, before the beginning of the open season on trout. On Friday he made a complaint against himself before a magistrate, for selling trout out of season, and has had himself arrested for the offense by Chief of Police Manter of his town. His object is to carry the matter to the Supreme Court. Doubtless he expects to overthrow the whole code of fish and game laws in the Bay State. There is scarcely great cause for alarm. Mr. Gilbert's claim is that he has a right to sell trout reared by himself, whenever he pleases. But the Massachusetts Fish and Game Protective Association contends that he has a right to sell his own only in the open season, when everybody else can do the same. This Association contends that it matters not whether a man raises a trout by means of a hook and line, or by means of chopped liver, he must not sell his raised trout in close season.

Maine Legislature.

As suggested last week, the Maine Legislature has adjourned. It has been a peculiar session, of far as fish and game legislation is concerned. Scarcely a measure has been passed that promised to favor non-resident sportsmen, but the one designed to give the non-resident the most trouble, the proposition to charge a license fee, was indefinitely postponed at the last hours of the session.

Among the dispatches in regard to the closing acts was one saying that the last bill signed by the Governor was one "prohibiting non-residents from fishing in State waters." This news caused sportsmen fond of fishing in Maine no little uneasiness, but a little explanation sets the matter all right. It relates only to seining or fishing for mackerel, menhaden, etc., in "State waters," that is, in bays and harbors within the three-mile limit. The act for protection of fish in B. Pond, in Oxford county, came along. A member from Norway said that all of the people in his county were opposed to the measure, and he moved its indefinite postponement. The local fishermen wanted to fish with bait, while the members of the Oxford Club, rich sportsmen from Boston, wanted to fish with the fly only, and they desired to control the actions of citizens of the State. The bill was indefinitely postponed. This bill was the one petitioned for by Gov. Russell, of Massachusetts, and his friends, members of the Oxford Club. The club controls the shores of the pond.

The measure permitting sportsmen to send out their game, an amendment of the game laws whereby a man must go with his game and have the same plainly tagged and marked with the owner's name, was fought for till the closing hours, but the whole matter was finally referred to the next Legislature. Hence the old law must stand for two years at the very least. It is well that it is so, for the permission to "send out game" would open up the Maine forests again to the Boston markets. Another attempt to open September or a part of it, for the shooting of deer, was made late in the session, but was defeated, like the first. The amendment permitting the killing of one cow moose in a season by any man has become a part of the game laws of that State, and so it must stand for two years. This will be time enough to about wipe out the last of the moose. The attempt to further protect partridges or ruffed grouse during September utterly failed, as I stated last week.

Opening Day Luck.

The Monument Club spent the day among the trout, as its members always intend to do. This club has some fine trout waters in the neighborhood of Monument Beach. Among the names of the members out on the opening day may be mentioned Chas. B. Horton, J. L. Stackpole, Wm. Stackpole and T. W. Bradley. Report says that these gentlemen made good scores. Mr. Mark Hollingsworth, one of the most genial sportsmen on the list, with a friend, went down on the Cape on the opening day. Their score was the best one mentioned yet, being 86 trout. They do not explain where they went, and they are not to blame if they do not. It was not a preserve that they fished, however, and their trout were wild trout. Mr. G. W. Wiggin, president of the Massachusetts Fish and Game Protective Association, Dr. J. T. Stetson and Mr. H. Kimball were after trout on April 1. They made a good score. They also visited the Cape. The exact location they are not willing to name and are not to blame for keeping mum.

Monomoy Brant.

The second squad of the Monomoy Brant Club has returned from the club's shooting boxes at Monomoy Beach. This squad had rather poor success, taking but 18 brant in all. The members of the party mention bad weather and unfavorable winds, though they saw a good many brant flying. Other parties mention a point not very far distant from the Monomoy Camps where they have lately killed over 200 brant and some 50 eider ducks. I cannot vouch for the truth of this story, though it comes to me from sources I should not be inclined to dispute, only saying, in the case of error, that my informant was misinformed. Some of the duck and brant that this party took have found their way into the Boston market. The brant were pronounced "terribly poor," and the marketmen say they are good for nothing. The ducks that are now occasionally coming into the same market are in very poor flesh. Quite a bunch sold the other day for the great sum of ten cents each. What a chance for a good sermon on spring shooting!

Metalic Brook.

Among the private and special laws passed by the recent Maine Legislature was one closing perpetually Metalic Brook, which flows into Upper Richardson Lake in the vicinity of the Narrows. This brook is one of the great trout nurseries that feed the lake below, one of the best of the Rangeleys. Of late years parties have been in the habit of camping on the brook and taking the small trout by the thousands, in many instances allowing them to spoil. The closing of this brook will be a great thing for the trout, and will please everybody but the trout-hogs, who have been in the habit of fishing there.

SPECIAL.

ANGLING NOTES.

The Printer and the Writer.

I WAS never proud of my handwriting at any period of my life, and the printer and I have a perfect understanding about it. He reads what he can and guesses what the words may mean that he cannot read, and I am constantly surprised that he proves to be such a good guesser. A few weeks ago when I wrote in one of my notes in this journal, "common ringed perch," and the printer made it "winged perch," I was surprised, not that he made winged out of ringed, for we do have flying fish, but that he did not make "common" read celestial, so that we could have had a celestial winged perch. I have not kicked when black bass has been printed "heach bass," but I would have kicked had the printer made it basswood bass. I do not object seriously to having "codfish" printed catfish, except that in the instance where the printer made the transformation the statement was true as to codfish and untrue as to catfish. I do not object to having "both fish" reconstructed into bait fish, for although it destroyed the sense of the sentence, a reader who is a good guesser would guess that the word "bait" meant both. In fact, I would not object—would not dare object, at anything that the printer might make out of my writing as long as he confines himself to what I am supposed to say, but when he monkeys with what I quote some other fellow as saying I am obliged to kick, otherwise the other fellow would tell me nothing more. To the best of my knowledge and belief I wrote: "I asked Mr. Dix if he had seen salmon in the fishway or above it, but he said he had not personally, although his men had seen salmon both in the fishway and in the river above it, when it was first built. The fishway being impassable last summer the salmon could not get above it." After all, the printer might "prove it on me" that what I did write in FOREST AND STREAM of March 23 looked more like what he made it than it did like what I intended it.

"Gen. Hooker" and "B. A. Scott."

Mr. E. T. D. Chambers, of Quebec, Can., sent me a few days ago a couple of flies which have been found very killing for ouananiche in Lake St. John waters. The fly was the discovery of Mr. B. A. Scott, the Mayor of Roberval, Quebec, and was copied from natural insects found in the stomach of an ouananiche and named after the discoverer. I recognized the fly at once as being identical with one of Miss Sara J. McBride's patterns which she called "Gen. Hooker." Miss McBride gave me her dressing of this fly (and it must have been nearly twenty years ago) as follows: "Body, bright yellow and green, ringed alternately; red hackle (and this means chicken red); wings, tail feathers of ruffed grouse." The curious thing, perhaps, about this fly, which bears two names, is that years apart two different people copied a natural insect upon which fish were feeding, in one case trout, in the other ouananiche, and made a fly of materials so identical that one cannot be distinguished from the other except in the workmanship of the fly tyer. In each instance the natural fly appeared to the eye in the same fashion, and was counterfeited with the same material, identical in color, and if it is true, as charged, that our artificial flies do not really imitate the natural flies they are supposed to represent, fly tyers do arrive at the same result when acting independently in trying to imitate them.

The Illinois Fish Commission.

I have read with considerable interest Mr. Hough's comments upon Gov. Altgeld's wisdom in recommending the abolishment of the Illinois Fish Commission. I do not imagine the Governor will derive any great satisfaction from the comments because they are true, and consequently the Chief Executive is shown to have gotten beyond his depth when he rushed into the subject of fish propagation. I do not know just how well informed about fishculture angels may be. Mr. Hough writes in general terms of the probable value to the State of the work of the Fish Commission. In one year the Illinois Fish Commissioners in co-operation with the U. S. Fish Commission rescued from the sloughs that Mr. Hough mentions 535,000 fish. Remember that these fish would have been utterly lost except for the work of rescue which resulted in their being planted in waters where they would thrive and multiply. These fish were not helpless fry, but fish more or less mature, and it was expected that they would spawn the spring following their rescue, for all were spring-spawning fish. Say that only one-quarter of them spawned; they were fish that spawn prolifically, some 5,000 to 20,000 eggs, others 150,000 to 300,000, still others 100,000 to 600,000, but if the one-quarter of the fish rescued spawned but 500 eggs and one-tenth of these

survived to grow to a pound in weight, at one cent per pound they would be worth over \$66,000. Besides, some of the breeding fish would be left to breed again, and some of the young would grow to breeding age. This alone is sufficient to show that the investment of the money appropriated for the work of the Fish Commission is very profitable, and in addition the 800 convictions in two seasons for illegal fishing, which were secured by the Commissioners, tell a story that requires no comment.

A. N. CHENEY.

Analomink Trout Waters.

ANALOMINK, Monroe County, Pa., April 3.—The streams in this section are quite high, owing to the melting of the snow, which I am thankful to say is fast disappearing. The fishing season being near at hand I give you my opinion about the coming season. There were a great many trout to be seen last fall in October and November. The streams were low and the large fish ran to deep water, which, of course, gave the younger ones a chance for their lives. Now, with the fry placed in the brooks two years ago and the large fish which were here in the fall and the condition of the streams since November last being quite high, I think the season will be a good one.

THOS. H. STITES.

Onondaga Anglers.

SYRACUSE, N. Y., March 31.—*Editor Forest and Stream:* To show your readers and the people of Onondaga county that the Anglers' Association mean business for this year, at a meeting of the executive committee on March 27 we passed the following resolution: "That the Association have cards printed to contain a short synopsis of the law; and also that the Association offer a reward of \$10 for the arrest and conviction and fine of \$25 for any man violating the law."

WM. EVERSON, Sec'y.

Bait-Casting for Bass.

MELROSE, Mass., April 3.—*Editor Forest and Stream:* I desire to urge your interesting correspondent, Mr. Henry G. Abbott, to give your readers through the columns of FOREST AND STREAM more information in regard to the art of bait-casting. What is the best weight and length of rod? What the best line, how could the cast be best acquired? If Mr. Abbott will aid in regard to these and other points he will confer a favor on at least one. W.

Iowa Fishways.

MATLOCK, Iowa.—Mr. T. J. Griggs, Fish Commissioner of Iowa, called here a few days ago on his way home from the western part of the State where he had been putting in fishways in the Rock and Sioux rivers. He is proving to be "the right man in the right place," as the seiners and spearers are finding out to their sorrow. Will send you account of fishing trip to Lake Okoboji in a short time.

UNION MACHINE.

New York Trout Season.

The trout season opened, on Long Island April 1, and in Spring Brook Creek, April 1. In Lake George it will open May 1. Elsewhere in the State it will open April 15. There is no exception as to Sullivan county; the season there will begin April 15.

Lake Champlain Black Bass.

By the Vermont laws the black bass season in that State (Lake Champlain included) will not open before June 15.

Who Wrote This One?

THE J. L. INGALLS CO., Manufacturers of the "Peeler" Rasp, Glens Falls, N. Y., April 1, 1893.—The Forest and Stream Pub. Co., New York City.—Dear Sirs: The writer, formerly a subscriber for your paper, has allowed business to crowd out all knowledge of you. We own one of the best trout brooks in the State, bought one year since. Almost no trout now. Three dams below—no fishways. Can we have this remedied? Have a copy of the fish laws, but do not know how to apply it. Will you give us a hint in your answers to correspondents and send us a copy.

We want a sample copy

Fishing Boots.

Messrs. SAGE & Co., of Boston, are enacting the rôle of public benefactors in putting their light-weight fishing boot on the market. These boots, while strong and serviceable, only weigh 4 lbs., and the change from ordinary foot wear to them is hardly appreciable. Anglers who are accustomed to wade rapid streams all day know how this consideration counts, and that the pleasure of a day's sport is often made or marred by a few pounds difference in the weight that has to be carried, and to all such the Sage boots will prove a boon.—*Adv.*

Sportsmen's Wear.

E. OUMPAUGH & SONS, of Rochester, advertise athletic and bicycle suits of every description, sent C. O. D. with the privilege of examination. They also have on the market a first-class, all-wool sweater, that should prove a boon to those who want some warm yet easy-fitting dress for shooting, fishing or tramping.—*Adv.*

THE Hannaford Ventilated Boot which is waterproof, and as warm as any boot made, provides a way for the perspiration to escape; at each step the foul, moist air is forced out of the boot; when the weight of the body is removed from the compressible sole, fresh air is drawn into the boot. Hundreds testify that these boots can be worn with absolute comfort. No red linings are used.—*Adv.*

FIXTURES.

DOG SHOWS.

April 4 to 7.—New England Kennel Club, at Boston, Mass. J. W. Newman, Sec'y.
April 11 to 14.—Continental Kennel Club, at Denver, Col.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Suraner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.

Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Report Stave Nov. 16. W. A. Coster, Sec'y.

INDIANAPOLIS DOG SHOW.

THE Hoosiers have scored a distinct success in a new undertaking. The officers of the Illindio Kennel Club must be congratulated upon the result of their first dog show, which commenced March 28 and was brought to a successful close on the 31st, at Indianapolis, Ind. The show was held in Tomlinson Hall, a building well adapted for such a purpose, and at the same time in its appointments much more striking and artistic than the general run of buildings that fall to the lot of most bench show committees. Although only about 320 dogs were benched, the hall will accommodate quite 500. The benches were well laid out by Spratts Co., with the larger dogs on the main floor and toys and terriers on a stage at one end. Two excellent judging rings were provided down the center of the main floor. The light was good in the day time, but at night in some of the side rooms it was a difficult matter to tell a Yorkshire from a Skye. The club must feel elated at the good class of dogs they were able to bring together at the first call. There was really very little time to work the affair as they would like to have done, and when one takes into consideration that the club had really only twenty-eight days in which to organize and hold a show, the result is all the more commendable to their pluck and energy. In Mr. Chas. K. Farmer, however, the club has an invaluable secretary and organizer. With more experience he would be a model secretary. He is a hustler, but unlike most of that type, not all for himself, on the contrary, he wishes others to have the credit of anything that may be done, and is at all times cool, collected and ready with a courteous answer to the many importunities that fall to the lot of a secretary. Among the officers who busied themselves more particularly with the show were Mr. Harry S. New, the president, and son of Henry S. New, Consul General to London and proprietor of the Indianapolis Journal; Henry Swinge, a prominent grocer in the town who kept an eye on the "geld" and ran the treasury office. Then there was Mr. A. A. Anderson, secretary and treasurer of the street car railroad company who secured the posters in the car privileges. Of course Dr. Van Hummell of greyhound fame, and chairman of the committee, couldn't keep away from a dog show if he tried, and particularly one in his own town. With his experience in such affairs his counsel was of much value and he was on hand from morning till night, or as some one put it, "threw his physic to the dogs" for the time being. George W. Strong also rendered good service in the printing line. One of the best "vets" and a conscientious one was Dr. H. Roberts, who certainly must have read the paragraph in FOREST AND STREAM lately on the duties of a qualified "vet," for he carried them out to the letter, went the rounds of the dogs several times a day, and was on hand day and evening, neglecting his practice for the purpose; this is as it should be. Mr. Davidson, one of the judges, wished us to particularly mention what a model steward Mr. Frank Samuels had been for him, we believe he said "the best he ever had." Mr. Horace Comstock also proved valuable in the same capacity to Mr. Frank Wheeler, who judged terriers, etc. Unfortunately Mr. Roger D. Williams, just as he was starting from home, was taken ill with a severe attack of bilious colic, and as the doctors would not allow him to leave the house he wired the club his inability to be present at the opening of the show. At the desire of the exhibitors Dr. Van Hummell judged Mr. Williams's classes. The greatest interest centered in the wolfhound classes, and the two principal kennels had sent strong teams, the best yet seen out, particularly for Mr. Williams to judge. Mr. George Parr, one of the leading attorneys of this city, acted as steward for the Doctor. It will therefore be seen that the officers were not only officers in name but in fact. As they represent some of the best interests in Indianapolis the club may be said to be established on a firm basis.

In the winter a small dog show was given in connection with the chicken show, but as the canines were chiefly local the exhibit created little interest and in one respect led to the idea that the Illindio Club's venture was of a similar order. The newspapers—*Sentinel*, *Journal*, *News* and *The People*—however, disabused the people of this idea, devoting columns of space every day to the show. This had the desired effect and the hall was comfortably filled every day, and especially so on Wednesday, when about 1,700 people attended. Professor Bachelor's dog circus provided the amusement-loving public with lots to laugh at; it is a really good show, the act where one dog turns a back somersault over a greyhound being especially good. There was some kicking in regard to catalogues, the club arguing that as they could not afford to issue plain and marked catalogues it would be better to wait till the awards were made and then get out a marked catalogue. This is a mistake. The public require catalogues not so much to see who has won as to find out particulars of the dogs. Their absence also led to a good deal of inconvenience among exhibitors. Catalogues were out Wednesday afternoon. The judging was well done on the whole, though Dr. Van Hummell's peculiar decisions were subject to much discussion, the doctor judging entirely on the practical, and, to his mind as an old coursing man and wolf killer, suitability of the animal judged for the work it is intended to do. This is all right as far as it goes, but in a bench show a number of points are sacrificed for the good of the whole and judgment rendered accordingly. The weather throughout was superb and the best we have experienced this season. Among those we noticed at the show were J. L. Adams, Dr. John R. Daniels, J. E. Isgrigg, A. J. Carey-Curr, C. R. Pratt, Chas. Proctor, Harry L. Goodman, W. Turner, Andy McGregor, J. W. Mack, E. C. Riedinger, John Hawkes, Geo. H. Spahr, B. F. Seitzer, Berry B. Jearl, J. R. Monroe, Peter Paulus, J. Englehart, Al. G. Eberhart, Chas. E. Bunn, George Thomas, Ben Lewis, Joe Lewis.

MASTIFFS (*John Davidson, Judge*).—As we have stated before, the West now holds most of the trump cards in mastiffs, and the entry here plainly showed this, being better than any since New York. Beyond his generosity with commended cards—this judge's fault, if fault it may be called—the awards were well made. Merlin and Ormonde came together in challenge class; both are well known. Merlin loses in shortness and depth of muzzle, but gains in skull; his slight straightness behind was more than offset by the other's sway back and bad tail, besides Ormonde was too fat. Sinaloa won in challenge bitches. Open dogs introduced us to Marquis, first, a little faulty in hindlegs and hocks, pasterns should be stronger, good skull and fairly good muzzle, but rather a bitchy head. Grover, second, is a black-faced, plain-headed sort, ears not hung close enough, good bone. Reserve to Rollo, excellent in skull, measuring 28 in., but inferior in muzzle, light in eye, falls away in quarters, short in body; a large dog, by Ilford Caution, standing 33 in., and in condition should weigh 205 lbs., but having been lately poisoned, was looking thin and harsh in coat. The Moor, vhc., we have seen at several shows lately. Heywood's Carlo, c., is a beast. In bitches, first went to Minnie Beaufort, a sister of Black Prince and like him in many respects. She has a rather bulky head, immense skull and short muzzle that is not deep or square enough, rather frog-jawed, and she lacks the deep black shadings of her brother, and has entirely too much dewlap, which, reaching well under her ears, gives her a very cheeky appearance; nice body and legs, with good, all-round action, though she might move a little better behind, and is a trifle slack behind shoulder. Minna Minting, second, was fat, has lots of quality, but is a shy shower. Mateila, reserve, was noticed in Chicago report, and our old acquaintance, Ethel, a bit outclassed here, brought up the rear with vhc. There were no puppy classes in the show.

ST. BERNARDS (*John Davidson, Judge*).—These, on the whole, were not very good, in fact, poor compared to the

request of the exhibitors present, were given to Dr. Van Hummell. It was most unfortunate, as a very strong entry of these hounds were sent from New York purposely to be judged by Mr. Williams. The doctor judged the dogs entirely with an eye to their possible powers as wolf destroyers, and consequently leaving type, or what we have accepted as type, gave his awards an entirely Montana flavor, and rather upset certain calculations that hitherto have been accepted as about right. Argoss, for instance, was left in the cold at the start, and of all the challenge entries, which included Argoss, Groubian, Princess Irma, Zerry and Svodka, the latter gained the verdict. Zerry, Argoss and Groubian can either of them beat her, according to our accepted notions. This class should have been divided by all means. Then the doctor took a fancy to Osslad in the open dogs and placed him over Peter the Great, and one cannot quibble much at that. In bitches Vinga won well, but Modjeska and Krimena were unnoticed, and second given to the pup Lobedya over Flo-deyka, vhc., whose poor shape perhaps had something to do with it. The others certainly deserved some mention as dogs of the breed, even if they did not come up to a wolf killing standard. Osslad, the judge believing that he had the most powerful wolf chewing jaw, took the special for best. Of course this is all wrong when type and quality is concerned, but then the doctor was the judge *pro tem*, and there was no remedy. Mr. Williams arrived on Thursday morning as he telegraphed he expected to do, and was much impressed with Argoss and Groubian and one or two others that were not placed. Considering the fact that Mr. Williams wired he would probably be on hand by Thursday, and as the entries all belonged to two kennels, would it not have been more satisfactory to have kept these classes open till his arrival, or word came that he could not come. This in view of the opposition of one of the exhibitors to Dr. Van Hummell as judge. The kennel prize went to Searcroft Kennels.

FOXHOUNDS (*Mr. Davidson, Judge*).—There were four of them, but being of a mixed American type there need be little said about them. Mr. Davidson judged in place of Mr. Williams. Chase, first, beats Jordan in substance, ribs and head. A rather nice-headed bitch, Fannie, took first in the "lady" class. No deerhounds on hand.

GREYHOUNDS (*Dr. Van Hummell, Judge*).—Here again the judge upset previous calculations. The placing of Pious Pembroke over Gem of the Season I cannot indorse, except on the score of condition of muscle, which we understand was the judge's reason principally, but Gem lays over the other so much in head, feet, chest, loin and hind legs that he should have won. With Lord Neverstill, Gem of the Season, Bestwood Daisy, Maud Torrington and Pious Pembroke in the challenge class the class should have been divided. In open dogs it was a poor placing to put Henmore K., vhc., and Watcher, both well known, on the same level and withhold the prizes. Henmore King may not be a crack, still he is very much good enough for first when there is nothing better in the class. The other entries were not up to much. In open bitches the judge thought well enough to give Wild Rose a first, but Marguerite could do no better than he, and Chips was out in the cold altogether, his faulty feet and forelegs accounting for this, of course. Three others in this class were deservedly unnoticed. Wild Rose was thought to be the best in the show, a peculiar decision when such greyhounds as Gem of the Season, Maud Torrington and Pious Pembroke were on hand.

POINTERS (*John Davidson, Judge*).—These were heavy classes, but there was really not very much quality, take them all round, a good moderate lot of dogs, many of them prized for their field qualities rather than bench looks. Count Graphic won in challenge class without opposition. Open heavy dogs (6) Boxer, who should be stronger in pasterns and have more stop, won over Spotted Boy, who must have pressed him very closely, had he not been shown so gross. He has a fairly good head, too throaty, good legs, but body fat and cloddy at present; he is a noted performer in the field. Ightfield Upton, reserve, should stand truer in front, fair head, flat loin, and as our English cousin has it, "goose-rumped." Shotmaster, vhc., not in very good fettle, should have more bend of stifle, nice bone, rather wide in front. Don Fishel is a plain sort, all black, heavy, wide front. Joe H. K., hc., is plain in face and very leggy. Bitches (6), Sal II., well known, won easily from Maid of Ossian, whose short neck, straight face and gross condition puts her out. Bar Maid, reserve, I almost like better; she is back on her pasterns, and head might be better, but all round she is better than the other. Pickwick, vhc., has open flat feet, and should have more stop. A nice bitch, Nell, in poor shape, nursing a litter—more shame—was hc.

Open light-weight dogs (9) found the winner in a well made dog, Rush of Lad, whose worst faults are his short neck and throatiness, otherwise he is a well-made little dog. Glamorgan, second, and Rock II. reserve, occupied their accustomed relations. Signal, vhc., is straight in shoulders, weak plain muzzle, nice body and set on and carriage of stern. Fred of Idstone, vhc., not enough stop, light in body, flat open feet was liberally treated. Lad of Rush, the noted Derby winner, took hc., but deserved another letter at least, he is plain in muzzle, fairly good front, little straight in shoulders, otherwise well formed. Bitches (15), made a hard class to judge as many were "much of a muchness." Kent's Pearl proved the winner, an excellent mover, good bone, pasterns hardly straight enough, nice skull, muzzle is square, but a bit plain. Duchess, second, has not stop enough, is faulty in ears and lacks depth of chest. Queen of Hearts, reserve, has rather open flat feet, very heavy drooping quarters, and just a fair head and good legs. Vic of Idstone, vhc., very plain head, but good behind that. Queen Graphic, vhc., has a rather nice head, shown fat, and has bad pasterns and feet. Lass of Bloome, hc., was the best of that lot, but was in wretched shape.

ENGLISH SETTERS (*John Davidson, Judge*).—These classes

MR. T. G. DAVEY'S LADY GAY SPANKER.

First, Challenge Class, Detroit, 1893.

classes we have seen at late shows. No challenge entries. In open rough dogs first went to Lord Dante, a brother of Lady Gladwyn. He has a Prince Regent head in many respects, but would be better with more shadings, his head now being rather plain, good depth of muzzle, but skull too narrow, good bone, turns one forefoot out, shown thin and light in loin, good mover. Elmer, second, has a plain, snipy muzzle, is bad behind and small-sized, good bone. Cap, hc., hardly deserved the letters, plain snipy head, no markings and throws his ears back. Spruce, c., has a cherry, butterfly nose. Bitches saw Lady Taylor, whom I spoke favorably of at Philadelphia, the recipient of premier honors; she has a nice body, coat and legs, and had she more stop, deeper muzzle and wider skull she would be a good one. Constance, second, is narrow in head, good profile, ears not carried right, small-sized and body short. Queen of the Alps, vhc., is mostly white, plain head, with little markings, good legs, but body should be longer. In smooths a well-made dog in Alton II. won easily. This wonderful litter was well represented, furnishing first, second and reserve winners. Alton has grown into a fine dog, with great bone, but it is a bit flat in forelegs, good legs, but forefeet could be truer, head lacks the dark shadings the others have, but is of good shape and depth, but a trifle longer than the others of the litter, he is of large size and a good active mover. Lawrence Garza, a smaller dog, took second; he is a bit better in muzzle than the winner, but loses in skull, size, bone and hindlegs. Lord Milton, vhc., loses to both in depth of body and substance, but shows more quality than either in head. The well-known Nun Nicer was alone in bitches, his head is snipy and small, but well marked. Alton II. rightly took the special for best in show.

BLOODHOUNDS (*John Davidson, Judge*).—There was only that hardy animal Jack Shepard, who was put down in good shape.

GREAT DANES (*John Davidson, Judge*).—Many of the entries were there that have been scoring so frequently lately, and really need little comment. For challenge honors champion Melac appeared. In open dogs first of course went to Major McKinley, who is losing flesh a bit; second to Sander, a neat type of dog who, however, has not the substance of Theseus, and is straight behind. Theseus, vhc., might well have been second. An old favorite of ours, Neverzell, whose type is excellent, won well in bitches from Charmion, beating in head, front and body. Minerva, reserve, beats June III. in eye, which is too light, substance and depth of body, the latter being little more than a pup. Neverzell took the honors in specials, and when type and quality is considered no fault can be found with such a decision.

RUSSIAN WOLFHOUNDS (*Dr. G. Van Hummell, Judge*).—Mr. Roger Williams having telegraphed his inability to be present owing to a sudden attack of colic, his classes at the

filled well with a good average representative lot of dogs, which must have been hard to judge. Champion Cincinnati and Albert's Nellie, both looking remarkably well, furnished the challenge winners, with Toledo Blade reserve to the former in dogs. In some respects Blade is a better dog, especially in body. Open dogs (17), a rather plain-headed dog in Paul Hill won; his muzzle is short, needs more spring of rib, gets his tail up, but has a pair of good forelegs. Second went to Ben Hur of Riverview, whom I thought hardly treated, as he beats the other in head, ribs and carriage of stern. Viscount, reserve, dog with a pretty good head, good square muzzle, good depth of chest, is throaty and falls away too quick in quarters. Sir Kent, vhc., should have a squarer muzzle, should be better in front, and is down in quarters, otherwise a well-formed dog. Cecil H., he, is small, faulty in muzzle, but well formed from head to back. Another of the he lot was Noble Lit, whose plain head and lack of rib are his worst faults. I forgot to say that Sultan, looking coarse and out of condition, was vhc. about right. Albert Gladstone, in same lot, should be squarer in muzzle, is round in skull, and poorly shown. Albert Breeze has rather a good head and is well formed in body and legs and should have had another letter, I thought. Bitches (17). Victress Livellyn won nicely. She was shown a little heavy and would do with a little more stop; nice skull, well-ribbed body and nice coat. This bitch pushed Cincinnati a bit for the special, beating him in body. On her first appearance in this country I placed this bitch first at Hamilton and I remember how the decision was received, but if a man has a little patience the vindication of a correct decision comes sooner or later. Nellie Breeze, second, has a nice type of head, is shelly in body, and stifles should be more bent. Flight of Riverview, reserve, is a little heavy in shoulders and out at elbow; nice head, showing lots of quality. Daisy of Riverview, vhc., muzzle short, but square, plain quarters, excellent legs and feet; coat should be flatter. Lulu Hill, vhc., is rather full in skull and short in muzzle, but her good legs, shoulders and body always bring her into notice. Bessie, vhc., was the novice winner at Washington. The others need no particular mention.

IRISH SETTERS (John Davidson, Judge).—Oak Grove Kennels supplied all the challenge winners, and this time the judge thought Seminole the best and Kildare Glenmore next in order. I don't like him so well in ribs, forefeet and muzzle as either Kildare or Duke Elcho. Queen Vic rattled the challenge class at her first appearance, beating Norma in head and body, but loses in condition of coat and color, but with Joe Lewis's retouching varnish she may be expected to put on a proper finish very soon. In open dogs (10) the well known Blaney, Jr., proved the winner, followed by Shamrock Brice, whose fairly good head, nice expression, good body, bone and legs well entitled him to the recognition. Quaker Tom, reserve, has one foot out, is light in body and should have a little more stop. Don Carlo, vhc., is too much out before the eye, and is plain in muzzle, good otherwise. Don Pedro III. has not a good head, plain, stary expression, but has a good type of body and color. Victor S., vhc., is a big, coarse dog of good color. Jess, he, is a bit out in front and ears not well hung. Nearly every dog got a mention, entirely too much, four vhc. cards in such a class are too many and lose their significance. Bitches (8) were much easier to place, the well known Marchioness winning from Lady Cleveland, also shown lately; and another familiar face belonging to Kildare Winnie was reserve. Veto, vhc., has a nice body and good legs, but muzzle is snipy, good skull. Flame, in the same division, had some puppies and was in excellent nursing condition. What a shame it is to show such stock, one would think a nursing mother could retire from publicity for a couple of months at least. Gypsy he, is plain-headed, ears set on too high and head short. Oak Grove of course took the kennel prize, still further strengthening the kennel by the purchase of Queen Vic, the bitch of the year.

GORDON SETTERS (John Davidson, Judge).—Outside of the Philadelphia contingent there was little to commend. The challenge aspirants were Ivanhoe and Leo B. in dogs, and Duchess of Waverley for the other sex, in the order named. Then in dogs (3) the well-known Duke won over Bob, who has a very poor Roman-nosed head, he is also faulty behind and has a rosy tail. Foster's Duke, vhc., has a poor expression, smutty tan, and is too broad in skull. Bitches (4), Princess Louise and Catherine scooped up the ducats; both have been reviewed lately. Jessie Dame, reserve, has a snipy, light muzzle, light tan on legs, and of only moderate character all round. Rose, he, has a dark smutty tan and is not typical. The kennel prize, as usual, fell to Dr. Dixon. When we have nothing better to do and time hangs heavy, a little statistical information as to the number of kennel prizes Dr. Dixon has captured in the last five years would be interesting.

NEWFOUNDLANDS (Frank C. Wheeler, Judge).—These were a poor lot. Surpass, the winner, being the best, second went to Pluto, whose coat is not right and head too long, and so is Plato, whose coat is very curly.

SPANIELS (John Davidson, Judge).—After the quality we have seen lately, the showing here was indifferent. Newton Abbott Torso was the only challenge representative and he was well shown. Glencairn Roter, the open dog winner, is woefully crooked in front, and light and shelly in body, and how he came to beat Torso for the special I cannot make out, as the latter excels far away in front, head, coat and body. There were other field dogs. In challenge cockers Bendigo was alone; he has his feet out, has a coarse head and light eye, good body. In open dogs (3) the winners, Brantford Jet and Pickpania, are well the former beating in front and head. Cornell, vhc., has fearfully bad forelegs and is too long in body, fairly good head. The winners and bitches (3) was the Chicago winner Lady Dufferin and Nora II. occupied the same relation as before. I Wonder, vhc., is out at elbow, but has a cocker body. In any other color dogs Brantford Rufus, a red, too high in skull, light, long body, but good front, was alone. In open bitches the order was Brownie and Ditton Brevity. Bendigo won the special. In Cumberlands, "columbers" in the catalogue, Our Joan, well known, was the only representative; she has good forelegs and body, but is fine in muzzle. Trouble, a frequent winner lately, was the only Irish water spaniel.

COLLIES (Frank C. Wheeler, Judge).—Not a very good collection of these "farmer's friends." Charleroi, wrongly stated as first in challenge class, last week, was absent. Sir Walter Scott III, proved just a little too much for Scotilla IV, in open dogs, neither are good in ear, and Scotilla has a little the best of it in skull and length of head, but is not so good in coat or bone; Sir Walter was shown a trifle fat, which made him appear a bit cloddy. Argyle Mac has a bad ear and expression, is light in body and short of coat. Sir Clifford, vhc., is full in skull and should not be so down in loin and quarters, is also soft in coat. How seldom nowadays we see a collie with a real good coat texture, nearly all are soft. Roslyn Tory, vhc., is open in coat and short, stands back in pasterns and should not be so full in skull. In bitches (3), first went to Dot II, nice head and expression, though skull bit too round and full, and ears are not carried very well. Sparkle is not very typical in head, and her coat is not *au fait*. Lady Squire, vhc., a puppy, had probably been sent home. Sir Walter Scott III. took the special.

POODLES (Frank C. Wheeler, Judge).—A pretty good lot of them. Berri took care of the challenge class. In open dogs Black Jack, a rather nice one with a good head and bend of fair length, as they go here, won over the well known Ben L. A separate class was made for Parisian, the French poodle.

There were no bulldogs shown.

BULL-TERRIERS (Frank C. Wheeler, Judge).—Champion Attraction was the only one in the challenge class; she stands the racket wonderfully. In open dogs (4) the smart terrier Crisp, the Chicago winner, won from Sir Monte II.; he is far better in front than the latter and has a cleaner head, but the "baronet" lays over him in body, loin and quarters; he however showed poorly in the ring. The others were no sort. The bitch class (4) was fairly good. Countess of Dufferin, repeatedly spoken of lately, beat White Gypsy, whose thick cheeky head is much against her, but she is superior to the other in body and legs, but was shown in poor shape. A bull-terrier should be put down before the judge in condition and as white as soap and grooming can make it. Edgewood Wonder, reserve, I thought should have won comfortably, taking everything into consideration, better body, hindparts and legs, besides her head is infinitely superior to Gypsy's. Burston's Kit, not well shown, heavy and coarse in muzzle, full in eye, took vhc.

DACHSHUNDS (John Davidson, Judge).—All these came from Mr. Loeffler's kennel and Hundesport Bergmann and Lina K. furnished the winners, a nice son of Windrush Roter's getting vhc., beating Diamond Joe, vhc., in head and length.

BEAGLES (John Davidson, Judge).—Most of them are now so well known it is superfluous to go into any extended criticism. Fitzhugh Lee and Roy K. were the challenge aspirants in the dog class. Roy beat in head but loses to Lee in front and coat, and is a little better dog; vhc. better. Two good ones came forward in bitches; Emeline had to give in to Butterfly; the former has a better type of head and body but loses coat and something in front, especially in pasterns; they are of different classes and the decision might go either way. Doctor, Hawkeye and Rockland Boy was the order in open dogs, and rightly so, while in bitches Lonely had little difficulty in disposing of the big Gypsy A. Lonely took the special, Fitzhugh Lee taking that for second best in show.

FOX-TERRIERS (Frank C. Wheeler, Judge).—These were not very well represented. The challenge winner proved to be Grouse II., who beats Consequence in head, ear and shoulders, but was looking very light in loin. Open dogs (4) had two fair ones in the money. Cincinnati Boy beats Belvoir Van in length of head, coat and bone and has a little the best of it in skull; forelegs about equal. Brandy he, is too round in skull and fine in muzzle and is a bit out in front. Bitches (4). There was no denying Lady Roseberry's claims in this class, she beating Venus II. in feet, which are open, front, coat and quality of ear, the other's being thick and large. Blanton Lu Lu, vhc., is heavy and wide in front; good coat and body. No wire-hairs were shown.

IRISH TERRIERS (Frank C. Wheeler, Judge).—Only two exhibited, one in each class, Jack Briggs for dogs and Salem Witch for bitches, both out at late shows.

BLACK AND TAN TERRIERS (Frank C. Wheeler, Judge).—Again the order in dogs was Sultan and Prince Regent, while Gypsy Girl had a bloodless victory in her class, Tritsey being transferred to the toy class.

YORKSHIRE TERRIERS (Frank C. Wheeler, Judge).—Not much difficulty here, the only entries being those shown at Chicago, Dick York and Minnie York, the dog beating in tan and body color; both fairly off for coat. In toy terriers, however, Nellie, second, should have won, as she is infinitely better in head than the winner, Daisy. Though both are of the apple order, Daisy is smaller, but has hardly a particle of hair on, while Nellie is nicely coated and well marked for the sort.

SCOTCH TERRIERS (Frank C. Wheeler, Judge).—Four well-known "Scotties" turned out, and again it was Three and Rhudaman, from the same kennels, while Colored Preacher beat Ashley Plug, vhc., in head, coat and hindparts.

PUGS (Frank C. Wheeler, Judge).—The classes here were well filled and of fair merit in some instances. Bob Ivy added another challenge ribbon to his score and also the special. In open (6) Trot E., hardly full enough in skull and a trifle long in muzzle, but with lots of wrinkle, won over Duke Howard, and in their present condition, Trot being fat, I liked the latter little dog better. He has a smaller ear and is not so heavily loaded in shoulders and neck; Medlar, reserve, kept to his kennel this time. He is beaten in size, head and front by the others. Dark B., he, is a poor sort. Princess May, a charming little pug, won easily from Miss Penrice. Both are a bit shelly yet in body; the latter is beaten in head, ear and front. Topsy, reserve, should have smaller ear, and be carried closer, but in body, legs and curl beats the average. Queeny is too long in muzzle and leggy, and not straight enough in forelegs, either. In King Charles spaniels first was withheld and second given to an inferior one called Tags, dark tan, poor head.

ITALIAN GREYHOUNDS (F. C. Wheeler, Judge).—The breed showed up well with three in the challenge class, Spring rightly winning from Sprite and Lavender, the latter losing in skull, which is too round and full. In open dogs (3) first went to Guy, a nice-sized one, too much scooped out before the eye, and skull bit full and round. Rob Roy is smaller but rounder in skull. Physche, first in bitches (3), is the size we want and is nicely formed barring the same roundness and fullness of skull that runs in this kennel. Second to Queen, whose feet turn out and ears are badly carried. Pearl H., vhc., is just fairly shaped but nearly all white. Geo. Thomas's whippet scored another blue. She looks as if a good run would do her good.

MISCELLANEOUS CLASS (Frank C. Wheeler, Judge).—Two Skyes, Barnaby Rudge and Islay, were found in this division and a separate class made and they were placed as named. The prizes in the miscellaneous were withheld though a bobtail, Dame Ursula, should certainly have had a prize, a far better one than old Lucifer was in his time. H. W. L.

AWARDS.

MASTIFFS.—CHALLENGE.—Dogs: 1st, Mrs. C. Wallack's Merlin. Reserve, C. E. Bunn's Ormonde. *Bitches:* 1st, C. E. Bunn's Miss Cautious. *Open Dogs:* 1st, C. E. Bunn's Marquis; 2d, G. Burnham's Grover. Reserve, H. Curr's Rollo. *Very high com.,* W. P. Riggs's The Moor. *Com.,* J. B. Heywood's Heywood Carlo. *Bitches:* 1st, Dr. L. Youngusband's Minnie Beaufort; 2d, reserve, C. E. Bunn's Minnie Minton and Matella. *Very high com.,* B. F. Lewis's Ethel.

ST. BERNARDS.—Dogs: 1st, C. J. Bonsfield's Lord Dante; 2d, F. S. Anderson's Elmer. *High com.,* C. Brunka's Cap. *Com.,* W. L. Wilson's Spruce. *Bitches:* 1st, C. S. Houston's Oslag; 2d, Tuxa's Peter the Great. *Bitches:* 1st and very high com., C. S. Hanks's Vinga and Flodyka; 2d, H. W. Huntington's Lobedyka.

BLOODHOUNDS.—1st, R. G. H. Huntington's Jack Shepard. **GREAT DANES.—CHALLENGE.—1st,** Cumberland Kennels' champion Melac. *OPEN.—Dogs:* 1st, J. M. Studebaker's Major McKinley; 2d, F. S. Anderson's Sandor. Reserve, Cumberland Kennels' Thescus. *Bitches:* 1st, Osceola Kennels' Neverzell; 2d, Cumberland Kennels' Charmion. Reserve, Cumberland Kennels' Minerva. *Very high com.,* C. K. Farmer's Juno III.

RUSSIAN WOLFHOUNDS.—CHALLENGE.—1st, C. S. Hanks's Svodka. *Open Dogs:* 1st, H. W. Huntington's Oslag; 2d, C. S. Hanks's Peter the Great. *Bitches:* 1st and very high com., C. S. Hanks's Vinga and Flodyka; 2d, H. W. Huntington's Lobedyka.

FOXHOUNDS.—Dogs: 1st, 2d and very high com., F. W. Samuels's Chase, Jordan and Sallor. *Bitches:* 1st, F. W. Samuels's Fannie. **GREYHOUNDS.—CHALLENGE.—1st,** A. W. Purbeck's Pious Pembroke. *OPEN.—Dogs:* 1st and 2d, withheld. *Very high com.,* Manatung Kennels' Hemmore King and Watcher. *Bitches:* 1st, A. W. Purbeck's Wild Rose; 2d, withheld. *High com.,* Manatung Kennels' Marguerite.

POINTERS.—CHALLENGE.—Dogs: 1st, Dr. John R. Daniels's Count Graphic. *OPEN.—Dogs* (53lbs. or over): 1st, Dr. John R. Daniels's Boxer; 2d, Charles Proctor's Spotted Boy. Reserve, Drake Sefton Kennels' Lightfield Union. *Very high com.,* U. R. Fisher's Don Fishel and B. F. Seitzer's Proctormaster. *High com.,* J. H. Kerr's Joe H. K. *Bitches* (50lbs. or over): 1st, Tim Donoghue's Sal II.; 2d and very high com., J. B. McGuffin's Maid of Ossian and Pickwick. Reserve,

B. F. Seitzer's Bar Maid. *High com.,* Smith and Dewees's Nell and A. N. Binkerd's Molton Bee. *(UNDER 50lbs.)—Dogs:* 1st, A. F. Hochwall's Irish Lad; 2d, L. A. Biddle's Glamorgan. Reserve, Chas. Connell's Rock II. *Very high com.,* Dr. John R. Daniels's signal, B. F. Seitzer's Fred of Idstone and John Gasser's Gasser's Joe. *High com.,* Washetaw Kennels' Quick and J. L. Adams's Lad of Rusli. *Com.,* Bannworth & Kurz's Glide. *Bitches:* 1st, F. Wm. Kuehn's Kent's Pearl; 2d, Dr. John R. Daniels's Duchess. Reserve, B. F. Seitzer's Queen of Hearts. *Very high com.,* B. F. Seitzer's Vic of Idstone, Drake Sefton Kennels' Ridgeview Duchess and John Gasser's Queen Graphic. *High com.,* B. W. Butterfield's White Cloud, Wilber S. Richardson's Queen Uno and Drake Sefton Kennels' Lass of Bloome. *Com.,* J. E. McGuffin's Tuxedo and Cornelia G.

NEWFOUNDLANDS.—1st, John Condon's Surpass; 2d, J. W. Springstein's Pluto. *Very high com.,* C. E. Manville's Plato. *High com.,* Elizabeth Hawkins's Hero.

ENGLISH SETTERS.—CHALLENGE.—Dogs: 1st and reserve, J. E. Dager's champion Cincinnati and Toledo Blade. *Bitches:* 1st, Washetaw Kennels' champion Albert's Nellie. *OPEN.—Dogs:* 1st, J. T. Williams's Paul Hill; 2d, F. G. Taylor's Ben Hur of Riverview. Reserve, J. Lewis's Viscount. *Very high com.,* Forest Kennels' The Sultan. *G. Kettner's Shirkey K.,* J. L. Adams's Sir Kent, Washetaw Kennels' Albert Gladstone. *High com.,* J. T. Williams's Noble Lit, J. L. Adams's Cecil II., Washetaw Kennels' Albert Breeze. *Com.,* F. W. Samuel's Trenton Rock, H. Schwinge's Teal Wing. *Bitches:* 1st, J. Lewis's Victress Lowellyn; 2d, Washetaw Kennels' Nellie Breeze. Reserve, J. T. Williams's Flight of Riverview. *Very high com.,* J. T. Williams's Daisy of Riverview, W. A. Hinesley Lulu Hill, J. H. Hunter's Bessie. *High com.,* C. R. Goodall's Zip Lister, J. Becker's Queen Regent. *Com.,* J. Lewis's Victress Lowellyn.

IRISH SETTERS.—CHALLENGE.—Dogs: 1st and reserve, Oak Grove Kennels' Seminole and Kildare Glenmore. *Bitches:* 1st, W. H. Beazell's Queen Vic. Reserve, Oak Grove Kennels' Rose Sarsfield. *OPEN.—Dogs:* 1st, T. Sharpless's Blaney, Jr.; 2d, D. L. & A. Carmichael's Shamrock Brice. Reserve, A. A. Anderson's Quaker Tom. *Very high com.,* G. V. Spahr's Victor S., J. Hoffman's Don Carlo and Don Pedro II. *High com.,* Indian Irish Setter Kennels' Jess. *Com.,* G. L. Jones's Hoosier Jack and Pat Rooney. *Bitches:* 1st, Oak Grove Kennels' Marchioness; 2d, Dr. S. G. Dixon's Lady Cleveland. Reserve, W. H. Beazell's Kildare Winnie. *Very high com.,* Becklowe's Flame, C. K. Farmer's Veto. *High com.,* T. Dudley's Gipsy. *Com.,* W. H. Dooley's Vigil.

GORDON SETTERS.—CHALLENGE.—Dogs: 1st and reserve, Dr. S. G. Dixon's Ivanhoe and Leo B. *Bitches:* 1st, Dr. S. G. Dixon's Duchess of Waverley. *OPEN.—Dogs:* 1st, B. F. Lewis's Duke; 2d, H. W. Vermaer's Bob. *Very high com.,* C. M. Foster's Duke. *Bitches:* 1st and 2d, Dr. S. G. Dixon's Princess Louise and Catherine.

FIELD SPANIELS.—CHALLENGE.—1st, S. Donaghue's Newton Abbott Torso. *OPEN.—Dogs:* 1st and special, H. F. Hildebrand's Glencairn Roter.

COCKER SPANIELS.—CHALLENGE.—1st and special, Jersey Cocker Kennels' Bendigo. *OPEN.—Dogs:* 1st, Jersey Cocker Kennels' Pickpania; 2d, H. B. Fields's Brantford Jet. *Very high com.,* H. F. Hildebrand's Cornell. *Bitches:* 1st and 2d, Jersey Cocker Kennels' Lady Dufferin and Nora H. *Very high com.,* H. F. Hildebrand's I Wonder. *ANY OTHER COLOR.—Dogs:* 1st, Jersey Cocker Kennels' Brantford Rufus. *Bitches:* 1st and 2d, A. W. Fancost's Brownie and Ditton Brevity.

COLUMBER SPANIELS.—1st, W. S. Cobb's Our Joan.

IRISH WATER SPANIELS.—1st, E. G. Fink's Trouble.

COLLIES.—Dogs: 1st, J. Hawkes's Sir Walter Scott III.; 2d, Oslag & Mueller's Scotilla IV. Reserve, R. S. Mott's Argyle Mac. *Very com.,* C. H. Johnson's Don and Argyle Kennels' Roslyn Tory. *Bitches:* 1st and special, Maple Grove Kennels' Dot II. 2d and special for second best, Argyle Kennels' Sparkle. *Very high com.,* Tuxedo Park Kennels' Lady Squire.

POODLES.—CHALLENGE.—1st and special, L. A. Biddle's Berri. *OPEN.—1st,* Carter's Black Jack; 2d, Dr. Buer's Ben L.

FRENCH POODLES.—1st, R. S. Haicher's Parisian.

BULL-TERRIERS.—CHALLENGE.—Bitches: 1st, F. R. Role's champion Attraction. *OPEN.—Dogs:* 1st, Lugbora Kennels' Crisp; 2d, Chautauqua Kennels' Sir Monte. *Bitches:* 1st, W. J. Bryson's Countess of Dufferin; 2d, Chautauqua Kennels' White Gypsy. *Very high com.,* reserve, F. F. Dole's Edgewood Wonder. *Very high com.,* F. L. Dever's Burston Kit.

DACHSHUNDS.—1st, 2d and very high com., W. Loeffler's Hundesport Bergmann, Lina K. Diamond Joe and Milwaukee Jewel.

BEAGLES.—CHALLENGE.—Dogs: 1st, Glenrose Kennels' Fitzhugh Lee. Reserve, Rockland Beagle Kennels' Roy K. *Bitches:* 1st, Glenrose Beagle Kennels' Butterfly. Reserve, Rockland Beagle Kennels' Emeline. *OPEN.—Dogs:* 1st, B. F. Lewis's Doctor; 2d, W. G. Harding's Hawkeye. Reserve, Rockland Beagle Kennels' Rockland Boy. *Bitches:* 1st, Rockland Beagle Kennels' Louly; 2d, Glenrose Beagle Kennels' Gypsy A.

FOX-TERRIERS.—CHALLENGE.—1st and special, C. S. Hanks's Grouse II. *OPEN.—Dogs:* 1st, E. C. Riedinger's Cincinnati Boy; 2d, Argyle Kennels' Belvoir Van. *High com.,* J. B. Mansur's Brandy. *Bitches:* 1st, Toon & Symonds's Lady Rosemary; 2d, R. E. Fishburn's Venus. *Very high com.,* E. C. Riedinger's Blanton Lu Lu.

IRISH TERRIERS.—Dogs: 1st, Toon & Symonds's Jack Briggs. *Bitches:* 1st, Toon & Symonds's Salem Witch.

BLACK AND TAN TERRIERS.—Dogs: 1st, Dr. H. L. Foote's Sultan; 2d, Toon & Symonds's Prince Regent. *Bitches:* 1st, Toon & Symonds's Gypsy Girl.

YORKSHIRE TERRIERS.—1st and 2d, Dr. N. E. Oliver's Dick York and Minnie York.

TOY TERRIERS.—1st and two specials, J. Englehart's Daisy; 2d, M. P. Grady's Nellie.

SCOTCH TERRIERS.—1st and special and 2d, Toon & Symonds's Three and Rhudaman. Reserve, Chester Ford Park Kennels' The Colored Preacher. *Very high com.,* R. Elliott's Ashley Plug.

SKYE TERRIERS.—1st and 2d, C. R. Smith's Barnaby Rudge and Islay.

PUGS.—CHALLENGE.—1st and special, Dr. H. M. Cryer's Bob Ivy. *OPEN.—Dogs:* 1st and special, J. Englehart's Trot E.; 2d and special, Lake Shore Kennels' Duke Howard. Reserve, E. Adams's Medlar. *High com.,* H. E. Bowl's Dasb. *Bitches:* 1st, Toon & Symonds's Princess May; 2d, G. H. Hardy's Miss Penrice. Reserve, J. W. Mac's Topsy. *High com.,* J. H. Handline's Nellie Bly and D. C. Bryan's Queeny.

KING CHARLES SPANIELS.—1st withheld; 2d, C. W. Saunders's Tags.

ITALIAN GREYHOUNDS.—CHALLENGE.—1st, J. Lewis's Spring. *Very high com.,* J. W. Mack's Lavender and J. Lewis's Apple. *Open Dogs:* 1st and 2d, J. Englehart's Guy and Rob Roy. *Bitches:* 1st, and very high com., J. Englehart's Psyche and Pearl E.; 2d, J. W. Mack's Queen.

WHIPPETS.—1st, G. Thomas's Boston Model.

MISCELLANEOUS.—Prizes withheld.

NATIVE HOOSIERS.—Dogs: 1st, Police Department's Bluch (alias "Bum"). *LD.* Date withheld unknown; breeder unknown; breeding unknown. *Winnings:* Always present at roll-call; leader of all parades; thoroughly conversant with fire alarm signals, and the best specimen of his kind in this country.

SPECIALS.

MASTIFFS.—Best in show and best American bred, Minnie Deaufort; same best in open classes; second best, Miss Cautious.

ST. BERNARDS.—Best in open classes and best in show, Alton II.; second best, Lady Taylor. Best American bred, Alton II.

GREAT DANES.—Best in show and best in open classes, Neverzell. Best American bred, Major McKinley.

BLOODHOUNDS.—Best in show, open class, Oslad; second best, Peter the Great; third, Flodyka.

FOXHOUNDS.—Best in show, Chase; second best, Jordan.

GREYHOUNDS.—Best in show (2), Wild Rose; second best, Pious Pembroke.

POINTERS.—Best black, Don Fishel. Best other than black in challenge class, Count Graphic. Best dog in open class, Rush of Lad. Best black, Don Fishel. Best other than black, Kent's Pearl.

ENGLISH SETTERS.—Best in show, champion Cincinnati (2). Best bitch, Victress Lowellyn (2). Best bitch and litter of puppies, Queen Regent. Best owned in Indianapolis, Trenton Rock. Best American bred, Cincinnati; second best in show, Victress Lowellyn. Best Lowellyn setter, Victress Lowellyn.

IRISH SETTERS.—Best in challenge classes, Queen Vic. Best in open class, Marchioness. Best in show, Queen Vic. Best getting third, Quaker Tom.

GORDON SETTERS.—Best in show, Ivanhoe, and best American bred; COCKER SPANIELS.—Best in show, Bendigo.

COLLIES.—Best dog (2), Sir Walter Scott III. Best bitch bred and owned west of Pennsylvania; second best, Sparkle.

BULL-TERRIERS.—Best in show, Crisp; second best, Attraction. **BEAGLES.**—Best in challenge class, Fitzhugh Lee. Best in open classes, Lonely. Second best in show, Fitzhugh Lee.

FOX-TERRIERS.—Best in show, Grouse II. **BLACK AND TAN TERRIERS.**—Best in show, Sultan.

SCOTT TERRIERS.—Tiree.
Pigs.—Best in challenge class, Bob Ivy. Best in open classes, Trot E. Second best in show (3), Duke Howard.
NEWFOUNDLANDS.—Best in show, Surpass.
POODLES.—Best in show, Berri.
IRISH WATER SPANIELS.—Trouble.
Best Toy, Daisy. Smallest dog in show, Daisy. Handler having largest number of dogs, Ben Lewis.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

The World's Fair Bench Show.

CHICAGO, March 31.—The arrangements for the bench show of the World's Columbian Exposition are progressing in a kind of perfunctory, desultory way.
When an ordinary, every-day bench show takes place, the secretary or superintendent sends out items of news, or mention of the attractions or benefits of the show, etc., and earnestly avoids the appearance of a state of coma. Bench shows do not run themselves. Large shows require the management of men thoroughly trained and skillful, and who have personal acquaintance with owners and handlers, or knowledge of them. The actual exhibition of the dogs is but one detail of many, though of course a very important one, in the arrangements. The preparatory work, however, must be thoroughly done, if the best success is expected. The number and quality of the dogs entered and exhibited depends for the best results on the efficiency and thoroughness of the preliminary work. Inexperienced men can not manage the preliminary arrangements of a large show with any more hope of success than they would have in managing the show itself.

One rule of the World's Fair show reads as follows:
"A remittance of \$1.50 for each dog offered for entry must accompany the application, to cover cost of benching, feed and care, which will be provided by the Exposition. If a dog offered for entry is not exhibited, this money will be returned."

This is a most remarkable rule. In relation to this matter I have heard a number of owners say that they would enter their dogs and not show them, or would enter dogs which they did not intend to show, simply for the sake of the free advertising thereby afforded. They will have their own names, names of their dogs, etc., in the official catalogue free of charge.

They pay \$1.50 for each dog entered. The entries are duly printed in the catalogue. The dogs are not shown. The owner gets his money back again. The management, however, must accept the entries as if made in good faith, and order benching, food and bedding accordingly. In short, the owner who so desires practically gets his dogs entered in the catalogue free.

All ordinary bench show managements retain the entry fee whether the owner shows his dogs or not. It is necessary to do so, to compensate for the expense incurred in preparing for the care, comfort and security of the dog.

The entry fee, in the first place, is too small. A \$5 entry fee would have given more standing and dignity to the competition. The difficulty and importance of a competition is what gives it value in the eyes of the public. A \$5 entrance fee would have sifted out the poor specimens with greater

H. A. COMSTOCK. GEO. B. ROBERTS. Q. VAN HUMMELL.
Illindio Kennel Club.

nicety than any jury could do it. Better, in fact, for better specimens would compete. Would the Westminster Kennel Club's show rate as high if the entry fee were \$1.50? It would be largely composed of ordinary or poor dogs, and they lessen the value of the wins.

The World's Fair dog show is not going to be a success simply and solely because it is connected with the Exposition or is a part of it. It must have merit as well as prestige. There are hundreds of owners and exhibitors who will value it at its true worth, be the same great or small. There is an intelligent press which will probably strip it of all artificial valuations, and record it at its actual worth. It should be run better, far better, than the ordinary show, which expects its gate support from its own city.

This one, I presume, will be for the people of the world to gaze upon as a model, and the best of its kind.

There is one requirement that, apart from it as a matter of easy revenue to the American Kennel Club, I have failed to understand. That is, "Exhibitors of dogs owned in the United States or Canada must furnish, with each application for entry, a certificate, signed by the secretary of the American Kennel Club or the secretary of the Canadian Kennel Club, showing that such dog has been registered in the American Kennel Club Stud Book or the Stud Book of the Canadian Kennel Club."

For such compulsory certificate the A. K. C. requires a fee of fifty cents. For what? For the mere statement of the fact that the dog is registered. If the World's Fair dog show managers had a set of stud books in its office, they could, by reference to these books, get precisely the same information. The official signature of the secretary adds nothing to the mere question of fact. The superintendent, or one having the matter in charge at the Department of Agriculture, could easily verify every entry by reference to the stud books. It would add but little to the labors of the Department; and, in any case, the purpose of the Department must be to promote its interests and do the necessary work. If there are 1,200 dogs on exhibition, the exhibitors will have paid \$600 to the A. K. C. for the mere information that the dogs are registered—precisely the same information that the Department could get by looking for it in the stud books, which is the same source from which the secretary derives his information. No business institution would be guilty of conducting its business in such an imbecile manner. Supposing that a man owned a large kennel of 1,200 dogs. Would he pay the secretary or any other man \$600 to look in the stud book and inform a third party or himself that his dogs were registered? No indeed, he would buy the books and look for himself.

If there were any special advantages to be gained by the course adopted, there would be at least a reasonable pretext for it, but to insist on getting information in such a round-about way and at such expense when the Department managers could get the information from precisely the same source that the A. K. C. does and at no expense above the cost of a set of stud books, is not a skillful way of doing business, nor is it in the interest of exhibitors.

The A. K. C., as I understand it, is a representative body, with no need of money further than what is needed to pay its actual running expenses. It is not a money-making concern, or at least such is not its purpose, yet it has over \$6,000 in its treasury, according to the treasurer's last report, which

the dog owners have paid over and above all its expenses. A reasonable balance for emergencies is necessary, but \$6,000 or more is for what?

Last week the Western branch of FOREST AND STREAM had a pleasant call from Mr. J. L. Adams, the owner of the famous field trial winner, Lad of Rush. He gave a most encouraging view of the prosperity of field trial sports in the

PRESIDENT H. S. NEW.
Illindio Kennel Club.

South. He has made the very liberal offer of \$100, \$50 and \$25 to any puppy by Lad of Rush winning first, second or third respectively in the U. S. F. T. C., E. F. T. C., C. F. T. C., P. F. T. C., the puppy to be whelped on or after March 1, 1893, to March 1, 1895.

175 MONROE STREET, Chicago.

Flaps from the Beaver's Tail.

TORONTO, Can.—The Sir John disqualification case has at last been finally settled, and the prize money won (refunded by Bell), has been mailed to the owners of the dogs next in order.

Mr. Irving L. Smith, Montreal, has sold the English setter dog St. Lambert Rex (Warwick Rake—Brighton Speed), to Mr. J. A. Whitmore, Regina, N. W. T.

"Andy" Laidlaw is not quite out of spaniels. He bought a good little red dog the other day in Golden Rod, from Mr. Wm. Tocher, Hamilton. Golden Rod is by the well known winner Red Roland out of Golden Duchess.

The Ottawa Fair Association does not feel inclined to erect a new building for the dog show, nor add to the classification; therefore the committee are "kicking." The committee at a recent meeting asked for the addition of several challenge classes.

The president of the C. K. C. has mailed the following circular letter to each member of the executive:

COTE ST. ANTOINE, Montreal, March 30.

DEAR SIR—At the time the executive of the C. K. C. had its conference with the Government Commissioner of the World's Fair a scheme for selecting the dogs for this exhibition was submitted to and accepted by the Commissioner. It was agreed that this selection should be made by a committee of five then named by the executive, viz., Messrs. Davey, Geddes, Gorman, Kirk and Mills. Then and at the subsequent meetings of the executive there was no dissent whatever from this proposition; and personally I have never heard any objections to the plan.

It is now proposed, however, by certain members of the executive, to replace this committee by an "all-round judge," on the alleged ground, I understand, of dissatisfaction with the committee because they might be judging their own dogs.

Having placed myself in communication with every member of this committee, I have been informed that three out of the five will show no dogs whatever; so that if the other two (one of whom may not exhibit) do present dogs for selection, there will be at least three members of the committee free to judge them.

As this proposed radical change at this late date is a serious matter, about which strong opinions have been expressed, I am anxious to

H. F. HILDEBRAND. J. H. BECKER.
Illindio Kennel Club.

learn the views of each member of the executive prior to the meeting called for April 6.

Please mail me an answer to each of the following questions at your earliest convenience:

1. Are you in favor of replacing the committee appointed in September last to select dogs for the World's Fair by an "all-round judge or judges"?

2. In case you are in favor of the proposed change, would you prefer that the selected judge or judges be resident in this country?

WESLEY MILLS, M.D., Pres. C. K. C.

Express Appreciation.

Editor Forest and Stream:

It is not often that express companies get a complimentary notice from dog men, and as I believe fair play is a jewel, I wish to extend thanks in the name of every exhibitor at the late Elmira bench show, as well as the club, to Mr. Dent, agent Adams, Mr. Smith, agent National, also United States, whose name has slipped my mind, for the very prompt delivery of all dogs consigned them; also for their kindness and trouble in keeping their wagons and men out on Saturday night until a very late hour that all dogs might start for their homes at the earliest possible moment. I can assure them that their kindness will be gratefully remembered by C. S. WIXOM, Sup't Elmira Kennel Club.

American Pet Dog Club Show.

THE different English clubs devoted to particular varieties of pet dogs give animal exhibitions which are invariably successful, so at last the American club that looks after the interests of all kinds has decided to try a show in New York. It has selected Lenox Lyceum and the end of May and first days of June for the event. So far the prospects are very favorable, as many special prizes have been promised, and the show fund has been rapidly increased until it has nearly reached to the thousands. All sorts of novelties are suggested, and a special award for best decorated pen, with another for the most popular dog in the show, are sure to add to the interest. The latter is to consist of a painting from life of the lucky dog by the well known artist of fur and feather, Mr. F. Sewell, who has lately returned from Europe, where his sketches and happy groups, made at exhibitions there, secured such favorable comment.

The club has donated two silver medals for these classes, and one of the pork and bean terriers is said to have a good chance to get his picture painted by Mr. Sewell, for what constitutes popularity has not been defined. Would it not be a good idea for the club to ask the society leader to award the prize, and would the cultured object?

E. H. M.

Classification of Pointers.

TUCKAHOE, N. Y., March 27.—Editor Forest and Stream: Mr. Waters has not convinced me yet and I still insist it is a question which will regulate itself in regard to bench shows, or does Mr. Waters really believe the Westminster Kennel Club show, for instance, would have had the top entry of all dogs in pointers, 150, if there had been no classification by weight? Not much. And any club which is considering how little they ought to spend in prizes will and has always found to its sorrow that nobody will come. Alike in bench shows and field trials; and in the point which Mr. Waters's *nom de plume* adversary brings forth, "that it is a matter which ought to be principally settled by breeders and owners," I fully agree. Even Mr. Waters must acknowledge that the pointer must have a stronghold among owners and breeders or the immense entries of this breed are very fallacious, and any breeder knows that whatever way he will mate, big and small ones will come in the same litter, and what is of more importance and has the most weight in this question to breeders and bench shows alike, the taste of buyers demand for one a light-weight and the other wants a heavy-weight. Should ever the weight classes be abolished in general the entries of pointers would be reduced one-half as a natural consequence, and furthermore, the heavy-weight dog would be predominant, as, notwithstanding the solitary curious assertion of our esteemed ex-secretary of the Pointer Club, Mr. La Rue, a good big dog will beat a good little dog under nine out of ten judges as a matter of course. Why are the proposers of abolishment so timid and do away with the pointer's privilege only? Has he less rights than the St. Bernard, where rough and smooth coats are in one litter? The logical sequence is the same as with the pointer. And what about the bulldogs and the spaniels and beagles? Have they more right, or why else do you not object to their classification? Do you want to stop the grand forward march of favor among sportsmen the pointer has got?

H. SCHWINGEL. GEO. SPAHR. C. K. FARMER.
Illindio Kennel Club.

Mr. Waters is too just to follow the threadbare path of most setter cranks to say all pointer owners are mostly bench show cranks, which is the most persistent reason brought forward by the setter men, and yet most of our bench show champions among pointers are winners in field trials also, which can not be said in the same extent of the setter, and in this respect is the principal cause of the overwhelming favor in number as against setters. The utility point, on which the setter is lately bred principally, has not worked his terrible havoc among pointer men; only to get there, no matter how the look, is a bit too prosaic for me and most average sportsmen, as it brings in its iron logic, as consequence the magazine shotgun; that is, taking all the feeling and love out of it, and get there only. Mr. Waters thinks it irrelevant and unjust that I mention his sly little dig and plays innocence. If he will look back in the Feb. 2 issue he will find my reason for it, as he says there: "Again, the pointer is a working dog, at least it is commonly supposed he is." (sic) Now it may be Mr. Waters did not mean anything and yet it certainly gives a right to my innuendo, as I would certainly otherwise apologize very humbly; Mr. Waters having then the full right, and his writings have the full prestige of one of the most straightforward sporting journalists we have, and I wished sincerely we had all like him.

G. MUSS-ARNOLT.

Detroit Hospitality.

Editor Forest and Stream:

I think there is no doubt the visiting dog men at the late Detroit show would join me in a vote of thanks to the members of the City of the Straits Kennel Club and to the Detroit sportsmen generally for the kind way in which they looked after our comfort and pleasure.

Some go to the dog shows for business, others for business and pleasure combined, and others again to see the dogs, have a chat with brother sportsmen and have a good time generally. To the latter class, particularly, and to the others as well, I am sure the Detroit show will be looked back to with pleasure. The contrast was great by comparison with some of the larger shows where, from the lordly superintendent up, one is impressed with the idea that he is highly honored by being allowed to exhibit at such a magnificent affair.

AN EXHIBITOR FOR PLEASURE.

United States Field Trials.

INDIANAPOLIS, Ind., April 2.—Editor Forest and Stream: The third annual field trials of the United States Field Trials Club will start with Trials A at Bicknell, Ind., Monday, Nov. 6, at which \$2,400 in prizes will be given. Trials B will be held at Grand Junction, Tenn., beginning Monday, Feb. 13, 1894, at which \$3,400 in prizes will also be given. The club assumes a great responsibility in giving two trials, and it is hoped that the public will appreciate our efforts and patronize both trials; by so doing the club will be enabled to continue the double trial system and give increased prizes in the future. The printed matter is now being prepared and will soon be ready for mailing. The Bicknell Derby will be advertised next week.

P. T. MADISON, Sec'y-Treas.

Bitches: Woodlawn Park Kennels' Saleni.—*OPEN*—1st, Monarch Kennels' His Lordship; 2d and 3d, Woodlawn Park Kennels' Wall Hampton and Rustie Sovereign. Very high com., R. H. Vaughn's Dr. Rush and Tanner & Card's Billy. *Bitches:* 1st, Monarch Kennels' White Venn. *Puppies:* 1st and 2d, S. S. Green's Smike and Mose. Reserve, Woodlawn Park Kennels' Zazle II.

BULL-TERRIERS.—CHALLENGE—*Bitches* (30lbs. and over): 1st, Retnor Kennels' Enterprize.—*OPEN—Dogs:* 1st, Mrs. J. N. Henry's Young Marquis; 2d, Retnor Kennels' Diamond King; 3d, H. A. Harris's Prince Gully. Very high com., F. C. Haskell's Bruce III. High com., Chatham Kennels' Chatham Prince and Comet II. *Bitches:* 1st, Retnor Kennels' British Queen; 2d, J. Whaland's Kit; 3d and high com., H. F. Church's Castle's Pride and Trentham Lilly. Very high com., H. A. Fuller's Lomont Kit. Com., Chatham Kennels' Queen of the Dale.—**CHALLENGE** (under 30lbs.)—1st, Retnor Kennels' Dusty Miller.—*OPEN—Dogs:* 3d, J. A. Skillman's Aristocrat Victor. *Bitches:* 1st, H. A. Harris's Mermaid. *Puppies:* 1st and high com., H. A. Harris's Mermaid and White Wonder II.

BOSTON TERRIERS.—Dogs (over 20lbs.): 1st, A. Potter's Groton Tiger, 2d, John I. Taylor's Tumbler; 3d Dr. T. Plant's Tom Sayers; 4th, H. J. O'Brien's Ross. Reserve, W. A. Pike's Duke. *Bitches:* 1st, Trimount Kennels' Countess; Beacon Kennels' Miss Nipper; 3d, A. M. Tyner's Miss Thora; 4th, W. H. Carroll's Lille. Reserve, Norfolk Kennels' Mollie. *Dogs* (20lbs. and under): 1st, H. W. Richards's Rossie Richards; 2d, Kate Sheppard's 3d, Dr. H. J. Schenck's Dixie; 4th, Trimount Kennels' Tobey. Reserve, H. W. Weeks's Junior. *Bitches:* 1st, J. McMillen's Dolly; 2d, J. F. Holt's Tansy; 3d, J. Sheppard's Lady; 4th, W. H. Carroll's Kitty. Reserve, Trimount Kennels' Ciney.—*PUPPIES—Dogs:* 1st, W. H. Carroll's Duke; 2d, R. W. Hickey's Teddy; 3d, J. McMillen's Dick; 4th, Mrs. E. L. Perdrain's Cricket. *Bitches:* 1st, Beacon Kennels' Sport; 2d, E. G. Clark's Mollie C.; 3d, J. I. Taylor's Queen Mab; 4th, R. C. Dean's Mischiev.

FOX-TERRIERS.—SMOOTH-COATED—CHALLENGE—Dogs: 1st, Hillside Kennels' Starden's King. Reserve, Woodlawn Park Kennels' Ripon Sturmer. *Bitches:* 1st, Cambridge Fox-Terrier Kennels' Blenheim Consequence. Reserve, Hillside Kennels' Miss Dollar.—*OPEN—Dogs:* 1st and high com., L. & W. Rutherford's Warren Tip Top and Warren Layman; 2d, C. Rathbone's Beverwyck Punster; 3d, Mrs. H. A. Harciss's Baby Pallis; 4th, Grove Kennels' Baby Trigger. Com., A. B. Cobb's Rochdale Spark, E. R. Hollander's Hillside Rufian. *Bitches:* 1st and com., Hillside Kennels' Dominica and Holcombe Jill. 2d, L. & W. Rutherford's Warren Layman; 3d, 4th and high com., Woodlawn Park Kennels' Ripon Regina, May Storm and Miss Domino. Very high com., Seacroft Kennels' Dampson.—*PUPPIES—Dogs:* 1st, L. & W. Rutherford's Warren Layman; 2d, C. Rathbone's Beverwyck Roy; 3d and very high com., Hillside Kennels' Hillside Pitcher and Hillside Royal. *Bitches:* 1st, Hillside Kennels' Hillside Pepper; 2d, Seacroft Kennels' Seacroft Myrtle; 3d, Hill Hurst Kennels' Hill Hurst Vic.—**WIRE-HAIRED.** *CHALLENGE—Dogs:* 1st, H. Smith's Saint Broom. *Bitches:* 1st, H. Smith's Sister Patience.—*OPEN—Dogs:* 1st, Hill Hurst Kennels' Oakleigh Bruiser; 2d, Woodlawn Park Kennels' Dandy Jack; 3d, H. W. Smith's Saint Brittle. *Bitches:* 1st, Woodlawn Park Kennels' Jess Frost; 2d, G. M. Carnochan's Suffolk Tassel; 3d and high com., H. W. Smith's Sister Nettle and Sister Mop. Very high com., H. T. Foote's Miss Brittle. *Puppies:* 1st, Woodlawn Park Kennels' Ruth; 2d, H. W. Smith's Saint Brittle; equal 3d, S. J. Rogers's Ebor Larchmont and H. T. Foote's Miss Brittle.

DANDIE DINMONT TERRIERS.—CHALLENGE—1st, Heather Kennels' King of the Heather.—*OPEN—Dogs:* 1st, 2d and 3d, Heather Kennels' Heather Amphion, Laddie and Sir Robert. *Bitches:* 1st and 2d, Heather Kennels' Ainsley Daisy and Heather Peggy II.

SCOTTISH TERRIERS.—OPEN—Dogs: 1st and 2d, Wankie Kennels' Kilroy and Kilreave. *Bitches:* 1st, 2d, 3d and very high com., Wankie Kennels' Wankie Diana, Culblean, Zembra and Thistle-down.—**AMERICAN BRED—Dogs:** 1st and 2d, Wankie Kennels' Wankie Ted and Wankie Tam; 3d, Hazlecroft Farm's Gipsy John. Very high com., T. H. Garlick's Glenelg. High com., W. F. Fraser's Rob Roy. *Bitches:* 1st, Wankie Kennels' Wankie Diana.

IRISH TERRIERS.—CHALLENGE—Dogs: 1st, W. J. Comstock's Boxer IV. *Bitches:* 1st, W. J. Comstock's Saint Broom. *Dogs:* 1st, Synond's Salome. *Bitches:* 1st, 2d and 3d, W. J. Comstock's Wankie Grady and His Honor; 3d, Dr. W. F. Kenney's Crib. Very high com., W. J. Comstock's Hanover Boy. High com., Heather Kennels' Valley Boxer. Com., Broadway Kennels' Shant Boy II. *Bitches:* 1st, Woodlawn Park Kennels' Chancery Lass. 2d, Heather Kennels' Nora II.—*PUPPIES—Dogs:* 1st and 3d, W. J. Comstock's His Honor and The Alderman; 2d, S. M. Fletcher's Jack Desmond. *Bitches:* 1st, W. J. Comstock's Maggie Cline; 2d, E. Butler's Kathleen; 3d, Broadway Kennels' Pluck. **BLACK AND TAN TERRIERS.—Dogs:** 1st, Rochelle Kennels' Broomfield Sultan. *Bitches:* 1st, Rochelle Kennels' Broomfield Madge; 2d, F. F. Dole's Queen III.

SKYE TERRIERS.—1st and 2d, C. H. Smith's Barnaby Rudge; 3d, H. K. Coner's End Cliffe Maggie.

YORKSHIRE TERRIERS.—Dogs: 1st, Mrs. E. Plant's Teddie; 2d, D. J. Wilson's Major Domino; 3d, J. B. Lewis's Smuggler. *Bitches:* 1st, Schipperkes.—1st, F. W. Connolly's Prince, Jr.

BLACK AND TAN TERRIERS.—UNDER 14lbs.—1st, J. Beck's Jasson; 2d, Mrs. Tenney's Dandy; 3d, New York Pug Kennels' Gypsy.

TOY TERRIERS.—1st and 2d, J. H. Welch's Punch and Judy; 3d, Mrs. E. Deffley's Rack.

World's Fair Show Judges.

THE FOREST AND STREAM is in a position to state with unquestionable authority that the recently printed list of judges for the World's Fair was a "fake," originated by a Chicago paper, which in its silly eagerness to tell something it did not know, has by this "fake" achievement aroused among exhibitors a feeling of unnecessary discontent with the World's Fair managers. In reply to an inquiry by the FOREST AND STREAM's Chicago office, Mr. Buchanan said that the list of judges published are in no sense official. The names were simply under consideration. No official list has ever been made, nor will any be made for a week or two. Some of the names published are those of judges; some are not—among the latter for mastiffs, pointers and toys.

Fox-Terrier Club Meeting.

THE annual meeting of the A. F. C. was held at the Algonquin Club, Boston, on Tuesday last. John E. Thayer, late Vice-president, was in the chair. Proxies were read from several members and a full majority was present. The following officers and governors were elected: President, John E. Thayer; Vice-President, August Belmont; Secretary and Treasurer, H. W. Smith; Governors, Clarence Rathbone, August Belmont, John E. Thayer, H. W. Smith, Hollis Hunnewell, Winthrop Rutherford. The following resolution was passed: That the club learned with regret that Mr. Belmont would not accept the presidency again and the thanks of the meeting were then tendered him for the jealous interest he had always taken in the club. Voted that the Yankee Stakes of '92 be divided at Chicago for puppies born between March 1, 1891, and March 1, 1892. The Fox-Terrier Home Bred Puppy Stakes were decided at Boston and were won by Messrs. Rutherford's Warren Tip Top. Clarence Rathbone's Beverwyck Roy, reserve.

The Yankee Stake Award.

Editor Forest and Stream:

The winning of the American Fox-Terrier Club's Yankee Stake of 1892 at the Westminster Kennel Club show by Blenheim Strickler is declared void, he being ineligible, belonging properly by date of birth in the stake of 1893. There having been no other terrier designated by the judge as second to whom the prize could be given, the Yankee Stakes for 1892 and 1893 will be ordered to be judged at some future show, notice of which will be given later.

AUGUSTUS H. VANDERPOEL, Sec'y.

NEW YORK, March 29.

Dogs For Black Bear.

Editor Forest and Stream:

Can you or any of your readers inform me what breed or cross breed of dog is most likely to prove successful in following and tracing our Eastern black bear? Courage, a good nose and a large amount of discretion are the necessary qualities.

SUMNER ROBINSON.

Boston, Mass., April 1.

[We should think some of the large Airedale terriers would be useful, but some of our readers may be able to suggest a better breed.]

Yachting.

On April 8 the new Carroll cutter Navahoe made a preliminary trial trip with her owner and designer on board. The centerboard was not shipped, there being insufficient depth of water off the yard, but it will be shipped this week at Bristol Ferry, further down the bay. The yacht is reported as quite tender and heeling heavily, but the addition of the centerboard, between 3 and 4 tons, will make a difference. She is very nearly completed and will soon be ready to leave the yard.

THE Seavanhaka Corinthian Y. C. has set an example which is likely to be followed by many other clubs, in admitting ladies to the privilege of membership, though without the right to vote or to use the city club house. Thus far there are few ladies among American yacht owners, but there are many who are good sailors and devoted yachtwomen, and no doubt the number of owners and sailors will increase now that their privileges have been formally recognized and defined by one of the leading clubs.

THE Seavanhaka Corinthian Y. C. is the first in the field with a special prize for the new yachts, a cup costing \$1,000 being offered for a race after the New York Y. C. cruise and prior to the trial races. The club presented a similar trophy in 1890, which was won by Puritan.

THE report goes that the Stewart and Binney fin-keel will be named Pilgrim, carrying out the series of colonial names begun by Puritan. We would commend to Mr. Paine for his new fin-keel the name Witch, a good old colonial word of equal standing with Puritan, Mayflower and Pilgrim. The witch was an important personage in early New England society, no less so than the pilgrims and puritans who officiated at her cremation.

A CORRESPONDENT this week questions our definition of the term "representative," and the Yachtsman makes a similar objection, though putting a meaning on one of our remarks which it was not intended to convey. In our opinion, the term should apply to a yacht not merely because she is successful, possibly the lucky hit of an unknown designer, but because she represents the very latest progress of a nation through its most successful designers. It is possible that we may be in error on this point; but what we wish to emphasize is the desirability in the coming contests of each side accepting a possible defeat in a manly way, taking the medicine gracefully, however nauseous it may be, and in the event of a defeat to extend sympathy instead of blame to the individual who has done so much, although unsuccessfully, to uphold the national honor. In the natural order of things, the probabilities are that two yachts which cross the ocean this year, from west and east, will each be defeated by the picked yacht of the home fleet. Under the fairest of rules and conditions this is one of the chances of war, and no blame can rest with the defeated yacht. In such an event, however, we hope that neither side will seek solace in idle boastings of what the yachts which did not cross would have done if they had.

Our correspondent brings up another matter also, the conditions which should govern a contest for the claim of national supremacy in yachting. No doubt the method pursued in the past of haphazard challenging and mis-matched yachts has been most unsatisfactory and indeterminate in its results. Matters are now on a much fairer basis than ever before, but still the odds are overwhelmingly against the one yacht which, like Navahoe, goes 3,000 miles to meet the picked vessel of a fleet. To insure a fair contest it would be necessary to allow the challenger as well as the defender to pick a champion by trial races. This, however, is practically impossible under existing conditions.

YACHT NEWS NOTES.

At the meeting of the board of directors of the Cleveland Y. C. the following officers were elected: Com., Geo. W. Gardner; Vice-Com., P. W. Rice; Rear-Com., W. R. Huntington; Sec'y-Treas., J. O. Gardner. Regatta Committee: W. F. Francis, W. DeLooy and L. Allen. House Committee: P. P. Wright, C. W. Kelly and E. W. Radder. Club Book Committee: E. W. Radder, C. W. Kelly and Ed Overbeke. Building Committee: P. P. Wright, W. R. Huntington, E. W. Radder, Ed Overbeke and C. W. Kelly. J. J. Gill was elected a member of the club and the following names were presented for membership: W. B. White, H. W. White, Frank Wendell, H. L. Cross and C. E. Shattuck. An adjourned meeting of the board of directors was held on March 29. Action was taken on the proposition to increase the capital stock, and it was decided to increase it from \$10,000 to \$25,000. The building committee was authorized to consult two engineers and to invite bids for the piling necessary for the club house. Plans were submitted for the house, but several changes were recommended. It was decided to accept the lease by the city of 400ft. frontage in front of Lake View Park. The following names were presented for membership: F. DeH. Robinson, C. W. Burrows and J. P. Macbeth.

Among other boats now building at the Gloucester City, N. J., yards of Clay & Torbensen, is a very handsome cruising yacht, of 53ft. over all, by 8ft. beam, for F. C. Fowler, Esq., of Moody, Conn. She has a guaranteed speed of 18 miles, but 14 at least is expected. She is fitted with one double acting for and aft compound engine, and Roberts boiler of suitable size. In construction every part is of the very best. Plank of selected cedar, copper fastened throughout, keel in one piece of oak, stem of oak, knatack, sturruak, crook, stern, deadwood, tillge, engine and floor keelsons of white oak, all ribs and white oak straight grained, stained and bent to shape. The arrangement is as follows: 84ft. forward deck, 7ft. pilot house, furnished outside in mahogany, interior English oak; engine compartment 11ft., toilet and galley aft, cabin 12ft., finished in English oak, handsomely paneled; open cockpit aft 4ft. and after deck 6ft., all deck fittings, rails, side ladders, etc., of polished brass. Among other new yachts are a high speed 40-footer for James R. Hopkins, of Philadelphia; a 23-footer for J. E. Moore, of Philadelphia; a 27-footer for A. R. Shattuck, of New Orleans; a 25-footer for E. R. Smith, of Sioux City, Ia.; a 20-footer for Henry P. Williams, of Charleston, S. C.; another 20-footer for Chas. C. Murdock, of Conn.; an 18-footer for Arthur Barnard, of Saginaw, Mich., and among some eight or ten other hulls, two for the United States Government, one a steam whale boat of 28ft., for use in Alaskan waters, and a 25-footer for river and harbor improvements. Department of the Ohio. Chas. H. Brock's, 18-footer Leni Lenapi, will be fitted with new mainsail and double head sails. Mr. Bailey's launch Almont, Mr. Schuman's launch Adelaide, and Mr. Austin's launch Folly are being overhauled.

Mr. A. Cary Smith is at work on a design for a 70ft. electric auxiliary schooner for use in Florida waters by Mr. C. W. Chapin, owner of the schooner Yampa. The new yacht will carry the usual schooner rig and also a two-bladed screw and storage batteries for about one day's run. Mr. Smith has also designed the new sail plan for the Yampa with pole bowsprit and larger rig, and the change will be made at Poillon's. The schooner Crusader, Messrs. Swift & Goodwin, is also at Poillon's for alterations to her sail plan under Mr. Smith's direction.

The first of the large yachts in commission is Marguerite, schr., R. S. Palmer, now at Hampton Roads for the naval parade.

At Ayer's yard the Scarecrow was launched on March 22, her fin was shipped and she had her trial trip on the 25th, being the first boat out of the Basin this season. On Saturday last she was out under full sail in a strong westerly breeze and lumpy water, proving very stiff and weatherly. The outfit of the same model, but with a heavy Tobin bronze centerplate and yawl rig, is ready for launching, being owned by E. H. Burtis; and Mr. Ayers has laid the keel of a third, for Dr. Dennison, of Brooklyn, a canoe yawl man. She will carry a yawl rig and loaded board. Beside her in the shop are two 15ft. l.w.l. boats of similar model, also designed by W. P. Stephens, for Messrs. Elliott and Allen, of the Marine and Field Club. The Scarecrow carries a leg-of-mutton mainsail, set canvas fashion, and a jib tacked to the stemhead. The sails were made by F. M. Wilson, of Port Jefferson, and are of excellent workmanship.

At Winttingham's yard the burned steamer Emily has been launched from the railway and beached, her place being taken by the schooner

Trinculo. One of the two 20-footers is finished in the shop, although her keel will not be run until she is taken outside. The other is planked and partly decked under the shed. The 24-footer, also designed by Mr. Olmstead, is all planked, the mahogany making a beautiful finish on the hull. The ironwork for the Maxwell schooner Emerald is mostly completed in the smith shop, and the riggers are at work on the steel rigging in the mould loft. The Gielow steamer is nearly planked and part of her joiner work is ready. Fitting out has hardly commenced yet at Bay Ridge.

Manning's Basin has been partly planked by a high fence, and a neat office has been built beside the Alcyone boathouse for Capt. King, who is in charge.

The Senate of Illinois on March 30 passed the joint resolution looking toward the building of a breakwater off Jackson Park, a project which is a part of the plan for the erection of a Naval Academy, and also to provide a harbor for yachts visiting the World's Fair. It was sent at once to the House and referred to the Committee on Judiciary, where it will be considered some time this week. If the bill becomes a law the work of providing a harbor for visiting yachts will be commenced at once and hurried as fast as possible.

A yacht club to be known as the Yale Corinthian Y. C. has been organized at New Haven with the following officers: Com., Guy B. Miller, '94, of New Rochelle; Vice-Com., H. W. Harris, '95, of Orange; Rear-Com., Sheldon Carey, '93, S., of Cleveland; Sec. and Treas., Harold W. Bush, '94, S., of New York; House Regatta Committee, Cornelius Vanderbilt, Jr., and Geo. T. Adee, both of New York. The club pennant is a white triangle with a blue Y in the middle. The commodore's pennant is distinguished by a blue star on each of the three sides of the Y. The club will hold three races for a cup in May and June, and will make a cruise to New London in time for the Yale-Harvard race. The fleet includes the well known yachts Kathleen, Yolande, Nymph, Ilderim, Portia and other sail, steam and naphtha craft. Quarters have been leased at Morris Cove.

Iroquois, schr., has been chartered by Rear Com. Ellis to a member of the Morgan-Iselin syndicate, and the crew of the new boat, under Capt. Hansen, will handle Iroquois during the first part of the season. Mr. Ellis will accompany Mr. Carroll to England in Navahoe.

Yachting is looking up about Red Bank and the Shrewsbury River, and the recent organization of a new and large club at Red Bank is certain to result in still more active racing than in the past. The club is now building a large and handsome house of modern design, with every convenience for its members, including tennis courts and croquet grounds on the shore. A number of new racing boats will be added to the fleet, and its convenience to New York and the exciting racing is likely to bring in many new members. The Shrewsbury River has for some years been the headquarters of the open centerboard racing boats west of Hell Gate, and as the place can be reached in little over an hour from New York it offers unusual advantages to those who delight in this branch of yachting.

Iola, slp., built for the late Oswald H. Jackson in 1884, has been hauled out at Solheim & Abrams for a new and much longer stern.

Hildegard, slp., J. C. Bergen, is being entirely rebuilt at Smith's yard, Nyack.

Atlantic, schr., Messrs. Seely & Marshall, was at Havana from Jamaica on March 28.

Wild Duck, steamer, J. M. Forbes, arrived at Savannah on March 27 with Prof. Agassiz on board.

Sagamore, steamer, Edgar L. Scott, was at Jacksonville on March 29.

The young Jamaica Bay Y. C. has purchased the Wycoff club house on Rockaway Beach for \$5,500 and will move it to the club's new anchorage.

Mayflower, schr., Vice-Com., W. A. Gardner, Eastern Y. C., will be materially altered at Lawley's. Her lead will be lowered and her masts shifted forward, the foremast 2ft. and the mainmast 8ft. The interior will be remodeled, the centerboard trunk being cut down.

Gracie, slp., has been chartered for the season by J. P. Earle, his business calling him to South America this summer.

Messrs. Waterhouse & Chesebrough have designed two large passenger steamers, one building by Story, at Essex, and one in Portland, Me.

Lagonda, steam yacht, has been towed from Shaw's Cove, New London, to New York for fitting out.

Alert, schr., has been laid up at Poillon's and her mainmast lifted out.

The steam yacht Lady Cassandra, built as the Oriental, has been purchased by William Clark, of Newark, from the estate of the late J. George Clark.

The annual regatta of the Corinthian Y. C. of New York will be sailed on June 17.

Neaira, schr., designed by Geo. F. Lawley and built by Lawley & Co. for Com. Warren R. Fales, Rhode Island Y. C., was launched on March 30, and is now being rigged. Carnita, the Waterhouse fin-keel, will be blocked up this week to receive her fin.

Vixen, slp., once well known about New York when owned by Mr. Frank Lawrence, is out at Lawley's for a new bow.

Vandal, 40 footer, has been sold by Henry Stanton to Com. John A. Stetson, Boston Y. C.

A new yacht club is proposed in Toledo, O., under the name of the American Y. C. As this name is already held by two clubs, it might be less confusing and show a little originality if some other were chosen.

The yacht Viva, formerly owned by Com. C. W. Bray, of the Portland Y. C., has been sold by Will N. Davis to Grant R. Bennett, of St. Joseph, Mo. Mr. Bennett is a Western man, who visited the Maine coast last year and saw the boat for the first time. The sailing which he then did has made a most enthusiastic yachtsman of him, and this year he will spend a good part of the summer in the Viva in the vicinity of Portland. The new owners of the 30-footer Chaos are three Portland yachtsmen, Messrs. Noyes, Davis and Merrill, of the Portland Y. C.

The third regular meeting of the Seavanhaka C. Y. C. was held on April 4, with Com. Weeks in the chair. A number of formal changes were made to comply with the present laws governing corporations. The trustees were asked to elect to associate membership ladies owning yachts, such members to enjoy all the privileges of the club, other than attending meetings, taking part in the business affairs of the club, and the use of the town house. The club has offered a \$1,000 cup for a race of the new 85-footers prior to the trial races. Notice was given that Mrs. James A. Roosevelt, mother of the late Alfred Roosevelt, had deposited with the trustees bonds to such an amount that the club will provide a yearly cup, to be known as the "Alfred Roosevelt Memorial Cup," to be raced for as the regatta committee may direct.

Emerald.

THE shipyard at Elizabethport, N. J., on Staten Island Sound, established a few years since by Messrs. S. L. Moore's Sons as an addition to their large machine shop and foundry, is making an excellent reputation by the high quality of the work turned out. The recent trial of the new practice cruiser Bancroft has proved most successful, and the firm is now doing equally good work in another line on the schooner yacht Emerald, a 23-footer designed by H. C. Winttingham for J. Roger Maxwell, of the Atlantic Y. C.

The work on the new yacht is quite equal to that on any boat of her class, the lines are fair throughout, the plating smoothly laid, the plate edges and rivets finished off, and all the details of construction carried out in a workmanlike manner. The form of the keel, a wide, deep, trough of rectangular section, is as to call for specially skilful work in the fitting, as the keel is about 30in. across the bottom amidships, tapering rapidly to the siding of the stem and sternpost. This part of the work has been carried out very successfully, the keel being fair and true. The keel is straight and parallel to the waterline for the greater portion of its length, then making an abrupt angle and running straight to the waterline, above which the stem curves outward into a very moderate clipper stem.

Although the design is in all respects up to date, it is free from all extravagant or freak features; the forward overhang is comparatively short, the keel outline is such as to give little forefoot, and to dispose of the lead at the lowest possible point on a given draft, but without the fashionable twists and turns of some recent yachts. The sternpost has rather a strong rake and the counter is carried out to a good length and is light and graceful in appearance. The midship section shows a strong hollow below, which is carried into the forward frames, making a rather fine bow.

The construction is peculiar in a steel vessel, being the ordinary lap strake in place of in-and-out plating, the lower edge of each strake lapping outside of the strake below, a taper liner being necessary on each frame. With about the same weight as the in-and-out plating, the work is being made by the builders. The rigging is now under way at Winttingham's and Sawyer is making the sails, and the yacht will be ready for the June regatta.

Apparatus for Model Experiments.

Most yachtsmen are aware of the extensive series of model experiments which have been carried on for over twenty years under the auspices of the British Admiralty, first by the late Wm. Froude, and since his death by his son, R. Edmund Froude. The method of making these experiments, and the curious and ingenious machinery that has been gradually invented will, however, be new to most of our readers, and we therefore reproduce entire from the pages of *Engineering* a paper recently read by Mr. Froude before the Institute of Mechanical Engineers, as follows:

The principal feature of the present Admiralty Experiment Station at Haslar, as of the former one at Torquay, consists in a large covered waterway, in which models of ships are towed to ascertain their resistances. The towing is done from a dynamometer carriage driven at definite speeds by a stationary engine working a wire rope. The models are made of hard paraffin, generally about 14ft. long, and something upward of 1in. in thickness when finished. They are cast in a mold with an allowance of about $\frac{1}{4}$ in. for finishing accurately to shape, which is done by means of guidance grooves cut in the paraffin by a shaping machine specially devised for the purpose.

A brief general description of the experimental tank and apparatus of Torquay was given in a paper read to this Institution by Mr. Robert Gordon in May, 1884, and a full description of the model shaping machine as it then existed at Torquay, was given in an earlier paper read by the late Mr. William Froude at the Cornwall meeting in July, 1873. The object of the present paper is to describe the principal novelties of mechanical interest in the experimental apparatus now used at Haslar.

Waterway and Experimental Carriage.—The waterway at Haslar, Figs. 1 to 4, is nearly 400ft. long and of nearly uniform section throughout, instead of having only about 200ft. of uniform section as at Torquay. The sides are concrete and vertical, instead of asphalted earth slopes, and the railway on which the dynamometer carriage runs is bedded on the tops of the side walls of the waterway, instead of being suspended over the water from the roof. The railway is extended beyond one end of the main waterway, so that the experiment carriage can be brought over a dry pit for getting at the experimental apparatus from beneath.

The experiment carriage, which has to span the whole width of the tank, and therefore to run on a railway of nearly 21ft. gauge, is a trussed structure, shown in perspective in Fig. 5. Its principal peculiarity consists in the fact that the members of the several trusses composing it are wooden trunks or boxes about 4in. square in cross section, made of $\frac{3}{4}$ in. deal and put together with screws and shellac varnish.

At the joints formed by the intersection of the various members of the trusses the sides of the boxes are made to overlap one another

over a large area, providing a large surface for screwing and for the adhesion of the shellac varnish. The dimensions of the boxes forming the several members of the girders are assigned so as to bring the sides of the boxes into the right planes to suit these overlaps. Views of one of these intersections, showing the method of overlapping, are given in Figs. 6 and 8. The whole structure thus produced is remarkably rigid and light. The general design of the carriage is arranged so as to leave clear a sort of central alley provided with a railway, the rails of which are close to the sides of the alley. The object of this secondary railway is to carry the smaller carriages, on which are mounted the actual experimental apparatus of different kinds, so that these may be adjusted on this railway to any desired position fore and aft on the main carriage.

Stationary Engine and Hauling Gear.—The wire rope by which the experiment carriage is driven from the stationary engine is not wound upon a barrel, as it was at Torquay, but is simply led over a grooved sheave driven by the engine, the necessary tension of the wire rope providing quite sufficient adhesion for the purpose. The engine is a 10in. power horizontal engine (Proceedings 1885, page 96), the ample power of which is required only for starting the truck quickly for high speed experiments. The ordinary speeds of experiment range between 100ft. and 500ft. per minute; for some classes of models experiments are occasionally made up to about 850ft. per minute, or $\frac{3}{4}$ miles an hour. The truck has been run at over 1,200ft. per minute, or about 14 miles an hour.

Governor.—The engine is regulated by a governor, acting on the same principle as that used at Torquay and described in Mr. Robert Gordon's paper, but somewhat improved in detail, having been originally designed in accordance with that principle, instead of being merely adapted to it, as was the instrument at Torquay. The arrangement of the governor is shown in Figs. 9 to 11, and to a large scale in the details, Figs. 12 to 14. The lower ends of the two symmetrical bell cranks A A are attached to each other by the links B B, having slotted holes which allow the bell cranks a very small range of freedom of angular motion. When a certain speed of rotation is reached the centrifugal force of the weights C C overcomes the tension of the spiral spring D, which tension may be adjusted by the coupled screws E and F to any desired amount within a considerable range. But before the bell cranks, in yielding to the surplus centrifugal force of the weights, reach the outer limits of their very small travel, by means of the hooked rod R they put pressure on the stationary wheel G, pressing it down upon the rotating wheel H above the top bearing of the governor, and by so increasing the friction between the faces of the wheels they cause the stationary wheel to attempt to turn with the governor, and thereby to extend the spiral spring connected with the throttle valve, and partly to close the latter. The extension of the spring, and the consequent distance of departure of the throttle valve from its full open position, are proportional to the frictional turning

movement applied to the stationary wheel, which movement is in itself proportional to the pressure brought to bear upon it by the bell cranks; in other words, it is proportional to the excess of the speed above that at which the centrifugal force of the weights just equals the tension of the spiral spring. To give greater sensitiveness of action the bell cranks are hung not on pin joints but on flat springs S, Figs. 13 and 14, after the fashion of a clock pendulum. The apparent pin joints at K are only safeguards to prevent the instrument from flying to pieces if any of the flat springs should break. While the springs remain sound the pins do not touch the insides of the holes. It was found advantageous to coat the rubbing face of the stationary wheel G with wood veneer, to give steadier friction.

General Arrangement of Model-Shaping Machine.—The present model-shaping machine is shown in Figs. 15 to 17. As in the case of the Torquay machine, described in the Proceedings of the Penzance meeting, the machine shaping of the model consists in cutting a series of grooves in the rough model, to the depth of the intended finished surface, Fig. 15, at the successive levels of the series of waterlines in the half-breadth plan, the surface between the grooves being finished off by hand and eye. These grooves are cut by a pair of revolving cutters, between which the model passes, traveling in a fore-and-aft line, while the cutters are moved laterally, receding from and approaching each other symmetrically, in such accordance with the longitudinal travel of the model as to trace in plan upon it the intended horizontal section or waterline (Fig. 17). This due accordance of the lateral motion of the cutters with the longitudinal motion of the model is accomplished by the operator so regulating the cutter motion as to maintain a tracer in contact with the corresponding waterline on the drawing. By suitable mechanism the drawing itself is made to imitate the longitudinal travel of the model, while the tracer imitates the lateral travel of the cutters. In the Torquay machine, at the time of the Penzance meeting, the tracer was maintained in contact with an adjustable template set to the curve of each waterline. Afterward the tracer was made to follow the line on the drawing itself by eye, assisted by a magnifying glass on account of the smallness of scale of the drawings used in that machine.

The principal features of difference between the shaping machine at Haslar and that at Torquay are as follows:

Firstly, the adjustment of relative level of model and cutters, requisite for cutting the successive waterlines, is effected at Haslar by raising and lowering the cutters themselves, instead of the model. The main advantage of this arrangement lies in a firmer vertical support for the model throughout its entire length, since it now rests directly upon every one of the six axes of the model table V, which are spaced 8ft. 6in. apart; the arrangement also lessens the vertical height required for the whole machine. The two outer spindles R, which run at 2,700 revolutions per minute, are mounted inside stout steel tubes, as shown in Fig. 18; the cylindrical outer surfaces of the

tubes are interrupted by a small vertical feather-way to keep the tube from turning round; and also by a small single-thread screw groove, in which engages a tooth fitted in the nut-wheel A. The raising or lowering of the cutters is affected by rotation of this nut-wheel, communicated to it by the gearing B C driven by the cross-shaft D, on which slides the spur-wheel B fitted with a sliding feather. The rotation of the cross-shaft D, effected by the hand-wheel Q and communicated to the screw E by mitre gear, moves the indicating nut F (Fig. 17) through a distance equal to the vertical rise or fall of the cutters; and this enables them to be set at the levels of the successive waterlines, marked off on the scale.

Secondly, the lateral motion of the cutters is controlled and made symmetrical by means of the right and left-handed screw, H, working in the nuts, S, fitted in the cutter frames, instead of by an arrangement of bell-cranks as was done at Torquay. The screw is worked by mitre gear from the hand-wheel, U; and its use supersedes the necessity of the oil cylinder or cataraft referred to in page 307 of the Proceedings of the Penzance meeting. As at Torquay, the tension of the cord belt by which the cutters are driven, tends to keep the cutter frames apart, and so eliminates any "lost time" due to "slap" of the nut or other parts. As an additional safeguard, the cutters, when cutting, are always made to work from midship of model toward the ends, so that they are always being moved inward, and the friction of sliding of the cutter frames is in the same direction as the pull of the bolts. This sliding friction, as at Torquay, is minimized by the counter-balance levers and weights, W, which lighten up the weights of the cutter frames.

Thirdly, the drawing table, T, besides being much larger than at Torquay, lies in a horizontal plane instead of standing in a vertical plane. The motion of the tracer is consequently horizontal and lateral, instead of vertical; in other words, it is in the same direction as that of the cutter frames; also the copying levers lie in a horizontal plane instead of standing in a vertical plane. The purpose of the much larger relative size of the drawing table in the machine at Haslar, especially as regards its length, is to enable half-breadth plans of the usual scale of $\frac{1}{4}$ in. to 1 ft. to be used for models of large ships. The use of so large a drawing table requires special provisions for accuracy, which constitute a distinct feature in the Haslar machine.

Copying Apparatus of Model-Shaping Machine. The drawing being made to correspond in proportion to the longitudinal plane of the model, and the tracer to follow simultaneously the water line on the drawing, the condition required for the accurate reproduction of the lines of the drawing by the cutters to scale on the model is that at every instant the distance apart of the cutters shall be proportional to the distance of the tracer from the center line of the drawing. The table travel and the length of the drawing may be as much as 12 ft. Now, in a very long drawing it is not easy to draw the center line absolutely straight; nor to find a long narrow drawing quite straight on a board. Moreover, to insure that the travel of so long a table through so long a distance should be rigidly true and straight, would require an expansive structure and great nicety of workmanship. It would probably also involve a degree of frictional resistance to the drawing table travel, which would be incompatible with so convenient and inexpensive a method of communicating the proportion of longitudinal motion from the model table to the drawing table, as has been used at Haslar, and previously at Torquay, namely, by light change wheels, of which the shafts take their motion off the model table and the drawing respectively by stretched pianoforte wire winding on and off a drum on each shaft (Fig. 16).

In order, therefore, to insure that the distance apart of the cutters shall be proportional, not to the distance of the tracer from a fixed point in space, but to the distance of the tracer from the center line—the position of this center line in space being slightly indefinite, owing to the causes already suggested—the fulcrum M, of the copying lever J (Fig. 17) is mounted, not on any fixed brackets, but on the frame K, which is itself in fact a lever, pivoted at one end at L, just beneath the line of motion of the cutter end of the copying lever, and held at its other end at point I, in the line of motion of the tracer, by the frame N. The position of this frame N in the direction of the tracer's travel is regulated by the roller O in contact with the back edge of the wide parallel batten P, of which the front edge is adjusted carefully to a uniform distance from the center line of the drawing. In virtue of this arrangement, lateral deviation of the center line of the drawing does not affect the distance of the tracer from the center line.

In order to obtain accurate working in this copying apparatus without running into expensive mechanism—seeing that the actual work to be done by it is almost the smallest conceivable, in fact simply that of sliding over a drawing a tracer consisting of a piece of tracing paper, so that the only material resistance to be overcome is the friction of the mechanism itself—care was taken in the design to use such mechanical features as give precision against small forces, but involve little friction; for friction tends to cause deflections, or requires heavier and therefore again more frictional working parts to resist such deflections. All redundancy of control was also avoided, as tending to cause indecision of working.

As in the Torquay machine, the fulcrum M of the copying lever can be adjusted to give any desired proportion of travel of tracer to that of cutters. Also the proportion of longitudinal travel of drawing table to that of model is regulated by that of change wheels X; and the "lost time" due to play of teeth in the line of motion of the weight leading over a pulley, keeping a tension on the table always in one direction.

Method of Feed of Model in Shaping Machine.—The model table has a maximum longitudinal travel of 20 ft. Its travel is effected, not by a band winch as at Torquay, but by a simple quasi-hydraulic arrangement, as indicated in Fig. 19, the liquid used being paraffin oil instead of water, in order not to rust the steel parts. The valve is contrived so that the speed of the table can be regulated from a certain maximum in one direction to a similar maximum in the opposite direction through every intermediate degree. By opening the cock A—which, indeed, opens itself, and is only held shut by the foot of the operator while the cut is being made—free communication is established between the two ends of the tube, whereby the self-acting hydraulic travel is instantly stopped, while the time the valve is becoming free to be easily and rapidly moved by hand in either direction. The principal novelty of the arrangement lies in the circumstance that the hydraulic pressure required, amounting to only 14 lbs. per square

inch, is maintained, not by an accumulator or high-level cistern, but by a little high-speed centrifugal pump, driven by the cord belt which drives the cutters. This arrangement is very convenient, and is found quite satisfactory in working.

Melting and Casting.—The arrangements for melting and casting the models scarcely differ from those described in the paper read at the Penzance meeting. It may be noticed that it has since been found better to coat the cores with a simple wash of clay without using any plaster of paris. It has been found that it is best to cast the models at a temperature not higher than, say, 160° Fahr., also that by mixing a little wax with the paraffin, and by remelting it several times in buckets when newly bought, the porosity of the castings, referred to in the report of the proceedings of the Penzance meeting, has been almost entirely done away with.

Weighing Machine.—This is used for obtaining the dead weight of the models, in order to determine the amount of ballast required. What was actually required was merely an instrument to weigh up to 1,000 lbs. or so with greater accuracy than is obtainable with an ordinary spring weighing scale. But a special machine had anyhow to be made, and it seemed to make a really accurate one would not add much to the cost, while such a machine might prove useful for other purposes. The instrument, which is shown in Figs. 20 to 23, was made at the Admiralty Experiment Works, except the knife edges and plates, which were supplied by Cerning. It is similar in principle to an ordinary chemical balance, except that it is a steelyard having one arm 6 in. and the other 5 ft. in length, instead of the usual symmetrical beam.

When the model or other weight which is to be weighed is being hung upon the machine, the eye or shackle, A, to which it is hung is resting in its fixed trunnions; as also are the sling, B, by which this shackle is brought to bear on the knife edge, and the scale beam, C, with the trunnions of the sling, B, consist of notches resting on points. All these points are thereby held in their correct places, so that the knife edges shall come to bear properly in the centers of the plates when brought into work. Turning the hand-wheel, D, raises the center fulcrum-plate, E, which first picks up the scale beam and raises it off its trunnions. As the lifting continues, the outer knife edge picks up the sling, B, which in turn presently picks up the shackle, A, with the model hanging to it. For the long end of the scale beam, accuracy of leverage being of less importance, a V or notch-plate, F (Fig. 23), hangs on the knife edge, G, instead of a flat plate; and at this end the weights are hung on or taken off without any formality of first relieving the knife edges from strain.

The beam and knife edges, etc., are cased in to protect them from dust and damp; but the model or other weights to be weighed, as well as the weights used in weighing, hang in the open. In order to make proper use of the evident sensitiveness of the instrument, these also would have to be cased in, to avoid the disturbances caused by draughts of air.

Tarpon Springs Y. C., March 25.

TARPON SPRINGS, FLA.

Editor Forest and Stream:

Our regular Saturday regatta was sailed in a strong, puffy S.W. wind; all had single reefs in and plenty of ballast. A large number of people filled the boat houses to see the fun. The Lucy B. went over the line first, followed by the Commodore's Silver King, that he put in for the first time rigged without the jib, to give the boys a chance. The rest of the fleet held back to gain time. Around the point they go, where, as they flatten the sheets for a dead beat to the first stake, the boats feel the full strength of the wind, which quickly shows their power and the skill of the skippers. Two short tacks and the Silver King is in the lead, going well, but missing the jib left at the boat house. Capt. Gregg's new vide boat, with four heavy men in her, was going like a race horse, and soon passed the Lucy B., who, as Noblet says, wanted our heavy city muscle on the weather rail to hold her up.

The Storm King is soon around the first stake, and with sheets broad off is rushing through the water like a steamer, the strong puffs bringing her bow down until her deck is nearly level with the water; then power tells, and she starts ahead with renewed speed. Capt. Roberts is pushing the Topsy with all his skill, and leaving the smaller boats; but length tells against him, and Gregg is steadily leaving him.

Around the second stake they go, a dead beat to the first stake, a run home, and the starting flag is rounded with the Silver King leading by 4 in. 16 s.

The second round was a duplicate of the first. The more powerful boats gaining on the others. Around the last stake goes the Silver

House Boats and House Boat Life.

Two illustrated papers in "Forest and Stream," April 13th and 20th, 1893.

King far in the lead and sure of the first prize if the Commodore had let well enough alone; but, wishing to make a big record, he ordered the reef out, and when the job was nearly done a strong puff strikes her, the mainsheet binds, and over she goes; an object lesson to the boys, who smile as they sail by until the tops of their heads look like an island. They finish the race, then all come back and help bail out the Silver King and tow her home with the naphtha launch. Next week we expect to have a regatta out on the Gulf of Mexico.

J. P. PHINNEY.

Representative Yachts.

Editor Forest and Stream:

Your paragraph concerning representative yachts, published March 9, appears to require some qualification. If Valkyrie No. 2 and Navahoe were to meet for the America Cup, nothing could be better or fairer than the paragraph referred to. Unfortunately, Valkyrie will have to meet the best of several trial yachts—Navahoe doing something similar in British waters. Each yacht is the last effort of the yacht designer at the head of his profession in England and America; but, as you point out when instancing Galatea and Genesta, a designer may, and frequently does, produce a slower boat than his best of a previous year. International racing ought, therefore, to be separated from the personal equations of owner or designer as much as possible, and be conducted under conditions which give no advantage to either side. The premier club of a nation alone should challenge, and the date and class named, any number of trial yachts being permitted on either side.

So long as the challenger is, tied down to one boat, and the challenged can try a dozen, the America Cup should remain in New York and the gold cup at Ryde. THALASSA.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with members' names, signal number of their clubs, and also notices of advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters drawings or descriptions of boats and fittings, and all items relating to the sport.

Officers:

VICE-COM: Geo. L. Parmele.
REAR-COM: F. A. Sears.
PURSER: F. B. Lewis, Box 99, Hart's.
EX-COM: Paul Butler, W. U. Law-son, R. Apollonio.

NORTHWEST DIVISION.

Officers:

VICE-COM: J. N. MacKendrick.
REAR-COM: F. Mims.
PURSER: W. G. MacKendrick, Tor.
EX-COM: C. E. Archibald, J. H. Carnegie.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Applications sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by address the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—G. M. Munger, Fureka, Kan.
Vice-Commodore—F. W. Dickens, Milwaukee, Wis.
Rear-Commodore—F. H. Gary, Oshkosh, Wis.
Secretary-Treasurer—F. B. Huntington, Milwaukee, Wis.
Executive Committee—G. H. Gardner, W. H. Gardner, S. N. Maxwell.
Regatta Committee—G. P. Mathes, J. H. Ware, G. C. Case, M. D. Smith.
Applications for membership should be made to the Sec'y-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 initiation fee and dues for the current year.

FIXTURES.

JUNE.

3. Red Dragon, Delaware River. 17. New York Ann., Bensonhurst.
10. Brooklyn Annual, Bay Ridge. 24. Marine and Field Club, Bath Beach.
14-17. East Div. Meet, Haddon's Id.

JULY.

1-15. At Div. Meet, Captain's Island. 15-30. W. C. A. Meet, Ballast Island.
29. Red Dragon, Delaware River.

AUGUST.

11-26. A. C. A. Meet, St. Lawrence River.

SEPTEMBER.

4. Ianthe, An., Passaic River. 16. Red Dragon, Delaware River.
4. Holyoke, Fall, Holyoke, Mass.

Excelsior Rifle Club.

THE weekly handicap shoot of the Excelsior Club for the club medals was held at the headquarters of the club on Tuesday evening, March 28. The shooting of the members was on the whole very good. John Speicher, with his handicap of 6 points, seems to have dropped into a very soft spot. The scores of the members will be here appended to their classes. 10 shots, possible 350, 25 yds.:

First class:	
Speicher.....	233+6-244 Hansen, scratch.....244 Hennessey.....232+4-236
Second class:	
J O Boyce.....	241 J Hughes.....240 C Bauchle.....230 C L Pinney.....229
Third class:	
Thomas.....	235+6-241 Duff, scratch.....235 Bins.....211+11-222

International World's Fair Shoot.

Chicago, Ill., March 30.—The Chicago Sharpshooters' Association now has out its programmes in English and German, announcing details for an international Columbian prize shooting at Chicago June 1 to Sept. 1. The conditions may best be learned by reference to the programme, which has the following:

"The Chicago Sharpshooters' Association has arranged and will hold in its park an international Columbian shooting festival during the three exposition months of June, July and August. The shooting days will, however, be only confined to each Sunday and Monday during these three months, and at the end of the third month (August) enough consecutive days will be added to enable each shooter present to finish his scores; but the first Sunday in September shall be the closing day of the contest, when also the distribution of prizes will commence.

"As a memorial of this event a solid gold medal, symbolizing the 400th anniversary of the discovery of America by Columbus, will be awarded on the bullseye targets to each participant, which can be claimed by him when shooting his first bullseye. Besides these medals a series of cash prizes is set aside for the highest number of bullseyes scored out of 100 shots on these targets.

"The following series of resolutions was passed at a regular meeting of the Chicago Sharpshooters' Association:

"The rules and regulations of the Western Sharpshooters' Union (see below) will be ruling.

"Only rifles of and below .40cal. (10½mm.) and such as shoot more than 200 balls to the pound are allowed.

"Intended participation must be made known to the secretary two weeks in advance. This must, particularly, be observed by larger bodies of shooters, as the number of targets is limited, and the non-observance of this might result in an overcrowding at the targets.

"The shootingmasters of the Chicago Sharpshooters' Association will superintend the shooting and will be assisted by a shooting committee, which again will be supplemented by one member from each outside society taking part.

"The treasurer has to furnish a bond to the amount of \$5,000, and is held to deposit all incoming moneys every Monday and Tuesday for account of the Chicago Sharpshooters' Association at a designated bank.

"The Chicago Sharpshooters' Association, owning real estate and personal property to the amount of \$80,000, will be responsible for the strict and faithful fulfillment of the shooting programme.

"The results of the shooting will be published every Monday and Tuesday in the newspapers.

"The shooting committee is vested with the right to examine the books, has the right to investigate and settle disputes which may arise, also uphold general order.

"Shooters from all parts of the world are allowed to take part.

"The shooting shall take place during the Exposition months of June, July and August, on Sunday and Monday during these months, and at the end of these three months on as many consecutive days as may be necessary to allow every shooter to finish his scores; but the first Sunday in September shall be the closing day of the festival."

Some criticism has been passed on the Chicago Association for not making the shoot a solid event, held on consecutive days. All this was considered, so say the officers of the Association, and the present plan decided upon as being the fairest for all, and as tending to make the shoot more nearly really international one. Not all foreign shooters might be on hand for any one week or any two or three weeks, whereas, by leaving a date open for three months, all the visitors arriving within the three months could be accommodated. Another serious reason against a consecutive shoot was the lack of proper room to handle a crowd of shooters, there not being butts enough for all, nor room to erect sufficient butts. The Chicago men hope that when this is all understood that they will be set right, and will receive the cordial support of all their brethren in this and other lands. The best comment on the attractiveness of this event is the publication of the money prizes offered, probably the most considerable put up for any years. Some of these are as follows:

Bullseye target, distance 600ft. (ditto, bullseye in a 12in. circular black). Ticket, \$25, entitles to 100 shots. Gold Columbian Medal, value \$15. First prize \$100, second \$90, third \$80, fourth \$70, fifth \$60, sixth \$50, seventh \$40, eighth \$30, ninth \$25. Two prizes of \$20, three of \$15, four of \$10, five of \$8, eight of \$7, ten of \$6, twenty of \$5, thirty of \$4, fifty of \$3.

A TEAM CONTEST.

A very interesting affair should develop from the proposed team contest, which is offered in the programme thus:

"A team consists of 12 shooters, entry for each shooter \$5, 5 shots each.

"The intention is to make this a competitive shoot between States. In case a State can furnish more than one team they will be numbered team No. 1, 2, 3, etc. The same rules will apply to Canadian, English, Scotch, Irish, German, Swiss, or teams of any other nationality. The proper medal to be awarded to each team shall be a gold medal, 2½ in. and cost of medals will be deducted from the total proceeds on this targets, and balance will be divided among half of the highest teams. The first highest will receive 20% of the total balance and the others a declining percentage, according to number of teams taking part."

All interested in the International Rifle Shoot should address for all particulars Mr. C. Schott, Sec'y, 13 N. Dearborn street, Chicago. Mr. Schott is doing all possible to help his associates bring this event to a conclusion perfectly satisfactory to the riflemen of all nations.

175 MONROE STREET, Chicago.

E. HUGH.

The final match will be shot on Excelsior range, April 13, to decide the winner of the series. The EAGLE.

Independent New York Schuetzen Corps.

WASHINGTON PARK, N. Y., March 29.—The Independent Corps opened its season shoot for the year 1893 in this park to-day. The attendance was unexpectedly light, but those members who were present kept up a lively fusillade until the close of the shoot. George Grause made the first center shot (red flag), and captured the premium of \$10. Gus Zimmerman made the most bullseyes (45) and B. Walther the most points.

Wm. Hayes had 38 bullseyes, B. Walther 29, George Krauss 18, Alex. Stein 17, I. Martin 15, E. Fisher 13, Fred. Timon 8, F. Meyer 6, Heyman 3, M. Lower 4.

Ring target, 5 shots, possible 125: I. Martin 116, E. Fisher 113, Wm. Hayes 111, Alex. Stein 109, Geo. Krauss 105, Geo. Jantzer 105, Edv. Bornhoft 104, F. Meyer 98.

Man target: Messrs. Hayes, Zimmermann, Martin, Stein, Simon and Heyman had a lively race for the champion medal on this target. The honor fell to Mr. Hayes. The following scores are appended: 3 shots, possible 60: Wm. Hayes 53, I. Martin 57, G. Zimmerman 53, Alex. Stein 53, Geo. Krauss 53, M. Heyman 53, Geo. Jantzer 53, E. Fisher 51, F. Simon 50, M. Bittschier 50.

New York Revolver and Pistol Club.

A MEETING for the election of officers was held April 1. Henry Oehl, was re-elected President; B. Walther, Vice-President; F. Hecking, Secretary. It was decided to hold weekly out-door shooting after May 1, during the summer. The weekly practice scores: Geo. E. Jantzer 89, Geo. L. Hoffman 85, B. Walther 85, H. Oehl 84, F. Hecking 81, A. Bertrand 80, E. Walsh 86.

Greenville Rifle Club.

The Greenville Club held its regular weekly shoot for class medals on Friday evening, March 31. One more shoot will wind up the season, and then the medals will be distributed to the fortunate winners in the

respective classes. Colin Boag and C. Scherline are a tie for the first medal, and each contestant has a score of 10 shots to shoot at the next regular meeting, consequently the final result next week, is looked forward to with much interest by all the members. The following appended scores were shot; 10 shots, possible 250, distance 25yds.: Wm. Robedoux 242, G. W. Plaisted 241, Colin Boag 239, C. Scherline 234, Geo. Purkiss 233, Jas. Dadds 231, Wm. C. Collins 230, Jas. Boag 229, H. Gotthardt 231, Geo. Vreeland 231, John Hill 224.

Turtle Bay Rifle Club.

The members of the Turtle Bay Club met again on Thursday evening, the 30th ult., for the weekly practice shoot. This club has every prospect of being able to turn out some extra good marksmen in the near future. The club has thus far confined its practice to the gallery, but it now has in contemplation a system of two men team matches between the members, to be shot on one of the Park ranges on Long Island. The following appended scores were made by the members competing, 10 shots, possible 250, distance 20yds.: G E Jantzer.....246 249 243-738 H Walther.....239 239 234-712 J Oehl, Jr.....245 245 242-732 H Lingelbach.....226 221 237-684 C H Plate.....242 243 237-723 J Oberle.....224 225 228-677

Excelsior Rifle Club.

A VERY small contingent of the Excelsior Club put in an appearance in the Greenville Schuetzen Park this afternoon for the outdoor practice. The members of the Excelsior Club were not very fortunate for any open air sport that it requires unusual inducements to get any sort of a party together, except there is a good warm stove close at hand. The shooting to-day on the part of Mr. Hansen was first class. J. O. Boyce was in hard luck, being handicapped with an imperfect fitting bullet in his .40cal. Ballard. C. Thomas made some brilliant spurts at times with his little .25-20 Maynard; he is only 17 years of age and to-day was his second 30yds. target. The following appended scores were made, 10 shots, possible 250, distance 20yds.: L P Hansen, Ballard, 38-55.....24 24 21 21 21 21 21 21 21 21-220 J O Boyce, Ballard, 40-65.....21 23 21 19 23 23 23 23 23 24-225 J O Hansen, Maynard, 25-20.....20 24 18 21 19 23 24 20 20-210 C Thomas, Maynard, 25-20.....16 20 21 19 20 17 22 21 19 22-198

The Zettler Rifle Club.

On Tuesday evening, March 28, the members of this club met again for the regular weekly shoot for the championship honors and the cash prizes. A Messrs. Dorrier and Walther divided the honors for the highest score for the champion medal, each having made 248 out of a possible 250. The following appended scores were made by the members competing, 10 shots, distance 25yds.: B. Walther 248, M. Dorrier 248, Hy Holmes 247, B. Zettler, 246, M. B. Engel 245, B. Busse 245, C. G. Zettler 244, F. C. Ross 243, F. Schmidt 242, Geb Krauss 237, F. Heintz 236, J. Michelbacher 234.

Beideman Rifle Club.

BEIDEMAN, N. J., March 25.—The Beideman Rifle Club opened its 100yds. range this day by the following scores, conditions 10yds., strictly off-hand, at the standard American targets: J A Michard.....10 8 9 9 10 8 6 5 9 8-81 J L Wood.....7 7 5 9 7 7 8 9 10 9-77 A J Targey.....5 7 7 9 8 8 9 9 9 7-77 W Gilbert.....4 4 6 5 7 5 7 5 7-58 E L Gardiner.....6 10 4 8 5 5 4 4 5 7-55 25yds., targets ¼ in. ring, possible 250: E. L. Gardiner 246, W. Gilbert 230, O. Garrity 220, G. Bosler 216, C. Monday 210.

WALT GILBERT, Sec'y.

RIFLE NOTES.

The opening shoot of the Independent New York Corps at Washington Park on March 29 brought together quite a number of New York's prominent shooters. Among the many who were pegging away at the bullseye we noticed Wm. Hayes, from New Jersey. Mr. Hayes is generally, when in the shooting house, the recipient of much attention on the part of his brother shooters on account of the high esteem in which he is held by the fraternity, as well as for his well known shooting ability. On this occasion the rifle which he was using received fully as much attention as the shooter. The action is of Belgian make and is a sample imported by Messrs. Schoverling, Daly & Gales. The barrel (.38-55) was made and attached to the action by the Marlin Fire Arms Co. A peculiar feature of its mechanism was its simplicity and the ease with which the entire working parts of the action could be detached from the frame and dismounted without the aid of a tool. Should this action by practical use prove to be efficient it will fill the void that has occurred since the Marlin Arms Co. stopped the manufacture of the Ballard rifles.

The close of the season's practice of the Independent New York Corps last fall found two of the members, Messrs. B. Walther and G. Zimmerman to be tied for the champion medal. The departure of Mr. Zimmerman for Europe shortly afterward gave the two gentlemen no opportunity to shoot off the tie. Now that the shooting season has opened again the friends of each are speculating on the probabilities of the result of the coming contest. The matter will no doubt be decided at the next shoot of the club, the latter part of the present month.

The members of the Greenville Rifle Club, of Greenville, N. J., are at the present time very much interested in the new club house under construction which is being built for the club, and which will probably be finished before the first of next month. The club expects to dedicate the house in a match with a team from the Puritan Club, of Newark. As soon as the Greenville Club shall have got settled in their new home we shall be pleased to favor the patrons of this paper with a short history of this young but enterprising rifle club.

New Jersey, and Greenville in particular, will, on or before May 1, increase its shooting population. We learn that those well known expert riflemen, Messrs. M. Dorrier and Fred C. Ross, have made permanent business arrangements there, and in the future will make Greenville their place of residence.

The contemplated Bundesfest and International Shoot to take place in New York in the summer of 1894, is already becoming an interesting topic and among the friends of the shoot there are many who are expressing expressions of hope that all of our shooting societies from every part of the country, Germans, Americans, Italians, Scotch or Indian, so long as they have an organized shooting society and are good American citizens, filled with the love of America will participate. To all such the right hand of fellowship will be cordially extended by the New York shooters. The next meeting of delegates for the permanent organization of the Bund will take place at No. 12 St. Marks place, New York city, on Friday evening, April 21. Mr. C. Roedel, No. 712 Seventh avenue, is the secretary of the organization as it now stands, and any society wishing to enter the Bund can communicate with Mr. Roedel, who will place all communications before the next meeting.

The frontispiece to the programme of the International Columbian Shooting Festival at Chicago contains a fac-simile of the Columbian medal which it is proposed to distribute among the shooters during the festival this summer. Upon the front of the medal is depicted Columbus in the act of raising the Swiss standard upon the soil of the New World. The inscription on the medal is in the following words: "Italian of his nationality! Suppose that in the thirtieth century, A. D., some enterprising savant searching for the site of the Chicago of the nineteenth century, should unearth one of these medals? Chicago would add 400 years to its history and the Swiss would be in it for sure."

Glenmore Rod and Gun Club.

The Glenmore Rod and Gun Club had the poorest attendance for months at their regular monthly shoot at Deeter Park on Wednesday, March 23. Only nine shot for the "Claus" diamond badge and three special members' prizes, 7 birds each, club handicap. C. Engelbrecht won the badge and first prize, W. Vorchab the second and H. Gasteiger the third. A good sweepstake shoot followed. The scores: H Gasteiger.....10101-4 C Engelbrecht.....112311-7 R Plaster.....110111-6 J A Still.....200122-5 W Sevens.....322202-6 J Young.....102011-5 S Schlemmer.....222011-6 W Vorchab.....111202-6 L Eppig.....110201-4

Towanda Monthly Shoots.

TOWANDA, Pa., April 2.—The Towanda (Pa.) Gun Club will give on the first Friday in each month a monthly shoot. The first of the series will be held on Friday, April 7, commencing at 1 o'clock P. M., and continuing throughout the day. A county and club badge will be contested for. The county trophy is open to all residents of the county. Entrance cost of targets. The club badge for club members only. Sweepstake shooting will fill out the programme. Targets will be thrown at 2 cents each. W. F. DITTRICH, Sec'y.

Trap-Shooting.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

April 5-7.—Interstate live bird tournament, Dexter Park, Long Island. H. A. Penrose, Sec'y, New London, Conn.

April 11-12.—Manufacturers' Trap-Shooting Association tournament, Greensboro, N. C.

April 19-20.—Springfield (Ohio) Gun Club tournament.

April 19-21.—Waverly (Iowa) Gun Club tournament. Professionals barred.

April 25-27.—Third grand tournament of the Wilmington Rod and Gun Club, Wilmington, Delaware. C. C. Kurtz, Sec'y.

May 2-3.—Independence (Ind.) Gun Club tournament. Added money.

May 2-4.—Williamsport (Pa.) Gun Club annual tournament.

May 9-11.—Ohio Trap-Shooters' League tournament, Columbus, O.

May 9-12.—Saratoga Springs (N. Y.) Gun Club tournament.

May 16-17.—Manufacturers' Trap-Shooting Association, Lansing, Mich.

May 16-19.—North Baltimore (Ohio) Gun Club tournament.

May 16-19.—Michigan Trap-Shooters' League tournament, at Lansing, Mich.

May 17-18.—West Newburg Gun Club spring tournament, at Newburg, N. Y.

May 23-25.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.

May 23-25.—Minneapolis (Minn.) Gun Club tournament.

May 23-25.—Nebraska State Sportsman's Association, Omaha, Neb.

July 4.—Eastern New York Trap Shooters' League tournament at Amherst, N. Y., under auspices of Riverview Gun Club. Rob't M. Hartley, President.

July.—Manufacturers' Trap-Shooting Association tournament, at St. Louis, Mo.

August.—Manufacturers' Trap-Shooting Association tournament, at Indianapolis, Ind.

Sept. 26-29.—Pennsylvania State Sportsmen's Association tournament, at Philadelphia, Pa. H. M. F. Worlan, Cor. Sec'y.

September.—Manufacturers' Trap-Shooting Association tournament, at Columbus, Ohio.

Oct. 19-20.—West Newburg Gun Club fall tournament, at Newburg.

October.—Manufacturers' Trap-Shooting Association tournament, at Baltimore, Md.

DRIVERS AND TWISTERS.

From advance proofs of the programme of the Michigan State shoot to be held in conjunction with that of the Manufacturers' Trap-Shooters' Association at Lansing on May 16, 17, 18 and 19, we call the following: The Association shoot will be held on the 16th and 17th under the Rochester Gun Club section. The Michigan Association makes the "Michigan system" with side purses will be used. The following is a brief description of this system: A race will consist of 30 or 30 birds, in two or three sections of 10 each, entrance 10 cents a bird or \$1 for each section of 10 birds. Rebate to each shooter 10 cents a piece for his kills throughout the race. In a 20-bird race, after paying the rebate for kills in the first section, divide the balance, per capita, to apply on the second section. In a 30-bird race, rebate as before and divide the balance in 3, 4 or 5 purses according to number of entries. In a 30-bird race, rebate and divide per capita in first and second, and use the balance for purses in the last section. Charge three cents for targets and use one cent for each target scored to make a purse or purses for the best shots, as follows: With 20 entries or less, one purse; over 20, two purses. The side purse may be for any amount with three, four or five entries, and no rebate. The sportsmen of the State have a bill before the Legislature legalizing the shooting of live sparrows from the trap, and the bill is expected to pass and be signed in time to allow sparrow shooting at this tournament.

The members of the Saratoga Gun Club are beginning to agitate a lively movement in favor of securing the management of the 1894 tournament of the New York State Association for the Protection of Fish and Game, and will bring some heavy arguments to hear at the Rochester Gun Club section. The Saratoga Gun Club is one of the strongest in the State, and whatever promises it makes will be fulfilled to the letter. The town is well supplied with hotels and the club can secure the lowest of rates for shooters and their friends. The club grounds are second to none. Taken as a whole Saratoga would be a good place for the 1894 tournament. At several conventions they have waived their claim with the understanding that at some future time they would receive the support of delegates from other places, and at the June convention they propose to press their claim.

DULUTH, Minn., March 28.—The Duluth Gun Club has been reorganized and will in the near future build a magnificent new house. A committee has already been appointed to secure a suitable location and discuss plans for the coming season. There are several clever marksmen in the club, and phenomenal records will be no surprise. The Central Gun Club, a young and successful organization, have also appointed committees to look for a suitable site at Spirit Lake, where they intend erecting a suitably large house. If the records recently made by the members of this club are any indication, they will set a pace for the best marksmen at the head of the lakes. Several clubs will soon be organized in neighboring cities.

The prospects are that a big crowd of shooters will attend the Manufacturers' Trap-Shooting Association at Greensboro, N. C., on Tuesday and Wednesday of next week. The Association programme will be the same as that at Savannah. The State championship race will be hotly contested. An additional feature of the tournament, to be presented on Tuesday, will be a match for the team championship of North Carolina. The conditions will be 5 men per team, 15 targets per man, entrance \$10 per team. The purse will be divided 60 and 40% and the Association will add \$20 to first money. At least seven teams are expected to enter. It is hoped that all the subscribers to the Association will have their exhibits at Greensboro.

We have received advance sheets of a tasty programme to be published by the Minneapolis Gun Club, for its fourteenth annual tournament May 23-25 inclusive. The events each day will comprise two 15 targets each, one at 10 singles and 3 pairs, one at 10 singles and 3 pairs and two at 20 targets each. The aggregate amount of entrance fees each day will be \$10. On the first day the purses will be divided 30, 25, 20, 15 and 10 per cent.; on the second day five equal moneys and on the third day 40, 30, 20 and 10 per cent. Beside the money there will be twenty-five cash and merchandise prizes for averages. The cash prizes will run from \$40 for first average down to \$7.50 for the tenth average.

It is with regret that we announce the death of Mr. W. R. Curtis, of Saratoga, N. Y. Mr. Curtis was a gentleman with the true instincts of a sportsman, and one of the leading trap and field sports of Saratoga. He was secretary of the Chatham Gun Club, and the moving spirit of that body, and in him the lovers of trap shooting lose a man hard to replace. His remains were escorted to the depot by the Chatham Artillery and other kindred organizations of which he was a member, and from there taken by his brother to his old home in Massachusetts, to be interred in the family vault.

BATAVIA, N. Y., March 25.—There was a large attendance at the meeting at the Chatham House on Tuesday evening for the purpose of reorganizing the Batavia Gun Club. The meeting was presided over by Dr. W. B. Whitcomb and the minutes were kept by Alexander Wyness. The following officers were elected: President, J. L. Stein; Vice-President, L. F. McLean; Secretary, D. N. Dwight; Treasurer, Dr. W. B. Whitcomb; Captain, P. Tompkins; Directors, A. Wyness, A. W. Skelly and Chas. Blumerick.

Routes for Sportsmen.

A BLANK DAY.

BUT IT WAS NOT ON THE

ILLINOIS **CENTRAL**

RAILROAD.

The sportsman of the North often has a blank day. Indeed, no Northern shooter knows much about shooting until he has shot in the South, where the superb natural conditions have left the game in undiminished plenty in the covers.

Don't Go After Bear

to the Rockies. Go to the wide river bottoms of Mississippi or Louisiana and you will get one.

Don't Go After Turkeys

to the Great West, but to the Great South, in Mississippi and Louisiana, where the unbowed wood lands hold abundance of these noble birds.

Don't Go After Ducks

in the North, and work hard for days for a dozen ducks. Go South, to Louisiana and Texas, and learn what wildfowl shooting is.

The Quail, Woodcock and Snipe
shooting of the South is such as the Northern hunter never dreamed of. A genial climate, a pleasant people, a six months open season, and birds until you want no more.

The Illinois Central Road runs direct to all this country, and is the only road that does.

A TROUT LAW INTERPRETATION.

THE Attorney-General of New York has just given an opinion, which we believe to be an incorrect interpretation of the law in the case. It relates to the possession of trout in close season.

The statute of 1892 prescribes: Trout "shall not be fished for, caught, killed or possessed between the 1st day of September and the 15th day of April following, except as provided by Section 166."

Section 166 applies to Long Island and reads: "Trout shall not be fished for, caught, killed, sold or possessed between the 1st day of September and the 1st day of April following."

The law thus provides that trout may be taken and possessed in the State only between April 15 and Sept. 1, and on Long Island between April 1 and Sept. 1. But the Attorney-General rules that trout caught on Long Island in the open season for those counties "may be lawfully transported to any point within the State."

This ruling appears to us to be in direct conflict with the ruling interpretation of similar laws. By that interpretation the prohibition of trout in the general State close season must apply to all trout whether caught in the State outside of Long Island or on Long Island or in other States; and there appears to be no more ground for excepting Long Island trout than there would be for excepting New Jersey trout.

LET THE GOOD WORK GO ON.

NUMEROUS congratulations have come to the FOREST AND STREAM upon the final success of the prosecution of Delmonico's restaurant concern in this city for the serving of woodcock out of season. These welcome words are by no means limited to New York State. Our ventilation of this notorious case had made it one of widespread interest; its progress was watched by readers everywhere, and the result has been received with widespread satisfaction. It is to be hoped that the salutary lesson of the Delmonico fine may be equally far-reaching.

The demoralizing influences of the District Attorney's delaying of this case have not been fully comprehended. The FOREST AND STREAM's activity in the affair has not been in any sense a campaign against Delmonico personally. Our determination to see him forced to pay the penalty was based upon an appreciation of what immunity for him would mean in both city and country. Other New York restaurants, emboldened by the scandalous ignoring of this suit by the public prosecutor, were selling game out of season continually. They reasoned that if Delmonico could go unpunished, they would go unpunished. Again in the country, particularly in Protector Kidd's district, it was coming to be said quite commonly, and with a good show of reason, too, that while some "poor devil" of a grouse snarer or trout netter would be punished fast enough, the protector did not appear to do much with a rich and influential offender on Fifth avenue, New York. To silence this vicious talk and to take away from offenders of all classes the defense they had in Delmonico's immunity was the end sought. That payment of \$450 last week was and is will be an object lesson. It means that the laws which are righteously enforced against the humblest individual are designed for all and will be righteously en-

forced against all. It means that no one can have cause to plead unjust discriminations.

Now that the docket has been cleared of the Delmonico case we trust that Protector Kidd will bring to early trial the suits he has in preparation against other restaurant proprietors in this city. Let the good work go on.

At the regular monthly meeting of the New York (City) Association for the Protection of Game, last Monday evening, it was voted "That the thanks of this Association be tendered to Dr. Willett Kidd and Col. Robt. Townsend for the successful termination of the suit against C. Delmonico." It will strike most persons who are familiar with the peculiar history of the Delmonico case that this is an extraordinary expression to come from a game protective society. The thanks extended to Dr. Kidd are well deserved, and to tender him thanks is a becoming recognition of his pluck and pertinacity and persistence and perseverance. But Col. Townsend, the Assistant District Attorney, never did the first thing in connection with the case to entitle him to thanks from a game protective society nor from anybody else except the defendant Delmonico. He persistently ignored his duty in the matter, betrayed a scandalous ignorance of it, dilly-dallied and shilly-shallied with it for months; finally took action only when pushed and prodded into doing so, and at last reached "the successful termination" much as a man tied on the cowcatcher of the Empire State Express might reach Buffalo. Now that a victory has been won for game protection, no thanks are due the District Attorney's office, and we fail to see what good end may be gained by glossing over the record made by that office in the Delmonico prosecution.

THE DEAR PEOPLE.

SENATOR ARNOLD, of the Massachusetts Legislature, must have curious notions about "sportsmen." In course of an argument for the Gilbert trout bill the other day, Mr. Arnold said: "We are here to legislate in the interest of the people, and not in the interest of the sportsmen, who can afford to expend its weight in gold for every trout caught." The golden truth is that not one sportsman of ten thousand who go fishing could afford to expend its weight in gold for every trout he catches; and this talk of Senators and lesser lights is the veriest bosh. No public man who cares to be considered tolerably well informed on matters of everyday observation should permit himself to prate of a diversity of "interests" of "sportsmen" and "the people." There is no such diversity. The sportsmen are the people. Take the shooters and the fishermen in any city or village of the land and they will prove to be just as representative of the several classes of the community as are the first ten men you meet on the streets going about their business. When you hear a man haranguing about his solicitude for the interests of the people as against the interests of sportsmen, you may put it down either that he is ignorant of the facts or else that under the guise of anxiety for the dear people he is endeavoring to promote the selfish interests of one or two or at the most three individuals at the expense of the community. And if ever such a man has a little bill in the Legislature bearing on game or fish, the people will do well to watch it closely.

If it is true that there are thousands of wealthy sportsmen who could afford any luxury obtainable with money and who are never called upon to consider the item of expense in gratifying their tastes, it is equally true that there are other thousands who are compelled to count the cost of an outing very carefully, and must arrange and plan to find time and money to go shooting and fishing. We may not rightly put forward a representative of either one of these two classes as the typical American sportsman. As to the fullness of the pocket-book there is no typical American sportsman.

But the important point to keep ever in mind, when as representatives of the people we stand up in our legislatures to discuss game and fish bills is this—that the American sportsman of to-day who is least able to look out for his interests as a sportsman, is the one of restricted financial resources, and it is his interests, then, that must be protected by legislation. He cannot, as does his wealthy brother, put money into railroad fares and devote weeks of time to expeditions to the end of the earth in quest of sport. If he has any fishing at all it must be in home waters. He cannot go five hundred miles, but he can go

five miles. He cannot spend a week, but he can enjoy fishing for a day or for a Saturday afternoon. No man under the blue heaven enjoys it more than he. No one is better entitled to enjoy it. No one has more at stake in the protection of fish than he has—the protection of fish in home waters. No one ought more promptly and vigorously to oppose legislative measures granting special privileges, the practical operation of which means the destruction of fish in these home waters. No one ought more emphatically to resent misrepresentation of himself and his interests by leather-headed demagogues who champion special privileges, in the name of the people.†

SNAP SHOTS.

There is manifested a growing disposition to limit the public stocking of trout streams to public waters. We spoke the other day of a Massachusetts law requiring as a condition precedent to giving out trout fry a pledge that the streams in which they are planted shall be open to the public for fishing in the open season. A bill embodying a similar requirement has been introduced at Albany. The enforcement of such a rule would not necessarily mean the throwing open of private waters; it would mean that if individuals want their trout streams stocked for individual benefit this must be done at individual expense.

It is seldom that a single article in the FOREST AND STREAM appeals to so large a number as of those who are likely to follow with interest the descriptions of "House-Boats and House-Boat Life" in this and the following number. The aquatic "cranks," the yachtsman and the canoeist will find hints and suggestions for future pleasure afloat, and the camper and outer, the hunter, the fisherman and the tourist are no less concerned in these cheap, pleasant and convenient floating homes. The house-boat, in one or another of its many forms, is adapted to nearly all localities in the United States, and now that Americans are coming to a recognition of their many advantages, these craft promise to become both plentiful and popular.

The Izaak Walton Fishing House has been accorded a site near the Fisheries Building and is now in process of construction. Capt. Collins tells us that he hopes to have it in readiness for May 1; and he makes the neat suggestion that it may look small alongside of the great structures in Jackson Park, "but, estimated from the influence it will exert in promoting good fellowship among men, and serving as a shrine for anglers to gather in and around, in all that it teaches us of the lasting reverence of humanity for love and gentleness, and as a reminder of days spent in delightful and healthful recreation, it will be to many of us about the 'biggest thing' at the 'biggest show on earth.'"

A waiter in a New York restaurant, kept by one Burns, was arrested last week on a charge of having defrauded his employer out of a considerable sum of money by forged checks of customers. Now, this man Burns has been carrying on a large business in illicit game birds out of season, serving them in open and brazen defiance of the law. The inquiry is as pertinent here as in another case cited by us not long ago.—Is it not asking too much of an employe, who is made *particeps criminis* in an unlawful business, that he shall be honest with his employer?

The case brought a year ago against the cold storage warehouse in this city for possession of game has been compromised by the payment of a fine of \$1,000. It will be recalled that the cold storage people promised to test the law by carrying the case up to the highest courts. We said at the time that the law would stand the test. Presumably the cold storage warehousemen have come to the same conclusion.

Contributions for the "Nessmuk" memorial fund have been received from the following:

MR. J. B. DAVIS, Ann Arbor, Mich.
MR. GEO. ANDERSON, The Dalles, Ore.
MR. R. S. IREDELL, Akron, O.
HERMIT, Gloucester, Mass.
MR. T. G. DABNEY, Clarksdale, Miss.

The Audubon monument in Trinity Cemetery, this city, will be unveiled Wednesday afternoon, April 26. Prof. Thomas Eggleston will deliver an address at the unveiling; and in the evening Mr. D. G. Elliott, ex-president of the American Ornithologists' Union, will deliver an eulogy of Audubon before the American Academy of Sciences.

The Sportsman Tourist.

"PODGERS'S" COMMENTARIES.

A Personal Paragraph.

SAN FRANCISCO, March 31.—In glancing over the FOREST AND STREAM of March 23 last evening, I found a communication from Judge Greene, wherein he explains his position on the question of the protection of game, and his recent efforts in the passage of a law to that end and purpose, and thereby exonerates himself completely from the implication in some of my recent scribbles, that the sportsmen of Oregon and Washington were derelict in their duty, permitting the wholesale destruction of pheasants. I might perhaps give a Scotch judgment in the case, "collectively, not guilty, but don't do it again." But in the special implication that Judge Greene has been derelict, I shall have to apologize, as from his defense it is evident that he has not been idle nor indifferent to the wanton destruction of the noble game in question. Thus do we do good in our generation and don't always get credit for it; we will, however, give the Judge due credit now and take it all back.

Pheasants and Quail.

Speaking of pheasants, I would like to ask Judge Greene if he has had any experience as to the assertion that wherever quail abound, the pheasant is exterminated or driven away. The question has come up here in the proposition to stock Goat Island, an island in the very center of our harbor, with pheasants. It is stated that the pheasants have to quit wherever quail are, and preparations are being made to capture and remove from the island all the quail before placing the pheasants on it.

It seems to me a perfect absurdity that a bird as large as a pheasant could be "knocked out" by a little chap of a quail, especially as we all know what a spunky and belligerent bird the pheasant is. It is the general belief that the game cock was bred from the pheasant; at any rate, I know from personal experience that the bird is a fighter from way back. I had a pair in my stable yard, and when I went out that way in the morning, and through the yard, the cock would make for me, and oppose my progress, and fight like a little son of a gun, and if a stray rooster from a neighboring yard came foraging over the fence, he never got back again without help. So it seems too ridiculous to talk about a quail standing any chance with a pheasant, as spunky as little top-knot is. No doubt he is a good one as far as he goes, but he don't go quite far enough.

Pheasants and Climate.

It is a settled conviction in my mind from personal efforts in the way of raising pheasants that climate has very great influence in the question. My experience, I would say, has been in the south at Jekyll Island, Georgia, more particularly, where we gave the birds the greatest care, even going to the expense of importing a man from England, especially, to care for them. The first year was a great success as far as hatching out went, the eggs being placed under the common barn-yard hen; and we turned loose nearly a thousand. But they have never seemed to increase; in fact, I doubt if there are as many to-day as we turned loose the first year. This I attribute to the great heat of the summers there, and to the insects that abound in the southern hammocks. The pheasant is evidently a very hardy bird, and can stand almost anything in the way of a hard climate, *vide* that of Oregon this last winter. Not that I would for a moment insinuate that the climate up that way is not almost tropical, and that oranges cannot be raised in mid-winter, and that flowers do not bloom every day in the year; I don't think the pheasant cares much whether they do or do not; but he is evidently well satisfied with his lot if he can be let alone out of season, and as Judge Greene and his associates have taken his part, we are content, and will say no more about it.

Raging Trout Streams.

I know it is very mean to rejoice over the misfortunes of others, but I can't help chuckling at the utter knocking out of the poachers and lawless small boy this year on the trout question. The streams have all been raging torrents, and fishing has been impossible, and although to-morrow will be the opening day, there won't be a trout caught. So the pot-fisherman and the squab granger have not only been perforce obliged to respect the law, but cannot even yet find a stream in fishing order, whereas he must be wretchedly unhappy, especially that he couldn't break the law—the meanest part of the business. He probably won't care to fish at all now, no fun in it when he is not defying the statutes. The floods have been so extensive that a great area is still under water, and the fish have the largest field for exploring, and have had a chance to invade the farmer's dooryard with unfortunate results, it is feared, as they are liable to be caught inland by the receding waters and destroyed, as has been the case on former occasions, and made poor fishing the following year.

Index Expurgatorius.

On page 249 (March 23 number) you give a very pretty photo of a trout stream and bordering forest, being, as stated, the fourth prize in the amateur photo competition. To my mind it should come much nearer number one, for it is beautiful; but I enter my protest to the title, "After the Speckled Beauties." Years ago I assisted at a meeting of jolly good fellows, all sportsmen, when we devoted one entire very rainy day to the purification of the language of sportsmen from stilted and hackneyed terms. We entered into a solemn compact, each one and all, to devote ourselves to the cause and to enforce the expurgation of certain time-worn and threadbare terms, even though it involved force of arms and possibly interviews with the police judge; and I distinctly remember that the term "speckled beauties" was at the top of the list. I, therefore, in compliance with my oath, protest against the use of this time-worn and venerable allusion to so respectable a fish as a trout. There were other equally objectionable terms that we taboed, such as "My hair stood straight up," "I felt my hair raise at the sight," "I drew a bead on him," calling a gun "Old Betsy," etc. I cannot remember them all now, but I do take cognizance of speckled beauties, and rise to a question of privilege to say, drop it. It is of the past. It is worn to the bone. Let it rest and give us a rest.

The Decoy Doe.

I note the calamity that befel your correspondent

"Mux" in making the bet he did on the fate of the decoy doe, mentioned in my story of her usefulness to her owner up at the Sacramento River Soda Springs. The other man had the dead thing on him, for he knew from experience no doubt that no man ever had a pet he particularly prized, a fine dog, for instance, that some scalawag to whom the dog was superior in intelligence, did not shoot it, usually with the excuse that it was killing sheep; and a deer above all things was the most likely to be killed almost in the dooryard. These cases are as liable as a flock of tame ducks in the vicinity of a stream, where they are often encouraged to get shot at a price considerably above the market. It is also a lesson to "Mux" never to bet; I have been told that it is a very demoralizing practice.

I was going to say something about the photo of the gentleman sitting under the tree with rod and fish basket, smoking the long pipe, but I have already exceeded my limit and must defer him, but I envy his calm serenity and perfect enjoyment of the shade and rest after evidently a good morning's sport. I will venture to say that he has a well filled basket. No man can wear that expression of perfect content with no fish. It is not in the nature of things. I don't suppose it really makes much difference to some insects whether they get there or not, but it does to a man, and it is dollars to cents that our friend has arrived. The position, the pipe and the expression prove it.

PODGERS.

A SPORTING SYMPOSIUM.

BY A COUNTRY PARSON AND HIS DEACON.

Prelude.

It is agreed betwixt the Deacon and myself that we shall each tell the best story we know about the other for the benefit of the readers of the FOREST AND STREAM, each to select his own subject and method of treatment, and neither to take any offense at the recital of the other, as indeed how could we, considering that we have been sporting friends over both gun and rod for the last thirty years, and in all probability shall be till both hunting and fishing are no more for either the one or the other. As the toss of the penny has given me the privilege to tell my tale first I shall begin without further ceremony.

I.

The Parson's Story About the Deacon.

My friend the Deacon has a beard—mark that well, for thereby hangs my tale. A good long chin whisker it is, such as few men can raise; very distinguished looking, well sprinkled with gray now, though it was black as the raven's wing when I first made the Deacon's acquaintance. In those early days of our friendship, observing what assiduous care my friend bestowed upon his handsome beard, I did much fear it might become a source of worldly pride and vanity, but I never suspected how much amusement it was one day to afford me, and how much piscatorial perplexity it was to occasion my friend the Deacon.

Well, it was a pleasant September day, now some years ago, and we were out on the river bass fishing. Our luck, as often happens the bass fisherman, had been indifferent. The fish "were there"—that we very well knew—and "there" they were going to stay, too, for all our tempting bait, for they were not in the humor, however much we might be, and in fishing, if anywhere in the world, "it takes two to make a bargain."

So, the Deacon sat in his boat anchored beside a rock, and I sat in mine, likewise anchored beside a rock, about fifty feet away. The day was drawing toward a close; the long shadows were beginning to fall; everywhere around us was the witchery of a calm autumn evening. I was dozing over my rod when, all of a sudden, click-click went my reel, and almost at the same moment click-click went the Deacon's. After a hard and exciting tussle we each brought his fish to boat, a fine gamy capture of some two or three pounds weight.

Our luck now became good, and our sport was fine. By and by, while waiting for another strike, I heard the Deacon's reel running, and looking in his direction I beheld a most singular and laughable spectacle. The Deacon's beard had come too close to his reel, and had somehow got twisted up with his line, and a 3lbs., nay, a 5lbs. bass was pulling away like mad.

And there sat the poor Deacon, a picture of perplexity, both hands desperately grasping his rod, with his head bent down close to his reel, wincing and "ouching," afraid to stop his reel for fear of losing his fish, and afraid to let his reel run for fear of losing his beard. Was ever fisherman in a more truly embarrassing and uncomfortable position?

Now, I know I ought to have pitied the Deacon, and I did; but my sense of humor quite overmastered my sympathies. For the soul of me I couldn't help laughing, it was so comical. I acknowledge with shame, however, that under the stress of a peculiar temptation to merriment, I added, I fear not a little, to my friend's discomfort by my laughter, and still more by my words of counsel and advice, impossible under the circumstances to follow.

"Give him a leetle more line, Deacon; just a leetle more. He's a big fellow, and he'll break away if you don't let him run."

"Can't give him any more line," grumbled the Deacon, "not an inch more. Can't you see what a fix I'm in?"

"Well, if you can't let him run, reel him in—but slowly, slowly, Deacon."

"Don't you see I can't reel him in—"

"What was that last remark of yours, Deacon?" For I was more than half sure that my friend had made use of some words of an apocryphal sound, but nothing more, I was fully persuaded, than his emphatic "Scissors and buttons"—a peculiar expressions to which he always resorted in extreme cases. "Go for him! Haul him in! Easy, my boy! Don't get excited, Deacon!"

The Deacon actually shook his fist at me—the first and only time in thirty years!

The fish now took to skulking at the bottom of the river, and the Deacon sat there, beautiful as a picture, with the evening shadows around him, meditating apparently on the vanity of earthly things in general and of a fisherman's luck in particular—when, with a sudden rush, the beastly bass made a leap into the air in a frenzied effort to shake himself loose. But meanwhile the Deacon had got out his knife and had actually sawed off the half of his glorious beard, and was now a free man again and ready when the rush came. His blood was up. Fire was in his eye—and tears, too; and the way he handled that

fish seemed to me; the solitary spectator of the battle, a furious testing of the Deacon's temper as well as of his tackle. His rod bent and swayed; his reel clicked and rang; his line saved the water and whizzed through the air. Inch by inch man and beast fought for the mastery, and it was beautiful to behold how gradually the Deacon's tackle and experienced skill, reinforced by his suppressed irritation over the trick the beastly fish had played him, were gaining the day. At last he towed the played-out bass to the side of his boat, scooped him in with his long-handled net, a powerful five-pounder—threw down his rod into the bottom of the boat, and shouted to me:

"Let's go home!"

"Better wait till it gets quite dark, Deacon. Do you think your wife 'll know you?"

We went home. When the Deacon took up the collection the next Sunday in church, everybody wondered what had possessed him to cut off his long beard, but nobody knew except the Parson.

II.

The Deacon's Story About the Parson.

That's a right good story the Parson's writ about me, and none the worse because it's true, every word of it, and I guess some words that aren't there, too, which I hope 'll not be counted against me. But what on earth is a poor mortal to do when your beard gets a tangled up that way with your reel and a blamed fish begins to yank it out by the handful? I reckon Simon Peter himself made use of rather strong language once in a while when his nets got tangled, and it's no wonder a poor Deacon like me should forget himself a little when in such an uncomfortable fix. "Human nature is human nature" the world over—especially when you're fishing.

Or hunting. For my story isn't about fishing, but about hunting, "coon hunting" I call it; and then the Parson laughs, for he knows my story about him quite as well as I know his story about me, and maybe just a trifle better.

The Parson's fond o' cider. Put that down first of all, because thereby hangs my tale.

We were out quail shooting one fall day some years back and at night we put up at a farm house, where the Parson was well acquainted, having often stopped there before. No matter about our luck with the birds; I'm not talking about that just now, having much better sport to relate.

When night came we were put to lodge in separate rooms, both on the ground floor, only the Parson was in a room at one side the house and I in a room at the other side.

It was a grand moonlight night. Everything was so quiet and still, and the air was so cool and keen, a fellow could sleep without rocking, and I got into bed as quick as I could for a good night's rest.

But the Parson couldn't sleep without cider. Mighty fond o' cider the Parson was. I used to fear he might get a bit too fond of it, at least when it was a leetle hard like. And the Parson he'd noticed a barrel of cider laid up for use on a pair of trestles by the side of the house, just outside the window where he was put to sleep. Now, if that barrel had been on my side of the house instead of his, what I am going to relate would never have happened; but so it was that when the Parson was all ready to jump into bed, he went to the window and raised it to let in a little fresh air during the night, and standing there in his night clothes a few minutes looking out into the farmyard, all bright as day, nearly in the clear moonlight, he unfortunately spied that barrel of cider.

"Ah!" said he, "I wish I had a glass of that cider—I wonder if there isn't a tin cup or a tumbler near by that barrel somewhere? Guess nobody'd see me if I'd just step out this window and tap a leetle—just a leetle—before going to bed?"

No sooner said than done. Out the Parson stepped from the window—the window sill was but a few feet from the ground—and made softly and straight for the cider.

But the barrel had been "laid up for use," as we say, and was not "on tap." The bung was in tight. No tin cup was anywhere around, and it was too far and too bright moonlight to venture to the barn after a rye straw, and even if he had a straw there was no hole in the barrel into which to put it.

"Any man in his senses—and in his night-gown besides—would have let that barrel of cider alone. But the Parson was thirsty and began to pull at the bung in the end of the barrel, thinking just to loosen it a trifle and let just a little run—when, whish! the bung flew out and the Parson fell back soused to the skin with the whizzing cider! Fearing the whole barrel would run to waste, he picked himself up, looked around in vain for the bung, ducked his head and ran up stream, as it were, against the current, and finally succeeded in getting his thumb in the bung-hole.

And now the real fun just began to begin. For his thumb not being big enough to stop the bung-hole, the cider squirted out this way and that—whish! fizz! zip! now in his face, now down his neck and back, and again full in front, until he was at last forced to call me with that well-known whistle of his which I had heard for thirty years past, but never under such peculiar circumstances as these.

I was just dropping off to sleep when I heard it—and so I reckon were the dogs too. Perhaps they had been asleep already, but the Parson's whistle woke them, and out they came, five of them, pell mell, lickerty-scoot, bow-wow! and spying the man in white they put up their hair and forthwith gave tongue and chase.

Abandoning the cider to its fate the Parson fled, jumped into the open window, the dogs in full chorus after him. Into the bed (a feather bed at that) he plumped just in the nick of time to save his bacon, for the dogs had followed him in at the window and were now leaping upon the bed, and jumping off and running under and yelling like mad, by the time I had got into some of my clothes and come on the scene.

"Scissors and buttons, Parson, what's the matter? Have you flushed the whole covey with the full pack, run a coon to cover under the bed, or what?"

"No," said a voice from under the feather bed, "not a coon under the bed, but a mighty wet one in it. Call off those confounded dogs and I'll tell you."

I kicked the dogs out the window and shut it down, and then the Parson came out from under cover like a half-drowned rat and told me this story about himself, right there in the pale moonlight, but made me almost take an oath I'd never tell—and I never did till now.

Next morning the farmer said he'd "Heered them dogs a barkin' like forty and guessed that old weasel was about agin."

"May be it was a coon?" I mildly ventured to suggest.

"Wall, no. I reckon it couldn't well been a coon, 'cause coons don't, as a ginerel thing, git so nigh to the house."

I was greatly tempted to inquire whether he ever knew coons to be fond of cider, but I forbore.

The next Sunday I stayed away from church, because I knew very well that though the Parson could preach the sermon soberly enough I never could take up the collection without smiling.

DANVIS FOLKS.—II.

Home Again.

JOSEPH HILL must have had a late breakfast and been a long time harnessing his horses, for the morning was far spent when he made his serene appearance, which had for some time been heralded as with the rattle of drums by the clatter of his hay wagon. At last they were fairly set forth on the final stage of their journey. The little city was behind them, the roar of the cataract becoming fainter and fainter on their ears, and before them arose, ever a little nearer, their own mountain, towering into the drift of clouds. The gusty south wind blew so chillily that Uncle Lisha drew his bell-crowned beaver well down upon his ears and buttoned closer his many-caped drab surtout, and Aunt Jerusha, muffled in a melon hood and blue camlet cloak, with a buffalo skin tucked about her, was none too warm. Withal they were unmercifully jolted, tumbled now together, now apart, on the board seat which they often could only keep by hard holding. Yet in spite of any discomfort, their old hearts grew lighter with every shortening furlong of their homeward way. They were continually shouting inquiries to Joseph and he shouting back disjointed answers above the din of the wagon, all together making an uproar of voices and clatter that might have alarmed neighborhoods less accustomed to such sounds.

They were impatient of every delay; when Joseph would halt a moment to pass a few words with some teamster that they met, he was reminded by a hint that the afternoon was waning. They would not waste time in stopping to eat lunch, but ate as they bounced along the rough road. If the jolting sometimes cheated the opened jaws of an expected, gyrating mouthful, these old people partook with the appetite of children of the good, home-cooked fare that Maria Hill had bountifully provided for her husband's refreshment.

"These aire fried cakes is complete," Uncle Lisha said, as he captured another doughnut from the dodging pail and gave it to his wife.

"Yes," she said, regarding it with benign approval, "they be proper good, an' Marier twists 'em jest as she useter. Taste better 'n them raound things wi' a hole in the middle at some folks make," and Uncle Lisha understood that their son's wife was as good as named by this general term.

"Them was invented for folks 'at goes afoot tu Kerry on a string er string 'em on a fish pole er a gun berril, an' they're raal handy," he explained.

"I don't keer," she answered, "I don't wanter be a tryin' tu stay my stomerk wi' holes. Gi' me solid victuals."

But once Uncle Lisha did call a halt. They had satisfied their hunger and were brushing the crumbs from their garments when they entered the hill country, where a cold mountain brook braided the strands of its clear current along the roadside, frequently crossing from one to the other beneath rude, wooden bridges.

"Whoa, Jozeff," he shouted as his delighted gaze returned from roving up evergreen slopes and climbing rocky peaks, to rest upon the sparkling water, "le' me git aout. It's three year sen I hed a drink o' what you might call water, an' I'm drier 'n a graven image. Naow I'm goin' tu ha' some." As he spoke he clambered down from the rear of the wagon and waddled like a thirsty duck to the brookside. Carefully setting his hat upon a stone he got upon his hands and knees and drank long and eagerly from a pebbled-bottomed pool, while the bubbles went to wreck upon his nose and sprinkled his face with unheeded spray.

"Ahhh," he sighed, raising himself a little to regain his breath, "that squenches me clean tu the soles o' my boots;" and again he set himself to lessening the volume of the brook.

"Naow, Jerushy," said he as he got upon his feet and wiped his face with the ample bandanna that he stowed in his hat crown, "gi' me the kiver o' that tin pail an' I'll treat ye."

He passed the brimming pail cover over to his wife, while Joseph, casting a glance down stream, remarked:

"Why, Uncle Lisher, I b'lieve you've dranked the brook dry. Seem's 'ough I c'd see the traouts a-kickin' on the gravel daown yender."

"Like's not, Jozeff, I had a thirst 'at was wuth ten dollars in money, an' I've squenched it. Why, good airth an' seas, Jozeff, what they call water aout West is wet, an' some kind o' fish live in't an' you c'n wash you in't arter a fashion, but when you come tu drinkin' on't, you haftu make it intu tea, er mix it wi' whiskey—but it spiles the whiskey. Wal, le's be gittin' along. I'm in a hurry tu git hum, an' I swan, I'm a good min' tu set on the front seat so's tu git there quicker."

They were nearing their own township, and the landscape was becoming more and more familiar. The forlorn aspect of the naked trees and fields tawny with dead grass or stubble or black with furrows of fall plowing did not diminish the interest of the travelers in every feature of the lanscape, for unlike Joseph, who had seen it all so lately as yesterday, they scanned eagerly every farm and homestead, recognizing every old landmark and discovering every change.

"That ort tu be the Johns' place," said the old man after a long look at a farmstead that had come into view, "but

somehaow it don't look nat'ral. Why, 'f Johns haint ben a-buildin' on him a haouse. Who'd ever a thought o' him duin' that, tight'er'n the bark tu a tree an' yit never had nuthin' tu du nothin' with. An' 'f he haint ben cuttin' off half his sugar-place, the dumb'd fool. I'd never thought o' Johns duin' that."

"Ol' Mr. Johns died las' year, er year afore mebbe, I d' know," Joseph explained, speaking over his shoulder. "Abner heired it all, an' he's cuttin' consid'able of aswath with the ol' man's prop'ty."

"Ahhh, thet 'caouts for it," the old man said, "most allers the way. Ol' folks pinchin' an' savin' for young folks tu squander. So poor ol' Johns is dead. You don't say. Wal, wal, an' hed tu leave all his savin's. I uster shoe-make for him, an' he'd allers hev his'n an' his wife's an' boy's boots an' shoes made a size tu small to save luther."

"Naow don't, Lisher," his wife expostulated mildly, "he's dead an' done wi' boots an' shoes."

"An' I haint no daoubt it's a comfort tu him t' git red o' the expense. See them critters," pointing to a long straggling flock of crows that, close above the tree tops of the Johns sugar place, staggered southward in slow, laborious flight against the buffeting wind, "but nex' spring they'll be as glad as we be tu git back here an' gether the crow tax an' pull corn an' raise hob an' their young uns an' git shot at. An' here we be to the top o' the Johns hill, an' there's ol' Tater hill an' the Hump julluk ol' frien's a risin' up tu welcome us, not a mite altered nor a day older tu look at. I hope there haint no livin' frien's changed no more."

A SANDWICH ISLAND FISH-HOOK.
In the possession of the editor of FOREST AND STREAM.

At the thought of such possibilities a shade of sadness touched his radiant face. "The Hump's got his white cap on," pointing to the snow-sheathed helmet of the majestic mountain, for a moment disclosed by a rift of the driving clouds. "Time your taters was dug," says he. An' by thunder, I begin tu git the smell o' the balsams an' spreuces. Good airth an' seas, I c'd holler an' I c'd sing, an' I'm a dumb good minter," his heavy voice increasing to a roar that threatened something alarming if it should rise to greater volume.

"Lisher Peggs, du, fer land's sake, behave. Folks'll think your bein' brung home crazy."

"Let 'em think," shouted he, "'twont hurt 'em none, I'm goin' tu. Hooray. Sing, Jerushy, sing I tell you.

"Come, Philander, le's be a marchin',
Ev'ry one his treu love a sarchin';
Chuse your treu love, now or never,
See that you don't chuse no other.
Fol de rolde fol de rolde day."

Aunt Jerusha could not forbear adding her quavering voice to his roaring refrain, and then, with tears on her wrinkled cheeks, laughed hysterically, exclaiming, "What tew ol' fools we be."

Joseph laughed in enjoyment of their exuberant happiness and hummed to himself a bit of the old song with some intention of adding his voice if they should strike up again. Then urging on his horses the wagon went rattling down the long hill at a pace that jolted all the tunefulness out of Lisha's voice, while his hat already shaken down to the bridge of his nose, threatened presently to quite extinguish his utterance. Carefully showing the cherished beaver upward with both hands till he regained sight of his surroundings; he remarked in quieter tone, "There's the Dan'l Perkins place jest as it was when I see it last."

"Why land o' Goshen, so it is," cried Aunt Jerusha, "an' Miss Perkins has got her milk things aout sunnin' this claudy day. Raises sunflaower seeds to feed her turkeys jest's she allers did. See what a sight o' stalks in the garden. They must ha' looked harnsome when they was in blow. But I'd druther feed turkeys corn for me t' eat. Ily things sunflaower seeds be. An' there's the turkeys goin' t' rhust on the ridge o' the ruff, jest as c'tented 's if day arter t' morrer wa'n't Thaxsgivin'. I wisht' Miss Perkins er him'd come aoutdoor, I du hanker so tu see someb'dy 't I know. But there's the ol' yaller dawg," as a stiff-legged old dog came waddling down the footpath toward the road, asthmatically and mechanically performing his self-appointed duty of barking at every passing team; having accomplished which, he waddled back to the house, congratulating himself with labored wags of his rigid tail. "I c'n see faces in the winders, but I can't tell 'em. Why on airth don't some on 'em come aou' door? But I s'pose they don't know who we be?" sighed Aunt Jerusha, again looking forward, after painfully twisting her neck to keep the house longer in view.

"Tew more hills an' you'll see hausen and folks'nough 't you know," said her husband cheerfully, "ef 'taint got tu be tu dark by then. An' there's a hoss, colored and gaited kinder famil'ar," he continued, while his eyes became fixed on a sleek, black horse that was soberly coming down the hill which they were ascending. "Good airth an' seas, Jerusha, it's ol' Bob an' that aire big 'John Dart a drivin' on him," and in the next minute he said as the teams met, "Wal ol' Bob, haow be ye, ye tarnal ol' critter? Don't ye know yer own folks?" while the old horse pricked his ears at the sound of the unmistakable familiar voice.

"Whoa, Jozeff, I got to git aout a minute."

Joseph, never loth to stop, pulled up his horses and the old man, getting to the ground with clumsy haste, went around to Bob, caressing the white nose which was thrust into his horny hand, and would have kissed it if there had been no one to see him. "Johnswort haint made your ol' white nose sore this year hes it? You know your own folks don't you? Slick's an otter haint ye, an' haint growed ol' a mite, not a mite; hes he, Jerushy?" as he patted his way along the old horse's glossy, black sides toward the wagon and its occupant, to whom he now stretched forth his hand.

"Haow dy du, Mr. Dart, you an' ol' Bob looking fustrate?"

"O, tol'ble," responded the giant, shaking the old man's hand with a painful grip that for its heartiness was heroically borne, "but pinin' away to a cartload; and be you well, and you, Mis' Peggs? Kinder tuckered aout trav'lin' Putty tough on folks o' your age trav'lin' so fur. You never ort tu gone West an' I'm mighty glad y're back in ol' V'mont agin."

Joseph urged his horses forward, but before they began to climb the second hill the shadows of evening were thick in the hollows and creeping to the hilltops in gathering volume, till the bounds of gray woods and tawny fields grew undefinable in the even hue of dusk and the outlines of the wooded ridges were blurred against the somber sky. When the promised point of observation was reached the valley of Danvis lay before them in the thick darkness of early nightfall, the gloom relieved only by the broken chain of house lights that here and there defined the lines of highways, and in a thicker cluster of links marked the place of the village.

A moment after they had reached the hilltop, the expectant silence of the pair was broken by Lisha in a tone of disappointment. "Wal, I swan, we can't see nuthin'. It's darker 'n a wolf's maouth. But I c'n pick aout the lights. There's the Forge an' Hamner's an' the store, an' there's the blacksmith's shop, an' there the lower rhud goes off north. An' the fust haouse on it is Darker Stun's, an' then comes Gove's—wonder ef that's Peltier pokin' aout tu the barn wi' a lantern—an' there's Lovel's, where we're goin', an' there, 'baout a hundred rods furdur north, ort tu be aour lights shinin', one in the shop 'n' nuther in the haouse part; but they won't never be lit agin, I s'pose. I wisht they was an' these tew humless an' humly ol' creeturs was in the light on 'em, she a-fussin' raound her kitchin, him a-whackin' away 't his lapstun, all his frien's a-loafin' raound, smokin' an' tellin' stories. But they won't be never."

"Why, yes, Lisher, you'll shoemake agin an' hev yer frien's comin' an' visitin' jes's they useter," said his wife, her voice modulated to the tender tone with which she would have comforted a child.

"Yis, yis, I'll shoemake, but it won't be as it useter was. Ol' times don't never come agin. Ye look back an' ye look forrad tu 'em, but they never ketch up tu ye, nor meet ye, ho, hum, sussy day."

"Ain't that light tu Solon Briggs's?" asked his wife, recalling him to the locating of homesteads.

"An' there's yourn, Jozeff, and Joel Bartlet haint a-hidin' his'n under a ha' bushel, for there it shines afore all men. An' there's Pur'n'ton's, an' le' me see, why that aire leetle glim o' lighs off t' the left is Antwine's. Ev'ry identical haouse lit up but aour. But we're alive an' kickin' yit," he added more cheerfully; and so he completed the round of his mental visitation, during which Joseph had contributed items of uncertain information as each neighbor was named.

"An' so yer father's hel' his own tol'able well, hes he, Jozeff? I swan tu man, I dread meetin' on him, for he'll gi' me Hail Columby fer comin' back wus'n he did fer goin' away. But ef I c'n on'y git him tu takin' Ti, he'll le' me alone. He hes spells o' takin' Ti yet, don't he, Jozeff?"

"Wal, yis," Joseph answered with a tone of resignation. "Reg'l'ar, oncte a week, an' I dont know but oftener; seems 's 'ough. Sometimes I most wish him an' Ethan Allen hedn't never took the pleggid ol' fort, seems 's 'ough I did a most."

Presently, when they could see on the steps of the store, which was also the postoffice, the expectant group awaiting the mail, staring into the gloom out of the dim light shed through the dusty panes and the sprinkled rays of a tin lantern, they turned the corner and took the road

northward, familiar even in the darkness. Mingled with the gusty roar of the wind, they heard the note of a hound swelling and falling among the rugged corrugations of the nearest hill, a persistent, plaintive voice, as sad and lonely as the cry of some perturbed spirit doomed to nightly wandering.

"Thetsaounds julluk Sam's ol' Drive," said Uncle Lisha, after giving an attentive ear to the sound. "I hope Sam's got in, fer I wanten cum kerslap ont' the hull caboodle on 'em, an' s'prise 'em aif tu onct. There," as the sudden report of a gun was blown short and echoless down the wind, "there goes his gun, tu call the haoun' off. Drive slow Jozef, an' give him a chance tu git hum ahead on us, an' don't make no nise."

To drive slower was almost to stop, but Joseph accomplished the feat and still made some progress. They were nearing the Lovel homestead and could see the lights of the kitchen windows shining across the dooryard and fading out at the roadside, in shadows of the naked lilacs. Then they heard the scraping of feet on the doorstep, the door opened and a brighter bar of light gleamed forth streaked with the longer shadows of two long legs, as Sam's tall form was briefly shown in silhouette against the bright interior, then disappear, with the old hound pushing in past him. When the wagon stopped in front of the house, unheard by the inmates in the uproar of the wind, the travelers saw a woman's shadow passing to and fro across the half-curtain of the window and knew it was Huldah's, and by the clatter of the dishes that she was laying the husband's supper.

"Good miniter holler tu her tu set tew more plates," Uncle Lisha whispered, smothering a chuckle in an asthmatic wheeze. "Come, Jerushy, pile aut as spry's ye can," he continued, getting to the ground, and reaching up his hands to help while he braced himself to aid her descent. "Bear yer hull heft on me. Why, ye don't weigh no more'n a straw hat. There, yer hosses'll stan', Jozef, an' naow you go ahead an' ask them 'f they c'n keep a couple o' poor, leetle young uns 't you picked up on the rhud, over night."

"Tew young uns? Oh, Sam Hill!" Joseph ejaculated, and they could hear the loose-bladed jack-knife and wooden pocket combs rattling in his pocket with the suppressed laughter that shook him.

"Yis, young uns," Uncle Lisha repeated, "an' tell 'em they haint no parents an' haint hed no supper, an' don't ye laugh. An' be quick, fer I can't wait," giving the last injunction as Joseph reached the door, and they halted close behind.

Joseph entered without knocking, after the neighborly fashion of Danvis, and the door closed behind him as he uttered the salutation, "Evenin'."

"Evenin'," came Sam's hearty answer from where he was stooping over the cradle of his sleeping baby, and they heard Huldah's cheery welcome and Timothy Lovel's voice as he came in his stockings from his place behind the stove to set a chair for the guest.

"Consarn him," Uncle Lisha whispered when he heard the loud sigh of satisfaction which announced that Joseph had seated himself. "Naow he'll set an' set tu all etarnity 'fore he gits tu what he's arter."

"Wall, ben huntin', hey?" Joseph drawled. "Git one, did ye?"

"Yes, got one," was the answer.

"Not when I heerd ye shoot, sence dark?"

"No, callin' Drive off then. Shot one fox 'fore noon an' started another, but he run the hull len'th o' Hawg's Back an' never come back till dark."

"Consarn the dumb fox, he'll be a huntin' on him half the night," Uncle Lisha growled under his breath, half angry that Sam should be talking of such trivial matters with his old friends so near.

"I heerd the dawg an' I heerd ye shoot," Joseph put in at the first break in the story of the fox's hunt, "'s I was comin' 'long, jest gittin' back f'm V'gennes, went daown w' a lhud o' shingles for Morrison, yist'd'y."

"Did ye stop t' the office?" Sam asked with sudden interest. "No? Wal, I must go over arter I git suthin' t' eat an' see 'f the haint a letter f'm Uncle Lisher. The old people silently exchanged punches of each other's ribs. 'It's cur'us he haint writ. I hope the' haint nothin' happened."

"The' will suthin'," Uncle Lisha whispered, hoarsely, "I'll go in an' shake the pegs aouten Joe Hill's boots, 'f he don't up an' tell his leetle lie pooty quick."

"I was comin' 'long kinder mawdrit for me, over beyend the Johns place I b'lieve it was. I do know but 't was this side o' Perkinses, I ruther guess it was. Anyways, the 's a but'nut tree, an' onderneath that but'nut tree the' was tew leetle young uns," Joseph raised his voice, "yis, sir, tew as pooty little young uns as ever you see. ['Dumb your picter, Joe Hill,' whispered Uncle Lisha, shaking his fist at the door], he a-crackin' but'nuts w' a stun' an' a-feedin' on 'em tu her, and there they sot, she a-cryin' an' him a-crackin'. An' they tol' me, I don't know but what they lied, but they tol' me they hadn't got nothin' t' eat an' hen't hed no father an' mother, all day. ['Joe Hill, I never tol' you to tell no sech a lie,' the old man said in a smothered growl.] They'd come f'm 'way off somewheres, an' they're goin' 'way back here somewheres to some o' their folks er suthin', an' I jest fetched 'em along. An' I come in tu see 'f you couldn't kinder keep 'm over night, 'cause ye got we're kinder full t' aour house, an' M'ri, she haint got what ye might call ri' daown tough yit, an' think, says I as I come along, I'll ask Samwel an' Huld'y tu take 'm in."

"Be they a-settin' aout in your vagin all this time?" Sam asked, sharply. "Why on airth don't ye fetch 'em right in? Poor leetle cubs, a-shiverin' aoutdoor whilst we're a-gabbin' in here, com'fable! Fetch 'em right in," and he made a quick movement toward the door.

Huldah stayed him with a hand upon his arm, and with an anxious glance toward the cradle, asked, hurriedly: "They haint got whoopin' cough ner nothin', hev they, Mr. Hill? The's whoopin' cough an' measles round."

"Wal, no, Huld'y," Joseph drawled. "They're healthy as boneset, an' come tu think on't, they haint so turrible leetle. I do know but what they're pooty nigh growed up."

"Joe Hill, what on this livin' airth be you talkin' abaout? Be you crazy or hev you ben a-drinkin'?" Huldah asked in a sharp tone of mingled vexation and astonishment, while Sam fixed a bewildered stare upon their visitor.

"Good land o' Goshen," cried Aunt Jerushy, "I can't stan' sech foolin' no longer," and with trembling, impatient hands fumbling at the looped iron door handle, she

raised the latch and entered. With a yearning for womanly touch and sympathy that could find no expression in words, brushing past Sam, she went with the quick, jerky step of an agile old woman and arms outstretched, straight to Huldah, and the fresh young face and the other, wrinkled with age, were hidden together beneath the melon hood.

"An' naow," quavered Aunt Jerusha, withdrawing her face a little from Huldah's, and eagerly, though with tearful eyes, searching the room, "where's thet baby?"

Uncle Lisha had entered close behind her and roaring his accustomed expletive, which it was good to hear again, was now shaking hands with every one, at last even with Joseph and Aunt Jerusha, never letting go a hand till the possessor of that member was dragged where the next was awaiting his grasp. The old hound, awakened by the unusual commotion, scrambled out backward from his place beneath the stove, with a prodigious clatter of his stiff toes, and after sniffing at Uncle Lisha's knee, set up a bellow of welcome and belabored every one's legs with sounding blows of his tail. The baby, aroused by the noise, swelled it with his own lusty outcry, while Aunt Jerusha fluttered back and forth, hovering now over the child, now over the stove, and lamenting her hands were too cold to take him. At last, by hulloabes and commands, quiet was partially restored, Aunt Jerusha was divested of her cloak and hood by Huldah's ready hands, Uncle Lisha was laboriously unsheathed from his tight-sleeved turtlet by the united exertions of Sam and Joseph, and Timothy Lovel stood aloof, an interested spectator, helpful in holding the bell-crowned beaver.

When the travelers' chest, bandbox and blue cotton umbrella were brought in, the men drew their chairs to the stove and set themselves to the business of visiting, and the two women exchanged whispered confidences while the elder made excursive advances toward the baby's acquaintance and the younger busied herself with preparation of an ampler supper. Joseph Hill would not stay to sup with them; he told M'ri he said at he'd be hum tu supper an' she'd be a keepin' on't for him, 'so promising to bring his father and wife over soon to see their old friends, after his lingering fashion, he took himself away.

The tall clock that in former years had placidly ticked away innumerable sad and happy moments of these old people's lives, had escaped their notice till, with a wheezy purr it began deliberately to strike the hour. Uncle Lisha checked a half-spoken word to listen. "Jerushy, du you hear the ol' clock?" he cried, and the two went over to it, fondly examining its dull, brazen face, and opening the narrow door, displaying the ponderous weights so often coveted by Sam in his boyhood for the treasure of shot which they were said to hold.

"An' here's suthin' else I wanten hev ye look at," said their host, and taking a candle he led them into the after-thought of builders known as a lean-to, whither Huldah followed and Timothy Lovel came to stand in the doorway with an amused smile ready to flicker upon his quiet countenance.

There was revealed the old shoemaker's bench at a long, low window, beneath which was fastened a folding wooden scone with a candle in it, some familiar chairs, veterans with disabled legs, and the old shop's cracked stove. This familiar furniture, with some rolls of leather and a few blocks of unsplit pegs, gave the room, but for its unuse and cleanliness, much the appearance of the old shop. To complete the likeness there was only lacking a clutter of lasts and tools, an accumulation of rubbish and an odor of tobacco, mingled with the smell of leather that already pervaded it.

Even as it was, it gave the old man a thrill of delight that nearly took his breath away. He could only gasp, "Good airth an' seas," and plumped himself into the leathern seat as if he had again found rest and peace. Instinctively he stretched forth his hand to the place where his tools should be. Looking up at Sam and Huldah with a smile more expressive of thanks than any words could be, he said:

"Ol' times can't never come back agin, but it seems as 'ough this, wi' a leetle seasonin', would enanmost fetch 'em."

ROWLAND E. ROBINSON.

A Sandwich Island Fish Hook.

LAST week we illustrated an early form of spoon-hook devised by civilized man: to-day is shown a much earlier specimen of pearl shell fish hook, the handiwork of savage art. It was brought from the Sandwich Islands many years ago, and to-day among the most treasured angling possessions of FOREST AND STREAM is this hook of lustrous pearl from the coral reefs of the Pacific. The illustration is exact size of the original.

Curious Cullings.

A whale's throat is so small you could choke him with your fist, and he feeds on the smallest things in the sea, obtained by sucking the water in and straining it through whalebone, which hangs in thick clusters from the roof of his mouth like festoons of moss in a cypress swamp. The rinsed water is gotten rid of by what is called "blowing" or "spouting."

Lobsters are green until cooked, when they turn red. Ditto little crabs in oysters, which are seldom seen until after the stew.

Every oyster has a mouth, a heart, a liver, a stomach, besides many curiously devised intestines and other organs such as would be handy to a living, moving, intelligent creature. The mouth is at the end of the shell nearest the hinge.

Dolphins are reported as fond of playing about ships. The true dolphin is a fish about 5ft. long, and is celebrated for his surprising changes in color when dying.

The steamer Albatross obtained many specimens of deep sea fish off the coast of California. They were soft of body and covered with phosphorescent spots to enable them to see in the dark.

The pilot-fish is a common fish for ocean travelers to see, at it often accompanies ships, and as sharks also do this, it is said to be a pilot for them.

The drum-fish is so called from its power to make a peculiar drumming or grunting sound under water.

The flying gurnard obtains in the Indian seas. Its pectoral fins are so large that in springing out of the water to escape an enemy the wide, quivering fins are able to sustain it in the air for a limited period.

FISHY.

Natural History.

THE MOUNTING OF HEADS.

Editor Forest and Stream:

From present indications the collection of mounted heads and animals at the coming World's Fair will be the largest ever shown at such an exhibition. That it will prove one of the best depends to some extent on the committee in charge. To an ordinary individual, perhaps, a stuffed head is simply a stuffed head. A Maine deer rammed full of rags and marked a barren ground caribou would be accepted as such.

At the exhibition in New Orleans during the winter of '84 and '85 I saw a collection of mounted heads exhibited by a Montana taxidermist. As I remember, every part of the work on these heads showed the most scrupulous care. In fact, if any fault was to be found it was on account of too fine a finish. They were so glossy and smooth that it would suggest they had been blanketed and groomed like a thoroughbred horse.

Directly opposite the booth where the heads were hung was a group of deer, and such a group! They looked as though they had been stuffed with brush or kindling wood and then exposed for a couple of months to a Western blizzard. They stood in all manner of positions. Some were bow-legged, others knock-kneed, the hair pointed in all directions, and everything about them was about as bad as possible. I remember the remarks of a well known sportsman who was present. Some of them were rather forcible, and he finished by saying: "It is a good advertisement for those heads putting such a lot of stuff right in front of them."

To return to the exhibition at Chicago. Doubtless there will be many fine, well-mounted specimens, and it will be remarkable also if there are not some poor ones. Take the average work as turned out by ordinary taxidermists. It is safe to say that but a small percentage of it is done in a natural and life-like manner. On moose heads, for instance, out of fifty mounted heads, taken as they come, how many of them will really look like a moose? Few of the professional taxidermists have seen the subjects they work on, either in life or when freshly killed, and in mounting an animal or a head they follow ideas of their own, resulting in unnatural looking specimens.

Of late years many of the guides in Maine and elsewhere have taken up mounting heads of animals they kill or which are killed by the sportsmen they guide. Usually a guide who spends much of his time on the hunting grounds has pretty good ideas of how the game he kills looks when alive, and in mounting a head generally turns out well-proportioned work. Nevertheless I have never seen a specimen of their work which had been properly prepared before mounting.

A year ago I was shown two moose heads which had been mounted by a guide who is said to be a good taxidermist. They had been sent to a friend and had not been long mounted and were not dry. There was such an odor from them that you could not stay in the room where they were hanging, and the hair could be easily pulled out in handfuls. In time the odor would disappear and the hair set, and they might last a long time, but I should not care to warrant them. I know a guide who has mounted a number of heads. He set up a couple of buck heads one day while I was at the camp. There was one thing about his work, he did not waste any time over it. The deer had been killed within a few days and the heads skinned, and he went to work, sewed up the mouth, rubbed some dry arsenic on the inside, filled out the skull with plaster of Paris, pulled on the skin, stuffed the neck with anything handy, put in the eyes, brushed it over, and it was done. I asked if he did not flesh the skin over or pickle it. He said no, the arsenic will fix that all right. Certainly they did look pretty well at that time. I think there would be a decided change in a month or so when the ears curled up and the skin had shrunk.

When you kill a fine specimen which you wish to save, perhaps it is the big bull moose you have been long looking for, no doubt he has cost you many a hard tramp, much exposure and a good many dollars. Take my advice and have the head mounted by a thorough workman, and you will have a trophy you will be proud to show and which will last and bear close and critical examination. It is poor economy to send it to some one who will mount it at a low price, with the chance of its becoming wormy or moth-eaten in a few years.

My own work as an amateur in mounting heads has been confined almost entirely to heads of my own killing such as moose, caribou, deer, bears and smaller animals. Some of my friends who have seen my specimens have been kind enough to call them very good; to me they are fairly satisfactory; I can see room for considerable improvement. I have spent a week working on a large head after others have called it well done. Again I have mounted a head and let it get thoroughly dry, and not being entirely satisfied have taken it apart, soaked out the skin and remounted it. I have had some opportunities of looking over big game when alive and immediately after it was killed. A bull moose trotted out on an open bog within 40yds. of where I was sitting, and stood for some time. Not having my rifle I could only look at him. I can see him now as he then stood slightly quivering with his head well up. I have no recollection of how his body looked as I put in all the time studying his head and antlers.

When hunting any large game, I carry some large sheets of paper and carefully trace the outlines of any heads I get, also taking measurements with a tape. In tracing the head of a moose in this way, I think it should be done as quickly after killing as possible, as I think the shape changes in a few hours on account of the muscles of the mouffle, nostrils and lips relaxing. A bull I killed a year ago last fall, whose head I laid on paper and traced a few moments after he was dead, I found had changed quite a good deal after getting it to camp late in the day. Also carefully examined three heads several days after they were killed, and which had been brought out of the woods unskinned, and noticed the mouffle, lips and nostrils had fallen considerably, giving a flat and flabby look to the nose.

No doubt some fine heads are lost through lack of knowing how to take care of them when first killed. When I first went to Nova Scotia I found the custom was to send out a guide with a head as soon as one was obtained. A friend who has killed several moose lost his finest speci-

men by sending it out in this way. It reached a taxidermist in less than three days after killing, yet it was thoroughly spoiled. A very large moose, with fine antlers, was killed by a Boston sportsman. The skin of this head came very near spoiling; nearly all the hair came off the ears and the neck had to be patched and filled out with another piece of skin. It does not require much skill to skin a head, and a few pounds of salt and alum are often a necessity.

C. M. STARK.

WINCHESTER, MASS.

CHUKOR PARTRIDGES IN ILLINOIS.

MACOMB, Ill., April 3.—*Editor Forest and Stream:* The five pair of partridges (*Caccabis chukor*) I imported from Karachi, India, through the Hon. James Currie, U. S. Consular Agent, arrived here in the very best condition. Not a bird was lost on the way. They left Karachi Feb. 14, arrived in Liverpool March 13 and arrived in New York March 28. It is truly wonderful that these birds should travel 12,000 miles by sea and rail and arrive here in such splendid condition. It only shows that they are strong and hardy and have great power of endurance. Col. Ramsdale, of the English Army in India, writes to me that they will stand any climate on the face of the globe.

They are about two-thirds as large as our prairie chickens. The cocks and hens are marked very much alike. The cocks are larger than the hens. I shall keep them inclosed this year and if they don't lay I shall turn them all loose another year and take my chances with them. The 10 birds cost delivered here about \$75. I hope the sportsmen of the country will take an interest in these beautiful game birds and introduce more of them, for I believe they will take the place of some of our game birds that are fast disappearing. I give the following description of these birds, given by Murry, on the edible and game birds of British India. W. O. BLAISDELL.

The chukor (*Caccabis chukor*) is marked: Above pale bluish, or a live ashy, with a rufescent tinge on the back; sides of the chin, face, throat, fulvous, pale chestnut or rufescent, and circled by a broad black band from the forehead through the eye along the side of the neck on to the breast, meeting its fellow from the other side and forming a large pale chestnut, or rufous pectoral gorget; a pale white line behind the eye; ear coverts, chestnut; sides of the lower mandibles and chin with a black spot; breast, bluish ashy, slightly tinged with rufescent; abdomen and under tail coverts buff; the flanks from the axil deeper buff, each feather ashy at the base, with two dark bands; the interspace is buff, and terminates broadly with chestnut; wings concolorous with the back, the ends of all the primaries except the first marginal to nearly the tip or outer web, with buff, some of the secondaries also; axillaries, buff; pale rufous except the central feathers, which are concolorous with the back.

Length, 14 to 16in.; expanse, 21 to 25; tail, 4 to 5; wings, 6 to 7. The female slightly smaller. Habitat, throughout the Himalayas to the Afghanistan; common in Persia and along the Arabian coast. Breeds from May to July. They make their nests under the shelter of grass tufts or bushes, and lay from 12 to 16 eggs.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

NOTABLE SHOTS.—VII.

Another Rooster Ricochet.

HASTINGS, Mich.—The remarkable rooster shot in last FOREST AND STREAM recalls one that I made when a boy with my first Winchester .44. My mother wanted me to kill a young rooster, but objected to my shooting it, on account of tearing the body, but I insisted that I could cut off his head with a bullet. I found him sitting on a fence with an orchard of apple trees for a background. At nearly right angles, about 200yds. off, lived a neighbor. At the crack of the rifle down came the rooster, and on picking him up I found that I had made a clean shot, cutting off the head as well as could be done by the ax. But I saw that the bullet had cut the bark in the crotch of a tree in direct line of fire. Knowing that my father would object to that I at once put some wet clay on and traced the ball to where it had knocked off more bark on another tree. It had this time turned off sharp to the left, directly in front of the house of our neighbor. Somewhat startled I walked across the road and entered the front yard, and there in a crab-apple tree, directly in front of the open door, opposite which two ladies sat sewing, I saw where that blasted old bullet had entered the body of the tree. I said nothing of the cause of my entrance, and after a few remarks returned to where I had left both gun and rooster. The pride of my good shot had disappeared and I returned to my work a much wiser boy. I once made a fine shot with a Winchester which gave me much satisfaction, but turned some ridicule and much laughter on me. There were two of us plowing. In the middle of the next field sat a woodchuck. We were joined by a couple of neighbors, who, on seeing the woodchuck, urged me to go to the house, get my rifle and shoot it. At last I consented and walked a quarter of a mile and back. The woodchuck was still there, and the boys said that he had several times walked about and eaten clover. There was no cover, and from where I shot from a rest the distance was 300yds. I took a careful sight through the open sights and pulled trigger. "You have hit him!" shouted my friends. Sure enough he was on his side. But knowing from sad experience how a badly wounded woodchuck will kick into his hole I started as hard as I could tear along. As I got near I saw that he was stone dead, and on getting right up to him saw that he had been dead a day or two. Such a yell came from the boys: they tossed up their hats and rolled on the ground. But in the midst of my chagrin some satisfaction came from the fact that the 210grs. ball had gone through his head. A cousin had killed it and then fixed it up for me that day while I took my noon-day sleep. For a long time I got it right and left in jokes, but it nevertheless added to my reputation as a crack shot.

BRYAN, THE STILL-HUNTER.

NEW YORK HARBOR is justly celebrated for its beauty, and to the returning voyager, the sight from the deck of an incoming steamer as she enters the lower Bay, especially during the early hours of a bright autumnal morning is one that is rarely equalled.

Our waters used to swarm with myriads of wildfowl, which were loth to leave until winter forced them. The large increase in the number of arrivals and departure of all sorts of craft during late years has made a difference in regard to our web-footed sojourners. Continually disturbed, they have largely deserted the Bay for the more quiet waters of the Jersey and Long Island coasts. The white-winged coot, however, still remains in fair numbers, and with a fresh breeze good sport may be had with them from a "quick-handling" sailboat.

To me the ideal method of hunting these hardy fowl is to follow them with a steam yacht or launch. Steering well to windward of a flock the gunner glides toward them at a rate of speed they have not as yet learned to gauge. When within 60 to 80yds. "a jingle of the bell" and down you rush upon them, securing a fine shot at reasonable distance as they rise.

On one occasion it was my privilege to enjoy such a trip as a guest on board the trim steamer Sentinel, bound for the Horseshoe to lay over night that we might get under way betimes next morning.

Passing the Narrows with the flash of the sunset guns from the forts, we seemed to fly over the calm surface, a faint vibration of the yacht in answer to the throb of her engines giving a delightful sense of motion.

Far into the glow of sunset we steamed. Overhead the gulls were circling high in air, a good augury for a breeze on the morrow. At last the Horseshoe, a sounding splash, the rattle of anchor chains, and we swing at rest.

After dinner in the cosy cabin we take our cigars on deck, and within feel of the grateful warmth of the funnel are soon lost in contemplation of the quiet scene.

Now and again from the southeast there floats over to us, borne on the light air, the complaining voice of the surf as it dies on the outer beach. To the west and north the dark line of the Jersey shore bounds the horizon. All is calm and peaceful. A loon calls! Far away in the darkness we hear the *pouf! pouf!* of a school of porpoise at play, and once the stillness is broken as a sturgeon leaps. The romance of Cooper's "Water Witch" seems to brood upon these waters, and the dark outline of an anchored vessel inshore of us might well serve as the reincarnation of that fascinating craft, whose skipper was wont to tempt the fair maid of "Lust in Rust" with smuggled laces and finery from foreign lands.

The hum of a breeze in the rigging as I watch the operation of "getting the anchor" next morning makes the blood tingle with eagerness for the coming sport. As daylight grows and objects become more distinct I observe a pair of loons some distance out, and beyond them the glass reveals a long line of dark forms where the coots we are in search of are feeding.

One bell! We are under-way. As we jog along the nearer loon with an uncanny laugh of derision takes wing. With splutter of feet and wing-tips he urges his unwieldy shape along the surface until, the proper impetus gained, he rises and swings back on our wake to the spot where his mate still floats.

Selecting a handful of cartridges I move forward, and, crouching low, make preparation for a shot.

We are now plunging through the white caps that glisten and dash against the bows, flinging their salty showers to right and left as we strike them aside. The coots are rising on every hand as we approach and their dark forms are darting through the air ahead of us in all directions. Yes, I see him! A single bird just out of shot is swimming lustily, now rising on the swell, now sinking in the trough, but all the time working to one side out of our course. Now we are upon him, a flash of white on either side, as he spreads his wings and next moment he is buzzing off. Now! A streak of foam shows for an instant as the shot cuts the water behind him—missed! Again! ah! Souse he goes into the waves. A turn of the wheel sends our graceful craft down to him, and, as he floats alongside, he is quickly gathered into the net in the hands of a watchful sailor lad.

Back again on our course. The wind sings with a deep, low note in the muzzle of my gun; there is a wild exhilaration in the onward dash of the yacht, as though she actually entered into the spirit of the moment.

A sharp turn to starboard and we are bearing down upon a flock. Once more the flash of white-barred wings, two sharp reports and three more coots are gathered.

The hours pass like magic while the sport continues until the dying away of the breeze compels us to desist. We are again headed for the Narrows and home and the entry of a successful day is made in memory's log book.

Good night, captain! Good night, sir!

WILMOT TOWNSEND.

A New Model.

THE Marlin Firearms Co. will put on the market next month their model of 1893 safety repeating rifle, which differs in several important particulars from any repeater now manufactured. This model will be made in two sizes, .32-40-165 and .38-55-255, and will be the only repeater using this ammunition. It will use cartridges varying in length from the standard maximum to the empty shell, and will also shoot the .32-13-98 and .38-20-155 Marlin short-range cartridges, which are adapted for indoor or short range work. The standard length of bar-

rel will be 26in. and a rifle with octagon barrel of this length will weigh about 7½lbs. On account of lightness, flat trajectory and hard shooting, rifles of this model should prove very popular with hunters. The cartridges are standard sizes and can be procured in most localities. Loaded with express bullets the .38 would be a formidable weapon for almost any kind of large game and especially valuable for deer hunting.

VENISON FOR A CHANGE.

BEATRICE, Neb., April 7.—It happened in this wise. I was up in the Wyoming bad lands, those dreary, soul-killing natural ruins, sketching, holding my claim and killing what meat I had to have. The Bighorn Mountains lay to the west about seventy miles, snow-capped and nearly always cloud-covered. To-day, however, they stood out bold and clear against the deep blue sky that only the Western plains and mountains can conjure up. I wanted a sketch of the distant range; so packing my kit and shouldering my Winchester, I headed for a big lava butte, about two miles south of my "shack," which afforded an excellent view. After finishing my picture I sat lazily gazing over the dull stretch of butte country all around me, broken everywhere by deep, narrow valleys, covered with sage brush and cactus, furrowed by the snows of many winters, everywhere the same, sparsely covered between the sage clumps with a short, hardy grass which makes hay without the trouble of cutting.

The sun was still an hour high, and threw long, slanting shadows over the sere, natural meadow, where butte or lava boulder interposed.

There to the north is something moving, too small for cattle, too large for coyotes! What then? The field glass is focussed, and two antelope show in the circle of the lens. I'm out of meat at the ranch, and antelope steak don't go bad if you have a good appetite. A long cañon breaks up through the hillsides, and I can get within 40yds. Guess I'll eat 'lope for supper!

I climb down off of the lava boulder and start at a swinging pace along the bed of the gulch, my moccasins make no sound on the sandy ground, and I am out of sight of the game. The cañon gets deeper, narrower and very crooked. The light here is just right to lend a ghostly, chilly aspect to the fantastic lava cinders, and makes the thickets of choke cherry, killinick bush and the nervous quaking asp look rather too suggestive of bear, mountain lion or the gaunt specter of the cattle country, the great gray wolf. However, none of these animals are seen, but on turning a sharp angle in the cañon I come face to face with two splendid black-tail deer! Our surprise is mutual. I forget all about the rifle with its ten deadly cartridges which I hold in my hand, and stand gazing in mute admiration at the two superb animals, which boldly return my stare at a distance of twenty feet! The antelope are forgotten and my first thought is, "What beautiful creatures!" Almost the same size, both heads surmounted by a stately set of antlers. I am so close I can see every curve of the graceful bodies, the color of the eyes, the dilation of the nostrils and the quiver of the strained muscles as they stand stock still, just as they stopped when they first sighted me. They look too handsome to kill, but a hungry man with no fresh meat in the house knows nothing of beauty. Slowly the Winchester comes up until the sight covers the edge of the white streak which covers the front of the throat and relieves the sameness of blue-black which predominates. The sight is steady as a stone wall—no "buck fever" there. A touch on the trigger, a bright flash, then a roar that seems to split the hills, and down goes my first deer with a broken neck. The other one makes three startled jumps up the side of the cañon, and calmly stops, turns broadside and looks back over his shoulder for his mate. The empty shell flies out over my shoulder, another cartridge slips into the barrel and a snap shot misses the second buck, sending him bounding up the steep side of the cañon like the wind. Then I fire again. He stops, sways a little, and down he goes.

I am alone with these two superb animals, beautiful even in death. Alone in the ghostly, gruesome cañon, among the fire-rent ruins of unknown ages with my first deer. I hurry after the pack horses, for I have no intention of leaving any of my meat for the coyotes to snarl over. What can't be used fresh can be jerked in the sun for a less auspicious day when the only fresh meat is smoked bacon! On the way home I pass within 20yds. of the antelope, but then antelope is not very good meat anyway—not when you have blacktail deer and plenty of it. I killed several more deer and some antelope too while in those hills, and sometimes out of season, though not against the game laws of Wyoming. If any of the readers of FOREST AND STREAM have ever been unfortunate enough to "hold a claim" sixty-five miles from the nearest depot of supplies, lived on "salt pork and soda biscuits," they at least will excuse the unsportsmanlike killing of game in summer to relieve the monotony of the everlasting bacon. Though I had many chances and was out of fresh meat, I never was guilty of killing a doe antelope or deer while in the hills.

EL COMANCHO.

Texas Notes.

LA PORTE, Tex., April 4.—There is a great variety of birds here and there are a great many of some varieties. Three weeks ago, from where I now sit, I could look out on San Jacinto Bay, 100yds. distant, and see thousands of ducks, but they have nearly all left for the North. Just across the bay on the marshy islands the snipe is at home. In their season we have curlew and plover in countless numbers, wild geese in goodly numbers, quail plenty, chickens rather scarce. Across the San Jacinto is the country called the "big thicket," where abound wild turkey, timber wolf, deer and bear; also panther, it is said. The country here is new and undeveloped.

H. W. B.

New Jersey Flight.

PERTH AMBOY, N. J., April 10.—Some hawks and a few flickers have been killed at Morgan (Cheesequakes), and a flight is looked for this week if warm westerly winds prevail. Ducks have not been plentiful this spring. English snipe dropped in at the head of the creek on Friday, and a bag of 16 is reported from the Raritan marshes on Saturday. A few have been shot near Little Washington, South River. The birds are likely to stay until a storm comes.

J. L. K.

GOSSIP FROM NEW BRUNSWICK.

The Game Season of 1892.

It is, perhaps, not too late for a little gossip concerning the shooting season of '92. It was an off season for grouse in this vicinity, but there was better shooting further west, and I was fortunate enough to get some of it. During the spring migration in '92 I saw more ducks than have passed here any season in the last twenty. Among them was a flock of pintails or "sprigs," the only specimens I ever saw in this Province. But they did not get around in the fall. A market-shooter, who rolled in wealth in '91, had to go out of the business a month before last season closed. It was a good snipe year, but better on the upper St. Johns than around here, and the same is true of woodcock. I spent nearly three weeks in the lake region of York county, of which, perhaps, I may have something to say in the future.

Woodwork of Guns.

Each shooting season brings its lessons. There is some sense and much nonsense written concerning the merits of guns made in different countries. But something in that line well worthy of note lately came under my notice. Two of my friends were caught out in a drenching rain. One had a \$60 hammerless made in a country which I will not name. The other had a hammer gun which cost \$40 a dozen years ago and was made in another country. The wood on either side of the break-off strap of the hammerless swelled to such an extent that the top-lever would not work freely, while that on the hammer gun never started. A few days ago I examined a hammerless from a factory not far from the one that turned out the other mentioned above, and in some places the wood had shrunk away from the iron of the action a good thirty-second of an inch. It is quite plain that some firms use imperfectly seasoned wood for their gun stocks, and they cannot call a halt too soon for their own good. Sportsmen, as a class, are a shade more critical than they were twenty years ago, and they are not slow to make a note of occurrences like the above.

Reloading Shells.

Not many years since, we Canadians all used foreign madshells. But our paternal government placed a heavy duty on them to encourage home manufacture. I used the Canadian made product in '91, and had about 7 per cent. misfires, each of which caused me a good chance at game. When reloaded, they were wholly unreliable. Again, in the season just closed, I used 100, mostly at the trap, and had three misfires. The manufacturers seem so afraid that some one will try to reload them, that they make the heads too flimsy to insure a discharge at the first using. The paper in them is all any one could ask. I saw a cartridge of this same make which had lain three days at the bottom of a lake. After being dried a little on the outside, it was placed in a gun and fired.

I recently bought some nitro powder cartridges, loaded in the cheap, conical base, American shell. Though these cost only fifty-five cents a hundred, they are much better than the Canadian made case, which retails here at seventy-five cents. A well known writer said, about a year ago, that no manufacturer would make a cheap reloadable case, as it was not to his interest to make them durable. It seems to me it would pay him fully as well, as to have his shells discarded in favor of a higher priced brand, which could be reloaded often enough to bring the purchaser out more than even. I have fired seven shots from an Eley shell, that retailed at one cent. I have fired three shots from a Squires shell that sold at a half cent; and have no doubt it could have been used again.

"Pulling" Sportsmen.

Mr. B. Waters, in a recent note, commented on the tendency of certain railway employees to "pull" sportsmen who travel over their lines. The evil is widespread. It seems to have its root in a very general opinion, that all sportsmen are, or ought to be, millionaires, and they are worked on that basis. Last fall I witnessed a little altercation between a sportsman and a smart young purser on one of our steamboat lines. The man and his wife had been on a camping tour and had about 80lbs. of dunnage in three parcels. The purser demanded "two bits" freight on the largest parcel. The man protested that they were all the personal luggage of two passengers, who paid full fare, and that their combined weight did not reach that which one passenger was allowed to carry free. The purser reminded him that the sum was small one to kick about and he reminded the purser as to where the kick originated and concurred in his view, whereupon the purser blurted out, "You have a tent there, we don't carry tents for nothing." And the other blandly inquired how he knew there was not a tent in every trunk on board the boat, and cut short further discussion by tendering his name and address in case the official wished to attempt collection by legal process. As they separated one of a knot of men standing near called out to the passenger: "Did you work it on him?" "No," said the other, thrusting his hands deep into his pockets and following with his eye the "all hands round" movements of a flock of bluebills the steamboat had routed, "he did not work it on me."

New Brunswickers in Florida.

Speaking of camping reminds me that William and Harry Chestnut, of Fredericton, two FOREST AND STREAM men whose names were immortalized in these columns not long since in connection with the Pot Cover Trap Club, have been camping out in Florida since Dec. 8. I heard from them about the 1st of February. They were then 350 miles south of Jacksonville, in the Everglades. They had killed two deer and quite an assortment of wildfowl. They will be home early in April, and ought to have quite a yarn for us stay-at-homes.

About Wolf Yarns.

"Prowler," in some notes published in your paper early in the winter, mentions a desperate conflict in the woods near Oromocto, between W. H. Dykeman, a Jemseg blacksmith, armed with a sheath knife and revolver, and two wolves. By "the twinkle in Brer 'Prowler's' eye" as he tells the yarn, he more than half doubts its truth. And well he may. But I believe in putting the saddle on the right horse. I am very well acquainted with the aforesaid W. H. Dykeman. He is no great friend of mine. Neither is he a very bitter enemy. I freely admit that when he is in a jocular mood he does not always get his facts straight. But it was very difficult for me to believe that

he was foolish enough to try to stuff people of common sense with any such improbable tale. A few days ago I interviewed him concerning the correctness of the story as published in this paper. "Yes," he said, "barring a few small and apparently unimportant details, it is every word true. Except that it was thirty-two years last Christmas since I saw the wolves; that I was unarmed; that the brutes showed no disposition to attack, but only paused for a moment to look at me, and that when I yelled at them they got away so fast you could not see their tails for snow, the story of the fight is all correct."

In justice to "Prowler," whose notes I would be glad of the privilege of reading oftener, I may say that I believe that the story came to him in his capacity as journalist through the medium of the St. John Telegram, in which it was first published. There is a young man at Jemseg, and his identity is no secret either, who periodically furnishes that paper with items faked and distorted with the evident intention of hurting the feelings of certain persons. Less than a year ago he wrote up the marriage of a son of this same Mr. Dykeman, and styled the son a daughter, changing the name slightly to suit the changed character. The strong arm of the law should be invoked to suppress such a foolishly "smart" individual, and should this fail, a boot toe applied with energy and frequency to the terminus of his spinal column might produce the desired effect.

Another Great Shot.

I showed the "Johnny-Get-Your-Gun" series of notable shots to my friend, Mr. Milton Hutchicar. "Why," said he, "none of them is a patch to the shot I made in '78, the last year the wild pigeons came around here. You see I had crept up behind a bush within 20yds. of a flock of pigeons sitting on the stakes of a worm fence, near the corner of a buckwheat field. As I was about to fire the pigeons jumped and I only killed five, but I killed a red squirrel and a ground squirrel sitting on the ends of alternate panels and directly in range, and a snipe that jumped about 20yds. further on was wing-broken. Sixty yards away, on the edge of the woods, a flock of ruffed grouse were dusting in an ant-hill, and blamed if a stray shot did not penetrate the brain of one of these and kill him."

In these days the man who tells the first story places himself under a fearful handicap. L. I. FLOWER.

EXPERIENCE WITH A BAY LYNX.

In the fall of '87 I found myself temporarily located in Concho county, Texas, where I was engaged in the study of the domestic sheep—his habits, diseases, etc. Having plenty of spare time on my hands, I set out a number of beaver traps on the banks of a small water hole (a part of the North Brady Creek). During the day I could catch all the fish (black bass, cat and sunfish) that were required for camp use, and it was when thus employed that a neighboring ranchman came down from Eden to try his luck at the gentle art. For baits he used chunks of prairie dog, the remainder of which animal he hung up in a pecan sapling. The next morning I walked down to the creek and found the dog missing. On examining the tree large claw marks were plainly visible. I hurried off at once for another trap which I placed on the outlying branch of a cedar about 15yds. up the steep side hill which terminated at the water's edge; a little beyond the trap I fixed a cot and retired to await results.

At about 8 o'clock on the following evening I started, as usual, to inspect my traps, when my attention was attracted by a very peculiar sound, somewhat similar to the rotation of a circular saw; it came from the hillside, but having quite forgotten the trap on the tree, which, by the way, was only an ordinary single-spring rat trap and very small, I was very much puzzled, but of course made direct for the sound. The night was as dark as could be, so I climbed very carefully up the hill, and soon arrived at the overhanging branch, probably a foot or more above my head. By squatting down and getting the branch in a line with the sky I could see the outline of an animal somewhat larger than a coon, and presently I saw by his round head and short ears that a wildcat or bay lynx was my prisoner. Off I went for a stick, but only found a rotten one; with this, however, I returned and struck at the cat, who dodged the blow and sprang at me, evidently intending to land on my head, but I was not there, luckily, and the chain brought him up with a jerk. He passed so near my nose that I concluded I had enough of this sort of fun in the dark and returned to camp for a lantern and an ax handle; thus equipped I easily dispatched him, and although I forget the exact measurement, I remember he was a very large one.

I kill a goodly number in traps every winter and spring, but take care not to get my face too near until they are quite dead. A. P. F. COAPE.

A WAR-TIME SHOT.

WHEN the boy came in the other day and showed the mother of his boy the first gray snipe of the season, I was reminded of two things. First, that I was getting old, second, of my first English snipe.

It was in 1862, and the "old 9th" was in camp at Carolina City. Among my traps was a double-barrel shotgun, sawed off to fit my army trunk, and many a bunch of robins or brace of ducks had it brought to our mess—when I had loaned it out. Between the camp and Bogue Sound there was a little strip of meadow under the bluff, and some of the men reported that gray snipe were to be found there. Stepping up to regimental headquarters I saluted the colonel and asked permission to leave camp for a little while to get a few English snipe. Colonel Stewart, afterwards General James Stewart, Jr., chief of police of Philadelphia, asked me if I had ever shot that particular kind of game, and on my replying in the negative said, "All right, sir; you may go, and I will give you a new hat if you kill two out of the first five you shoot at."

Giving him notice that he might order that hat at once, I went down the bluff, and had barely reached the meadow when it seemed to me that a hundred spectral corkscrews arose at once, and each one whistled "scape" in turn as I successively tried to get aim at them. They all escaped. Two or three times I repeated this performance, and then determined upon a change of tactics. I would follow with my aim the very next bird that rose, no matter how he flew, and would pull on him if he was a mile away. "Scape," and I began the movement. It seemed to me that I wobbled my gun after that bird until every particle of twist was out of my barrels, and just as

I was about to give up he dropped to the ground and I could see him. Bang! without thought of ethics, and I walked over to pick him up. He had dropped beside another, and the two lay there together. With no desire for further sport I walked into camp, reported at headquarters, and the following colloquy closed the performance:

"Well, colonel, I will take that hat."

"What hat, quartermaster?"

"The one you agreed to give me if I killed two snipe out of the first five I shot at. Here are the two."

"Did you shoot at five?"

(A considerable pause.)

"No, sir, but I will before sundown, for they are as thick as mosquitoes out there."

"No more permission to leave camp to-day, quartermaster."

T. B. A.

HIGHTSTOWN, N. J., April 6.

The Wiping Out of the Wild Pigeon.

EAST SAGINAW, Mich.—Here is a clipping evidently written by some one that cannot distinguish between a sportsman and a sport, a gentleman and a prize fighter:

John Sims, writing to the Lakeside Monitor, tells what has become of Michigan's wild pigeons. He says: "The forest fires are the one great thing that destroyed our wild pigeons in Michigan. The next great thing that helped to destroy them are those who now call themselves sportsmen. They had men hired to trap them with a net and ship to every State in the Union to be shot and slaughtered by the sportsmen for their traps. The sportsmen alone, or game butchers, who destroy game for mere sport, went hand in hand with forest fires and wiped our wild pigeons out. I defy a sportsman to read this article and deny it. If he does he is one of the kind of sportsmen who hunts nine months in each year, and when caught swears to a lie in front of a jury to get rid of paying a fine for violating the game laws. I know some of this class."

He is right in saying that it was slaughter the way the pigeons were trapped years ago for trap-shooting tournaments, but is mistaken, I believe, in supposing that the forest fires had anything to do with wiping them out. Of course if fires occurred during nesting time, the young birds would be killed, but our forest fires invariably take place in the fall or along in the summer after nesting is over with. Possibly the writer of this article may belong to that class of "mossbacks" who years ago used to profit during the nesting season on the money they could earn working for these netters, who employed dozens of men and boys in packing and shipping pigeons that were netted and sent to New York and Chicago markets. I have seen carload after carload shipped in this way from all around Traverse City and other points in northern Michigan. There is no doubt that the indiscriminate netting and slaughter of pigeons during the breeding season has been the means of exterminating them. Last summer when fishing on the Little Manistee I saw a few bunches of pigeons now and then, but no large flocks have been seen for a number of years. M.

Market-Hunters Bagged Them.

HADDAM, Conn., April 7.—I promised (alas for the promise) and intended (a certain place is said to be paved with good intentions) to give you a few items during the last open hunting season in my locality. The birds were not plenty, and the quail were soon thinned out by market-hunters. There were four coveys within a mile of my house, where I had hoped to have some quiet sport, but these market-hunters bagged 31 of them the first day of the open season. Owing to our swamps and thickets many partridges escaped the gun, and there was not the usual amount of snaring, and as partridge can withstand our snows and cold, I think more than the usual number survived the winter. Quail must have suffered severely. I know of but two bunches in my vicinity which survived, and those I caused to be fed during the winter. Woodcock were fairly plenty, and, though not getting large bags, I had some quiet sport. A.

Missouri Small Game.

SEDALIA, Mo., April 2.—Although we have had the coldest weather here this winter that we have experienced for several years, the quail and prairie chickens have wintered well. I have noticed several large flocks of both quail and chickens during the last week, but should we experience the electrical storms that Prof. Hicks prophesies for the months of April and May, I am afraid the first setting will not produce any young birds. NDIROD.

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

MY CHANCE ACQUAINTANCE.—III.

His Testimony as to Spirits.

THE weather during the day had been dull and gloomy. In the evening it was no better, it being cheerless and depressing. The wind in fitful gusts wobbled through the treetop under which we were lounging, with a sighing mournful sort of a twang. Even our pipes had a dyspeptic turn; the ashes were knocked out of mine. I rolled over and asked the old man if he believed in ghosts and spirits. The old gentleman straightened up a little, gave his boots an extra pull and unraveled as follows: "As for sperrets, that depends; if the article is a good one and you can git the right combination, a little sugar, lemon, nutmeg and hot water, I am a solid believer."

"So far as ghosts go, sometimes I don't know, then agin I can't tell. A few years ago I was a-cutting and piling drift wood on the lake shore, when a party from the village came down to fish through the ice. It were a cold raw day. They told me that if I'd let them use my fishing shanty and they had any luck, they would give me some fish. Well, at it they went. Just as I was a-picking up at night to go home, they fetched me a pickerel that would-a-pulled down 6lbs. good and strong. I brought him home and put him up in the croch of that apple tree over there. Then I done my chores, eat my supper, got the pickerel and thought I'd clean him; but he was froze hard as a brick, so I run a string through his gills and hung him up back of the stove to thaw out. Just then a neighbor came in, wanted me to go with my team the next morning and help him haul some logs out of a bad place where his single team couldn't fetch 'em. In them days we always helped one another when there was a call for

it. Well, we talked a few minutes; he went home and I went to bed, forgot all about what I had started to do.

"I'd got a good grip on the sleep and was a-plowing ahead on the gallop, when my wife woke me up and said there was some one at the door. I lit a candle and hurried to the door, for it were a dreadful cold night; but there weren't anybody there. Back to bed I went quick, and after prodding the old woman a bit about eating so much supper as to make her dream 'bad, was soon asleep ag'in; but not for long, for my wife she nudged me ag'in and whispered in my ear, 'John, there is certainly some one at the door.' I listened a bit 'nd heard a noise jest like some feller was a-knocking on the door with mittens on his hands. I were a bit vexed, slid out of bed, pulled on my pants and boots, but did not strike a light, grabbed a big cane which stood at the head of my bed, hurried to the door, opened it and jumped out ready to knock the stuffin' out of anything. But, my dear sir, there weren't anything there to knock. I run around the house; not a living critter could I see, nor even any tracks in the snow. Well, I did feel sort o' queer, kind o' half-way between puzzled and scared.

"To bed I went ag'in, and was just dropping off, when the old woman she nudged me hard and whispered, 'Hear that! jest listen; there it goes ag'in!'

"I sat up in bed, and jest as plain as day I could hear a dull sort of a thump! thump! I begun to feel agerish like; mought have trembled a bit; then I hollered, 'Who's there?' No answer.

"I kinder shivered for 'bout half a minute; didn't know just what to do, when there was the darndest racket out in the kitchen you ever heard; sounded as if some one was a-kicken a tin pan all around the room; and my dog, he came a-yelpin' and howlin' into the bedroom and crawled clear under the bed, where he kept up a whinin' and a yelpin. My wife screamed and crawled down under the bed clothes. I had not only the ager, but the chills—sweating chills good and strong. I was rattled, badly rattled; jest had sense enough left to crawl out of bed, grab my gun, which was loaded, and creep carefully to the kitchen door. There was certainly some feller out there bare-footed and he were having a hull dancing school all to hisself. I located him as near as I could in the dark, then without making any noise brought my gun to my shoulder and let her go.

"The flash of the gun were just long enough to let me see what the trouble was. I went back, lit a candle and then went to the kitchen. There, right in the middle of the floor, was that are cussed pickerel having the liveliest kind of a circus all by hisself. He were a cutting up in great shape with his flippy-flop hipity-hop jest as lively as if he had jest been pulled out of the water. With a stick of firewood I busted that are show quicker 'n you could say shoot.

"You see I hung him up in a good, warm place to thaw out directly over the old woman's dish pan, right under the pan being a good warm out o' the way place the dog used to sleep. As that infernal pickerel began to thaw out his old cussedness crept back into him. Between the flappings of his tail and the workings of his jaws he broke the string, then dropped on to the dish, and both fell on to the dog.

"That, you see, was one of the times when I didn't know nor couldn't tell." A. W.

GRAND RAPIDS, MICH.

SALE OF TROUT IN CLOSE SEASON.

MR. CHAS. F. CHAMBERLAYNE, of Boston, recently sent out a letter of inquiry to Fish Commissioners asking what they considered would be the effect of a law preventing the sale of artificially raised trout in the season when the sale of wild trout is forbidden—i. e., after the manner contemplated by the Gilbert trout bill in the Massachusetts Legislature.

Pres. L. D. Huntington, of the New York Commission, writes: "The effect must be bad. We find the provision of our law prohibiting 'possession' of equal, if not of more, importance in the protection of game and fish than the taking or killing of them. To allow possession and sale of artificially reared trout during close season would leave an opening that would virtually defeat the benefits derived from it, as all trout found in possession would be artificially reared (or at least so claimed by the possessor), irrespective of waters from which they had been illegally taken. In my opinion, to allow possession and sale of artificially reared trout during the close season would be equivalent to abandoning it."

Sea and Shore Fisheries Commissioner E. W. Gould, of Maine, writes: "Such a law would have a far-reaching effect, very disastrous to the inland fishing interests of the country at large. The State that would permit the enactment of such an injudicious law would of necessity be to a great expense to properly enforce such a law—i. e., to differentiate between a wild and artificially reared trout in a legal manner. It would open a market for the sale of trout from other States and give the fish hog a chance to get in his nefarious work and ultimately bring about a serious depletion of our inland State waters. Any one who has been intimately connected with a vigorous enforcement of the laws restricting a wanton destruction of our fish will see at a glance the many and serious complications that would arise from the passage of such a law as proposed. A cry of injustice would go up from the farming community; they would say, 'Why are we thus oppressed, and allow one man to sell his trout that costs him something to rear and prohibit us from selling trout that costs us nothing?' It would also stimulate the establishment of artificial breeding ponds by unprincipled dealers to be utilized as a cover under which to sell wild trout. But I think you will have no cause to fear such a calamity as the passage of such a law, for your Governor has a very high sense of right, and being a true sportsman, is peculiarly fitted to view this question in its true light."

Commissioner Henry O. Stanley, of Maine, writes: "I do not think it good policy to allow artificially reared trout to be sold in our market in the close season. It is practically opening the market to the pot-hunter and the poacher."

Commissioner John W. Titcomb, of Vermont, writes: "I fear the effect of allowing artificially reared trout to be sold in close season would give more opportunity for fishermen to violate the laws for protection of wild trout, and that market-fishermen would be tempted to catch the wild trout for the market during the close season. Under the present laws we experience some difficulty in preventing the killing of trout in close season for shipment

to private customers in New York and Boston. While you do not ask the question, I will further state that I should deem it very unwise to make an open season from Feb. 1, as proposed in a bill recently introduced in your Legislature, if I am informed correctly. I have never read the Gilbert trout bill and do not know what restrictions are contained in it for the protection of wild trout, but as a sportsman and believer in protection of all our fish and game, I fear such a bill would prove detrimental, not only to the interests of Massachusetts, but to the neighboring States."

Mr. Fred Mather, of the Cold Spring Harbor hatchery, Long Island, New York, writes: "It seems to me that the sale of artificially raised trout out of season would open the door for frauds in many ways, but I have seen this argument set forth at length. Some years ago a man named Furman advocated selling trout out of season in this State, but he had no following. It might be pertinent to ask if there is a demand for trout out of season by consumers, or if the agitation of the question is mainly by trout breeders. It does not appear to be possible to so regulate the traffic that wild trout will not suffer, nor does it appear to be detrimental to the public to restrain their appetites for trout until the season opens for wild trout."

Commissioner W. H. Griffin, of New Hampshire, writes: "In my opinion it would be impossible to make a law that would give much, if any, protection to the wild trout while the sale of artificially reared trout was allowed."

ANGLING NOTES.

The Pike.

THE pike, *Esox lucius*, called also lake pike, great northern pike, great northern pickerel, or—and this is the name by which it is perhaps best known, taking one section of the country with another—pickerel, is a fish that occupies a queer position in the estimate of men called fishermen. The regard or disregard in which the pike is held illustrates as forcibly as anything I know, the saying, "Many men of many minds." In England, where the name pike is rigidly adhered to for this fish, except that in case the fish is under a certain size it is called a jack, there is but one species of pike—or for that matter in all Europe—and it is so highly esteemed as an angle fish that many books have been written about, and devoted solely to it. In Germany, where it is called *der hecht*, the pike is cultivated artificially; the only country on this green earth where it is so cultivated. Probably no fish has had so much written about the derivation of its name as the pike, unless the mascalonge of the same family be an exception. It has been supposed that the term pike came from the Saxon word *pik*, meaning sharp-pointed, having reference to the shape of its head; also from the French word *pique*, because of the sharpness of its snout, and Nobbes, the father of trolling, says that *lucius* is derived from *lukos*, the Greek word for *lupus*, because "the wolf is the most ravenous and cruel among beasts, so the pike is the most greedy and devouring among fishes. So that *lupus piscis*, though it be proper for the sea wolf, yet it is often used for the pike itself, the fresh-water wolf." Pennell, writing of the fish, quotes Ansonius, living in the fourth century:

"The wary Luce, midst wrack and rushes hid,
The scourge and terror of the scaly brood,
Unknown at friendship's hospitable board,
Smokes midst the smoky tavern's coarsest food."

And adds: "It seems as if from the earliest times the character, so to speak, of the pike has commended itself especially for treatment both in prose and verse, and the number of quaint anecdotes, mythical legends and venerable superstitions which have clustered around it give the pike a special and distinct interest of its own. I confess that to myself there has been always something singularly attractive in the very qualities which have made its chroniclers more often detractors than panegyrists. The downright, unadulterated savagery of the brute attracts me; he is no turncoat, vicious one day and repentant the next. Nothing that swims or walks or flies does he spare when his appetite is whetted by the sharp wind sweeping

"The half-frozen dyke,
That hangers into madness every plunging pike."

Weighed in the Balance of the Game Laws.

Possibly the fish and game laws give an idea of the region in which a fish is bred. In New York State the pike was not protected specifically by name until a few years ago, when, under the name of pickerel, it had a close season provided to cover its breeding season in two lakes in the northern part of the State. Of course it found shelter under the clause that no fish should be taken except with hook or line. After the pike had enjoyed a close season for a couple of years in the lakes referred to, the law was amended with the intent to permit the shooting, spearing and catching of pike at all seasons in these very lakes.

The State Sportsmen's Association suggested that there should be a close season for pike throughout the State, and following this a member of Assembly gave notice that he would introduce a bill making it legal to kill pike in any manner at any season. Vermont's law reads: "Nothing in this law shall be construed to prohibit the shooting of pickerel or pike (not wall-eyed pike) with a gun held to shoulder, from fifteenth day of March to the first day of May in each year."

This means that the pike may be slaughtered on their spawning beds. The laws of New Hampshire, Iowa and Pennsylvania provide a close season for the pike which covers the spawning period, but the other States, so far as I have observed, give the fish no protection except that it must be taken with hook and line; and some States do not go as far as that. There are plenty of fishermen who esteem the pike as highly as any fish that they have the opportunity of angling for, and I happen to know personally of several men who regard it above all other fish on the hook. Having friends who consider it a game fish second to none with which they are familiar, and enemies that would remove it from the waters of the earth, the pike appears to be between the devil and the deep sea whenever there is a discussion concerning protective laws for our fishes.

Habits and Size of Pike.

The pike is a spring-spawning fish, spawning in March and April, and one of the most prolific of the fresh-water hook and line fishes. It is commonly estimated that an

average pike will spawn 100,000 eggs, and Buckland counted 595,000 eggs in a fish of 32lbs. If my memory serves me the late Dr. Sterling counted a still greater number, something over 600,000 eggs in a ripe pike, but I have no recollection of the weight of the fish, and would be obliged to read scores of his letters, perhaps, to find the right one. At spawning time the pike proceed in pairs to the slack-water creeks and overflowed land near them, and the eggs are deposited in shallow water and left to their fate. This is the time that the pike are shot in the day and speared by jacklight in the night. The eggs are glutinous and adhere to anything they touch and hatch in about two weeks. From the very nature of the places selected for spawning the fry are as secure from enemies as any fish fry naturally hatched can be. Much has been said of the growth of pike fry which is chiefly guess work, but Herr von dem Borne wrote me last year that he has had pike reared from the egg that at five months of age were about 17in. long and weighed 2½lbs. This weight was brought about on a diet of small-mouthed black bass fry. The bass pond was dry and allowed to fill. The pike fry worked through a gravel screen one foot thick, placed for the very purpose of keeping the pike out. The pike being discovered, the pond was drained and 57 of the pike were found. They had eaten several thousands of black bass fry. The weight that I have given of a five-months pike is not unusual, Herr von dem Borne tells me, for he has observed it a number of times under conditions that establish the age and weight beyond doubt. Black bass at this same age in his ponds are about two inches long. After spawning the pike are in miserable condition and return to the river or lake and are found on the shores until July, when they take themselves to the sand bars and sand bottoms, and later, in August and September, to weeds or grass bottom. A dead treetop fallen into the water is a favorite lair of the pike, which is a solitary fish except at breeding time. Catch a pike from an old treetop where it is lying in wait and another will take its place. I once caught six pike in six successive days from the same old top. The largest pike caught in this country, so far as I know, was caught in a pond in Pennsylvania, and its weight was 35lbs. The largest pike taken in recent years from the waters of Great Britain was caught by Mr. Alfred Jardine (whose name is intimately associated with pike tackle and pike fishing) in 1879, the fish weighing 37lbs. English and German writers have recorded pike that have been taken weighing as high as 70, 80 and 90lbs., but the grandfather of all the pikes was one caught in 1862. An officer of the Tyrolean Rifles informed Dr. Genzik that he was present at Bregenz when a pike of 145lbs. was weighed, and Dr. Genzik himself saw a pike that weighed 97lbs. after it was dressed. Since the above was written the *Fishing Gazette*, London, has come, which contains the account of a 37lbs. pike caught in Ireland on March 22. The fish was weighed by Mr. Marston and measured by Mr. Jardine.

As a Food Fish.

As a rule the pike does not occupy a high place as a food fish, and yet among some people it stands as the very elect of table fishes. Like every other fish the flavor of the pike depends chiefly upon the water in which it lives and the food that it eats. A pike from a warm, muddy pond rank with weeds must taste of the muck even as a large-mothed black bass will under the same conditions, but a pike in the autumn from a clear, pure lake is a dish, properly cooked, to set before a king. The meat is hard and sweet, and if fresh from the water, as it should be, is flaky, white and delicious. One of the finest trout lakes in the Adirondacks, a lake famous for its deep red-colored trout, with creamy curds between the flesh flakes, was stocked with pike by vandal hands. The pike destroyed the trout, and their flesh became pink in color after the manner of the trout, and I ate them on several occasions when in that condition, and certainly they were an excellent table fish. A real pike lover, one who loves to catch them and eat them, will say that a pike for the table should be shorn of its outer skin, for in it the rank flavor is concealed if the fish comes from any but pure water. The so-called inner skin is a thin membrane, but it is sufficient to hold the flesh together when it is cooked.

As a Hook and Line Fish.

More pike are caught in this country by trolling a spoon perhaps than by all other methods combined. A strong hand-line and a spoon are always ready and they require no further outlay except a club to kill the fish. There is precious little sport in trolling for pike with tackle that requires only an expenditure of man's strength to get the fish. In July, when the pike are on the sand they are in good condition and they may be taken with rod and reel and minnow bait, which style of fishing affords some sport, first to find and hook the fish and then to land it. In the autumn, when the water is cold, the pike are at their best, but they are in deeper water on the grass and may be taken by deep trolling with minnow gang, which requires more skill than surface trolling with spoon bait.

Fishing through the ice in winter for pike with tip-ups and minnows is sport that I believe in, and it is a style of fishing that belongs to the pike, but the fish laws of some of the States forbid fishing with more than one line, and yet in the same States you may see in summer a scow boat anchored on a pond with half a dozen baited poles sticking out from the sides of the boat in as many directions, and perhaps an equal number of hand lines with corks watched over by a single occupant. No note is taken of such fishing by the law officers, but an equal number of tip-ups with baited lines through holes in the ice would land the owner before a magistrate for using "set lines" or for using more than "one line held in the hand." The Supreme Court of New Hampshire held that tip-ups were legal and if they were declared legal in other States the fish laws would be in better favor. As to the game qualities of the pike, some fight like demons and some die like dogs, but as a rule they fight. I was one day returning from an expedition after bait in the inlet stream of a big lake, and as the boat passed over a piece of grass I trolled at the bottom and hooked a pike of 21½lbs. that made no fight whatever. I simply drew the fish to the surface and the oarsman killed the fish with an oar. A few days later I hooked a 12lbs. fish on a light line and he fought hard enough for himself and the larger fish.

A. N. CHENEY.

Many of the wonders of the deep may be gotten sight of by a walk through Fulton Fish Market, Peck slip, New York. And for one no trip to New York could be complete without it.

WISCONSIN TROUT STREAMS.

Editor Forest and Stream:

Having noticed the article in your issue of March 9, on the "Brook Trout of Wautoma," by R. W. Hubbell, I am prompted to add my testimonial in behalf of those fine fishing waters. Wautoma is in fact the centre of a fine trout district, all developed in the last ten years, through the efforts and perseverance of such men as Judge Bugh, who for a number of years represented this district in the State Legislature.

There are about a dozen streams and tributaries in this vicinity, all well stocked with trout, which run much larger in size than those in the natural trout streams further north.

Wautoma may be reached by making about a twenty mile drive from Berlin on the C. M. & St. P., or by driving about the same distance from Princeton, the present terminus of a branch of the C. & N. W.

Now that the open season is again at hand, and the spring awakening brings to us all dreams of pleasant places, leaping trout, and bright sunshine, and in our reveries we are carried again to the scenes of last season's triumphs, and when the desire to go afishing amounts to a fever which consumes all arguments of business, I hope my friends of the rod and angle will pay this favored locality a visit.

The P. O. House, kept by W. A. Bugh, is a comfortable, home-like village hotel, plenty good enough for any true angler. Around the great stove in its cheerful office, or on its broad veranda, are gathered every evening the local and visiting sportsmen, discussing the day's success and the relative merits of the fishing at Gallagher's Bridge, Denning's, or Lunch Creek. The professional guide is met with only in his most primitive form, and is in no way a nuisance. A few villagers there are who may be induced at a moderate recompense, to forsake his potato hoeing, and with grub worm or other humble lure, will generally take more fish than the most accomplished visitor.

A wide bridge on the main street spans the stream a few rods below the hotel; under this I have often peeped while waiting for my breakfast or team, and watched a dozen or more speckled beauties swimming in native freedom. Good fishing may be had just below the village when the mill is running, but parties usually drive out about three miles to the main stream. Lunch Creek is a fine quiet stream flowing through brush and meadow land, a little further from town. Ten miles to the southward is another deep stream well stocked with rainbow trout, from which the 5lbs. 7oz. trout alluded to in Mr. Hubbell's article was taken. Visitors will hardly expect to take many trout of this size, but there are plenty caught of 2 and 3lbs. weight.

I could regale my readers with tales of wonderful catches, at the serious risk of being put down as a disciple of Ananias, and so will simply say in conclusion, "go and try it." Some may object to my thus assisting in giving away a good thing, but the territory is so large, and the care taken in protecting and restocking each year by the residents so thorough, that there is little danger that these streams will ever be greatly over-fished. E. J. BURNSIDE.
Ripon, Wis.

BOSTON AND MAINE.

THE opening of the trout season in Massachusetts is again proving to have been altogether too early, especially for the northern and western part of the State. The streams and ponds in the northwestern sections of the State are still in a condition not favorable to fishing with the fly, and but very few trout have been taken. Mr. Claude H. Tarbox, of the Chamber of Commerce, and who lives in Byfield, has tried the streams faithfully in that section for trout, but with most unsatisfactory results thus far. He is a great lover of the angle, as well as an expert, and if there were trout to be had he would be pretty sure to get them. He spent Fast Day, April 6, on a stream where, he says, he has generally succeeded in taking trout. He tried them faithfully, by every means of angling that he is acquainted with, but with no trout. Coming away from the stream, he concluded that it was altogether too early, and that he would try them later. If he could see any trout "lying around loose," and he had had his "tom cod tongues" there, he would have tried "fonging them." Mr. David S. Plummer, with his son, spent Fast Day on a good brook in the town of Orange, with a result of only three trout. He, too, concludes that Fast Day came too early this year, for on the same brook a year ago he had good sport on the day appointed by the Governor for fasting and prayer. The chances are, however, that Gov. Russell went afishing himself on that day this year. But he can be excused, since he is a great lover of angling, and since he has asked the Legislature to abandon Fast Day altogether, and make a good, handsome legal holiday instead, when everybody can go afishing and not be in danger of offending the over particular. The solons of Beacon Hill have not granted his request, however.

Mr. L. Dana Chapman, with Dame, Stoddard & Kendall, with his friend Harry Crocker, were on a famous trout brook at East Falmouth on Fast Day. They had good sport, taking twenty-nine trout, weighing from $\frac{1}{2}$ to 1lb. They could have done much better but for the fact that the brook had been fished several days in succession before they were there, with a result in one case of some eighty trout to a line. Like all the rest of the sportsmen who fish the streams on the Cape, they do not like to have the name of the brook published, though this one is a brook not open to the public. Mr. J. Russel Reed fished somewhere in Wareham on Fast Day, but with what results I have not yet learned. M. Geo. D. Appleton, son of Geo. B. Appleton, of Appleton & Basset, showed a very handsome dozen brook trout in the window of the firm for several days last week. They were taken from a cranberry bog stream on the Cape, in the town of Bourne. This is said to account for the beautiful red markings of this string of trout. Those who fish these cranberry bog streams declare that this red shading of the trout they get is a feature of those waters. They even go so far as to say—with a wink in their left eye—that it is "the juice of the cranberries, you know."

Fish and Game Commissioner Henry O. Stanley, of Maine, writes me that he is glad that the Legislature of that State has at last adjourned. It has been a heavy task to watch and prevent foolish and harmful legislation. He says that, with the exception of the change in the game laws permitting the killing of cow moose, he does not consider that any serious harm has been done. The

appropriation for the propagation and protection of fish and game has been increased, together with the fines being decreed to the work; so that the Commission is in really better shape than ever before. He thinks that Dr. Wentworth will be an able and an earnest addition to the Commission. His letter also says that the Commission has a goodly supply of sea and Sebago salmon fry, with a large number of trout fry. These will be kept and fed till next October, before being turned loose in the lakes and streams to take care of themselves. The Commission followed this plan at Auburn last year with good success, raising fully 75 per cent. of the fry to the size of the redfin chub, or 3 to 4 in. in length. Fish reared to this size are counted much better than turning them out the first year, to be destroyed by all sorts of aquatic enemies. Their operations of rearing will be carried on this season at Rangeley, Auburn, Sebago and Oakland.

Commissioner Stanley is a great lover of the rod and line, as well as much interested in the culture of fish, and the restocking of depleted waters in Maine. This has doubtless led to the erroneous idea that he is Fish Commissioner, while his colleague is Game Commissioner. The Commission of that State is not divided in that way. Both commissioners are equally commissioners of fisheries and game, and they work together. But it is a fact that late in the life of Mr. Stillwell the great burden of labor fell on Mr. Stanley's shoulders, owing to the ill health of his colleague.

Mr. Geo. H. Cutting, a Richardson Lake, Me., guide and lumberman, wrote under date of April 7 that he had just come out from the lakes, where he had been putting in ice for Camp Stewart. He found the ice 28 in. thick of clear, blue ice. The woods are full of snow, and it was so cold there that he could not paint boats. One boat house, standing under a hill, had to be shoveled out of a big snowdrift, the roof being covered. This almost assures a very late opening of the Maine trout lakes this season. The thickness of the ice, when compared with other seasons, would indicate that it would be June 1 before these lakes would be free from ice. But doubtless warm weather will intervene to reduce the ice rapidly, bringing the season up to a little later than the average, which is about the 15th of May, for these lakes to clear. Mr. John Bartleman, who has spent several seasons at the Mountain View House, at the foot of Rangeley Lake, is the first sportsman on the ground this year, having reached Rangeley last week. SPECIAL.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Figures for Gov. Altgeld.

CHICAGO, Ill., April 8.—Gov. John P. Altgeld, who thinks a Fish Commission that costs \$7,000 a year is "a useless and expensive board," would do well to look over the following figures, given me by Mr. W. P. Andrus, secretary of the Minnesota Game and Fish Commission:

"Minnesota appropriates \$10,000 a year for our Commission," said Mr. Andrus, "though next year we expect \$15,000. Our Legislature seems anxious to get all the information it can on these matters and shows a marked tendency not only toward liberality with the Commission, but also toward the making and enforcement of stricter laws. In this it is warranted, if you like, not only for reasons of sport, but for commercial reasons. Few know the actual commercial value of the fish and game of a State. In the last two years of our work in Minnesota we have planted fish enough to come, at a value of 6 cents a pound, to \$500,000. I submit that this is a good investment on \$10,000, or even \$15,000."

"We attempt to protect the deer of our State, and commercially they are well worth it. In 1891 there were shipped out of Minnesota, not to speak of the amounts used within the State, 10,000 saddles or carcasses of venison, which averaged \$10 a saddle. In 1892 there were shipped 6,300. This would make a total value for two years of \$163,000 for one sort of game alone. Such a source of revenue ought not to be wantonly wasted, if for commercial reasons only."

Mr. Andrus was the original promoter of the movement to secure a uniformity in the game in Minnesota, the law Dakotas, Iowa and Wisconsin. The law was passed in South Dakota, was vetoed in North Dakota, was badly cut up by the Legislature of Wisconsin, has reached its third reading in Minnesota Legislature, and will be taken up in the next session of the Iowa Legislature. It is a good law, and is especially strong in the executive clauses.

Mr. Andrus takes up the value of only one sort of game, and leaves quite out of the question the birds and wildfowl which are sold and held or shipped from Minnesota. Yet I know of one freezer in a Western State which holds between 6,000 and 10,000 dozen quail, worth \$2.50 a dozen; 2,000 dozen prairie chickens, worth \$7 a dozen, and the owner alone knows how many plover, snipe and ducks. I presume it far within bounds to say that 30,000 dozen ducks are killed annually in Minnesota, worth \$2 to \$6, or perhaps \$12 or \$15 a dozen for the rarest grade, the canvasback, only a few of which are killed, of course. Furthermore, as to the freezers. I know of two more in the same State, and of another just across the line, in another State, and of several here in Chicago. The game trade of Chicago probably runs \$2,500,000 to \$3,000,000 this year. The fish trade figures are not so easily obtainable, but they are enormous.

It would certainly seem, would it not, John P., that these fish and these birds sell for some money, to say nothing of the sport in the question?

Now, there isn't a State in the Union that does not have fish and game laws. The principle of preservation is the same for either fish or game. Every other State in the Union thinks it worth while to protect this property of its own.

Does John P. Altgeld, confessedly ignorant on all these points, know more than the game and fish commission of Minnesota, more than the people of Illinois who created the Illinois fish commission, and more than the people of all the other States which have created and kept up similar institutions? Before he ventures to squander, or to help squander, this part of the wealth of the people of Illinois, will he kindly give us some reason, any reason, any sort or size of a fractional reason why we should think him so very wise?

A Sad Accident.

A deplorable accident happened on last Monday, which will leave Mr. Henry L. Hertz, one of Chicago's best known sportsmen, a cripple for life. Mr. Hertz was at-

tempting to board one of the abominable Chicago cable cars, when a sudden jerk threw him under the wheels. His left foot was so badly crushed that amputation at the ankle was necessary. It will be recalled that Mr. Hertz lost a brother not long ago through an accidental gun shot wound in the leg. This happened at Pistaqua Lake, not far from the Northwestern Pleasure Club, of which Mr. Henry Hertz is a member. Mr. Hertz has long been prominent in the affairs of the Fox River Fish Association, and is an enthusiastic angler. A successful politician of the better type, he is also an exponent of a broad and thoughtful sportsmanship. His misfortune will not debar him from the joys of the outdoor air, and until he is able to be about his many friends will give him ready sympathy.

Judge Caton's Reminiscences.

That venerable and hearty jurist and sportsman, Judge John Dean Caton, contributes an article in the May number of the *Atlantic Monthly*, from which the Chicago *Tribune* makes the following extract:

Until 1833 Chicago had practically no existence except in name. True, for many years it had been a place where furs had been bought from the Indians and trappers, and goods such as their simple wants required had been sold; but beyond this, what we call commerce did not exist. A fort had been established in the early part of the century, and had been occupied by a few United States troops, but it had been abandoned in 1812, and it was still remembered by the first settlers that those troops and their families had been fallen upon and slaughtered by the Indians before they had gone two miles from the fort, and while they were still within the heart of the present City of Chicago. I am now writing on the very spot where that slaughter took place, on the very soil which drank the blood of the women and children who fell by the tomahawks and knives of the "braves," while their husbands and fathers were being shot down from behind the sandbags bordering the beach of the lake. This event had made Chicago known and talked about more than a score of years before 1833, but had been practically forgotten by a new generation; and probably not one in a hundred, even of Americans remembered name of the place.

Judge Caton's Chicago residence on Prairie avenue stands near the spot where once grew the old cottonwood tree about which transpired the central and closing scenes of the historic Fort Dearborn massacre. A memory and an intellect such as his could have no readier inspiration for speaking of the past. A brief carriage ride down this same beach that saw the massacre, and what inspiration meets him for the present! Chicago, 60 years ago an unknown waste of marsh and sand, now in three weeks throws open the doors of the grandest international exposition the world has ever known! It was potent soil, this sand. To Judge Caton, an actual resident, how strange, how real, how impossible must seem the Aladdin palaces of the White City. If the White City shall need apology, let Judge Caton speak it, who lives over the heart of a massacre which was not a reaping but a sowing of life, yet which happened only in the yesterday of nations.

At the Fair.

The Fair itself goes prosperously, and all sorts of impossible things are happening there daily in the most matter-of-fact way. This week somebody unloaded a lot of geese, over on the wooded island where Billy Hofer's Boone and Crockett free hotel is. It is said that during the spring the lagoons will receive additions of pelicans, egrets, flamingoes, scarlet ibises, etc., etc. All these birds will have a wing bone cut so they cannot fly away.

In the U. S. Fisheries Dr. T. H. Bean is reveling among all sorts of salty things, harpoons, blubber spades, mackerel plows, lobster pots, nets, trawls, sails, boats, *et id om*. The Gloucester, Mass., exhibit lately shipped is not yet here, but the floors are full of boxes, bales and boatloads of other sea goods, all carefully guarded by a bisected dummy harpooner who looks twice as natural as life.

Among the many boat models which lie behind the glass doors of the big case in the U. S. Fisheries there sits a tiny cedar canoe, which many would think also a model and not an actual craft. Yet this was the actual boat of one of America's quaintest sportsmen—"Nessmuk," of beloved memory. This boat, the old Sairey Gamp, will be loaned to FOREST AND STREAM, and will appear after May 1 in the FOREST AND STREAM exhibit, which has the best place in the Anglers' Pavilion of the World's Fair Fisheries building.

Always Ahead.

It seems probable that the FOREST AND STREAM installation will be the first one in place in its building. At this writing its big Pompeian red screen is up and finished and is surmounted by a *fac simile* sign after the style of the cover head of the paper, moose head and all. This sign is 17ft. long, 4ft. high and is made of white birch. Stop when you see the sign. FOREST AND STREAM will be ahead then, just as it is now.

A number of fine mounted heads are now in place in the FOREST AND STREAM installation. I would rather be out snipe shooting than nailing up horns, and that is how I come to know. Next week some more things will be nailed up and nailed down and nailed on, and by May 1 the FOREST AND STREAM house will be ready to receive its hundreds of visitors and to show them some things they never saw before. The visiting sportsman who does not call will be black-listed.

Dr. Henshall has assigned for neighbors to FOREST AND STREAM the Natchaug Silk Co., makers of fine silk bait-casting lines, and just beyond Brother Johnson, of the Waltonian Manufacturing Co., will show a number of fly-tiers actually at work in making artificial flies. The pavilion will be a great rendezvous for sportsmen. For one price of admission to the Fair they can look at Col. Gay's Quaker trout, across the other aisle from FOREST AND STREAM, and at Capt. Collins's two pet alligators from Borneo.

More than 150 Turks, 200 Egyptians, 50 Singhalese, a lot of Japanese, Arabs, etc., arrived in town this week. So, also, did three Zulus, each 6ft. tall. The civilized and savage races of the earth will all be represented. There are now on hand twenty donkeys from Cairo, Egypt, and nine burros from Colorado. A donkey is only another kind of a burro, as comparative philology easily establishes. Probably the Colorado sort is one of the lost tribes of Egypt. Scientists will watch this reunion with interest.

Got a Pull.

Mr. Knud Knudson Knudsonson has started to row from Bridgeport to the World's Fair. His confidence begets the thought that he must have a pull somewhere.

Beware the Umbrella.

The daily papers this week report a singular case of suicide. The victim, it is said, "strapped a gun to the belstead and leaning against the muzzle he discharged the

gun with an umbrella, which killed him instantly." Beware the umbrella.

Nice Story.

The daily papers also tell us this week of a Chicago mad dog which, when pursued, "sunk its teeth into a plank and was unable to extricate itself until a policeman shot it." This is a nice story, but I fear savors of the hoop snake sort of literature.

Jacksnipe.

The jacksnipe are now up all over the country. From Shelby, on the Kankakee, I hear of Mr. Von Lengerke's bag of thirteen early in the week, and from the Goose Pond country, near Warsaw, Ind., I note Mr. Chas. Douglass's score of thirty-four one morning. Mr. J. P. Roberts, of Roberts' summer hotel at Neenah, Wis., has gone to Lemont and Summit, on the Alton road, after snipe. Indeed nearly all its snipe shooters are out to-day, and early next week we shall hear of many bags. The thermometer stood 85° two days this week, a most unheard of thing. The birds came in on the full moon and with the warm wave.

Tarpon on the Fly.

Mr. Roberts was near Enterprise, Fla., on his Southern trip this winter. He had good quail shooting there, bagging forty-six one day. He reports seeing numbers of young tarpon, not over 2ft., long, rising and taking flies much as trout do, and often springing clear of the water.

A Husky Gobbler.

Dr. Rogers, of New Albany, Miss., so favorably remembered by all who attend the Southern field trials there, is one of the most prominent sportsmen of his section and a rattling field shot. Recently Dr. Rogers was blown up in a sawmill accident, but it is hard to down a good man, and he has now recovered, though the sawmill is in ruins. In a letter to Mr. Waters, of this office, under date of April 7, Dr. Rogers says:

"I fired my first since my injury on yesterday morning, and succeeded in bringing to bag a *Meleagris gallopavo*, commonly known in these parts as a 'gobbler.' He was a dandy, 25lbs., with a beard 10in. long. How is that? I send you his beard, as I know your contact with the world has made you cynical."

Any true sportsman would risk a boiler explosion to kill a turkey like that.

Heavy Run of Bass.

The spring run of bass at Mokence, on the Kankakee, is heavier than for years. The natives are sparing them in outrageous fashion. Dr. E. H. Sammons and Mr. G. F. Anderson report this to me, and so has Mr. Kinney, of Mokence. The local men are afraid to act.

Winter Sport.

Mr. H. R. Woodall, of Norfolk, Neb., writes as follows: "I want to spend the winter months next winter in the South where I can get good snipe and duck shooting, and as I have never been South I thought perhaps you could give me the desired information. I have been a reader of FOREST AND STREAM for years. It is the finest sportsman's journal printed in America."

Houston, Tex., has fine snipe grounds near by and there is good mallard shooting along the Trinity River. The Big Thicket of the Sabine offers a variety of game. Beeville, Tex., some distance further west, is in a grand game country. Abbeyville and New Iberia, La., are splendid points for a winter trip. E. HODGH.

175 MONROE STREET, CHICAGO.

New Hampshire Trout.

CHARLESTOWN, N. H.—Our Legislature has adjourned *sine die*, and as soon as I can get a copy of their acts and resolves I will send you one for the *Book of the Game Laws*. Mr. Neal, the business agent of the Concord Monitor, has just been here and tells me that the open season for trout has been restored to May 1, as it should be. This puts us in accord with Maine and Vermont, on either side of us, and is early enough for this latitude. He says that a number of acts of various kinds were passed, some good and some bad. Among them was one for the establishment of three new State hatchery houses for trout, making ten in all for New Hampshire, viz., Sunapee Lake, Newfound Lake, Plymouth, Laconia, Keene, Conway, Colebrook, Meredith, New Durham and Manchester. Pretty well for a small State, and it shows that trout culture in New Hampshire is not such an utter failure as a certain "ancient mariner" is wont to pronounce it. Beside the well known success in Sunapee, Newfound and Squam, Mr. Neal tells me that the "win-ninish" which I took up to Connecticut Lakes a dozen years ago, of which trip I wrote you an account at the time, have thriven finely, and that many were taken last season in First Lake, some reaching 6 or 8lbs. in weight. This is encouraging, and Commissioner Hodge put in more last year, and will also stock the lakes with landlocked smelt for food for the *Salmonidae*. In addition to these fish the brooks of the State have been well replenished with the *fontinalis*, and if we can preserve our forests we can preserve our fishing. I have great fears, however, for the next year or two, that the ova on the beds have been destroyed by the terrible freeze we have had this winter, when all the shallow brooks were frozen solid to the bottom. I can corroborate your other correspondents about catching fresh-water mussels on the hook. I have done it myself in Connecticut River when a boy.

Von W. P. S.—Did I ever congratulate you on your new heading? It is a great improvement, and the various designs suggested by your corps were all capital, particularly Mr. Lacy's.

Trout in Connecticut Small Streams.

HARTFORD, Conn., April 7.—Trout in this section are, as some rascal said about hanging, "played out" of the small streams. The last two summers have been exceedingly dry, reducing the streams and either preventing the trout going to the heads of streams to spawn and raise their young, or forcing them into the Connecticut River to find sufficient water in which to live. In favor of the latter theory I might say, I engaged a man to bring me some alewives this morning from a net he had set in the river over night, and when he came he had with the other fish a trout weighing 11oz. he had caught in his net. I went out April 1 and got but 9 small trout in a stream where I should have got at least two dozen. I have ordered some trout fry for the streams, and if I never live to catch them, I hope some good fellow may.

PENNSYLVANIA ASSOCIATION.

PHILADELPHIA.—A large attendance marked the occasion of the monthly meeting of the Pennsylvania Fish Protective Association on the evening of April 8, at their rooms, 1028 Arch street, Philadelphia.

The successful manner in which the entertainment committee conducted the reception to the Pennsylvania Commissioners of Fisheries and reunion of the Association elicited a vote of thanks from the Association.

The membership committee reported having formulated an address, stating the claims of the Association to public sympathy and support in the following circular.

A resolution of thanks was read from the Pennsylvania Fish Commissioners for courtesy extended them by the Association in placing its rooms at their disposal for the purpose of its meeting, March 24.

A bill authorizing the placing of a dam in the Delaware River below Easton had been passed by the New Jersey Legislature, and upon the fact being learned that a similar bill was before the Legislature of this State there were many and prolonged expressions of condemnation upon the passage of such a measure. After long and arduous labor the Fish Commission had entirely freed the river from obstructions, and it should be the duty of all citizens interested in the public good to protest against obstructing such a great supplying source of food fish as the Delaware River. Such being the sense of the Association, a committee was appointed to draw up a resolution embodying the fact, to be sent to the Legislature.

The able paper upon the work accomplished by the Pennsylvania Fish Commission, compiled by its president, Mr. Henry C. Ford, and read before the Association, was ordered to be printed and sent to all counties of the State, it being deemed of great importance in an educational view and would aid in strengthening the work of the Commission.

M. G. SELLERS, Secretary.

A CURIOUS TROUT POND.

IN the plantation of Eliottsville, not far from Monson, Me., there is a little sheet of water called Davis Pond. Although this pond has long been well known to the inhabitants of that region, it was not until the fall of 1889 that trout were discovered in its waters. Up to that time it was supposed to afford a home only to minnows, bream and other humble fishes.

But at the time referred to a lumbering camp was built in the vicinity, and one of the crew, a man by no means conspicuous for his veracity, reported that he had seen enormous trout on a spawning bed in Davis Pond. He was not believed, however, until he produced tangible evidence in the shape of a five-pound speckled trout. Therefore, with our consent the honest lumbermen proceeded to lay waste that spawning bed with set line and snare and spear, until the natural game protectors of that region, Henry Lane and the Davis boys, put an injunction on these unlawful proceedings by threatening prosecution and worse if any more trout were taken out of season.

No more was heard of the big trout until the next summer, when persistent fishing showed that there was a time between sunset and dark when these monsters of Davis Pond would take a fly; and at this time of day many were captured.

The largest one ever weighed tipped the beam at 64lbs., but (it was always so) others yet larger were lost. Charles Davis says he lost a 10-pounder for sure, and Charles has good judgment and tries to be truthful. At all events, the 64-pounder was a nice fish, and many others ranging from 4lbs. to 6lbs. have at different times been taken from this pond.

The fishing was good in 1890, fair in 1891, and in 1892 only very few large trout were taken. But since the discovery of the large trout, and the capture of many of them, small trout have made their appearance in the pond, and now a day's fishing there will yield a fair catch of half-pounders, with perhaps no very large ones. What is the explanation of this? Were these large and old trout cannibals?

MANCHESTER, N. H.

Creel Straps.

I HAVE just received the catalogue of a well-known tackle dealer in London—and I may say I am pleased to get it annually, for I generally find something new in it—and as I turned over the leaves of the book my eye caught the figure of a man with a fish basket or creel on his hip, suspended by straps not of the customary pattern. Under the figure was the legend, "Farlow's improved basket and girth." The sight of the "improved girth" reminded me of what a relative of mine said to a good old doctor of divinity of this State. This relative, a judge, attended the doctor's church and they were good friends and neighbors, and meeting on the cars one Monday morning as one was starting for court and the other to attend an assembly of some sort, the judge said, "Doctor, that was an excellent sermon you gave us yesterday morning, an excellent sermon. I thought it was very good the first time I heard it." The good doctor laughed as he replied, "Judge, you have an excellent memory, an excellent memory. I have always thought your memory was very good, and now I know it." So with the improved basket strap, I might say I have always thought it was excellent, for it was invented by my dear old friend Judge Fitz James Fitch, as near as memory serves me, some thirty years ago. I think he was fishing at the time in the Catskills with Dr. Fessenden N. Otis, of New York city, and that the invention of the creel strap came about through a make-shift to relieve a sore shoulder caused by a heavy basket of trout. The ordinary strap goes over the right shoulder, and it used to be the fashion to have a cloth loop and button on that shoulder to hold the basket strap in place, and even then the basket would swing out of place. The strap invented by Judge Fitch is webbing for the shoulder, say two feet long, the ends of the web being gathered and sewed into two rings. Below the rings are leather straps, one of them with a buckle, the leather straps to go through the holes in the basket and are then buckled together. Also in the rings the ends of a waist belt of webbing are sewed. The web to which the basket is suspended is placed on the left shoulder, and then the waist belt is buckled or snapped to together, and the basket is in place to stay just where you put it. One who has never used this combination strap will be surprised to find what an improvement it is over the old kind.

A. N. CHENEY.

Bass in Clackamas River.

PORTLAND, Ore., March 13.—*Editor Forest and Stream:* There is a desire on the part of the majority of the members of the Multnomah Rod and Gun Club of this city to introduce the black bass (large and small-mouth) into the waters of the Willamette River near this city, and at a point about the mouth of the Clackamas River. Before making any positive move in the matter we would like to hear impartial views from your readers as regards the advisability of introducing black bass into a stream inhabited by trout, also as to the depth of water they inhabit, and such other information as will aid us in arriving at a decision in the matter. The main object is to obtain a game and food fish that will admit of us enjoying a day's outing within an hour's trip of the city.

D. L. WILLIAMS.

[We desire to have the opinion of our readers on this important subject, and we expect to find that there is great diversity of judgment as to the advisability of introducing black bass into trout waters. The only successful instance of the kind known to us is found in Sunapee Lake, New Hampshire, a large body of water receiving tributaries in which trout spawn, and even in Sunapee there is a difference of opinion as to the wisdom of planting black bass.]

The basses are among the most predaceous of fresh-water fishes. They fear nothing, and devour even their own young in large numbers. A 4in. bass will eat his brethren of 3in. at the rate of two or three daily when on the feed. The Clackamas with its great schools of young salmon and trout would suit the bass wonderfully well, but the result to be expected would be the extermination of the weaker fish.

We do not advise the introduction of black bass in the Clackamas. It would be far better to plant them in lakes or ponds and streams which contain none of the salmon family, or, if necessary, to construct artificial ponds and rear the large-mouthed kind for the benefit of angling. This is practicable and involves no risk of destroying the noblest of the fresh-water fishes. Ponds can be built without much expense, and the rearing of the fish is not a costly undertaking. This subject has been very fully discussed in recent reports of the Fish Commissioners of Maine and New Hampshire.]

A Gamy Weakfish.

THAT chunky little white bass out in White Lake, Mich., may have had a good time towing that \$26 rig down to the outlet three miles and a half, as related in the April 6 issue; but the weakfish, of which a gentleman of the Teutonic persuasion told me over on Bedloe's Island last fall could give him long odds, both on time and distance and still beat him out of sight.

Three of us, strangers to each other, were whiling away the afternoon in sweet communion, for the bass left our blood-worms severely alone, and it came the turn of the jolly-faced son of Germany to speak. Said he:

"I had a yoonk vrent vot vis shoost marriet, unt v o day he goes by Brinness Pay mit a new rot unt a new reel unt eferydings new. Vell, so soon he vos get rigged oop unt he lay hees rot agross te boat so he lighd hees pipe, he gits sooch a shtrike vot dakes dot rot unt eferydings in te vorter unt he don'd see it some more. Vell, den he vos so mad he say no more he goes vishing; but he goes home by his vife unt he tells her: 'I vos tone. No more I goes vishing. Do-morrow vos Sunday. Vell, vere you vant go? Verefer you say you vant go, ve go by dot place.'"

"Unt she say: 'Vell, ve go by Gooney's Island.' So they go by Gooney's Island, unt he say: 'Vell, vot you vant do?' unt she say dey dakes leedle shvim. Den dey goes in der vorter unt she vos goot schvimmer unt she schvims right out. Boody soons he hear her say: Gome kervick mit dot boats! Somedings vos got me! unt he schvims out unt vetch her in.

"Den she say somedings vos all dangled oop mit her veet, unt dey vind vishline dere. Bulls oop dot vishline unt ovid gomes pig veakfish!

"Hi yah!" she say, 'dot's my vish. I getch me dot vish!'

"Holt on," he say, 've see vot ish on oder end of dees line.'

"Bulls leedle more, unt oop gomes hees fery same rot vot he lose by Brinness Pay yesterday! 'Py chimineddy,' he say, 'dot's my vish! I getch me dot vish by Brinness Pay yesterday!'

"Unt sure enough, fon Brinness Pay Saturday, all de vile by Gooney's Island Sunday." O.

JERSEY CITY, N. J.

The Onondaga Anglers.

THE regular monthly meeting of the Onondaga Anglers' Association last evening indicated a renewal of interest in the organization. Gen. D. H. Bruce, the recently elected president, was present and made an interesting talk on the prospects of the season. A considerable number of applications for membership were received and will be acted upon at the next meeting. The committee appointed to take charge of the prize contest for securing new members reported that four prizes had been obtained. First prize, a split-bamboo rod donated by Fred Devine of Utica; second prize, an automatic reel, given by the White & Ross Manufacturing Co. of Olean; third prize, a waterproof silk line, donated by the United States Net and Twine Company of New York, and the fourth prize, a set of trolling spoons, given by the Enterprise Manufacturing Company of Akron, O. The secretary was instructed to extend the thanks of the association to the donors. It was decided that the meetings of the association should in the future be held on the first Monday evening in the month instead of the first Thursday evening as heretofore. Congratulations of the association were extended to Dr. Kidd upon his success in pushing the celebrated Delmonico case to a successful conclusion. J. N. Babcock was selected to represent the club at the meeting of the executive committee of the State organization which meets at the Yates next Thursday.—*Syracuse (N. Y.) Herald.*

Aroostook Salmon.

CARIBOU, Me., April 2.—I send you to-day a snap shot of a salmon jumping at the dam on the Aroostook River in this village. Salmon were quite plenty here, but did not rise to the fly very well, only three being taken, two grise and one salmon 104lbs., which I had the good luck to land after three-quarters of an hour's struggle. Good judges say the Aroostook River is one of the best natural salmon rivers in the country.

BOSTON DOG SHOW.

ONE had only to drop into the Mechanics' Building any time on Friday to know that the show had been a success in nearly every respect. With an actual entry of 786 dogs in the building the show was almost a record one. While I have seen in several breeds better quality, notably the toy classes, which were very poorly represented, the show on the whole must be counted about the best the club has given. There seemed to be much better feeling among exhibitors and officers of the club, and it must be said that the latter gentlemen worked like beavers to please all and have the affair go through properly. The weather was capricious, but on the whole the attendance was well up to the average. The bench show committee consists of Messrs. E. Brooks, J. W. Newman, H. A. Harris, Geo. A. Fletcher and D. E. Loveland. On Messrs. Brooks, Fletcher and Loveland fell most of the executive work. The benching was the old wooden sort and anywhere else but in this building it would look out of place, but the floor space is so vast that the heavy boarding does not look so clumsy as it would in a smaller building. On the opening day there was a peculiar piny order that was very grateful; at the same time there was some dilatoriness in getting the work finished up. The fastenings for the dogs did not seem so secure as the Spratts arrangement, being the common staple and ring affair. Under Mr. Reed's supervision the building was kept clean and tidy, Sanitars being used. The rings were well served, considering the way the numbers ran, but judging progressed slowly and was not completed till Wednesday evening. Dr. Davidson had a difficult task, his classes being very heavy. It is only human to err, and if this veteran judge did leave out a dog here and there we must remember that his errors are infinitesimal compared to the good decisions he has made. Other judges did no better, some of the terrier and collie decisions being hard to understand and were freely commented upon. We saw more members of the N. E. K. C. taking an active interest in the show than formerly, and we are pleased that "Kennel Secrets" has been written, if only for the fact that it brought the genial Doctor more closely to the exhibitors, and he seemed to be just in his element. Another well known writer that seemed to enjoy himself was Mr. Wade, who was generally the center of a joking group. The luncheon and dinner given by the club was fully appreciated, and especially so as there were no speeches made. The club came out a little ahead, and for that they must feel thankful. But to turn to the dogs.

MASTIFFS (*Arthur Trickett, Judge*).—We have seen better displays in this breed at Boston, but still the entry that faced Mr. Trickett, though almost entirely local in make up, showed some pretty good individual specimens. Mr. Trickett, more familiarly known as "Arthur," made his first appearance as a judge of the breed that he was identified with so many years when Minting, Ilford Caution, Lady Coleus and the rest of them won the blue ribbons under his good generalship. We scarcely remember Mr. Trickett's first appearance in the ring, but imagine it was at Providence in 1887, when Minting and Lady Dorothy were first shown. For the past few years St. Bernards have, owing to Mr. Moore

ST. BERNARD EBORACUM.

Owned by Swiss Mountain Kennels, Germantown, Pa.

giving up mastiffs, claimed most of his attention, though he still keeps up an interest in the older breed, and we should say will be found a serviceable judge of both mastiffs and St. Bernards, a fact that dog show committees would do well to bear in mind. In challenge dogs, Merlin, as usual, occupies a solitary position, while the bitch class proved blank. In open dogs (7) first went to the New York winner, who is improving, his ears are large but his head well shaped, neither too short nor bulky, stands on good legs and while his body is well ribbed still he would do with more depth, that will come later. Ilford Caution II. is light in body, faulty behind and is beaten in forelegs and head by the others. Ingleside Beaufort, son of Black Prince, has a rather weak narrow head and his straightness of hocks is also much against his chances. Bruce, fourth, is a bit too long in head, muzzle plain, ears faultily carried, otherwise he is pretty fair. In bitches (6) the whole lot were badly fronted, first went to Gerda II., whose bad pasterns and feet are her worst features as she has a nice head, good strong body and plenty of quality. Eider, second, has a rather narrow head, though well formed if muzzle was deeper and squarer, nice body, faulty forelegs. Ella, third, the winner last year, is small sized, head the same and not volume enough, light in bone and body. Lady Beatrice, fourth, has a poor front, pastern and bone not straight, and has a lump over eye, plain head but good body and hind parts. On the whole not a very good lot. Puppies,

Lady Diana scored, though I think Emperor Maximilian might have changed places, better head, though his muzzle is extremely short, but very square and good depth, in bone and body he also excels, but is straight behind, which perhaps accounted for the decision, neither have good tails. Emperor William, vhc., should have more breadth in skull and muzzle and his body needs time, his pasterns and feet are also defective. Dr. Lougest won the kennel prize and Ingleside Minting beat Merlin and this he can do in head, bone and hindlegs.

ST. BERNARDS (*Jas. E. Greene, Judge*).—This was also Mr. Greene's first appearance in the ring and he acquitted himself with all the aplomb of a veteran. While his decisions may be accounted for and in the main were good, he was a little too heroic in upsetting several previous decisions, decisions which, owing to the importance of the dogs in the kennel world, attracted much attention and some adverse criticisms. In challenge dogs Kingston Regent, of course, showed up to make the kennel, for it was a foregone conclusion his mate, Sir Bedivere, would win. The latter was scarcely in the bloom that he was at Washington, a bare patch on his back did not enhance the appearance of his coat. Princess Florence trotted in alone for the next blue ribbon, and, we regret to say, Her Highness was looking far from herself. Her coat needs attention and she did not stand on her legs as we have seen her do. Open dogs (18) had some good ones among

MASTIFF MINNIE BEAUFORT.

First at Detroit and Indianapolis Shows, 1893.
Owned by Dr. L. Younghusband, Detroit, Mich.

them; in fact, there were four better than seen at any show since New York. That capital little dog Altoner, to the surprise of most of us, won the blue. That Altoner is a good dog and will make a better one we have repeatedly asserted, and if the judge is irreconcilably opposed to legs that are not as they should be, why the decision may be accounted for. Still, legs are not every part of a St. Bernard; heads are just as difficult to raise, and depth of body is another point that is most desirable. Marvel does not stand true on one leg and is a little out with the other. His hind-legs, too, are a bit straight, but no one can deny his claims to first when his grand head is felt, and his sturdy, deep frame and good coloring are characteristics that cannot be overlooked. True, Altoner is a better-legged dog all round, has excellent head and expression, but not nearly the depth and volume of the other; neither is he so well ribbed, and is shallow in body and not so well ribbed. Eboracum, third, I spoke of at Philadelphia. He is certainly improved and by fall will probably be a much better-coated dog. He loses to both those put over him in skull and muzzle; his front is excellent, but his hind legs are not bent in hocks sufficiently; still, he is a good dog. Marquis of Ripon runs him close and but for a little chorea would leave the question a very open one. He is a marvelously improved dog and was well shown. He has a good, massive head, well shaped, and with the dark facings and a little less loose skin would be hard to beat. Imperator, reserve, a son of Alton, has just a fair head, better skull than muzzle. He is flat-sided, feet come together and turn out and his hind legs are not above criticism. Gov. Russell, vhc., is a well-grown youngster that shows lots of quality. His color might be darker and he should be more bent in hocks. Sir Milo, hc., has a poor expression, lacking in blaze; light body, nice bone and front. Prince Draco, c., has a long, plain head, is nearly white in color and turns his feet out.

The bitch class (7) was scarcely so good, the winner proving to be our old friend, Lady Sneerwell, who beats the charming Florette, second, in depth of body, length and bone, and is a bigger bitch, with a more massive head, though not perhaps so correctly shaped or so good in expression as the other. Suffrona, third, is rather plain faced, not taking after her mother in this respect; not stop enough; her feet are not truly set, but she is a grand-bodied bitch, plenty of length and is good behind and in bone. Lady Elizabeth, fourth, was short of coat, good, straight bone in front, not a bad shaped head, but expression poor; would be improved with blaze; good body. Princess Saffron, reserve, is quite a nicely made bitch all round and could have been put over the last one without doing any harm. Countess Elizabeth, vhc., has a houndy sort of head, muzzle faulty, but nice body and bone. The puppies most of them had been removed from the show before we took our notes.

In smooths Melrose and Miss Alton again furnished the challenge winners, each being alone in its division. Open dogs did not fill up very well. Melrose King, of course, with his good head could not be denied. He is a bit faulty behind; excellent color and front. Alton, Jr., was out for the specials only and bided his time. The brindle Belisarius is known. He loses in head, expression, body and front to the winner, but is a trifle better behind. Marco II. shows a lot of coat, is faulty in muzzle and is a rather plain brindle dog. In bitches (2) the bitch Melrose Belle we spoke so well of at Baltimore, won nicely from Melrose Judith, a daughter of Sir Bedivere out of the renowned bitch. She is rather plain in head and shelly in body, and takes after the mother in color, fair bone, bit straight in hocks. Lady Alton was also reserved for specials. I thought Rex Bedivere the best of the two puppies, Cato not having so good a head as the other, though certainly Rex has the family dip in the back.

The two bitch pups, Lady Judith and Judith's Ruth, are only fair, and I like the second best, especially in head, better muzzle and stop, neither are good on legs and have the Judith dip in backs. The competition for the best kennel brought into prominence the argument as whether this prize should be given for best four, or four or more. The opinion seems to be general that the best four or certain number should constitute a kennel. In this instance there was little choice but to give the prize to Mr. Moore's team, he showing no less than ten to the New York St. Bernard Kennels' four, and as his stock is good, he naturally won. The award, however, that placed Lady Alton over Princess Florence we cannot indorse. Off in coat condition as the rough bitch is, still her massive head and great advantage in depth of muz-

zle, grand neck, shoulders, chest, nearly double depth of body, magnificent loin and quarters should surely offset any advantage the smooth bitch has in expression and legs. Lady Alton is not nearly so good in body, having the Judith dip behind the shoulder, where Florence is as strong as a house. Lady's coat is also against her as a smooth, and she stands back on pasterns, in fact many points can be advanced to show that the decision was all wrong.

GREAT DANES (*C. H. Mason, Judge*).—Not a very good show of these dogs, being one of the lightest entries of the season, the Cumberland Kennels having retired for the present. There were no challenge entries, and in the open (6) the Gloversville entry, a capital fronted dog, but straight in hocks and wretched tail, won; his skull is too round and full, and muzzle should be stronger, and he is also throaty; he beats Hepburn Hero in front, but the latter excels him in other points. Wenzel, third, is going off and looked light in body. That capital, well built bitch Hepburn Vera won with something to spare in the next class, Nora, second, being beaten in front, head and substance. Owl's Nest Topsy, third, was not in her stall.

BLOODHOUNDS (*John Davidson, Judge*).—Belhus had little difficulty in accounting for Bruno, whose rather plain head, not enough wrinkle nor depth and length of face, is sufficient to account for his secondary position; he has good legs and leather. Bennison had a walk over in bitches, Nellie Bly having died since she was entered.

DEERHOUNDS (*C. H. Mason, Judge*).—Thanks to Mr. Thayer, these classes were redeemed from oblivion by the entry from the Hillside Kennels. Most of them were seen at New York. Robber Chieftain, in the challenge dogs, was placed over Warrior, a decision not generally indorsed, the older dog being out of coat and beaten in body and ribs by Warrior. The decision that placed Romola over Theodora cannot be cavilled at. In open dogs, Hillside Raven, a well-made, powerful animal, scored over Argyle in head and ribs. Hillside Sylvia and Ruth are both well known in their division. Hillside Feodora came in for the yellow ribbon. The solitary puppy was thought not to be good enough for notice.

GREYHOUNDS (*C. H. Mason, Judge*).—The entries were small, but choice. Gem of the Season and Bestwood Daisy supplied the challenge winners. In dogs a capital made bound in Honor Bright scored well over Heumore King in loin, front, quarters and ribs. Watcher was not noticed. The bitch class (5) was filled by well-known animals. Southern Beauty, the winner, is a beautiful bitch, with capital head, neck and arch of loin, perhaps sloping a trifle too much, good legs and feet, would perhaps do with a little more rib; a capital bitch, standing over a lot of ground. Wild Rose loses to her very much in loin, being flat there. Reserve, Miss Dollar III., she should stand stronger on pasterns and would be improved by more spring of rib. The puppies were indifferent, second being withheld. Mr. Purbeck scooped the kennel prize, and considering the extensive journeyings of the kennel lately, they were very creditably shown.

RUSSIAN WOLFHOUSES (*C. H. Mason, Judge*).—The Seacroft Kennels had another hog killing, or should we say wolf killing, for they owned the classes and won everything with the dogs that have been round the circuit. Sorvanets was absent. The dogs were well shown, Turner having taken good care of them on the circuit. Mr. Huntington's flock was not entered.

CHESAPEAKE BAY DOGS (*John Davidson, Judge*).—Boston always counts on an entry or two and this time five well-known animals took part in the competition. Cleveland, the winner last year, repeated the performance, Deacon winning second, though I liked the latter's head better. At the same time there is little to go upon in criticising awards in these dogs. Type is nearly as much astray as in that other American institution the Boston terrier. Old Rump took third; he begins to show the sere and yellow. Rump was the only entry in bitches.

POINTERS (*John Davidson, Judge*).—Many of the best dogs seen out this year were on hand and the classes were well filled. The exhibitors, however, know less than they did before, for many of the awards upset previous rulings. No one kicked when Duke of Kent II. scored over old Pontiac in challenge heavy dogs and Revelation at last won for Mr. La Rue before changing ownership. In open dogs (16) a previous winner, Duke of Dexter, won over Robert S., who

RUSSIAN WOLFHOOUND GROUBIAN.

Winner of first, Washington, 1893.

Owned by C. Stedman Hanks, Boston, Mass.

stands wide in front, with feet together, out at elbow one should say, bit cheeky and plain in muzzle. Darego, third, is heavy in front, plain in muzzle and full in skull, well supplied with bone and nicely turned quarters. Grandee, fourth, would have a better head if he had more stop, good body and bone. Hylas of Naso, reserve, led several vhc. dogs; Auctioneer, for instance, has a heavy, coarse front, is back on pasterns, but well built from shoulder back. Bang is cut out too much before the eye and is leggy, though good in bone with nice ears. Devon Sancho could be better in shoulders and head. Ridgeview Pamie, with all the honors of his New York victory fresh in his memory, was put aside with an hc.; this was surely wrong, his place was near the top, if not on the first rung, he can beat Dexter in front and behind. A nice field dog, Mainpring, was given c., but deserved more. In bitches (9) Dr. Haire's new bitch Devon Fan scored; diligent search failed to find her. The benching of these sporting dogs was simply execrable and a disgrace to a well-arranged dog show; the numbers might just as well have been put in a hat and nailed up as they were drawn out. Lass of Kippen took second; she was fully described at Pawtucket show. Dame Bang, third, deserved her position, as she scores well over Lady Tammany in head and expression. Naso's Belle, vhc., has heavy, straight shoulders and would have a better head if squarer in muzzle. Peggie, in the same division, was shown fat; she could do with more bone, her hocks being weak, she is also

light in muzzle and short-necked. The others call for no mention.

In light-weight challenge dogs Launcelot scored once more, Ossining being his competitor; he is beaten in substance behind shoulders; neither have good heads nor true forelegs. Champion Fan N. was absent in bitches. In light-weight dogs last year's winner, Arthur, properly repeated his victory, his nearest competitor being Ridgeview Faust, well known now, and the Pawtucket winner Dash A. came next. Skip, fourth, is a black with a mean expression and none too well built in body; loin flat. Ridgeview Donald, reserve, is a much better animal; he is faulty before the eye and could be better in front. Sike, vhc., is light in body and dish-faced. Ned of Beaufort, vhc., has a coarse skull and is not deep enough in muzzle; he also should have more substance throughout, especially in body. Duke's Joe, hc., should not have such a wide front, and at the same time his body is shallow and light in loin. Turning to light-weight bitches we find Wild Lily, the winner last year, in the same position; she is rather light in muzzle but is a stylish, well-formed light-weight. Bloom, second, is a more typical bitch, I think, and has a better head and more substance. Devon Pearl, another new one, a daughter of Devon Fan, loses to the other in head and front. Queen Nell, fourth, in beautiful form, would do with more stop; head rather plain and ears carried wide. Ossining's Flush, reserve, is not deep enough in chest and has a flat, plain head. Dolly is also rather flat-faced. Merry Lad I could not find. Westminster Blanche, hc., has a snipy, weak muzzle and ears are badly carried; her legs are the best part. A likely looking puppy is Duke of Pontiac, who won in dog pups; he has a little too much stop, but good legs, feet and body and should make a pretty good one. In bitches another of Geo. Lovell's breeding took the "Spratts;" she is of the same litter as the dog pup, but not so good in muzzle as the dog, but is equally well built behind that. Strebor Augusta, second, has a dishd, light muzzle, and is not very good in front. We were pleased to see Mr. Lovell win the kennel prize, but we fail to see where Duke of Dexter beats either Arthur or Duke of Kent, losing to both in several points.

ENGLISH SETTERS (John Davidson, Judge).—Although the quality was not as good as in some former years, the classes were splendidly filled by a lot of very useful setters. In this breed the New England Field Trial Club came out strong, and benching their dogs together made a very imposing array. The handsome Kent II. was alone in challenge class. Old champion Paul Gladstone put in an appearance, but not to take part in the fun. The old dog really looked well, and though he goes a bit dicky behind now, he still looks as if he could raise a good gallop. He is nearly 11 years old, and has been an active life. Our old favorite, Blue Nell, beat Donna Juanita in challenge bitches; better in head. The dog-class was a scorcher. No less than 33 trailed round the ring. A judge would need be infallible to judge this lot without making a slip or two. First went to the New York winner, Sheldon, followed by the Earl, who droops in quarters; is otherwise well shaped; brow perhaps a little too prominent. Handsome Prince L., a frequent winner lately, took third from Count Noble's Boy, fourth. He is a slackly made dog behind the shoulder, is a bit out at elbows and coarse in skull. Norman, reserve, has quite a nice head, but is not sprung enough in ribs; nicely made dog otherwise. Domingo could do no better than vhc. his time. He is faulty before the eye and has a narrow muzzle. His feet and stifles are not above suspicion. Don Alonzo, from the same kennel, was also vhc., and another well known dog, Glendon, was also in the same class, and so was the well known Reverdy, who is a little too coarse and big for ordinary usage. Bow Bondhu gets her tail too far up; a strongly made bitch, though she is back on her pasterns. Tennessee Vandal, hc., is fairly well formed; faulty front and muzzle. Kent III., also hc., should fill out into a nice one, as he possesses a sweet expression and well formed head. Sam of Darlington is coarse in skull and back on pasterns. Real English, the winner of first, New York, was left out of it completely; he does not walk quite strongly behind, still his cure was a wonderful one, and John Brett deserves every praise for his patience, the dog is of excellent type and what we require and should certainly have been well up. In bitches (23) the winner proved to be Victress Lowellyn again. Maid Marion, a pup we saw last summer, took second, lots of quality, only needs time in body, head excellent and of correct type, good legs and feet. Blue Jennie, third, is small, plain muzzle, faulty action, is a sort of orange tan, blue belton. Alice Gray, fourth, a capably made bitch, rather flat faced, needs more stop, is a very pretty bitch. Jessie Noble II., reserve, was a winner at Pawtucket show. A lot of vhc. dogs followed, neither of which would do for farm company. Queen Kent has a heavy skull, Star has a flat, plain face and quarters droop; Our Pet is a nicely made bitch all round, shown fat, she could be improved in muzzle a little and hind action. Doretta, hc., is narrow in body and has a plain, weak muzzle. Fanny Gladstone is a nicely formed bitch, barring want of a little more stop and bend of stifle. Prima Donna, one of our best bitches on the bench to-day, was entirely overlooked, getting nothing. Some good puppies were shown. Dash Kent won in dogs, and partakes a good deal of his sire's characteristics, especially in head. In bitches Maid Marion won. Roscroft Kennels took the kennel prize.

IRISH SETTERS (John Davidson, Judge).—These classes were well filled, too, and many of the well-known faces seen at the shows this spring were on hand to greet us again. The benching of these dogs was enough to exasperate a saint, never name a kennel editor. The Oak Grove Kennels were in one part of the building, Seminole Kennels in another, and then down another row altogether went the rest of the parade. This should all be stopped. Champion Tim scored another blue ribbon and a medal in challenge dogs, and Kildare followed, beating Seminole this time. The week previous the positions were reversed. There were seven dogs out for this medal. In challenge bitches old Laura B. scored again, downing her hitherto successful rival, Norna. In open dogs Young Tim scored over Montank, Jr., from the same kennel. This is a bit of a reversal. I like Montank's head better, especially skull. Kildare Elcho, third, is faulty in loin and quarters and muzzle not square enough. Pemberton, fourth, is a good mover, feet turn out, eye light, but head well formed; rich color. Mack D., reserve, has a coarse head and is too leggy and rather flat-sided. Glen Jarvis, vhc., is well known, leggy and large size. Henmore Shamrock was absent. In open bitches (11) a number of well-known animals took part. The Marchioness, a frequent winner lately, took premier honors, Maid of Borstal coming next; a nicely-formed bitch, faulty in muzzle. Shandon Belle, third, has a well-shaped head, feet turn out a little, body good, excellent behind; a very pretty bitch that might well have been higher up. Rose Morton, fourth, we have commented on frequently. She needs more stop. Delphine, reserve, is also an old acquaintance and deserved her position; and so did another well-known bitch, Alice Kent; faulty in muzzle and would be improved with more spring of rib. Claremont Heather, hc., and Molly Glendyne II., c., brought up the rear. Quite a good class and very even. Quincy, the winning dog pup, is a bit dumpy in skull yet, King Sure, second, is too fine in muzzle and ears flat high. A neat little bitch in Jessequin secured the bitch prize. She stands very narrow in front, is light throughout yet. Miss Inchiquin, second, is not quite straight in front. Oak Grove Kennels, by force of number, wrested the kennel prize.

GORDON SETTERS (John Davidson, Judge).—It struck one very forcibly that there was something wrong in this breed when we did not see the familiar faces of Ben and Ivanhoe, Leo and the Duchess; the milk in the coconut flowed when

I saw that medals, not coin, were the attractions in the challenge classes. This let Rexmont and Becky Sharp in for challenge wins. In open dogs that well-made one Ranger B. was again placed over Count Noble; Dixey, third, having a rather plain head and stary eye, and is dark in tan; otherwise well made. Archibald, fourth, is well known now. Gordon Grouse, reserve, is too full in skull, nice muzzle and tan; coat should be flatter. In bitches, Fan, the winner at Pawtucket, beats Lady Maud in skull and muzzle. Minnie T. has smutty tan; should have more stop; is well marked on legs and feet. Queen Noble, fourth, is light in tan, stands on good legs, but should have more rib. Ven, reserve, is slack in back, and if she had more stop would have a good head. Juliette, vhc., is plain in muzzle, heavy in front and wavy-coated. Fairmont, spoken of before, was the winning dog pup, but the judge thought second quite good enough for the bitch pup Fairmount. C. T. Brownell, we were pleased to see, won the kennel prize. This breeder sticks to his Gordons year in and year out and is one of our oldest exhibitors and breeders.

BEAGLES (John Davidson, Judge).—We believe that the entry here is a record one, or at any rate equals Mr. Dufferin's large entry a couple of years ago. We wish we could say more for the quality, however; it was very mixed, and there seems to be no true conception of type, especially in body, so many of them run long, and as sure as they do you generally get the head coarse and long. Bassets and beagles, though both commence with a B, are as wide apart in type as dogs can well be. Breeders should get rid of their straight-legged bassets; this is nearly what some of them are. In challenge dogs, Frank Forest, looking very well, scored over Racer, Jr., especially behind. Roy K. absent. In bitches, old Lou, getting very cranky, just won on her shape, and should now be retired. Emeline, good bitch that she is, though she loses a little in head, can beat the old bitch in other parts, and especially in action.

In the open dogs (9) the standard was used freely and many dogs had to walk the plank and out. Among others Pulbro Crafty, who won under the same judge last year, had to forego competition, on account of his height, his kennel mate Thunderer, however, pulled (literally) through and eventually won; he is a plain sort. Diamond Forest, second, is too long cast, not rib enough, good bone and front. Puzzle, third, is big and coarse, fair shaped head, is too big. Jerry, reserve, is also coarse in head and is not very typical. Rambler II., vhc., well deserved letters, as his head is fairly good, but his feet turn out, however. In bitches (10) the competition was keener. Oracle, the winner, is a little slack in back, but excellent in front and shape of body and coat, skull is a trifle broad and heavy. Lufra, from the same kennel, second, should be deeper in muzzle, is long in body, nice skull and forepart. Gypsy A. is well known, big, long body. Prudence, reserve, another of the same sort that we don't want in the breed, they are not right type and should not be shown. Chesterford Beauty, formerly Minnehaha, was thought no better of than at Baltimore. We cannot see where any one can put this bitch alongside of Lonely for instance, her body is long enough and her legs are bad and action worse; she has a good type of head and that is all.

In the smaller dogs Joe H. proved the winner. He beats Paderewski, second, in front. Clyde, third, is wrong at both ends as a show dog, but he takes no dust in the field. Laddie, vhc., is pinched in muzzle, bad front, narrow, long body; is just one of that weedy type that the Covert Kennels want to eradicate from their stock. They are not right and are doing harm. In bitches Lonely could not be denied. She has kept herself wonderfully well and is an object lesson for breeders to pattern after. Maida, second, has a nice head and expression, light loin and quarters, but a very pretty bitch, with lots of quality. Topsy S., third, is well known. She has gone off a little from earlier form. Spot Reed, reserve, is a nice stamp, and were she straighter in front and shorter in muzzle, would dust the best of them. Fanny Reed, well known, took vhc. here. It was a little warm for her in this company. Norah K., vhc., is a bit out in front and long in body; head should be shorter, too. Queen Racer deserved her two letters. The puppies showed nothing very startling. Start, the winning dog, is not straight in front and rather long, and his skull needs toning down. Rockland Kennels took the kennel prizes.

DACHSHUNDS (C. H. Mason, Judge).—Zulu II. and Janet furnished the challenge winners. Janet looked much better than at New York. In open class, two capital young dogs with outrageous names, Plethysamus and Icthyosamus, were shown by Mr. Manice. They are young yet, but give promise of being more than good; they are sons of Pterodactyl. In bitches, Princess beats Linda in length of head, body, skin and intense type. The puppies were the same as in open classes, the pup whose name begins with P winning the \$250 challenge cup for best American-bred.

BASSETS (C. H. Mason, Judge).—A nice lot of these. Rowton Wag, the winner, beats in depth and length of head, better in muzzle than second, Minetta, and better body. Primrose Juggler showed more type and quality and better head and leather than the lot; he is deeper in chest and better ribbed too. Folly is fine in muzzle, narrow-chested, and is faulty behind.

FOXHOUNDS (John Davidson, Judge).—Most of them were half American and English in type and were of all sorts. Prince proved the winner in dogs, beating Tom, second, especially behind and in straightness of pasterns and in ribs. Brave's Boy has not depth enough of chest; was very throaty. The others need no comment. Waltham Jewel and Elite I could not find. If shown they can beat many of those mentioned. In bitches Judy is a nice-headed bitch, good length, ribs and neck and legs and feet. Fanny, second, is a little heavy in shoulders, stands back on pasterns and has a plain, roman-nosed head.

COLLIES (C. H. Mason, Judge).—The turn out was a good one, and our best were to be seen. Competition was keen, and hearts were sore thereafter. In challenge dogs Roslyn Wilkes, getting cheeky, won over The Squire, who loses in skull, but I think has an advantage in substance, coat and body. In the absence of Flurry II. old Cora II. picked up another blue ribbon, this bitch is a most lucky one. The dog class (18) was a warm lot. After the sorting the issue for first place lay between Wellesbourne Charlie and Goldust, the former won. While Goldust has the cleaner, longer head, he must give way to Charlie in expression and eye, then in front he is not so straight, and comparing bodies Charlie has a good deal of advantage in depth and substance, behind he is better, being more bent in hooks, and in carriage of stern there is no comparison. With this in his favor, the judge had no choice in the matter. Goldust needs showing in good coat and flesh, as we are informed he was when shown at Liverpool, where he scored so heavily.

Renown, third, is outclassed with these two, and had Chesterford Hero and Marvel been in better shape they should have had his place, either of them, they having wonderful coats, longest and densest in the show or that we have seen for some time, heads good, showing lots of quality, shy shovers, but when matured will have to be reckoned with. I like Marvel the better of the two. Scotson, vhc., thick in head, but a Dublin Scot coat and appearance. The others need no particular mention. In bitches first went to Gypsy Maid, who is too short from ear to eye. Ormskirk Sisie, second, is full in skull and not good on pasterns. Highland Floss has a better head than either and were she in better coat could beat them well. Chrissy, vhc., is well-known and Bertha II., vhc., is a little round and full in skull, short of coat. Reserve went to Donna, of nice quality, skull a little wide, but excellent front and dense coat. Mother Shipton

was the best of the h.c. division and I thought hardly treated, as her expression is very pleasing, she has a good coat, nice texture, good ears, but is going a bit in pasterns. Gypsy Maid was the best puppy shown. Seminole Kennels took the kennel prize and Wellesbourne Charlie the "president's cup."

POODLES (C. H. Mason, Judge).—Strongest show of these smart customers seen out for some time. There is a growing interest in them and the breed is quite worthy of more attention than it has had heretofore. In open French dogs Milo won from Poo-Bah, who is a little mixed in coat, good loin, beaten in head by the other. Sambo, third, has a nice coat, a little out of condition, just over, good head. In bitches Chloe, first, is well known, and so is Dinah, second. Bellone, third, was in whelp; she is a little deficient in muzzle. Frou Poodle, reserve, is woolly coated and not rib enough. In Russian poodles the well known Lion and Dexter competed, the latter entered wrongly, but transferred. They have been commented on and were placed as before. Mr. Trevor won the kennel prize and Mr. Hunnewell the brace prize for browns, a color that seemed to take well.

BULLDOGS (C. H. Mason, Judge).—The entry here was memorable for the first appearance of the crack, His Lordship, and he did not disappoint the admirers of the bulldog. Leonidas and Saleni furnished the challenge winners. Leonidas has gone off somewhat. In the dog class His Lordship had only Wal Hampton to beat, which he does in depth of muzzle, stop, skull and body and wonderfully good front, but the competition was made the occasion for a little fun, the judge stringing Frank Dole, who handled His Lordship, and James Mortimer, who held the rein over Hampton. It seemed to be a very tight go between them, and Dole turned very pale when the red ribbon was handed him, but the instant correction of the error brought the well known smile to Frank's face; still the shock was so great that he forgot to wink his *alter ego*. Rustic Sovereign, third, was well out of this little joke. Billy, vhc., has a fairly good head, straight at shoulder. Dr. Rush, vhc., big, coarse head and ear, not out enough in front, flat-sided. White Venn, a capably made bitch, was alone in her class. Her ears are large and fall over too much; capital forelegs and just enough out at shoulder; good layback, wrinkle, stop not deep enough, well broken up and plenty of loose skin. Puppies were not promising. Woodlawn Park Kennels won the kennel prize.

BOSTON TERRIERS (Dr. N. A. Knapp, Judge).—It is useless for us to go into this breed, the types of winners themselves were all mixed and the rest of the entries were of all shapes, sizes and noses. The "bully" type seemed to prevail and an unanswerable argument against the breed's admission to the A. K. C., for which that club is very much to blame, may be advanced from the fact that one of the B. T. judges puts a so called Boston terrier, Countess, which is a very good imitation of a bulldog, first, and we find that she comes honestly by her "mug," for her dam is a full blood bull bitch, sire a Boston terrier, grand sire a bulldog and grandam a bull bitch, and if the truth were known there are a lot of the so-called Boston terriers masquerading under the same false colors. Groton Tiger, first, in light weights, is as near the type they seem to want to get than anything else. Duke, a puppy winner, is an excellent imitation of a bull and was evidently in the wrong class, being better than the real bull pups shown.

PUGS (C. H. Mason, Judge).—Very poor entries. Seminole Dixie, poor fellow, was passed over, and Midget beat Nellie Bly in head, ear and body. Ivy Boy, first in dogs, beats Tip Top in front, bone, muzzle and body, though second winner has best skull, wrinkle and ear. The bitch and puppy classes were drawn blank.

TOY SPANIELS (C. H. Mason, Judge).—The King Charles spaniels were not conspicuous in quality. Romeo, the winner, beats Laurietta in muzzle, good coat, tan and action; the bitch is a nice headed little thing in excellent coat and condition. Cockney Charlie, third, won here last year, he is not high enough in skull, but has a good short deep muzzle. Little Lady was the only Blenheim shown; she is a trifle high on leg, but is well formed and had she a deeper stop would have a capital head. Two inferior Japanese spaniels were shown. In miscellaneous heavy-weights a nice typical Newfoundland in body and coat, won; he is rather long and light in head. A ram-looking Chow Chow got second; somebody called it a buff Cochon. The selling class contained a little of everything and four firsts were given. H. W. L.

(Special Report).

SPANIELS (C. H. Mason, Judge).—Field Spaniels—Newton Abbot Laddie was the only entry in challenge dogs and Bridford Ruby the same in corresponding bitch class. Both were in bad condition. In open dogs, Brush was first, with Otto Obo, transferred from the open cocker dog class, second. The last-named has a better head than the winner, cleaner before the eye, but loses in body, coat and field spaniel character. Both have fairly good legs and feet and move well. In open bitches, Rosedale Bess won easily from Dainty. The former is well known, the latter does not want to be. In field spaniels, livers, Mount Vernon Prince, a very moderate specimen, was alone and took the ribbon. In any other color, Jock was the only entry, and the prize was rightly withheld.

Cocker spaniels, challenge dogs, two entries, Fascination and Middy. The former won. If the latter keeps on improving it will be a close thing should they meet at the fall shows. Challenge bitches, three entries, Black Duchess winning. She showed more type and quality than Amazement or I Say. If shown in first-rate condition, with her nice head and good body, it will take a good one to beat her. In open dogs, first went to Duke Grant, with second to Donovan, transferred from the any other color class, and Rex T. third. The winner, although not a good one, shows quite some quality; his fault being a general coarseness. He stands on good legs and feet, and beats Donovan in head and body. The latter won handily over Rex T., whose good condition no doubt put him over Duke Obo, reserve. I liked Brantford Jet for the vhc. Although a wreck of his former self, he beat Smike, vhc., in head and body. Both are not quite right on legs and feet. In open bitch class, Miss Chip won well in hand from Lady Pete, second, with Carleton Cleo third, Woodstock Dora reserve. The winner is well known and is improving. She beat Lady Pete in head, body and coat. Both have very fair legs and feet. Carleton Cleo, third, was closely pressed by Woodstock Dora, whose condition, however, was not of the best, and no doubt told against her.

In any other color dogs Bim won, with Othello second and Cherry Punch third. It was a close thing between these three, and looking at them on their benches I liked Cherry Punch best, Othello second and Bim third. In corresponding bitch class Mary Queen of Scots was alone. She wins easiest when there is no competition. In puppies Tess won. She seems to be going off a little in head and in front, and will require some nursing to keep her right. She won with plenty to spare from Mona, who lost to her in body and coat. Neither are right in front. Juanita, reserve, seemed to me to have been badly treated when looking at them on the bench, but on taking her down I fully agree with the way Mr. Mason placed the class. Jack of Clubs, unnoticed, might have had a card.

Clumber Spaniels.—Prince Karl, the only entry, did not show enough Clumber to satisfy the judge, and he withheld the blue and awarded the red. I do not blame him.

In field spaniel specials Mr. Keesbey won the Oldham cup with Rosedale Bess. This was no doubt owing to his other entry, Bridford Ruby, having a sore foot. She could not walk round the ring. George Bell won the kennel and brace prizes for cockers. Mr. Mason handled the spaniel classes in

his usual manner, and seemed to give general satisfaction. It is a treat to see such a good spaniel entry at Boston.

EMO.

(Special Report by the Judge.)

BULL-TERRIERS (*T. S. Bellin, Judge*).—Challenge dogs over 30lbs. were drawn blank. Challenge bitches over 30lbs., first awarded to Enterprise, who wins in condition, skull, face, body, bone, legs and feet. Dogs 30lbs. and over, Young Marquis first; this dog wants length of jaw; in neck, shoulders, ribs, loin, quarters, bone, legs and feet he is a dog much above the average, still slightly wanting in quality. Second, Diamond King, here showed himself badly, acting in the ring more like a shy puppy; he is not as clean in head as formerly, skull fair, good eye and jaw, legs, bone and body; if anything a little long in back; a dog that still will do some winning. Third, Prince Gully, well beaten by the winner. Bitches 30lbs. and over, British Queen, first, beats Flirt, the second prize winner, in size, jaw, skull, body, bone, legs and feet. Challenge dogs and bitches under 30lbs., Dusty Miller, first, could be improved in skull and flatness of cheek; fair eye and jaw, also outline of body, good loin, fairly good quarters, legs and feet. Marguerite, the other entry, loses so much in eye and in general build and body is far too heavy and cloddy for her size. Open class dogs under 30lbs., third to Autocrat Victor; only fair and others still more moderate. Bitches under 30lbs., first, Mermaid; she is fair in skull, jaw and eye, good ribs and loin, moderate in legs and feet. Puppies, first to Mermaid, well in front of White Wonder II., second.

FOX-TERRIERS (*T. S. Bellin, Judge*).—Challenge smooth dogs had an entry of four, Starden's King, Ripon Stormer, Raffie and Ducky Trap, the latter was absent. Starden's King won first, shown a little too fat. This dog is improved in quality since last year, and is not going coarse, as many expected; he beats Stormer, reserve, in skull, eye, jaw power and leanness of cheek, also set on of ears, is also good in ribs, level in back, powerful in loin and quarters, his hocks should be a little more bent, in lay of shoulders, set on of forelegs, roundness of bone and best of feet, this is a dog that wants a lot of beating when shown in hard condition. Stormer shows cheek enough, good jaw, may be flatter in skull, carriage of ear wide, good bone, nice neck, ribs and loin. Raffie I thought not looking his best, still a nice little terrier, but do not like his hindquarters. In challenge bitches first went to Miss Dollar, looking better than at New York, a trifle heavier in condition, rather weak in jaw, very gay in carriage and now quite a good coat, right in skull, slightly staring in eye, fair ears, good in neck, shoulders, legs and feet, with nice depth of chest, right in back, quarters and hocks, her carriage and "gas" will always assist her. Donna, reserve, whose type all round I like better, but to-day she was not looking herself at all, seemed quite seedy and carried quite a faded look, which, I trust, is only temporary. Grouse II. is gone heavy in head, wide in chest and too thick set in body to win in this company. Age will tell with all of us.

Open dogs, first, Warren Tip Top; this dog shows quality in head, good skull, cheeks and jaw, right in eye, nice ears, well carried, perhaps a little short in neck, well sprung ribs, good loin and quarters, level in back, hocks well under him; a good youngster, shown a little too heavy in condition. He wants showing lighter, which will give him liberty and leanness in shoulder, good in coat. Second, to Beverwyck Punster, fair jaw, nice eye, slightly full in skull and improving in expression, nice ears, lean neck set into sloping shoulders, straight in front, good feet, little light at pastern, depth of chest and spring of ribs good, fair hindquarters, nice set on of tail, improving in coat. Third to Raby Pallis, a long-headed dog, slightly "bitchified" in face, wants keenness in expression, good skull, only fair in eye, ears quite large enough, right in neck, shoulder, front and legs, moderate in feet, good back, ribs and loin, plenty of coat that might be a trifle harsher; a very gay terrier and makes the most of himself. Fourth, Raby Trigger, a little plain in head and expression, more than fair in ears, neck, shoulders, body, legs and feet, too soft in coat; Warren Layman, beaten in jaw, bone, still a very nice terrier, with good front legs and feet. Open bitches, first, Dominica, much too heavy in flesh, which spoiled her good outline and made her look more cloddy than she really is; a grand terrier when shown lighter and harder, wants beating in head, jaw and eye, intense expression, best of ears, bone, legs and feet, nice neck, good shoulders, right in ribs and body, back and thigh, stern well set; a good shower and looks a worker. Second, Warren Duty, beaten in length of head and expression; this is a genuine terrier, in neck, shoulders, ribs, quarters and activity, very fair coat, good legs and feet. Third to Ripon Regina, fair head, eye, jaw and ears, getting heavier in front, at times stands wide, only fair in legs and feet, body and outline good, fair in coat and actions. Fourth, May Storm, nice in size and little behind the third prize bitch. Dawson, full of style, very straight, a showy bitch wanting in coat, body and bone, properly mated should breed winners.

Wire-haired, challenge dogs. First, St. Broom, much improved since New York, both in condition and coat, now a real good terrier fair in head, good jaw, might be smaller and darker in eye, ears may be carried closer, right in neck, shoulders, legs and feet, possibly a little wanting in bone, and is high enough on the legs, good body, well sprung rib, nice loin and thighs, trifle straight in hocks, good stern, very fair coat, can even be improved, good action and best of showers, to this dog was awarded reserve, to Starden's King for the best fox-terrier in show. Challenge bitches.—First, Sister Pattern showing age but still a rare old pattern, best of skull, jaw, eye and expression, well shaped ears, good neck, ribs, legs and feet, well sprung ribs, in body and loin not looking so well as at New York, being shown heavy in pup; this bitch has the correct wire-haired jacket, hard and dense, free from wool and openness. Open class dogs.—First, Oakleigh Bruiser, not improved since New York, looked here dull and sleepy, and in hind action is faulty, in body and outline he is good, fair in head and ears but wants expression, his lay of coat shows he is a bit of a creole, being too close, still fair in texture, a handsome terrier and a valuable stud dog. Second, Dandy Jack, good head but wanting in expression, fair in legs, feet and coat, right in size and outline, not the best of quarters, to-day looking very well and deserved his position. Third, St. Brittle, a nice little terrier, wanting in jaw power and expression, fair in shoulders, body, legs and feet, not hard in jacket. Open bitches.—First, Jess Frost, little thick in cheek and none too long in jaw, fair eye and ears, after this she scores in neck, front, bone, feet, good ribs, body, loin, thighs and hocks; her coat is extra good in lay and texture, a wire-hair, not a poodle. Second, Suffolk Tassel, good skull, fair jaw, eye and expression, not the best of ear carriage; in shoulders, legs and feet more than fair, nice body, little light of bone, coat should be harder, a quality one, that will still be in the money. Sister Nettle, third, much improved since New York, was well beaten by the winners but deserved her position. Sister Mop is none too long in head, a little large in ear, soft in coat, nice in size, front, bone, legs and feet.

Smooth puppies, dogs, first, Warren Layman; second, Beverwyck Boy, a nice headed dog, fair in eye and ears, not improving in shoulders and a little long cast; good in bone, legs and feet, but a bad shower; third, Hillside Pitcher, beaten in head and ears, but wins in front and lay of shoulders, also loses in loin. Hillside Royal may some day beat the winner in this class; at present is high on leg, light in body and long enough in back. Time will no doubt do much for him. Bitch puppies, first, one of Mr. Thayer's, a nice all round youngster, who beats Seacroft Myrtle in bone, type and expression. Wire-haired puppies.—First, Ruth, a fair seven months' puppy, at present promising in head, shoulders, coat, character, legs and feet, with luck should make a

fair one; second, St. Brittle, previously mentioned. Others in class need not be described.

DANDIE DINMONT TERRIERS (*T. S. Bellin, Judge*).—First, challenge class, King of the Heather, a good old sort of the right type, not improving in head. Open dogs, first, Amphion, a dog with a good head, punishing jaw, good coat, length of body and action, easily beating Laddie, second, in head and length; Sir Robert, with a poodle coat, won third for lack of competition. Open bitches, first, Ainsty Daisy, beats Heather Peggy II. in coat, head, bone and type.

SCOTCH TERRIERS (*T. S. Bellin, Judge*).—First, Kilroy, a grand head, eye, ears and expression, fair legs and feet, good in body, bone and jacket; second, Kilcree, beaten in head; in other points close up. Three was absent. Open bitches, first, Wankie Diana, a good youngster, excellent in head and ears, also expression, only wanting time to mature; second, Culblean, good in head, but here beaten in that point by the winner; the second scores in body, and as may be expected from her age, in texture and coat.

IRISH TERRIERS (*T. S. Bellin, Judge*).—Challenge class, first, Jackanapes, shown in good form; improves in skull, good jaw, ears, neck, shoulders, legs and feet; right in ribs, loin and quarters; a free mover; a good jacket, beating Boxer IV. in eye and head. Challenge bitches, first, Dunmurry; nice skull, eye and jaw; fair shoulders, wanting in bone; fairly good legs and feet; well ribbed body; good loin, quarters and hocks. Second, Salem Witch; a fair terrier, but rightly beaten in this company. Open dogs, first, Merle Grady; a much-improved dog; nice in skull, good jaw, eye, and a dare-devil expression; a well-placed shoulder, good legs and feet, ribs, back, loin and quarters; racy and a true representative of the Emerald Isle. Second, His Honor, a more than average youngster, at present wants beating, but I have my doubts if he is one of the improving sort. I trust I may be mistaken. Third, Crib; good expression, getting thick in head, bossy in shoulders, not straight in front; in body and quarters above the average, also texture of coat, in color getting quite too pale. Open bitches, first, Chaney Lass; fair head, little full in eye, well-carried ears; should be leaner in shoulders; good in body and quarters; fair coat. Second, Nora II., only moderate and well beaten.

BLACK AND TAN TERRIERS (*T. S. Bellin, Judge*).—In dogs first went to Broomfield Sultan. This dog without a doubt is the best representative of his breed in America; in fact I think he can beat the English champions Prince Eric and Derby Bess. Sultan retains his good head, neck and quality; in body he is much improved; in other points he is a high class terrier, and one to be proud of. In bitches, Queen III., first, not in good form, a bitch of correct shape, good head, and when shown fit, wants a beating. Broomfield Madge, second, beaten all round; Gypsy Girl absent.

TOY TERRIERS (*T. S. Bellin, Judge*).—Barnaby Rudge, first, a little rough in coat, still of good texture, scores all round in head and jaw, carriage of ears and length of body. There is little to choose between second and third, Islay and Endcliffe Maggie, the former winning in texture of coat.

YORKSHIRE TERRIERS (*T. S. Bellin, Judge*) were very moderate and need not be described.

SCHIPPERKES (*T. S. Bellin, Judge*).—Prince, Jr., first, fair in head, ears and coat, wanting in ruff or frill on neck.

BLACK AND TAN TOY TERRIERS (*T. S. Bellin, Judge*).—Yasson, first, wins in head, body outline and tail; second and third close together.

MISCELLANEOUS (*T. S. Bellin, Judge*).—Under 25lbs., first, Dewr, the Welsh terrier, gone thick in head and heavy in shoulder, good coat, fair legs, feet and bone; second, Sheffield Lad, a Pomeranian, good head and ears, in size quite large enough, fair tail, not in the best of coat. T. S. B.

ADDITIONAL AWARDS.

GORDON SETTERS.—Dogs: 1st, N. Billings's Ranger B.; 2d, Miss S. L. Nickerson's Count Noble; 3d and reserve, C. T. Brownell's Dixey and Bud Gordon; 4th, Woodland Park Kennels' Archibald. Very high com. Bitches: 1st, H. H. Morris's Fairweather; 2d, W. A. Small's Diamond Forest; 3d, S. J. Pettigall's Puzzle. Reserve, S. James's Jerry. Very high com. Kennecbe Valley Kennels' Rambler II. Bitches: 1st and 2d, Waddingfield Kennels' Oracle and Luffa; 3d, Glenrose Beagle Kennels' Gypsy A. Reserve, Shrewsbury Kennels' Frudence. Very high com. H. Ramsdell's Pride of Cressbrook. Dogs (under 13in.): 1st, Geo. R. Doctor's Joe H.; 2d, Glenrose Beagle Kennels' Paderewski; 3d, R. S. Turpin's Clyde. Very high com. Rockland Beagle Kennels' Laddie. Bitches: 1st, Rockland Beagle Kennels' Lonely; 2d, Ringwood Kennels' Maida; 3d, W. A. Small's Topsy S. Reserve, G. F. Reed's Spot Reed. Very high com. Shrewsbury Kennels' Fanny Reed, Rockland Kennels' Norah K.—PUPPIES.—Dogs: 1st, C. A. Godendorf's Start. Reserve, Glenrose Kennels' Bravo. Very high com. H. F. Atwood's Forest Rex. Bitches: 1st, R. B. Baker's Juliette II.; 2d, C. A. Godendorf's Beagle. Reserve, W. F. Rutter's Rosebud. Very high com., Ringwood Beagle Kennels' Fan Tan.

FOXHOUNDS.—AMERICAN.—Dogs: 1st, W. B. Foster's Prince; 2d, F. M. Sullivan's Tom; 3d, Connecticut Valley Kennels' Brave Boy. Reserve, I. C. Newell's Loud. Very high com., F. M. Whipple's Ned and Spot. Bitches: 1st, W. B. Foster's Judy, 2d and 3d, Connecticut Valley Kennels' Fanny and Crafty.

SPECIALS.

MASTIFFS.—Best kennel, Dr. Longest. Best dog or bitch, Ingleside Minton. Best moving pup, Ingleside Minton. Best American bred pups, Lady Diana and Emperor Maximilian. Best trio, same two with Emperor William.

ST. BERNARDS.—Best kennel, E. H. Moore. Best local dog (novice) Gov. Russell. Best American bred dog or bitch, Alton, Jr. Best rough or smooth dog, Sir Bedivere; bitch ditto, Lady Alton. Best American bred smooth dog, Alton, Jr. Bitch ditto, Lady Alton. Best American bred rough-coat dog, E. H. Moore's Altoner, ditto bitch, Saffrona.

GREAT DANES.—Best dog or bitch in open class, Heppern Kennels' Heppern Vera. Best bitch in show, Heppern Kennels' Heppern Vera.

DEERHOUNDS.—Best kennel, Hillside Kennels.

CRESTED DOGS.—Best kennel, A. W. Purbeck.

RUSSIAN WOLFDOGS.—Best kennel, Seacroft Kennels.

CHEESAPEAKES.—Best dog, Cleveland.

POINTERS.—Best kennel, Geo. W. Lovell. Best novice, Bennett's Flirt. Best sired by Pommerly Sec, Queen Nell. N. E. P. T. Club's best pointer dog, Duke of Dexter. Best bitch, Wild Lily; second best, Devon Fan.

ENGLISH SETTERS.—Best owned by a member of English Setter Club, J. V. Lawson's Blue Nell and Jon. Lewis's Victress Llewellyn.

IRISH SETTERS.—Best kennel, Oak Grove Kennels. Best English setter entered by a novice, Mrs. Nelson McIntosh's Blue Jennie. Best placed at a field trials, Our Pet. Best in show, Sheldon.

IRISH SETTERS.—Best kennel, Oak Grove Kennels. Best entered by a novice, F. H. Powell's Pemberton.

SPANIELS.—Best kennel, Geo. Bell. Best field, R. P. Keasly's Rosedale Bess. Best brace, R. P. Keasly's Bridford Ruby and Rosedale Bess. Best brace cocks, Ancient & Modern Kennels' Fascination and Amazeant.

BEAGLES.—Best kennel, Rockland Beagle Kennels. Best pack owned by a member of the National Beagle Club, Rockland Beagle Kennels.

BEAGLES.—Best kennel, R. B. Baker's Juliette. Best over 13in., with a field trial record, Frank Forest. Best bred by exhibitor, Oracle.

FOXHOUNDS.—Best entered by a novice, W. B. Foster's Prince. Best pack of six, Connecticut Valley Kennels.

DACHSHUNDS.—Best owned by a novice, Miss Dorothy Manice's Princess. Best American bred, E. A. Manice's Pletychosamus.

CORGI.—Best kennel, Seminole Kennels. Best entered by a novice exhibitor, Mrs. I. Firth. President's cup, Wellsbourne Charlie. Best American-bred bitch in open class, Seminole Kennels' Crissey.

POODLES.—Best novice, Jet. Best kennel, H. G. Trevor. Best brace of browns, Hill Hurst Kennels.

BULLDOGS.—Best kennel, Woodlawn Park Kennels.

BULL-TERRIERS.—Best kennel, Retnor Kennels. Best brace under 12mos., Mermaid and White Wonder II.

BOSTON TERRIERS.—Best kennel, W. H. Carroll. Best novice, Ship. Best under 12mos. old, Duke. Best dog or bitch in show, Countess.

FOX-TERRIERS.—Best, Starden's King. Best bitch in open class, Dominica. Best brace, Starden's King and Miss Dollar. Best kennel, J. E. Thayer (smooth). Wire-haired ditto, H. W. Smith. Best novice, Rockdale Spark. Best wire-haired, St. Broom. Best brace wire-hairs, St. Broom and Sister Pattern. Best wire-haired puppy, Ruth.

SCOTTISH TERRIERS.—Best in show, Kilroy. Best brace, Wankie Kennels. Best kennels, Wankie Kennels.

IRISH TERRIERS.—Best kennel, Walter Comstock. Best American bred, Merle Grady. Best entered by a novice, Sam A. Fletcher's Jack Desmond.

YORKSHIRE TERRIERS.—Best entered by a novice, Mrs. Ellen Plant's Teddy.

TOY TERRIERS.—Best entered by a novice, Mrs. Esther Deffley's Rack. Best toy spaniel entered by a novice, Mr. Augustus Prescott's Laurieette. Ashmont Trophy, Wellsbourne Charlie.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

The Future of Dog Shows.

CHICAGO, April 8.—With the increase in the number of dog shows held annually and the limited season in which shows can be held, there comes a problem for the American Kennel Club to consider in respect to dates. The active dog show organizations will soon outnumber the weeks available for dog shows in the cooler seasons of the year. The rule of suppression or coercion, by a refusal to recognize a show or its wins, will lose its force. In fact, exhibitors now do not care a rap whether the A. K. C. recognizes the wins of an independent show or not. They do care for a liberal prize list.

A few years ago, when dog shows were numerically much fewer, it was impossible to quickly get a large number of wins, simply because there were not shows enough to afford the opportunities. With the present large number of shows, a good dog ceases soon to be a bread winner, for he is too quickly in the challenge class where medals of rare economy in material and construction abound. A good dog can soon get wins enough where the opportunities are in dozens. The threats of punishments, often shaken at exhibitors in admonishment and at independent managements to force them into line and jurisdiction, by constant use and repetition has become hollow, and with age forceless. The reader has but to look up the statistics of the past season, and get the opinions of the largest exhibitors to be satisfied of the accuracy of this position.

Another venerable tradition earnestly urged as a fact by men who have no knowledge that it is a fact, since it is only their opinion, is that two successful dog shows cannot be held in any one season in the same city. How do they know it is so? While the conservatives are wisely asserting that it cannot be done, duly governed in their utterances by the letter of the constitution and by-laws, some organizations will turn to some time and hold two shows in one city in one season. Every city as a matter of course can not hold two shows in one season. But it does not deny that the ideas and conditions of five or ten years ago are those of to-day. In Chicago this year the Mascoutah Kennel Club decided not to hold a show, giving as a reason that it did not care to hold a show which would interfere with the dog show of the World's Columbian Exposition. It was a most feeble grasp of the situation. The club had about as much relation to the World's Fair show as it had to a show held in England. The Mascoutah Club was part of the established circuit. It appealed for gate money to the people of Chicago. It appealed to the exhibitors in the same manner that any other show would, that is, to their interests.

The World's Fair show makes a bid for international competition. I depends on the people of the world for gate money. It is not a Chicago affair in any manner excepting the one of locality. The show is in no manner arranged as a Chicago management. A Chicago or a Detroit or an Indianapolis show have no bearing one more than another on the World's Fair show. While the Mascoutah Club was in a state of rest from a false sentiment of courtesy or timorous apprehension a club organized and did hold a show, a successful one, too. Yet it had no more reference, near or remote, to the World's Fair show than it had to the Egyptian pyramids.

I do not wish to be understood as being opposed to the A. K. C. I am opposed, however, to matters which are unsound or ideas which are antiquated, as shown by the sentiment of exhibitors or the workings of the judicial machinery of the club. There is no impropriety in the discussion of public matters. Indeed, some of the now officers of the A. K. C., in times not long ago, were quite outspoken in their criticism, etc., of it.

As showing the drift of public sentiment I desire to quote briefly from an editorial in the *Dog Fancier*. Mr. Eugene Glass, the editor, writes good, hard sense on all these subjects and shows an accurate knowledge of the situation. My desire is to give him credit for his excellent definition of the bench show situation. After touching upon the difficulty which a new organization now has in securing acceptable dates and the advantage which precedent and prestige give the older clubs in holding their regular dates, he says:

The fact is there are not enough dates to go around. Meaning, of course, the dates at suitable seasons of the year. Only a few weeks in the fall can be counted upon, for the field trials take up most of the fall season. The holidays intervene, and then the severe months of January and February, so that March, April and May are the only free months, for in June the hot weather puts a stop to successful dog shows. Counting up the time, then, we have less than twenty weeks to distribute among all the clubs so that no dates will conflict. This time is insufficient, for but one show can be given in a week. The United States is a large territory, and it seems as though no injury would be worked by dividing the dog show circuits. The line might be drawn north and south, making an eastern and southern district. Certainly in the East there are enough successful clubs to fill the circuit, and they are springing up so rapidly in the West that the same may soon be said of that district. The mere division would not confine exhibitors to their own district, it would simply make it possible to give two recognized shows on the same dates. That two such shows would be successful has just been proven by the Detroit and Chicago exhibitions; both were excellent. Detroit, especially. Certainly in the East there are enough successful clubs to fill the circuit, and they are springing up so rapidly in the West that the same may soon be said of that district. The mere division would not confine exhibitors to their own district, it would simply make it possible to give two recognized shows on the same dates. The mere division would not confine exhibitors to their own district, it would simply make it possible to give two recognized shows on the same dates. That two such shows would be successful has just been proven by the Detroit and Chicago exhibitions; both were excellent. Detroit, especially. Certainly in the East there are enough successful clubs to fill the circuit, and they are springing up so rapidly in the West that the same may soon be said of that district. The mere division would not confine exhibitors to their own district, it would simply make it possible to give two recognized shows on the same dates. That two such shows would be successful has just been proven by the

place will be his home hereafter. Mr. Nowotny is an enthusiastic sportsman and a supporter of field trials, besides being a most companionable gentleman. May prosperity attend him!

There are a great many exhibitors of dogs in this country, judging from the list which is affixed to the protest—the one of present memory.

Whoever constructed the fake list of World's Fair judges learned one thing—he learned how little he knew about what methods and judges are acceptable to the exhibitors. As an adviser hereafter he would do well to first seek advice.

In an uncanny eagerness to score a "scoop," it is well hereafter to start with a fact. A factless scoop is "grand, gloomy and peculiar."

Mr. W. I. Buchanan impresses me as a very clear-headed, just man. I do not believe that he will permit any of his departments to be used as a tin kettle to make a dog run. Give him a chance, boys.

Now that the list of judges is not official, the protest of course ceases to have force. It was a real hearty, vigorous creation, and had all the speed, size and momentum which denote that it is well for all meddlers to get out of the way.

That reminds me how much a real successful independent show looks like a real successful A. K. C. show to a man who loves the welfare of the dog.

By the way, how disheartening (?) it is to the average dog man to have a win which is not recognized, and \$40 or \$50 thereto which is recognized. He can't negotiate the win, but the money will buy stud books and pay things. The day of the "recognized win" waneeth.

I have been observing some of the recent judicial or official decisions of the A. K. C. on cases before its astute arbitrators. I really believe that Blackstone, Kent, et al., with a nimble weathercock thrown in, are not "in it."

How would it be, in the way of punishment, to suspend every man who signed, read or winked at the protest.

There is a strong movement afoot to form a field trial club in Kentucky. There is every probability that such an organization will be effected. The National Fox Hunters' Association is taking steps to perfect its organization, the more active advocates of it being in Louisville, Ky.

There appear to be some questions of right of way in the A. K. C. schedule. B. WATERS.

DOG CHAT.

A Dog Show for Saratoga.

The Saratoga Poultry and Kennel Club met at the Commercial Hotel April 5. The meeting was presided over by the vice-president of the society, Allison E. Curtis. L. W. Clute, secretary of the kennel department, reported that he, on behalf of the club, had made application for membership to the American Kennel Club, which had referred the communication to the executive committee, and it would be acted upon at the May meeting. It was decided that the first annual exhibition of the club would be held as near as possible to the dates Jan. 16 to 19, 1894, providing the dates are agreeable to the American Kennel Club. John J. Wandell, George L. Corliss, John E. Hodgman and Daniel Eddy were appointed a committee to solicit subscriptions for the \$1,000 guarantee fund. The committee was given power to call for assistance if necessary. The secretary, Will D. Eddy, was instructed to notify out of town members that such a fund was being raised and to solicit contributions from them. The following were elected members: Wharton Meehan, W. H. Waterbury, C. B. Thomas, W. H. Gibbs, G. R. P. Shackelford, G. S. Mott, W. M. Martin, D. S. Cooper, H. Brezee, Frank Anabel, W. H. Ernst, E. S. Spencer and W. Searing of Saratoga Springs; Dr. G. M. Roberts of Castleton, Vt.; W. Curtis of Schuylerville, and A. Edson Hall of Greenfield. It was decided that all judging should be done by comparison; that the selection of judges be left with the board of directors, and that the kennel secretary correspond with judges of dogs and report at the next meeting.

Death of Revel III.

One of the best pointers that ever came to this country joined the large majority March 14. This was champion Revel III., whose name has become a household word among pointer men. She was whelped Feb. 3, 1883, and was imported to this country by Mr. Jas. L. Anthony, who afterward sold her to Mr. Chas. Heath, in whose kennels she died. She was imported in 1888. Mr. Heath has kindly furnished us with the following particulars of her record: Champion Revel III. (8063), whelped Feb. 3, 1883; died March 14, 1893. Winnings in England: 2d, York, 1884; 1st and cup for best in pointer or setter classes, Barnstable; 1st, Crystal Palace, July, 1884; 2d, Hull, November, 1884; 3d, Birmingham, December, 1884; 1st, Crystal Palace, 1885; 1st and special for best pointer in show, Brighton, June, 1885, and 1st, Sheffield. Winnings in America: 1886, 1st, Pittsburgh; 1st, Newark, and five specials; 1st, Boston, and four specials; 1st, Hartford, and champion, New York. 1887, not exhibited. 1888, champion, New York. 1889, champion, New York. 1890, champion, New York, Chicago, Boston and Buffalo. 1891, champion, New York, Pittsburgh, Cleveland, Boston, and *American Field Cup*. 1892, champion, New York, Philadelphia and Boston. Her last appearance was at New York in February last. She then looked in good health, though not her old self by any means, which was remarked at the time. Of course in the natural order of things her owner must have expected that she would soon pay the debt of nature; still, when a favorite dog passes away the loss is none the less severely felt, and Mr. Heath has our sympathy.

The New Beagle Trial Club.

The New England Beagle Club held a meeting in the press room of the Mechanics' Building on Thursday afternoon last. Officers were elected as follows: President, F. W. Chapman; Vice-President, H. S. Joslin; Secretary and Treasurer, W. S. Clark; Executive Committee, F. W. Clefield, Henry Hanson. Field trials will be held next fall, but the time and place were not definitely decided. The following classes will be made: Dogs and bitches, 13 to 15in.; dogs and bitches, 15in. and under; Derby for dogs and bitches pupped on or after Jan. 1, 1892; champion class for dogs and bitches, 13 to 15in.; champion class, dogs and bitches 15in. and under. Dogs eligible to compete in the champion classes must have won a first prize in some recognized field trials. The challenge classes will be run after the others. Messrs. F. W. Clefield, E. O. Cornforth, A. D. Fiske, Howard Almy and John A. Peabody were admitted to membership.

Measuring Beagles.

The uncertainty of beagle measuring was fully demonstrated at the Boston show. The beagle bitch Oracle was sent out of the ring as over-sized, but was returned to the ring and measured again among the others and found to be under the number, was judged and took first. There should be some hard and fast rule as to how the beagle's head is to

be held while measuring. If held naturally a beagle will measure anywhere from a half inch to an inch higher than if the head is pulled out and held nearly level with the back. To our mind the dog should stand naturally, for any dog that requires manipulating to go under the wire is certainly over the prescribed 15in.

The Ashmont Trophy.

One of the most interesting competitions of the show was that for the Ashmont trophy. The Scottish terrier Tires has won it twice, but a wise precaution prevailed, and Mr. Mason did not judge Scottish terriers at this show. The competition took place at 4 P. M. on Friday, and was very interesting. Great Danes, deerhounds, greyhounds, wolfhounds, dachshunds, collies, bulldogs, poodles and sporting spaniels were the breeds represented. Among the later ones left in were the bulldogs Saloni and His Lordship, dachshund Janet, collie Wellesbourne Charlie and deerhound Robber Chieftain. The collie, the deerhound and His Lordship made the final effort, and excitement ran high. Mr. Mason making the most of the occasion. The dogs were cleverly handled, Frank Dole had His Lordship, Henry Jarret Wellesbourne Charlie and Alfred Heald looked after the chances of Robber Chieftain. Back and forth they went—the judge with an air of the whole universe on his shoulders—till suddenly drawing the ribbon he broke the tension by placing it on Wellesbourne Charlie's back. Mr. Jarret received the congratulations with becoming modesty and took a look at the diamond locket, which he must win three times before he can call it his very own.

The World's Fair Judges.

The FOREST AND STREAM is enabled to state to day that the list of judges for the World's Fair show has been presented to the Director-General and to the Committee of Awards by Chief W. T. Buchanan, in keeping with the suggestions made to him through the American Kennel Club, and Mr. Buchanan has no doubt whatever that the list submitted by him will be confirmed. As Mr. Buchanan has already made public through the FOREST AND STREAM (see last issue) that the list as published in a Chicago paper was in no sense official, it is presumable that it was not the one sent to him by the American Kennel Club. The following are the names added to the list of those who condemn the "fake" judges' slate as published: F. W. Chapman, Seminole Keenels, A. C. Bradbury, H. A. Harris, C. A. Parker, Jas. E. Hair, R. K. Armstrong, Wm. S. Hastings, Fred'k M. Lyon, A. A. Savage, Edward Brooks, H. B. Tallman, Nelson McIntosh, E. Knight Sperry, Arthur R. Sharp, Howard Davidson, G. E. Osborn, F. W. Whitlock, John Brett, J. W. Lawson, W. P. Medberry, L. A. Pearle, F. E. Lewis, Edwin H. Morris, Andrew J. Lewis, Robert Leslie, Frank F. Dole, Chas. D. Roberts, Herbert M. Howes, A. W. Purbeck. These are names of prominent exhibitors at Boston show and fully show the feeling that is rampant in regard to this "cut and dried" affair.

A Bull-Terrier Club.

A number of gentlemen interested in the formation of a bull-terrier club met at the N. E. Kennel Club show at Boston, Friday afternoon. An organization was effected with the following list of officers: President, Frank F. Dole; Secretary, Herbert M. Howes; Treasurer, Herbert A. Harris; Executive Committee, the above officers, *ex-officio*, Dr. J. Frank Perry, H. Fred Church; Delegate to American Kennel Club, Herbert A. Harris. The sense of the meeting was that the name of the club should be the Bull-Terrier Club of America. A committee consisting of the president, secretary and treasurer was appointed to draw up a constitution and by-laws and submit the same to gentlemen desiring membership. This will be mailed to all bull-terrier breeders in the country and they are earnestly requested to join and make this specialty club a success. The membership fee has been placed at \$10 per year. Copies of the constitution may be had of the secretary, Herbert M. Howes, box 1751, Boston, Mass.

Rawdon B. Lee's New Book.

We have received Mr. Rawdon B. Lee's new book, "A History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland." The work is excellently turned out, and is adorned with numerous studies of ideal dogs in wash drawings by the noted artist, Arthur Wardle. An extensive review of the work is out of the question this week; but in glancing through the book we were particularly interested in the chapter on pointers, which will be appreciated by all pointer men. Every sporting breed of dog, from the bloodhound to the dachshund, is exhaustively treated and much valuable information afforded as to origin and the changes in type up to the present date, giving the names of principal past and present breeders and exhibitors of the different breeds. The book will be for sale at this office.

New England Field Trial Club Dinner.

A very enjoyable dinner was given by the N. E. F. T. C. at the Thorndike Wednesday evening. About forty lovers of the setter and the pointer allowed their thoughts to stray Assonetward for an instant and then returned to their plates with renewed relish for the good things provided. Dr. J. W. Hayward, president of the club, presided, with the secretary, Mr. Lovering, opposite. After dinner the annual meeting was held and the constitution and by-laws were gone over. The next field trials will be held Nov. 14 at Assonet, Mass., and Messrs. N. Wallace and W. Tallman will act as judges, and the club could not have made better choice. The Derby Stakes will be \$200, \$100, \$50 and \$25. Nominations, \$5, to close June 1, and second forfeit, \$10, to close Oct. 1, and \$10 additional to start.

The Late J. M. Tracy.

We understand that this year Mr. J. M. Tracy, had he lived, would have been elected to the National Academy. Additional particulars have been received relating to this artist's life. It seems that he was forty-eight years old when he died and was born in Huron county, O., and eventually entered college at Evanston, Ill., staying until the outbreak of the war. During the war he was seriously injured by the concussion from an exploding shell. It is not generally known that Mr. Tracy, while in Paris, studied under Ivon and afterwards with the master, Carolus Duran, from association with whom he gained his style in portrait painting. It was at his brother-in-law's place in Ocean Springs, where he had a studio erected on the lawn, that his sudden death took place. It is not generally known, but none the less a fact, that when the disaster of the ill-fated Lady Elgin occurred many years ago in the Lakes, Mr. Tracy, though a young lad at the time, was instrumental in saving several lives from the wreck at the peril of his own.

A Hanger On.

Prof. Bachelor, who seems to have taken Mr. Parker's place at the dog shows, diverges from the usual evening dress fashion affected by Messrs. Parker and Hampton, appearing in the ring as a clown. This unconventional costume admits of his taking a violent part in the act when his "business" dog shows his strength of jaw and tenacity of purpose by holding on to a thick rope. Bachelor makes the most violent exertion to force the dog to loosen his hold, but all to no purpose. He swings him round his neck, bangs him on the floor, and then as a climax gives him a yard of hemp and swings him round and round some three feet from the ground till

dizzy. The dog once held on to a rope suspended from a beam, tugging all the while, for one hour and ten minutes, when he was taken down. This was the result of a wager that he could not hold on fifteen minutes. Another act in which this tenacious animal takes a grip is done at country fairs, where Bachelor, by the aid of blocks and ropes, is hauled up in the air 40 or 50ft., with the dog tugging at the seat of his trousers.

Devotion of a Dog.

The Newfoundland is again the hero. An oil well worker at Oakdale, Pa., was left sleeping in a house by his four companions. In some way the bedclothes caught fire, and the man inhaling the flames was rendered helpless and was soon a charred remnant of humanity. Meanwhile, as soon as the fire broke out, the favorite dog of these men, knowing that one of his masters was still in the house, went to the bedside and tried to arouse him, not knowing the man was already dead. The poor brute in his vain attempts to arouse the man was overcome by the flames and dropped dead. When the man's body was found that of the poor dog was also discovered stretched at the foot of what was once the bed.

Sale of Fan N.

In the hurry of the shows we neglected to chronicle the sale of champion Fan N., the well known pointer bitch, by Mr. W. H. Hyland, of North Tarrytown, to Mr. R. A. De Ruse, of New York. The price given was a long one, but at the same time Mr. Ruse has secured a good bitch.

Canadian Fox-Terrier Club.

Mr. H. P. Thompson, the secretary informs, us that Messrs. T. S. Bellin and Clarence Rathbone, of Albany, N. Y., have been added to the official list of judges to the Canadian Fox-Terrier Club.

The American Field Trial Club's Trials.

The second annual trials of the American Field Trial Club will be run at Carlisle, Ind., beginning on Wednesday, Nov. 15, with the Pointer Derby. One thousand two hundred dollars in prizes will be given. The grounds at Carlisle are second to none in the United States, with birds in abundance. They are but two hours' drive from Bicknell, and are consequently very accessible to parties running at the United States Club's trials. Printed matter will be ready for mailing shortly.

The other morning, while coming up Thomas street, passing through the most crowded portions of the dry goods district in this city, plowing through the deep snow which lay in the streets, and dodging the plunging horses, the wheels of the trucks and the dry goods boxes being thrown about by the porters, we saw an unexpected sight—a dog carrying a pack. Trotting down the street toward us were a white setter and a small yellow Great Dane coupled together. The Dane carried on his back two good-sized bundles done up in newspaper, which hung down on either side, and about balanced each other. They were slung across the back just back of the shoulders by strings which were fastened to a small leather strap girth about his chest. The strings admitted of considerable swinging by the packs, and the dog could not have carried the load all day without becoming very tired and perhaps chafed, but he seemed to feel no inconvenience when we saw him, and trotted merrily along with head up in the air. It is a good many years since we have seen a dog carrying a pack, though in the old days on the upper Missouri it was common enough to run across camps of Assinaboines, where all but the smallest dogs carry a load. Often the transportation was by means of travois, but the larger dogs were frequently packed, and very good pack animals they were, too.

It has been wondered what became of the balance of the 14 dogs Lieut. Peary started with on his long trudge over the ice caps of the Arctic Circle. It has just leaked out that while Lieut. Peary and his party escaped the charge of cannibalism, which has been brought against other explorers, the big dogs which he shows in his lectures are openly charged with the gruesome practice. When the party began the return journey the load was lightened, but food was pretty scarce, and as it was absolutely necessary that the dogs should be well fed, the pack was lightened, and one by one the dogs were prepared as food for their fellows. It was the old story of "one little, two little, three little Indians" over again. At last the number of dogs became so reduced that the big sledge was too much for them. That is when the old sled that had done duty from the start was abandoned and the small sled which is also exhibited by the lieutenant was constructed. That was so small that the remaining five dogs found it very easy work for the remainder of the journey.

It would be interesting to know what a dog thinks of his master and in what light he regards him. Dr. Louis Robinson, in the *Popular Science Monthly*, advances a peculiar opinion on the subject. Remarking upon the fact that certain men, to propitiate their unknown gods, thought that roasted meats and fruits, because they themselves liked them, would also be acceptable to their gods, thus reasoned by analogy from the known to the unknown. "This," said Dr. Robinson, "would teach us to bear in mind that there is, affecting the dog's point of view, almost undoubtedly such a thing as cyno-morphism, and that he has his peculiar and limited ideas of life and range of mental vision, and therefore perforce makes his artificial surroundings square with him. It has been said that a man stands to his dog in the position of a god, but when we consider that our own conceptions of deity lead us to the general idea of an enormously powerful and omniscient man, who loves, hates, desires, rewards and punishes in human-like fashion, it involves no strain of imagination to conceive that from the dog's point of view his master is an elongated and abnormally cunning dog; of different shape and manners certainly to the common run of dogs, yet canine in his essential nature."

Mr. J. Herbert Watson has bred his well known bitch Dry time to his equally well known coursing dog Royal Crest. Such a union should really stir up the Eastern Coursing Club to action in regard to a meeting. We understand that Mr. John Brett has been approached with a view to his slipping at a meeting in the near future. Coursing men, from what we can gather, are just ripe for another struggle with the "jacks."

The Philadelphia Kennel Club was to hold a meeting at the Aldine Club, April 11, preceded, as usual, by a supper. While returning thanks for an invitation, we hope these meetings will result in some action toward holding a show in the near future. Why not join forces with the State Fair people again and have a show in the fall? The P. K. C. people are hampered by no restrictions in regard to dates and rules.

Meets of the Meadow Brook Hounds as announced by Mr. Frank Gray Griswold, M. F. H., are for the following afternoons during April: Thursday 13th, at Meadow Brook; Saturday 15th, at Roslyn; Tuesday 18th, at Westbury; Thursday 20th, at Mineola; and Saturday 22d, at Meadow Brook, on which date a grand subscription dinner is to be given.

An interesting communication from Mr. Manice informs us that the noted dachshund champion Janet is again in season. This in itself would not be so very wonderful, but we

understand that this bitch has not been in season for two years, during which time she has seldom, if ever, been well, and several veterinarians have said she would never be well again unless she came in season and was mated, owing to some womb trouble. To Dr. T. G. Sherwood, the FOREST AND STREAM veterinarian, however, Mr. Manice credits her recovery, for she has been under his constant care for three months. She was returned to her owner in perfect condition, and within five days of her return her period of oestrus commenced, and she will be bred to either Jay or Icthyosaurus.

There were loud complaints at Boston about the way the dogs were benched. The average visitor turned his catalogue and in trying to find the different dogs in the same class traversed more than double the distance he would have had to do had the numbers been in rotation as they should be. Dogs of one breed were benched among others and confusion reigned supreme. This delays the judging and spoils the *tout ensemble* of the show. Of course, it is immaterial to say that it makes double the work for reporters than it would otherwise and leads to mistakes in criticisms.

Lady Lee, the dam of the noted beagles Forest Hunter, Butterfly, Prudence, etc., has just whelped six to the old dog, champion Fitzhugh Lee.

Mr. H. Astor Carey is the name of the society man who purchased the bulldogs His Lordship and White Venn. He has just bought Mr. James R. Keene's magnificent stable on Coggeshall avenue, Newport, R. I., and will erect his kennels there.

At Boston Mr. F. F. Dole bought the cocker Othello from Mr. Wells. We understand also that \$800 was offered Messrs. Toon & Symonds for Tice and by them refused.

Dr. Glazier purchased from Dr. Lougest at the Boston show the third prize winning mastiff bitch Ella.

Dr. Lougest, not content with his mastiffs, also struck out among the St. Bernards, and purchased the dog Imperator from the Boston St. Bernard Kennels and also the two pups Lady Judith and Judith's Ruth from Mr. G. P. Wiggins.

At Boston show Mr. "Cy" Wilcox exchanged his pointer bitch Queen Nell, winner of fourth in open class, for A. A. Savage's Peggie, by Go Bang out of Meteor's Madge.

Dr. Wesley Mills has sold his well-known Gordon setter Hilda to Mrs. John L. Lebolt, Lorain, O. The noted pointer Devon Nell goes to Mr. John M. Barnes, North Adams, Mass. Elfrieda, another eligible to the challenge class in Irish setters, was bought by Seminole Kennels, Chestnut Hill, Pa.

The president of the A. K. C. has not improved his position by his action toward the Boston show. It seems he sent his entries from Hempstead on Saturday evening, March 18, but, as he says, finding that Mr. Mason was to judge at the show, though not entrusted with the fox-terriers, he wired the club on Sunday, telling the committee to cancel his entries and return his check, giving plainly as his reason that he did not know Mr. Mason was to judge at the show. The club refused to accede to his request, and a nice point has arisen as to whether they were justified in doing so. Anyhow, Mr. Belmont, it is said, stopped payment on the check and further threatened that if his entries appeared in the catalogue he would get out an injunction to stop the show. His entries did not appear in the catalogue. The affair has aroused a good deal of bitter feeling, and it was the general opinion that, as president of the A. K. C., Mr. Belmont should certainly know who is to judge at a show where he intends to exhibit, and further, that as president of the A. K. C. he should not allow personal animosities to enter into his conduct in relation to dog shows. Taken in conjunction with the prevailing opinion that the A. K. C. is responsible for the "fake" judges' list, it has not conducted to a better feeling toward that august body.

A rather amusing incident occurred at Boston, amusing when one takes into consideration the conduct of one of the principals at the Baltimore show. Mr. Bell, not finding a C. card over one of his dogs, procured one and nailed it up. Another exhibitor, seeing him do so, remonstrated with him, saying he had no right to do so. This having no effect on Bell he appealed to Mr. Read, who took the card down. Mr. Bell procured another and repeated the act, with the same result. Then another was tacked up, and the afore said exhibitor, we are told, essayed to take it down. This Mr. Bell would not allow and words ensued, the exhibitor calling the Toronto man a "pup." Mr. Bell spurned the soft impeachment and forthwith hid himself to Mr. Brooks, saying he had been insulted and demanding reparation. A policeman was called in and the offending exhibitor was requested to make his absence conspicuous. The O. E. left the hall vowing vengeance and "George" smiled a smile of triumph. The action cannot be commended on either side.

Mr. Bell has signed an apology to Mr. Watson for his various "assertions" made at the Baltimore show, which is considered ample reparation for the insult received. It has been forwarded to Mr. Watson with permission to publish. This should meet Mr. Watson's views, and with its publication let the matter drop.

Col. North's greyhound Fullerton has been found. There are no further details than the mere mention of the fact, but it is reported that the dog was never at any time far from home. In connection with this the San Francisco papers had the following dispatch: "A great sensation has been caused in sporting circles by the inexplicable disappearance of the famous racer and winner of the Waterloo Cup, Fullerton. The horse was taken from the stable of Col. North, at Eltham, Saturday."

Mr. E. W. Briggs has been chosen to take the place of Hon. Ramon E. Wilson, who resigned the presidency of the Pacific Kennel Club. He is said to be a good man for the position.

The Bovic, which arrived in New York April 4, brought over eight foxhounds and a number of horses to be used in a hunt which takes place in the production of the "Prodigal Daughter." Surely this is the age of realism.

The American Pet Dog Club seems to be at last secure in its position, and all members are putting forth every effort to make their coming show a success. Although it is termed a pet dog show, it will not be confined entirely to pet dogs; fox-terriers, cocker spaniels, dachshunds and beagles will also take part. We fancy that the latter breed being exhibited in a pet dog show will give a handle to the broom with which the upholders of the old working cocker wish to sweep away the modern toy cocker. Be this as it may, the show itself promises to be a "bang-up" gathering. It will be held in the Lenox Lyceum, and there is sure to be an air of "Canine 400" round the affair. The judges who have been asked to officiate are Messrs. Mortimer, Mason and Lacy, and it is known the first and last named have accepted. A meeting was to be held last night, when final arrangements would be made and a premium list arranged.

A meeting of the executive committee of the Hamilton

Kennel Club was held in Mr. Stewart's office recently, and the question whether the club should hold another show this fall was discussed. It probably will be if the money paid by the guarantors of the last show is refunded or other arrangements made. Dogmen generally look forward to another show at Hamilton and the club can count on good support.

Two hundred and ninety dogs were registered in the American Kennel Club stud book during the past month, being represented as follows: Beagles 12, bull-terriers 5, Chesapeake Bay dogs 5, Clumber spaniels 1, collies 17, foxhounds 3, fox-terriers 8, great Danes 2, Irish terriers 5, Italian greyhounds 2, Japanese spaniels 2, mastiffs 7, pointers 43, pups 10, Scottish terriers 1, cross-bred setters 1, English setters 50, Gordon setters 12, Irish setters 23, spaniels 16, rough St. Bernards 56, smooth St. Bernards 9, Yorkshire terriers 1.

Mr. R. B. Morgan, of Akron, O., who came on to the New England Kennel Club show as the guest of Mr. Harry Dutton at his beautiful home in Medford, has been commissioned by prominent Boston sportsmen to secure a shooting preserve of not less than 10,000 acres in either Tennessee or Arkansas the coming season. Mr. Morgan's experience and knowledge of the game and shooting of the South well qualifies him for the above. Mr. Morgan while here sold his best English setter bitch to Mr. Louis Cabot, of Boston.

We draw the attention of field sportsmen to the notice in our business columns of the Eastern Field Trial Club's Derby. The cash prizes are \$500, \$250 and \$150, and the Breeder's Cup, \$100, to breeder of winner of first. Entries close May 1; \$10 to nominate, \$10 payable Sept. 1 and \$10 to fill. The club will not run the trials at High Point, N. C., this year, having secured grounds at Newton, N. C., a short distance from Salisbury, on the Western line. The grounds are said to be good and excellent hotel accommodations can be had.

Arthur Trickett, who has been manager of Mr. E. H. Moore's kennels so long, has decided to make a change. There is no trouble at all, but Mr. Trickett, we think, would like to get nearer New York. It is superfluous to say that Mr. Trickett is a jewel as a kennel manager.

Among the new kennel advertisements this week we note that Brant Cocker Kennels offer prize-winning cockers; Lock Box 87, pointer dog; U. R. Fishel, Scotch terrier pups; G. Irvin Royce, greyhounds; A. W. Pleasants, foxhound; J. Hope, dachshund; J. H. Mills, foxhounds and rabbit dogs; H. L. Jeffrey, Skye terriers; J. Winchell, two choice mastiff bitches and pups; Berlin Kennels, greyhound, St. Bernard and mastiffs; W. H. Hyland, pointer Touchstone; Thasmo Kennels, kennel stock. S. W. Everett wants dogs to train on quail.

Flaps from the Beaver's Tail.

The letter previously published in some of the sporting papers and sent to the club by Mr. F. H. F. Mercer demanding reinstatement having been read, and also one from Mr. Little, in reply to a letter from the President, giving his version of the case, it was decided, after a brief discussion, that no action be taken in the matter.

The executive of the Canadian K. C. held a protracted meeting on Thursday night; it was long after midnight when an adjournment was made. The president, Dr. Wesley Mills, occupied the chair, the other members of the committee present being Messrs. A. D. Stewart, Dr. J. S. Niven, H. B. Bedington, T. S. Davey, C. A. Stone, J. S. Mitchener and H. B. Donovan, secretary. So many objections have arisen against the holding of a trial show in Toronto that the project has been abandoned and Mr. Stewart, the Canadian superintendent, will receive entries up to April 20. These entries will be passed upon by the executive committee at a meeting to be held in Toronto on May 3, at 3 P. M. The sub-committee in whose care were the details of the proposed selection was discharged.

H. B. DONOVAN.

The Irish Setter Club of America.

Editor Forest and Stream:

I beg to announce the appointment of the following committees of the Irish Setter Club of America to serve for the present fiscal year:

Field Trial Committee—Dr. Wm. Jarvis, Dr. G. G. Davis, Mr. Ray Tompkins and Mr. C. T. Thompson.

Bench Show Committee—Dr. L. C. Sauveur, Mr. James B. Blossom and Mr. Ray Tompkins.

After mature consideration I have decided to make the above appointments, believing that I have selected members of the club who are well fitted to serve on such committees with distinction, and who will devote their energies toward the advancement of the Irish setter in general.

It is my intention to take advantage of this opportunity to call the attention of all who are interested in Irish setters to the Irish Setter Club of America, which has held two annual field trials and intends to hold another this fall and one each fall hereafter. The club is on a solid foundation, and now that the breakers have been passed there is no reason why every breeder, owner and others interested in the breed should not at once join the club and give his assistance to the club in the advancement of our favorite breed of dogs.

At the last annual meeting, held at the New York dog show, Mr. C. T. Thompson, Dr. Sauveur and myself promised to put in five new members each during the present year, and others promised to put in one or more each, with the understanding that should we not be able to secure such members we were to pay an amount equal to their annual dues into the club. How Dr. Sauveur and Mr. Thompson have succeeded I have not heard, but I find that I could safely have promised twenty. Already about fifteen Irish setter enthusiasts whom I have approached upon the subject have signified their intention of joining the club, and not one-fifth of the field has been worked over. Come, Irish setter men, send in your application to Dr. G. G. Davis, the secretary and treasurer, 1338 Walnut street, Philadelphia. The annual dues are but \$5 and there is no initiation fee. Help to swell the numbers and make the Irish Setter Club of America the leading specialty club in this country.

W. L. WASHINGTON, President.

ALLEGHENY, Pa., March 30.

The Boston Pointer Upset.

Editor Forest and Stream:

Ill health and unlucky circumstances prevented my intention to see the second best show of the year at Boston, and I regret it now doubly, as it has prevented me getting direct information from our venerable "Honest John" about his general upset of decisions in the pointer classes. There is no judge under whom I would prefer to show my dogs than Mr. Davidson, for whose sound ideas in regard to pointers I have the greatest regard, fully knowing his capability in this respect. But for this very reason I should like to see some of the sporting papers get a report by him of his classes, as his awards are in most cases so much at variance with other judges who have passed upon the same dogs, that they do not permit the plea of difference of opinion, being so radically opposed to their judgment. If he is right the former judges don't know anything and we owners and breeders have a right to know which is which. If a Panic is justly beaten by a Duke of Dexter I want to know it, as it would be a vast difference to what I wish to attain. If Dare Go can beat Panic and even Hylas of Naso can do it, well, I think pointer

breeders should be under great obligations to Mr. Davidson in stopping them before they have traveled any further in their wrong attempts. Not that I consider Panic a wonder. I should like, for instance, to model his head a bit cleaner; but where is Duke of Dexter or Dare Go better there, and, after the head, where can they beat Panic and Hylas of Naso? This hyper-pronounced pointer type, everything to extreme in the dog—too much of it in head, too much of it in his pivot shoulders, is he better than Panic?

I am not objecting to Mr. Davidson's judgment nor do I want to defend those who have judged them, although they are both friends of mine, and Mr. Anthony is especially esteemed by me for his sound knowledge of the pointer, but I have often differed with him, as also with Mr. Tallman, about many dogs, yet in my judgment neither of those dogs can beat Panic, and as, if Mr. Davidson is right, their judgment must be wrong, it is due, for the benefit of the breed, to hear the judge's reasons. The same applies to Donald; outside of Arthur, who can beat him squarely, I would like to hear Mr. Davidson's ideas how Faust can too, good little dog that he is, his throatiness outweighs Donald's inclination to a severe stop, and Faust's splay feet ought to balance with Donald's slightly bent pasterns, but what and where else can Faust only touch Donald's superb body and last, but not least, quality. I do not admire Panic nor Donald unconditionally, but I think it ought to be made public why third raters in our opinion can, under such a qualified judge as Mr. Davidson was, beat dogs we had the temerity to think were way above those by all odds. I do not know if any of my brother fanciers do concur with me in my desire, as they seldom care to put their fingers in the "pie," but as there is a grave principle of breeding and—judges at stake, I hope we will succeed in getting a report from Mr. Davidson, and it will be worth reading.

G. MUSS-ARNOLT.

TUCKAHOE, N. Y., April 8.

The Brunswick Fur Club.

Editor Forest and Stream:

A special meeting of the Brunswick Fur Club was held at Mechanics' Hall, Boston, on April 6. President Heffeger presided, and the following members were present: A. B. F. Kinney, R. D. Perry, O. F. Joslin, W. B. Stone, T. W. Eddy, H. S. Curtis, O. A. Benoit, S. M. Winslow, C. A. Bigelow, H. C. Newell, E. W. Gill, Richard Seely, S. Decatur, G. P. Berry, N. Q. Pope, H. A. Dwelle, L. E. Conant and Bradford S. Turpin.

The report of the committee on the revision of the running rules was accepted and the rules adopted.

Voted: No hound shall compete for prizes under the rules of this club that has been hunted or kept within a radius of ten miles of the place where the trials are to be held, within two months preceding the trials.

Voted: Damage done by any hound at any club meet shall be paid for by the owner of the hound. If not paid for, the hound shall be debarred from further hunting.

Voted: The field trials for '93 shall begin on Monday, Oct. 23, and the venue will be announced later.

Voted: New England members of this club shall observe a close season for foxes, which shall extend from March 1 to Oct. 1.

H. A. P. Smith, Digby, Nova Scotia, was elected to membership. Adjourned. BRADFORD S. TURPIN, Sec.

New England Field Trial Club.

TAUNTON, Mass., April 7.—A meeting and dinner of the New England Field Trial Club were held at Hotel Thorndike, April 5. The 14th of November, 1893, was fixed upon as the opening day of the next field trial. It was decided to divide the Derby Stakes into four prizes, \$200, \$100, \$50 and \$25, and the All-Age Stake into three prizes of \$200, \$100 and \$50; that the nominations for the Derby be \$5, to close June 1, and that the second forfeit be \$10, to close Oct. 1, and that \$10 additional be paid the day before the start; that the nominations for the All-Age Stake be \$10, to close Oct. 1, and that \$10 additional be paid the day before the start.

On the recommendation of the board of governors, N. Wallace and W. Tallman were selected to act as judges at the trials next November.

The following new members were elected: C. C. Kammerer, Boston; S. C. Bradley, Greenfield Hill; Horace A. Belcher, Somerville; Atwood Collins, Hartford; Harry W. Smith, Worcester; Walter J. Clemson, Taunton; Dr. James S. Howe, Boston; Phillip H. Butler, Boston.

A set of running rules was adopted, also certain changes made in the constitution. WM. M. LOVERING, Sec.

English Bulldog Club Show.

Editor Forest and Stream:

I have been requested to inform you that at the next annual show of the Bulldog Club of England, to be held at London May 30 to June 1, a class will be provided for dogs or bitches owned by residents of America, with a first prize of £10. Intending purchasers of dogs abroad will find it to their advantage to instruct their agents to enter such dogs at this show, as it would take £10 off the purchase money of the winner. It is hoped that some owners will venture to send their dogs from this side to show their appreciation of the liberality of the parent organization.

Mr. Frank W. Crowther, Hon. Sec., Bulldog Club, Enfield Lodge, Enfield, N., London, England, will receive entries and answer any correspondence which may be addressed to him on the subject. E. A. WOODWARD, Sec.-Treas.

Returns Thanks.

Editor Forest and Stream:

On behalf of the officers and members of the City of the Straits Kennel Club I desire to thank the press for the support given both before and during our recent dog show.

The disadvantages we had to contend with were more than counterbalanced by the hearty support received, and we attribute the success of the show largely to the interest taken by the press. GUY D. WELTON, Sec'y C. S. K. C.

DETROIT, Mich., April 5.

Dachting.

The new auxiliary yacht Intrepid made her trial trip on April 6, Mr. Phoenix and a party of friends being on board. The trip was very successful, the speed attained being very satisfactory.

Marietta, the steel steamer yacht designed by H. J. Gielow for H. B. Moore, was launched at Pusey & Jones's yard, Wilmington, on April 1 and towed to South Brooklyn for her engines.

Saracen, 30-footer, has been sold through Stewart & Binney to Wm. Whitten, of Brookline, Mass. The same firm has sold the cat Cadbird to E. P. Pond.

The latest report concerning the schooner Miranda is that she will not sail for San Francisco, but has been chartered for the summer.

Una, schr., will be rebuilt under the direction of H. J. Gielow. She was sunk in collision last fall off Execution Light.

Psyche, sloop, has been purchased by J. G. Ramsdell and J. J. Murphy, of the Philadelphia Y. C.

Wild Duck, stmr., has returned to Boston from her winter cruise in the West Indies.

Golden Fleece, steam yacht, has just been officially re-christened Satanella.

Isis, cutter, has been sold by Carl Miller to Warren Watson.

HOUSE-BOATS AND HOUSE-BOAT LIFE.

I.—Auxiliary House-Boats.

THE FIRST HOUSE-BOAT.

and models, and an unprecedented advance in the development of pleasure craft, however, there is one type which, in spite of many obvious advantages, has been almost entirely neglected, and which is only beginning to receive that attention which it really deserves as a most convenient, economical and pleasant means of enjoying a healthful open air life about the water.

The history of the house-boat in America is much like that of the canoe; the latter in its primitive form, the Indian birchbark or dugout, is distinctly American, and yet it is to the river Thames and to the British canoeists that the introduction of canoeing in its modern form is due. In the same way the primitive house-boat dates back to the early days of American history and the Indian wars, a typical craft of this description, on one of the lakes of central New York, plays a very important part in Cooper's novel of the "Deer Slayer," and these crude house-boats or even house-rafts gave comparative comfort to many an isolated family of settlers. The house-boat of today, however, is found in its perfection on the river Thames, and there at least house-boat life has approached the standing of a social institution.

The Thames house-boat, with its gayly striped awnings, its flower boxes, flags and Chinese lanterns, is known all over the world, thanks to several modern novelists and many newspaper writers, so much so that the mere word "house-boat" at once suggests an idyllic life and no other, at least glance the task of definition and description would seem a very easy one.

As will appear later, however, there is a wide difference among the authorities as to the proper meaning and scope of the term, and no small amount of ingenuity is required to frame a definition that shall be accepted by all. In one sense every yacht or vessel is necessarily a house-boat, in that she possesses in the accommodations for her crew, all the component parts of a house on solid ground; and while one could hardly mistake a schooner like the Yampa or a steam yacht like the Corsair for a Fifth Avenue residence or a Newport cottage, the links in the connecting chain are so numerous and so closely graduated that it is very difficult to locate the exact spot where the identity of the vessel is lost in that of the dwelling.

The house boater of the Thames, who certainly must be recognized as an authority, would probably repudiate with indignation the claims of the "house-boat" to include in its family of "auxiliary" house-boats, such as the Pinson, Caiman, Studio, and even that of our esteemed correspondent, "Podgers"; but he would be hard pressed to make good his contention in the face of "Podgers's" presentment, even if he were successful in proving that the first mentioned craft were strictly yachts and not house-boats.

While recognizing as entirely proper the use of the term in its more limited sense, as applied to the stationary craft of the Thames type, it is essential to include in anything approaching a comprehensive treatise on the subject a number of craft which are very closely allied to yachts; and as some line of demarcation between the house-boat and the yacht is necessary, we propose to draw it to include only those vessels in which the form of superstructure, and in most cases that of the hull, and the requirements of the dwelling rather than of the sea-going or navigable vessel. To illustrate this distinction, in any modern yacht the arrangements for the convenience and comfort of the crew are as complete and elaborate as in the finest houses; comfortably furnished apartments, bath-rooms and running water, perfectly equipped kitchens and store-rooms, with ranges, ice boxes and other essentials for luxurious living. At the same time all of these arrangements are subordinate to the demands of the naval architect, the prime requirements of safety, seaworthiness, stability and speed compel the owner to put up with rooms of limited dimensions, irregular shape, and devoid of large windows, and the same subordination of the features of the dwelling to those of the ship controls the whole design.

In the case of the house-boat, however, the designer, even though a naval architect, works with a freer hand. While he produces a craft that will float, that will not capsize, and that may even be sailed with reasonable speed under favorable conditions, at the same time he departs widely from the conventional ship form, his hull is practically a box or scow, and on it he rears a rectangular structure which at once proclaims the relationship of the entire craft to the house rather than to the boat.

This, large or small, making a speed of seven or eight miles under sail or steam, or anchored for the whole summer in some quiet nook, is the house-boat of civilization, but the house-boat family is a very large one if we take the world over, the rivers of China alone teeming with small craft, each inhabited by a family, the members of which are born and pass their whole life aboard, seldom setting foot on dry land, and knowing no other home than the rude sampan with its bit of reeds and primitive hearth for the family fire.

Every great river, the Mississippi, the Danube, has its distinctive fleet of house-boats or shanty-boats, inhabited by a numerous floating population.

Over six years ago the FOREST AND STREAM published a warm plea for the house-boat, accompanied by a very attractive design, both by Mr. Frank W. Weston, a Boston architect; but the article was evidently ahead of its time, as it attracted far less attention than it deserved, and failed to awaken any widespread interest in the subject. Within the past three years, however, the daily papers and the magazines have given considerable attention to the house-boat, and the increasing number of inquiries which reach us for information indicate that Americans are about to take up the subject in earnest. The many advantages of the house-boat are set forth at length by our various correspondents in this and the following number, and we need not recount them here; we hope, however, that they may induce others to band and to make known their experience. We propose in the present number to describe some of the larger auxiliary house-boats, and next week to give the plans of various sizes of the simple boat, without power.

The largest and most pretentious of American house-boats is the steam craft Caiman, owned by Pierre Lorillard, and built in 1891 by Fusesy & Jones, Wilmington, Del., from the plans of Gustave Hill. She is 100 ft. long, 30 ft. beam, 10 ft. draft, 100 hp. engine, 10 ft. top and 20 ft. at bottom, and 5 ft. 6 in. depth, the guards overhanging 1 ft. on each side. The superstructure is of wood, two stories high, the hold being used for stores, etc., the first floor or main deck for the engineer and servants, and the second story containing the owner's apartments.

The arrangements are shown in the plans, for which we are indebted to the courtesy of *Music and Drama*, in which they originally appeared. The forward deck is enclosed, making a space where horses can be carried. The engines are triple compound, 5, 8 and 13×8 in., driving twin screws 38 in. diameter and 6 ft. pitch. The main floor is elegantly furnished, and the house is lighted by electricity and heated by steam. The Caiman has been in use for two winters in Florida waters, making a most comfortable home; in addition to the size of

TWO AMERICAN HOUSE-BOATS.

the rooms, and their light and ventilation, as compared with a steam yacht, she has the advantages of light draft and of self-propulsion at a fair speed.

A smaller and different steam house-boat is the Pinson, built last year in France by the Société des Ateliers et Chantiers d'Argenteuil, for use on the European canals. The Pinson is 65 ft. 7 in. over all, 11 ft.

AUXILIARY TWIN-SCREW HOUSE-BOAT. DESIGNED BY CLAY & TORBENSEN.

6 in. beam, and 3 ft. 4 in. draft, with a two-cylinder high pressure engine, each cylinder 54×74 in., and a three-bladed bronze screw 3 ft. 4 in. diameter and 5 ft. 4 in. pitch. She has excellent accommodations and a speed of ten miles.

Messrs. Clay & Torbensen, the steam launch and yacht builders of Gloucester City, N. J., are among the first of the builders to appreciate

SAILING HOUSE-BOAT "STUDIO." Owned by M. F. Tobie, Brooklyn Y. C.

the possibilities of the house-boat in American waters, and have prepared several designs, one of which we produce by their permission from their new catalogue. This boat is 67 ft. over all and 16 ft. beam, with twin screws, the engines being in the extreme after end, leaving a large amount of space in the body of the boat for saloon, staterooms, etc. The kitchen is fitted with a range, set in brick, and the

ordinary appurtenances of a house ashore. The estimated speed of this boat is five to six miles.

The application of sails to a house-boat may vary in extent from a simple squaresail set when the wind favors and it is desirable to shift from one semi-permanent berth to another, up to the full schooner rig. A craft of the latter type is found in Gravesend Bay and about the adjacent waters of Sandy Hook and New York Harbor, being in constant use as a yacht almost as much as a house-boat proper, though from her general arrangement and the nature of her cabin house she must be classed with the latter craft. The Studio was planned by her owner, Mr. M. F. Tobie, of New York, a naval veteran, who finds his chief pleasure still in a life aloft, although engaged in active business in New York. She was built in 1890 by Terry Bros., of Keyport, N. J., and was originally 40 ft. over all, 28 ft. l.w.l., 13 ft. beam, 3 ft. 6 in. hold and 1 ft. 6 in. draft. Her house proper was 28 ft. long, and painted to represent brickwork, but above it she carried a full schooner rig. She has a centerboard 14 ft. long, and in spite of her scow bottom and flat floor is quite a sailer, being enrolled in the fleet of the Brooklyn Y. C. and sailing with the other craft of the club cruises. As the result of a couple of seasons' trial, she was lengthened forward 5 ft., her bow being improved, and her house was cut down somewhat, but it is still a house rather than the cabin trunk of a yacht. Below deck, or perhaps more properly indoors, she is very elaborately fitted up, the large amount of space being utilized in a roomy kitchen and store-rooms and in state-rooms, cabin, etc. Her home port is the club station at Gravesend Bay, where the Captain and his little daughter keep open house, but she may be seen during the season under way on the bay or anchored for the time in some secluded spot.

Captain Tobie is a strong adherent of the sailing house-boat as opposed to the stationary craft, his ideal naturally being the Studio.

Our old correspondent "Podgers" is also a house-boater of many years' standing, and one of the sailing division, too, but his ideal craft is quite different, his views on the subject being set forth in the following chapter, which we quote by permission from his forthcoming book, "Yachts, Yachting and Southern Cruises."

California in the winter season, as every true sportsman there knows, is the paradise of the nimrod who cares for quail, duck, and snipe shooting. When I say winter it does not imply numb-fingers and a red nose as the penalty of the sport.

To follow a bevy of quail up the steep ascent of a mountain side or gulch is work that causes a healthy glow, if not an occasional spasm to blow and mop the moist brow of the hunter. As to duck shooting, he can sit in a boat shoved into the tules, making a blind by bending their tall tops over his head and boat, which, being cradled as it were by the supporting pressure on either side is kept steady, and does not throw him off his balance and overboard, if in his excitement at a passing bunch of sprightly birds he fires straight up as they pass over his head. The kind of ducking boat used being narrow and sharp at

each end, it can be shoved well into the tules, and can be pushed back again, which is a struggle with a square stern boat. The finest duck shooting in the vicinity of San Francisco is at the mouths of the Sacramento and San Joaquin rivers, which empty into Suisun Bay, a marsh extending from river to river for three miles above their mouths, speckled with deep creeks, or, as they are called, sloughs (slews), all navigable at nearly all stages of the tide, with a high growth of tules on either bank, under which a boat may be hidden, and good shooting obtained, as the ducks fly over or up and down the creeks.

Until recently it was necessary after a day's shooting to have a long pull to find shelter and lodgings, unless the shooter was up there in his yacht, which could anchor in convenient proximity, but even a yacht, unless of large size, does not afford space and all the comfort desired, when returning from a day's tramp wet and muddy and a wee bit tired, and especially are all small yachts deficient in the comforts of a warm cabin or fire, whereby to dry wet clothes and take off the chill of the evening, or mayhap a sharp north wind not felt while exercising but decidedly manifest when the day's labor is over. Considerable experience in this discomfort led me to plan and forthwith proceed to build a nondescript craft, half boat, part house, an ark it might be called, not

planned after Noah's exactly, and more than two of a kind eventually came aboard.

The preliminary step was the construction of a flat or scow with raking ends, length 50 ft., width 16 ft., depth 3 ft.; upon this, or rather let down into it, a house was built, 30 ft. by the full width of the boat, 7 ft. high, with two large windows on one side, on the other a tier of berths, nine in all; on the starboard side a transom, cushioned, and serving the purpose of sofas by day and sleeping at night. A partition or bulkhead was thrown across, making a cosy state-room with a double bed, washstand and conveniences, with a window for light and air. This was the reserve for ladies or distinguished guests. A passageway on the right to the forward deck, with a smaller state-room as the quarters for cook and steward. At the after end, on either side of the passageway to the after deck, was a large roomy kitchen and pantry; a large old-fashioned open Franklin stove at the forward end, between the two doors, an extension dining table, a couple of large easy chairs, and several old-fashioned Boston rockers, a warm carpet, a soft rug in front of the stove, several bracket lamps and a large center hanging lamp completed the "tout ensemble."

After a hard day tramping through wet ground for snipe or a long row up the creeks, to come aboard at dark, wet and tired, shed rubber boots and soiled garments, get on dry clothes after a dip of the feet over the side, and a good wash at the tank outside, hanging shooting clothes up under the projecting roof, making all tidy, then to come down the three steps into the cabin or "saloon" and see the table spread with a clean linen cloth, a cheerful fire in the stove, the lamps burning brightly, and our old cook and steward and crew combined in the person of that incomparable old salt, Captain Cutter, just placing a roast goose or a couple of pairs of mallards on the table, smoking pot, with the announcement, "Dinner, gentlemen," was enough to make one say there is something in this kind of a life worth living for, and such was a dinner in the cheerful cabin of the old Mud Hen way up there in the tules. How we commiserated and sympathized with friends who were not there to enjoy it all with us.

Then, after the dinner, to which good cooking and good appetites gave a zest, came the cigar and pipe. The table was cleared off, (contributed by a lady) set in the center. Some played cards, but the old guard, the old comfortable, took to the rocking chairs or lounged on the cushions, and gave themselves up to the perfect sense of enjoyment of a cigar or the meerschaum, looking into the bright firelight or watching the rings of smoke ascending. Waistbands were slacked up, slippers feet were elevated to the fender, or mantel, and if outsiders could have peeped in on us at such a moment they would have said, if there is peace and comfort to be found in the wide world it is here.

What glorious times we did have on the old craft. She was not a beauty, and her name was not originally the Mud Hen. She rejoiced in the more sentimental one of Tule Belle, but some unappreciative fellow that did not shoot gave her that derisive appellation and it stuck to her ever after, varied by such disrespectful cognomens as Inebrius, Old Torpid, Fly-up-the-Creek, etc., but it was not until that these facetious gentlemen never failed to accept an invitation to come aboard and more frequently to come without any.

The Tule Belle was intended just for a floating shooting box, to be anchored up the river in a good location and remain as an objective point to which we could run up on Saturdays by rail or steamboat, having the man in charge meet us with the skiff at the landing. Then when we wanted to move her, which was seldom, we hitched on to some passing tug and took up another location.

At first the Mud Hen had no other means of moving about except by

steam power to tow her, but later, after selling my small steam launch, I put a mast in her and sloop-rigged her, put the old-fashioned leeboards on the sides, and with a fair wind it took a very smart craft to catch her. She would scud away before it in a manner most surprising to the bay boats that we encountered. She was not much on the wind of course, except when having the tide with her, then she would work to windward fast and we could always get somewhere with her. It was, of course, grotesque yachting, but there was a deal of fun and lots of comfort in it, for no matter where we brought up we were at home.

If it looked like bad weather we could run under the lee of an island or into a creek, as she drew but 20 in. of water we could run up any slough or on to a mud bank into the tules (our name for a tall species of cat-tails or rushes) and there we were. Let it blow high or low, we were as snug as bugs, and what jolly days we had and cheerful pleasant evenings.

frequently cruised 200 miles or more on a trip up the San Joaquin and Sacramento rivers and Suisun Bay and tributaries, and never came to grief in low or calm. She was always reliable, and while a run one to look at, had more comforts than any \$30,000 yacht could boast.

Whenever the yacht fleet had a Saturday afternoon "meet" and a short cruise to some picnic ground, it was the Mud Hen that had the prettiest girls, for she was the supply craft, the tender and general rendezvous. We ran her nose up on the beach, put out a plank, and the girls could run aboard and consult the mirror, arrange tousled hair, and generally the table was set on board, and such crab salad as was evolved from her pantry! She was a necessary adjunct to the fleet.

On one occasion the cruise was extended over Sunday, the objective point a shallow bay. It was a flood tide and we had no difficulty in reaching the spot just at evening. After dinner the guests on board the several yachts came on board the Mud Hen for a frolic. Guitars, violins and flutes helped to eke out the entertainment. A dance being proposed, the chairs and table banished, and for two hours the girls and boys had a good time, until some properly-minded matron suggested that it was nearing Sunday, and ordered the festivities closed. Then came the return to their respective yachts. They had come in boats from each, which were made fast to the Mud Hen, all around her, reminding one of a country church meeting and the horses all tied around the house. It was a beautiful moonlight night, not a cloud.

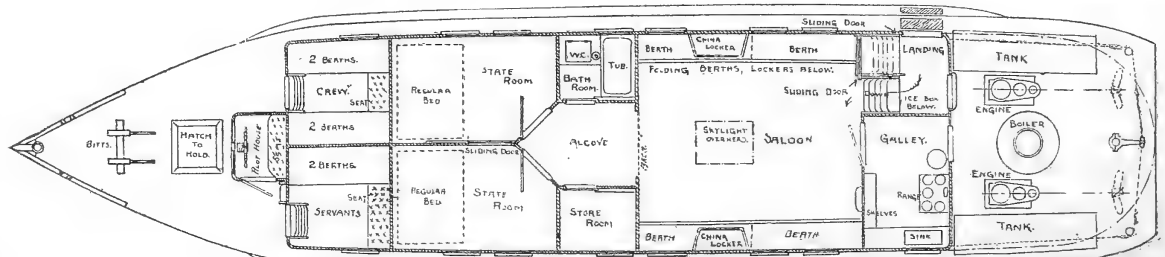

The girls, after the usual flurry of putting on wraps and hoods, and giggling and laughing went on deck, and a scream from all called attention to the fact that it being spring tides every drop of water had run out of the bay and every yacht was standing bolt upright in a sea of mud. Some were a quarter of a mile distant. The question was how to get those girls home. A plan was at last devised. We had several small light flat-bottomed ducking boats. All the long rubber boots were utilized, and the girls put into the boats by twos, one of us behind to shove the boat over the slippery mud to its destination. It was of course soft and it would not do to let go one's hold on the boat, or down you would sink. You rested the weight on the boat and pushed with the feet. It was an odd sight that beautiful night to see a half dozen boats scooting across the mud, the girls screaming and shouting, calling across the mud to know how they were enjoying the sleigh ride. They were all safely put aboard

their respective yachts, and so what was seemed at first a dire catastrophe was converted into a frolic.

Whatever became of the Mud Hen? Well! she got to be so popular that the shooting side of my friends declared that it was simply on imposition on me, and insisted on making it into a club, so a party of twenty, called the Tule Shooting Club, fell heir to her, and she continued to do business at the old stand for several years, until finally the club came to be a very swell one, and an expensive club house was built and the poor old craft was relegated to a position on four legs above tide water and became the dog parlor for the club's dogs.

I cannot conceive a more sensible method of spending a winter South than to have a craft after the style and pattern of the Mud Hen, built right here or at Jacksonville, where lumber is cheap, and made a floating home. I should, however, for those waters rig her as a schooner and have a centerboard, or if the case is objectionable, put two centerboards, otherwise leeboards, one on each side outside of the main planking and inclosed by an outside casing or planking, running to nothing, to hide the cases. Easily done and perfectly effective, getting rid of the centerboard in the cabin entirely. A craft so built and rigged can run down the coast with perfect safety, run into this place, go on down to Key Biscayne, into Indian River, and for that matter around the cape and along the west coast and into every port. She need not necessarily be sharpened forward. She will pound more in a seaway probably than if sharpened, but you are outside but a small part of the time, and as for safety I should not hesitate to go anywhere with such a craft.

In San Francisco Bay all the grain carriers are of this pattern, perfectly flat on the bottom, a little sheer at ends, and drawn in, narrowed at bow and stern somewhat, but still square. A long rake from bottom to deck. These craft go outside and beat up about as rough a coast as you can find the world over, to Oregon, and bring down heavy lumber cargoes, thus refuting by actual demonstration the idea of their unseaworthiness. We don't, of course, advocate them as the perfection of sea boats, nothing so perfectly flat can be, but for use in shallow waters they are simply perfection, being fast sailers, roomy, cheap and comfortable.

What crew would be required? You would want a good steady man that knows the waters, as a sort of sailing master, if not competent yourself. A sailor cook is a man who understands lending a hand to get up sails and anchor, presuming, of course, that your sailing master is not a fancy fellow but a practical sailor, two all told, no more. You pay your cook \$30, your mate \$40, a steward or waiter \$30, or say \$100 a month wages. Your table, according to your purse and taste, \$8 a day should supply it for all, that makes \$250 a month for the expense of a moderate sized family and crew, as cheaply as if you staid at home, and compare that with hotel bills, without crediting health and the enjoyment.

New Jersey Y. C.

The annual meeting of the New Jersey Y. C. was held at its club house, foot of Tenth street, Hoboken, on March 30, and brought out a large attendance of members. The treasurer submitted his annual report, which set forth at length the receipts and disbursements for the past year, showing the club to have a balance of \$300 and over. The trustees, in whom the property of the club is vested, through Com. E. W. Ketcham, their chairman, submitted an exhaustive report of the doings of the club for the past year, telling of the alterations and improvements that had been made in and about the premises, and making some valuable suggestions for the guidance of the club.

The meeting reported a fleet of forty-one sailing yachts, from the large sloop to the small catboat, of seven steam yachts ranging from 105 to 35 ft. in length, of two catamarans, making a total of fifty vessels.

At a previous meeting of the club certain resolutions were adopted concerning the death of one of the original members of the club, Mr. R. Dumatheray. At the meeting last Thursday a handsome memorial brochure was presented to all the members by his widow.

The date of the twenty-second annual regatta was fixed for Saturday, June 10, and will be sailed over the usual courses of the club in the Upper and Lower bays. The regatta committee was instructed to make all necessary arrangements, including the chartering of a suitable steamer for the regatta. It is probable that a steamer will also be procured for the America's Cup races.

The following officers were elected: Com., F. S. Ketcham, sloop; Charm, Vice-Com., A. W. Wenzel, sloop; Recorder, Sec'y, Frank H. Benjamin; Treas., E. W. Ketcham; Financial Sec'y, B. A. Deetjen; Corresponding Sec'y, Louis Wunder; Meas., H. L. Schneider. Regatta Committee, E. W. Ketcham, Louis Wunder and J. E. Clark. Trustees, E. W. Ketcham, E. A. Stevens, T. Butts, John Ortlieb and Alfred Wenzel. Delegates to Yacht Racing Association, G. E. Gartland, Louis Wunder, F. H. Benjamin. The club starts so early with every prospect of having a brilliant and successful season.

Southern Y. C.

Editor Forest and Stream:

At the regular annual meeting of the Southern Y. C. (the second oldest yachting organization in the United States) the following officers were elected: Thos. Sully, Com., steam yacht Helen; Alex. Brewster, Vice-Com., sloop Mephisto; L. O'Donnell, Rear-Com., sloop Florence; H. Brown, Treas., F. M. Hall, Sec. Governors' Committee, James Rea, Wm. Lynd, N. E. Baumgardner, C. T. Yenni, H. O. Benedict. Membership Com., C. R. Van Winkle, E. L. Piac, L. R. Garcia, J. M. Huger, Jr., M. J. Farrell. The date of the annual regatta was changed from the first Tuesday in June to the second Saturday in May. The club is in a very prosperous condition, and the coming season bids fair to be the most hotly contested one since the days of Lady Emma-Silence \$1,500 prize regatta. The club owns many fine modern yachts, the work of Burgess, Stewart & Binney, McGiehan, and other noted designers, also one of the fastest 22-footers anywhere, the Nyanza. This fleet little sloop has, according to time calculations of races here and all over the North, the fastest time to her credit of any yacht of her class. There is talk among the club members of sending Nyanza to Minneapolis with a full Southern crew, to represent the South at the summer carnival. Yachting here is on a boom; everything looks very bright for a most interesting season. The FOREST AND STREAM is always on file at the club house and is considered great authority with the members. TALLY HO.

NEW ORLEANS, La.

PLAN OF CLAY & TORBENSEN'S AUXILIARY TWIN SCREW HOUSE-BOAT.

A Vacation Voyage.—IV.

[Concluded from Page 285.]

THE wind had blown strong from the west all day, but at sunset it was veering to northwest. This enabled us to stand out of the bay close-hauled, skirting the southern shore, but it made a rough sea to encounter. The sky was dark and threatening and soon the dangerous shore to leeward disappeared in the gloom. The Flora was heeling down to the breeze and threw the spray half way to the fore throat when she met the steep seas. Having lashed the sweep to the

TULE BELLE. "PODGERS'S" HOUSE-BOAT.

B.—Berths. K.—Kitchen. H.—Hatches. L.—Hold.

coaming and coiled sheets and halliards fore and aft, the "crew" and the skipper joined Vag in the cuddy. It seemed snug indeed below on such a night, though one would roll out of the weather berth. The rush of the wind under the sails and the hammering of the seas against the bends made a pleasant music. What trust our little plunging craft deserved in us and how often had she proved her staunch, weatherly, qualities. We had learned to love her dearly for the personality she had acquired in our eyes.

And nothing more delighted the mate than to hold the tiller at such a time. Covered from head to foot in dripping oilskins he sat perched high on the weather coaming and listened for the surf to leeward. He deemed it risky to follow the treacherous shore where it begins to turn to the southward, so kept her full and by until at last the faint red beacon on the Charlevoix pier head came in view. Then, knowing that the last point had been passed, he raised the fin and put her dead before the wind.

Next morning when the bridge opened to let us pass into the upper harbor, we knew by the way the group of loungers pointed at us that Caldwell's version of the regatta was generally accepted. It was Sunday, so after drifting lazily over to our anchorage, we lowered sail and made all "shipshape and Bristol fashion."

"Skip, come out of the cuddy, they've lowered a boat from that big cruising yawl over there, and a fellow is pulling right toward us." Then the skipper heard voices through the open hatch. "Howdy, boys, been North, have you? Fine morning. I'm master of the Margaret yonder. Yes, I guess there'll be wind from the southwest before long. That boat of yours looks like one of the kind that stays with you, eh? My name is Dan Moloy; I came up here from Chicago to take the yacht for the season and it's awful dull here now. Won't you fellows come aboard and have dinner with me? We'll take a little run in Pine Lake this afternoon. My owner will get here in a few days, I expect."

Dan had begun with, "Well I should, how—" when the mate's broad palm was placed where it interrupted the rest of the sentence. "Very glad to know you, Mr. Moloy. I think we have no pressing engagements to-day and will be pleased to take you up on that offer. About noon? All right, there are three of us." And then when the dip of the oars sounded faint in the distance, Bert released his hold on the irrepressible crew with an admonition to be more careful if he expected to keep our secret.

At the appointed hour we clambered noisily over the Margaret's rail, toggled out in our very best, and were greeted by her master at the companionway. "Glad you came, boys, shake; step right below. There's no one but me and Jim aboard. I shipped him for steward the other day and now I'm looking for a couple of foremast hands."

We felt confident that Mr. Moloy's politeness would protect us from any embarrassing questions about the race he supposed us to have won, but at first it was hard for us to appear at ease. The glittering

windlass. Whatever order might be given, Jim would seize the nearest line and cast loose or belay as the case might be. Finally he let go the topsail halliard to help her in stays and was banished in disgrace to the galley. But a moment later we caught a glimpse of him through the skylight going over the brass work for the twentieth time.

The Margaret was a large, handsome cruiser of the most approved deep water model. It seemed very strange to us, who were used to taking soundings with our centerboard, that such a yacht might take the ground where the eye found not the suspicion of a shoal. The flush deck, the swing table and the short spars were a revelation to

And this was but one day of the six that we spent in these congenial waters.

The next day was pleasant enough until noon, but then it began to rain and continued to do so until night. After lunch Bert and Dan went ashore to get some provisions and to call at the post-office. The skipper waited for them until he had finished his novel and then turned in with the faithful Vag at his feet. When he awoke it was broad daylight and the startling conviction seized his mind that he was alone in the cabin. He indulged in some deep thinking that morning, as he afterward admitted, while preparing his lonely breakfast. Still, hand sailing was all very well, but it seemed rather an abrupt change and then too he felt that he was not without some responsibility for the others. Having waited an hour or more and no news had of the missing crew it became too lonesome to longer remain idle. So the skipper made sail and boxed around the harbor a little just to see how it would be if he must end the cruise by sailing the yacht home alone. But this, too, became oppressive in time, so he lunched, fished the hatch and went to a bathhouse to wash.

It was about 12:30 when he returned to the yacht and found his troublesome crew seated in the cockpit trying to open a can of meat which they had found in a locker.

"Well, who went your bail?" he managed to gasp out, "and why don't you wait until dinner is formally announced?"

The crew doubled his exertions with a fair prospect of breaking his jack-knife while the mate seemed lost in abstraction. But at last he returned to a sense of reality and confessed some time, but if you love me don't let it get out at home. You see, me and the deck hand went to the post-office and there I came across a fellow named Robinson. He lives here, but I didn't know it and hadn't seen him since I lived at Traverse City. And Robbie said we'd go up to the house, it was so wet and nasty. Well, and here his interest in the faraway something across the harbor nearly made him forget the other's presence.

"Well, his sisters made the time go rather quick, you know. But Dan said he guessed it was time to pull out. Then Robbie told us no use to go back in the rain, that we must stay all night and he would wake us at six because he was going to Norwood early. And that's all there is of it."

"That's all there is of it?" "Yes, that's all, except that we woke up about half an hour ago and slipped out of the house and came down here. We thought we ought to account for our absence."

"Why, how nice; but I hope you didn't deprive yourself of sleep just to come down and report!"

"It was first-rate bunking, but I rather think Robbie played it on us that time," said Dan sorrowfully.

But this idyllic existence was not forever we knew. There still remained ports to be visited, an X on the chart, and we were beginning to long for blue water. And yet we were loath to leave. We had excused ourselves whenever a race was proposed, so our reputation as cup winners was not in the least tarnished. On the contrary, our presence seemed even to give it new impetus, if such were possible, while our silence on the subject won us the highest esteem for modesty. Then, too, we felt that leaving Charlevoix would but mark the beginning of an end.

Thence before us lay the south, with its interminable shores of sand bars, and astern was all we loved so well, the spice of adventure and the romance of foreign shores.

It was with a light west wind and an ugly lump of a sea that we finally quit Charlevoix. This time we passed inside of Fisherman's Island, a low, barren, wind-swept rock, and then the wind freshened and we began the long run up Grand Traverse Bay. At midnight we anchored near the head of West Bay, at Traverse City. But this place, with its general air of business, its railroad and the blithe music of the saws in the mills along the water, was little in accord

us, and, as I remember, produced a very favorable impression.

If any doubt lingered in our minds as to the Flora's standing as a flyer it quite disappeared the next morning, when two gentlemen from the Belvidere came down with a tape line and craved the privilege of taking her dimensions. "This sailing under false colors is more fun than a shipwreck," the delighted crew asserted, and he only expressed our unanimous opinion. Several times we met Caldwell,

AUXILIARY HOUSE-BOAT PINSON. FROM "LE YACHT."

the unwilling author of our popularity. The corners of his mouth were turned down, but there was an unmistakable twinkle in his eyes.

The only drawback that attended this peculiar condition of affairs was the perpetual show that we felt we were making of ourselves; it was a trifle embarrassing at times for the skipper to find himself the envious object of admiration, but he pointed out as the hero of an event which he had never entered; but the mate carried out his part in a way that made lavish amends for any deficiency exhibited by the others. We were especially careful when boxing about the harbor to show foresail only, if any other craft was near with which our speed might be compared. We knew that Caldwell could be depended on to support the story which his own ingenious brain had evolved, but it would have been exceedingly embarrassing for us if some little upstart of a catboat should overhual us in the harbor. Perhaps the very insecurity of our tenure to a reputation, the knowledge that our pleasant dream might be abruptly concluded by a letter, just as a letter had originated it, made the fun more vivid while it lasted.

One morning, with a fresh breeze from the northwest, we hoisted sail, slipped moorings, headed for the narrow channel to Pine Lake, and passed Buzzy Point with sweeping canvases and a long straight wake astern. It was a beautiful cloudless day and we were bound up the lake in exploration. As the Flora glided over the foam-flecked surface, with light hearts we lounged in the cockpit and enjoyed our glorious freedom. Soon we reached the smelting furnaces of Ironston, where South Arm, as this portion of the lake is called, branches off to the right. We were scudding past the pleasant shores that rise like river banks, green from the water's edge.

"Mate, I'll tell you what, if you'll wash a shirt for me I'll covenant and agree to wash dishes twice for you." It was Dan who broke in upon our lazy daydream with his rude reminder of one of the most abhorrent of the limitations upon our freedom.

"Take it off and I'll make the attempt," was the answer.

"No, I mean the one in my valise," but I'll forgive the insinuation."

So the grave Bert poured a bucket of water on deck and was soon engaged in his serious labor.

"Ho! Soap overboard, down helm!" We were going a clean eight miles an hour when the mate sung out. Without trying to keep his eye on the lost treasure, he hastily dropped the centerboard and seized foresheet in one hand and staysail sheet in the other.

"That's well, ready about, lighten headsheets," and she was soon heeling as to intersect her former course.

"Keep her off, helm up, steady," shouted Dan from his position at bowsprit heel. "Now watch for it to leeward." As we swept past, the mate made a successful dip with the bucket and landed the prize. In a moment the yacht swung off before the breeze and was on her course to the shore.

"Ha, precious treasure, and the only link that connects us with civilization! It floats, it floats, forty-four and ninety-nine one hundredths pin," and the White Elephant resumed his labor.

We proceeded up the winding lake until about fifteen miles from Charlevoix, then moored the yacht under the lee of a sandy point and spent the rest of the day gypsy-like on the beach. There was a plentiful supply of wild berries in the wood, and we found that by diligent application we could pick them fast enough to prevent our hunger from increasing and still have time for an occasional dip in the lake.

When evening came the breeze had died out and we were ready to return. Bert said he would take the first watch, so the other two turned in. Soon the night wind came up fair astern and the occupants of the cuddy were entertained by the efforts of the mate in keeping her wing and wing. This he was determined to do, but when he left the helm to wing out the foresail the mainsail would jibe. Then the foresail would jibe, or perhaps on the contrary the foresail jibed first and was followed by the mainsail, or as occasionally happened, both went over together. The crew fell asleep with a broad grin on his face, and knew no more until a lantern was thrust into his face and the deck beams hit him a vicious rap on the head. The yacht had arrived at her familiar anchorage, the hook was down and sails furled.

with our free and easy dilettanteism. We wandered about for a few hours, and left to retrace our course down the bay. Northport, where we arrived at daybreak, the sleepy, forgotten village detained us part of a day. The wind was fresh from northwest, so in the afternoon we held northward toward the open lake, but anchored under the lee of Lighthouse Point, well out toward the end, to wait until night should come. Our wait was not tedious; we took advantage of the occasion to visit the lighthouse and were shown into the lantern by the proud keeper.

This trick of lying by during the day if you have a head wind, and edging along at night with the land breeze, was one by which we had

A SHANGHAI HOUSE-BOAT.

profited more than once. The sun was just showing over the hills to port and the wind was beginning to swing back to the southwest, when the Flora slipped into the harbor at South Marquette Island, next morning. This peculiar, crescent shaped haven, situated on the east side of the island, which lies about twelve miles from the mainland, is familiar to every one who has seen rough weather on Lake Michigan. The course of the lower lake commerce lies inside the island, from whose empty harbor may be seen all day long and by their lights at night, all that passes through the straits, following each other as in some grand pageant. But when that tempestuous months of early autumn arrive, the island awakes to full activity: from the north and the south the over-laden steamers and the weather-beaten schooners will congregate in the little basin until their masts are numbered by the score.

When we arrived there was nothing in port but a steam barge and her consort loading gravel for Chicago. We beat to the sandy point that projects from the south, and anchored almost under the shadow of the tall white lighthouse. There is excellent holding ground, the bottom slopes down from the beach as steep as sand will lie to a depth of twenty fathoms. The lighthouse keeper told us he had known a schooner coming in for the first time that let go an anchor with too short a scope of chain. Down to the bottom it shot and surprised all hands by taking both ends of the cable with it.

Later in the day the wind became stronger. Just a half mile to the east we could see the hearing whitecaps roll. Soon a little steamer, fairly covered with lumber, sought shelter at the island, and was followed close by a great white-winged schooner from the north. We supposed she was laden with coal, for her deck was low and she was

(To Forgive Divine).

THE POETRY OF HOUSE-BOATING.

brass on deck and the elegance of the furnishings below almost took our breath away. But once more the mate's insuperable nerve carried us over the shoals. You would have thought, to see him examine the barometer and scowl at the inoffensive steward, that he had lived all his life on a 300-ton ocean rover.

This "doctor" Jim we found a very amusing character. "I came in on an ore vessel last week," he said, "and we stuck on the bar outside and the water came through the roof all night. So I struck. 'This here's the sweetest hooker I ever laid eyes on,' and then he rushed off to polish some of his galley utensils. When we had made sail Jim was going to lift the stream anchor hand over hand, but was surprised to find that he could not even haul the cable taut without the

A BLANK DAY.
BUT IT WAS NOT ON THE

RAILROAD.

The sportsman of the North often has a blank day.
Indeed, no Northern shooter knows much about
shooting until he has shot in the South, where the
superb natural conditions have left the game in un-
diminished plenty in the covers.

Don't Go After Bear
to the Rockies. Go to the wide river bottoms of
Mississippi or Louisiana and you will get one.

Don't Go After Turkeys
to the Great West, but to the Great South, in Missis-
sippi and Louisiana, where the unbounded wood-
lands hold abundance of these noble birds.

Don't Go After Ducks
in the North, and work hard for days for a dozen
ducks. Go South, to Louisiana and Texas, and
learn what wildfowl shooting is.

The Quail, Woodcock and Snipe
shooting of the South is such as the Northern hunter
never dreamed of. A genial climate, a pleasant
people, a six months open season, and birds until
you want no more.

The Illinois Central Road runs direct to all this

A TAG FOR THE DUKE.

THE Duke of Veragua, who is of direct line of descent from the great Columbus, has come to New York to participate in the festivities of the Columbian celebration and to receive, as is fitting to the rightful heir, some measure of the honor and glory accorded to his distinguished ancestor. In the name of the sportsmen of America we salute the Duke. Speaking for the shooters, the hunters and the anglers, we extend to him the assurance of our unbounded gratitude that, when the Genoese gave to Ferdinand and Isabel a New World, it was one so richly abounding in the resources of field and stream; and we proclaim our abiding satisfaction that of the game and fish of this continent which at first by providing subsistence for the new comers here made life possible to be lived, some fragmentary store still remains to be counted among the luxuries which make life worth the living.

The Duke will find this continent not so well off for game and fish as it was on the occasion of the first visit to America by one of his family, but if the Veraguas are sportsmen, and will do us the honor to prolong their stay with us until the crisp days of a North American autumn, we will undertake that feathers shall be put up worthy the matchlock of their ancestor's arquebus, as of the best modern gun from armorer of Castile or Arragon. Or if the Veraguan fancy incline to the sheen of the salmon, the glow and luster of the trout, or the glint of the bass, here in America we will show them such dancing mountain streams and placid lakes as the Old World may not boast—nay, not even amid those rugged fastnesses where first rose the Cid and made his glorious stand against the infidel.

The dignitaries of Manhattan have presented to the Duke de Veragua an elaborately-engrossed scroll of parchment, conferring upon him the freedom of the city. Empty honor! We extend to him the freedom of the continent—its waters and fields and woods, from ocean to ocean. Free to him shall be its trout from Pennsylvania to Oregon, the bass of Wisconsin, the landlocked salmon of New Hampshire, the pickerel of New Jersey, the channel bass of Florida, where rolls the surf as Columbus first beheld it on the silver sands of San Salvador. Free to a Veragua shall be the partridge of the old fields of South Carolina, and free that other partridge of the New England hillside. He may wander at will on trail of deer, caribou or moose in the forests of Maine, or pursue the bounding deer through the trackless wilderness of the Alleghanies, New York's North Woods and Michigan's wilds. If Veragua's pleasure is to be found in yet more arduous pursuits, there are the bears in the Mississippi canebrakes and in the mountains grizzlies, whose shaggy hides might well test the tough steel of a Toledo blade; elk, antelope and mountain sheep will be found in the Rockies of Wyoming; and on the summits of Montana, Washington and Oregon the clumsy goat, his pelt a prize not unworthy the quest of a Knight of the Golden Fleece, nor yet the winning by one in whose veins run the blood of him who won a world.

It was not given to the great Christopher to subdue the

wild creatures of the New World; he never dreamed of the western mountains, much less of the magnificent antlered creatures inhabiting them, but to this scion of his race are opened wider and richer opportunities, and as he shall improve them, and as one trophy after another shall be won by his skill to be taken home to Spain as tangible memorials of the sporting resources of this country, the Duke de Veragua will understand why the sportsmen of the New World rejoice in the best hunting countries, the best game and the best fish on all the round ball.

"The freedom of the city" indeed! How paltry a bauble is that. Compare with it this freedom which FOREST AND STREAM extends, the freedom of the game covers and the angling waters of a continent, nor do we speak presumptuously, nor without the most deliberate weighing of words when we assure the Duke that the freedom shall be the fullest, without reservation or limitation, save as by our codes of game laws which have somewhat tardily been adopted and are now more or less in force in this Columbian era. He shall have the best there is, even if that best be inclosed within the barbed wire confines of a game preserve, for what club the most exclusive would not remove its trespass signs in favor of one of the line of the discoverer of the whole continental preserve—and as for those States and counties where no non-resident, not even Christopher Columbus himself, might shoot or fish untagged, even there the Duke de Veragua shall shoot and fish both, if he will, not tagless, indeed, but with every minutest letter of the law duly complied with and the tags furnished, if this may be permitted us, by the FOREST AND STREAM, for what is "freedom" if not free, and what is hospitality if stinted. Such at least would not be the hospitality characteristic of the sportsmen of this country nor such their extended freedom of Columbia, misnamed America.

This distinguished foreigner shall not be hampered by any of the invidious and vexatious non-resident discriminations, which in certain sections of our great and glorious country are enforced against the ordinary every-day common American citizen, born under its Stars and Stripes. We shall undertake to see to it that even in Dorchester county, Maryland, the Duke de Veragua shall have the same freedom to shoot partridges that he would enjoy if, in addition to coming of the line of Christopher Columbus, he had married a Dorchester county girl. The Duke shall have his tag.

WORTH TRYING.

IT appears to be pretty clearly demonstrated that the Mongolian pheasant can stand the winters of New England and northern New York, and that he has nothing to fear from climate on this coast. This has been demonstrated not by a single experiment, but by several.

It is now well known that the pheasants turned out some years ago at Tuxedo Park did well and scattered themselves over a great range of country in New Jersey and southern New York. They are killed from time to time in Rockland and Sullivan counties, N. Y., and seem in the wild state to be slowly on the increase. Some pheasants imported two or three years ago to Flanders, L. I., by Mr. H. D. Auchincloss, have done well out of doors and are increasing. Last season Mr. W. Austin Wadsworth, of Livingston county, N. Y., turned out ten birds and they survived the bitter weather of the winter just past. On another page Mr. Wallace, of Connecticut, gives another instance of their hardiness.

We are familiar with the rapid increase of this beautiful species on the West Coast, where all the conditions are in its favor; where climate is milder, food more abundant and easily had, and enemies fewer. But with strict protection a somewhat similar increase might take place in the central West and even on the Atlantic coast.

Pheasants are great wanderers, and a few turned out at any point will spread themselves over a wide extent of country; they are also great runners and will sometimes refuse to lie to a dog, but at other times they have to be kicked out of the brush just as our own quail and ruffed grouse do.

We know of no experiments with any exotic game which have proved so promising as those with this pheasant, and it would seem worth the while of sportsmen's clubs generally to take the matter of their introduction in hand. The fact that the birds will lay their eggs in confinement and that the young can be hatched out under domestic fowls, greatly simplifies the experiment.

THE TROUT OPENING.

ON Saturday last the legal opening for trout for the State at large took place, and as usual there was a fine show of fish in Fulton Market at Mr. Blackford's and elsewhere.

The day before had been one of severe storm, one and a half inches of water having fallen in the twenty-four hours. This was followed by clearing weather and a cold wave, so that it was really much more comfortable in the market looking at Mr. Blackford's slabs and tanks than it was by the brook side.

Nevertheless, there were not wanting many anglers who wet their lines on the opening day, but most of these found the streams tremendously swollen and heavy with mud and soil, so that the results of their efforts were not large.

But from now on it is time to go a-fishing. The grip of the frost king is loosened for the year. Now the weather will be growing milder and milder, and

"On low seas over night the spring comes gently walking."

From this time on, he who goes afield with his rod will see many things to give him pleasure, whether he returns with creel full or empty. On the hills that bound the valley through which his brook flows are scattered the pink blossoms of the trailing arbutus and the blue ones of the hepatica. In the swamps which he threads as he follows the stream's course are the graceful anemones and the yellow blooms of the dog tooth violet. From every tree top he hears the mellow song of the building robin, and the twitter of the bluebird as he shifts his light load of song from post to post along the fences. From the willows and alders along stream and pond rise now and then flocks of newly arrived blackbirds whose quaint efforts at song are yet sweet to the ear.

The perfume of flowers, the smell of the meadows, the fresh, fragrant odors of the woods delight another sense, not less than the flood of warm sunshine in which the angler delights again to bask.

It has been said a thousand times that it is not all of fishing to fish, and the taking of a few trout is perhaps the least part of the pleasure of that angler who goes afield in the early days of spring, but after all, it is the fish that give him his excuse for his outing and all the delights that come with it, and if it were not for them he would still be sticking to his desk and carrying on his daily work. So it is that we all welcome the day of the trout opening, for it gives us an excuse to look again at nature awakened anew from her long winter's sleep.

THE AUDUBON MONUMENT.

ON Wednesday of next week there will be unveiled in Trinity Cemetery, this city, a monument which has been erected to the memory of John James Audubon. This unveiling completes the labors of those who for several years have been striving that some appropriate memorial should be raised to the great artist-naturalist, who did more than any other one man to acquaint Americans with the birds of their own country.

It is more than five years since the preliminary work of the Audubon monument committees began. The project for a monument to the naturalist was a direct growth from the founding of the Audubon Society, which was started by FOREST AND STREAM for the purpose of combating the pernicious fashion of wearing the feathers of native birds as ornaments. Committees were appointed by various scientific societies, among which the New York Academy of Sciences and the Linnean Society were prominent, and a general interest was felt in the subject. It is true that at times the work dragged, but the energy of those who had it in charge never flagged, and their labors are at last crowned with success.

At the exercises to be held at Trinity Cemetery next Wednesday, Professor Egleston will deliver an address, turning over the monument to the authorities of Trinity Cemetery. At the exercises to be held in the evening at the American Museum of Natural History, in Manhattan Square, an eulogy of the great artist-naturalist will be pronounced by Mr. D. G. Elliot, himself an ornithologist of eminence.

It is a source of satisfaction to all ornithologists that this monument is at last erected, and that it stands within a short distance of that home where the great naturalist passed the latest and, perhaps, the happiest days of a long and changeable life, surrounded by loving children and grandchildren, and having for his companion that noble wife to whom so much of his success was due.

The Sportsman Tourist.

"LIGE."

I.

I LIKE to think of Lige as I first knew him; the child of nature; the soft, tender-hearted man; the genial, easy-going, don't-care fellow; the interesting and entertaining friend. Not a care or thought for the morrow disturbed the serene monotony of his life; he lived alone in an old farmhouse, where he cooked, ate and slept, unharassed and untrammelled. Not a relative in the world that he knew of, everybody was his friend and he was the friend of every one. Kind, gentle and lovable; though the outer shell was rough and unkempt, the heart was ever kind and sympathetic. When I came to know him thoroughly I loved him. Rest here in this heart, old friend; I embalm you in my memory as you once were.

I first met Lige on a day like this on which I am writing; perhaps this brought him to my mind; I don't know; it makes no difference with the story. It was a soft, warm day in the opening of spring, gentle showers were falling, cooling the air and coaxing the buds to open and grass to grow. It was a good day for fishing, I was tired; oh so tired of business. Who has not had the mad impulse come over him to rush away from the wearing round to the woods and meadows, there in the quiet of nature to expand and grow backward to the boyish joys again? If there is one who has had no such impulses, who cares not to haunt the fields and woods for even a brief holiday, I pity, though I cannot understand him.

I had fished all day. Never before had the old Nepash so rewarded me for my efforts; I had fish enough to satisfy the most grasping, and I threw myself down to drink in the quiet and beauty of the scene about me. So absorbed was I in the loveliness that I was not aware of another's presence until I was greeted with, "What luck, stranger?"

I looked up and met the gaze of a pair of quiet gray eyes that sparkled under huge shaggy brows, large features, grayish brown beard and hair that sprawled at will 'neath the broad-rimmed soft hat that bore the marks and dents of many tussels with its owner.

We grew communicative; I told him of my business and enumerated for his edification the tons of coal, iron and steel, as well as ponderous grindstones we used in the manufacture of edge tools and plows, as well as other facts and figures of magnitude calculated to convey awe and wonder to the unfilled mind of an economist in thought timber, all of which he received with proper ejaculations of astonishment and negative shakings of his head in confirmation of the surprise conveyed in his tones. And then he told me of his life alone "Back here a mile or so," of the charcoal he burned and the hoop-poles he cut; as he expressed it, "Charcoaled it spring and summer, and hoop-poled it fall and winter." Nor did he neglect the trout and game interests. He told of muskrats he trapped, and he often got minks and sometimes—though rarely—an otter; foxes and coons were "midding plenty." He waxed warm when he talked of fall hunting and I felt all the glow of a sportsman as I listened to his inspiring talk. We met here on equal footing and lingered lovingly over the topic until the day grew gray as the sun went over the hills, and when the shadows in the valley had lengthened and become absorbed by the gloom of evening we parted with a warm clasp of hands and an expressed desire on his part for a visit from me a week later, to spend the night at his house and have a day of sport from the very source of the old Nepash, miles above the spot where I usually struck in. The frogs sang to me as I bowed my way home, and though tired with my trip yet the feeling was a good one and I laid me down and slept with peace in my heart toward the world at large and Lige in particular.

A week later Ben and I planned a trip to the country where lived this new friend. Ben is my particular crony; just the one to go away with on a hunting and fishing trip; funny fellow he is, too, in more ways than one; though a great lover of fishing and a good fisherman, he cares nothing for hunting. I don't believe he ever fired a gun, but he would go with me to carry the game bag and provisions and to keep up my spirits if they flagged a moment, and so I considered Ben as my right-hand man; a dear good fellow, a humorist and everything enjoyable when I had a day off and wanted a companion, and thus it fell that I wished Ben to share the joys of this trip with me. I felt that Lige could not object to the unannounced presence of Ben; with a woman this unceremonious breach of etiquette would never do, but there was no woman at Lige's house; he was a bachelor.

I shall never forget that visit. Lige came down the road a mile to meet us, greeted us with all the exuberance of spirits a boy might have shown, and was delighted that I had brought Ben. Poor Lige—but we reserve the telling of your sad fate for the next chapter. Let the sunshine of your life come first, while we hope that the clouds may break away and not overshadow your life forever.

Up toward Lige's house we rode, light at heart and frolicsome as boys let loose from school. Never did I feel more at rest or happier. All was quiet and harmony, with the birds trilling their evening songs and the gentle lowing of cows softened by distance. A feeling of peace and true joy took possession of us.

We soon arrived at the old farmhouse. What a picture it was to me. I failed to take it all in then, but I dream over it now, and with eyes shut tight I see every angle and corner and every broken clashboard.

We followed Lige to the large barn where our horse was, stabled with a bed of bright rye straw, and we left him contented and happy over his supper of oats. A large, old-fashioned, roomy porch, made by the roof projection at the back, invited us to a rest on its floor, where, with feet hanging off, we sat and talked and smoked the evening away. About 9 o'clock a whippoorwill flitted low across the meadow that lay wrapped in slumberous shadows and light glimmerings under the new moon. Low and sad came the notes "whippoorwill, whippoorwill," and without prearrangement our talking ceased and we listened. "Mighty lonesome that sounds," said Lige at last, "but not so lonesome as when I sit here alone." I agreed with him that it must be lonesome sometimes, at which remark he seemed to take some ex-

ception, for he said quickly: "Mighty good, though, after all, to be lonesome sometimes," and I agreed with him again, for I had often seen the time when I preferred to be alone and lonesome when I couldn't somehow manage to bring such a state of affairs about. When we were ready for bed Lige gave us a real old-fashioned tallow dip and brass candlestick. I nodded my satisfaction to Ben. "Lodgers will please not blow out the gas," I said, and Lige, evidently not understanding my levity, half apologized for not doing better by us and said he'd "never got the hang of karryseem." "Good night, good night, friend Lige; sleep tight."

Lige called very timidly the next morning as though fearful of waking us. I awoke with a start. Had I slept over and would I be late at the office? "Oh, no," I remembered, "it's our day off," and I heard the tall old clock in the hall peal the strokes on its huge brass bell; and outside the birds were singing. A voice from below rouses me from my reverie. Ben has left me and descended. Lige calls me to prepare for breakfast. As I go down the old-fashioned staircase with its quaint square bedpost balusters and rails, I note the fragrance of lilacs through the open door, and catch a glimpse of a paradise of green, sparkling dewdrops, dandelions, adder's tongues, grasses, and an old well sweep with Ben sousing his face and head in cold water he has just poured from "the old oaken bucket." Yes, here they were—the moss-covered bucket and well-sweep.

•We went in with Lige, who had waited for us on the old porch, a scent of coffee and browned cakes greeting us and whetting anew our already sharpened appetites. The trout were well cooked in cracker crumb batter, and we ate in comfort. Somehow the scent of that breakfast, the yellow of the ochered floor, the dark smoky ceiling, the fresh breeze through the open door, the perfume of lilacs, the "peace-with-all-mankind" look on Ben's features come to me now in a fantastic whirl and I fail to detach them one from another, they go together in my memory when I think over the joys of that May morning.

We were ready for fishing at last and struck out across lots for the head waters of the Nepash fully three miles away. The joys and full sense of wild free life that we experienced that day I have not time nor space to relate in detail. One such day braces the hand, eye and heart of a man for weeks to come. We made a halt at noonday by the side of a clear bubbling spring beneath the partly uncovered root of a large elm. Lige pulled from the bag strung on his shoulder a can, a wire toaster, tin plates, knives and forks, a box containing salt, butter and pepper, a loaf of bread, and then a chunk of salt pork came from the magician's inexhaustible bag. By the time the coffee boiled he was ready to broil his fish, which he did to a turn. Then having eaten, we lay down on the grass, with hands behind our heads watching Lige smoke his pipe and listening to his talk, well satisfied to listen; it was too much exertion for us to do more.

Down we went all the afternoon, alternately lapping by each other on the stream, Lige with his home cut pole, and hook baited with a worm doing great execution, though Ben and I were not far behind. The day drew slowly to a close without a cloud to disturb the harmony of our outing. Leg-weary we reached the homestead and partook of Lige's evening meal of cold boiled beef and cabbage. Then we started for home, well satisfied, well paid and in good spirits, with pleasant memories and trout.

Many such days came to us in the years following, and cool, frosty mornings in the fall found us tramping the hills and woods with our dogs and guns, "after anything," as Lige expressed it, "as wore hair or feathers," and the evenings found us before his open fireplace, where we smoked and talked the night away.

And all these things must end. I often felt the premonitions that denoted a coming change, and wondered just how it would be brought about. Poor Lige! We fought our great loss in your sad affliction. But I need not anticipate. Let the facts come in their routine. There had been little hunting for me one fall, and Ben, having no great propensities in the shooting line, had remained at home, and so it happened that for six months we had not seen nor heard from Lige except once when he came to town with eggs in the winter. I saw him there from the office window, and hastily throwing up the sash called, inviting him in. He shook his head, pointed significantly up street and walked away. I looked in vain for something that might give me a clew to his strange conduct, but there was nothing in sight except a tall, slim woman dressed in black. I was puzzled and Lige's behavior bothered me.

Spring had come and the trout brooks I knew were singing songs of welcome release from icy bondage. I felt that I must get away for a day; but there seemed no opportunity whatever, and day after day came and sped again, and still I seemed no nearer realizing my desires for an outing.

II.

The mails came in with unflagging regularity and found me up to my eyes in work. Was this state of things to last forever? Out on the hills I could see from my desk that the trees were growing greener and leafier every day and the far meadows spoke of grasses that were springing into new life and color hour by hour. I knew that brooks were flashing in the spring sunshine, and that trout were waiting to be caught. Would they wait much longer for me? I was afraid not. I sent the boy for Ben that I might discuss with him the situation. He came, but pleaded business as an excuse for not going. I graphically described in glowing colors the joys he knew so well without the telling. For a time he was really obstinate, shook his head, could not go—would not. But just as I was about to give up he said, "Where'll we go?" In the sweet joy of the winning I let him talk and listened to the programme he deftly unfolded. He knew just the place. It was Lige's of course. We would drive over that very night, sleep at the farmhouse, and be ready as of old for business in the morning. Then we talked of the days we had spent with Lige, and the evenings in his house, smoking our pipes before the large old-fashioned fireplace amid flickering flashes and shadows, and talk, with home-brewed cider and apples and hickory nuts. I remember that I grew intensely nervous after the arrangement was made. Every moment unexpected hindrances occurred to put back my work; but never for one moment did I give up the idea of going. I should go if it took a leg.

We were off at last. For a wonder we were out of town without a hitch. We said but little for the first five miles. May had laid her beauties all around us; the cold blasts of April had gone and soft breezes fanned our faces. How quiet everything was. The jar of heavy machinery and rattling of trip-hammers had gradually drifted from our hearing, and the monotonous and wearing gratings of the big wheels had gone and left in their places a restful calm which only those who have exchanged the one for the other can understand or appreciate.

At last we reached the farm of our old friend. I was restless. I knew not what I was dreading; but something whispered of a change—a disappointment. A board notice on the brook bank in sprawling, uncouth letters stared me in the face:

NO FISHING Allowed HERE.

I looked at Ben. "Not like Lige," I said. But Ben explained away my fears, and believed that Lige was saving the fish for us. And so, trusting and hoping, but in grave doubt nevertheless, we went on, and did a prodigious amount of thinking. We were rapidly nearing the house. No signs of Lige had dawned on our horizon. To all appearance the farm was deserted. But then Lige might be away. Of course he couldn't be expected to stand around watching for our coming when he had received no intimation of our visit. And so we chirked up a bit as we discussed the pros and cons. I was thoroughly startled, however, when Ben grasped my arm, pinching it severely, and, pointing at something with the other hand, told me to stop the horse. Wondering, I did so. I could see nothing to warrant his fixed gaze; but at his earnest cry, "See this!" I looked again in the direction indicated, but as before, nothing rewarded my eager gaze. "The flowers," he said. Then I noted a bed of pansies under the front window. Ah! I began to understand his agitation—there must be a woman on the premises. We looked blankly at each other. Our castles had already taken a tumble. Our bachelor friend must be sick or—or dead perhaps—or had a housekeeper. In any event our hopes were blasted. Where would be the enjoyable evening Ben and I had depicted and looked forward to?

We heard the soft and even cut of a saw back of the house as we drove into the yard. A little further and one of our fears was set at rest. Lige was not dead. He was sawing wood. The saw flew monotonously back and forth, and only a nod from the sawyer denoted that our presence was known. We slowly descended from the wagon and attempted to be jovial, but Lige confined his advances to a cold "How-r-ye?" and kept steadily on with his work. To Ben's inquiry whether we could stay all night, he pointed to the house, "Ask her;" and then went on again with the saw pushing, without a word of greeting or cheer.

Such a welcome was paralyzing. We had looked forward to glad surprise and joy on Lige's part, and warm hospitality as of yore. But we hitched our horse and walked toward the house. We dreaded the task before us but must see it through. The door was opened and a tall, angular female of a decidedly vinegary aspect told us coldly to "come in." We soon learned that she was married to the man sawing wood. "He was a shiftless fellow, but she meant to make him over; he was saving his stent now; he wouldn't get through before 8 o'clock, neither, and then he had two cows to milk; time was money, and it had got to be if they ever got anything out of the place, and at their time of life. Yes, we could stay to-night and to-morrow for a dollar each; she couldn't afford to wait on nobody for nothin' and wasn't goin' to; the nimble sixpence was worth more to her than the slow coming promised dollar, and she meant to 'git' it every time. Yes, Lige could go fishing with us for two dollars; if his time wasn't worth that we could go alone; but if we did go alone we needn't fish in their brook unless we paid one dollar each for the privilege; that was the long and short of it. Lige had been easy going and his friends had 'bout eat him up [I looked at Ben], and he had took his pay in thanks, but that day was passed; 'wouldn't happen again, not as long as she lived, she guessed."

We waited for an interval in her talk and then informed her that we would stay on her terms. Lige was told to finish his "stent," put out our horse and then milk the cows, but we took care of the horse and milked the cows, thinking that thus we could purchase Lige's time and have a good smoke and talk with him out back of the barn after 8; but we were disappointed, for just as he finished his last stick he was invited into the house to churn, and we strolled out in the evening mists to smoke and ruminate alone, though not before we saw Lige shoot an appealing glance into his wife's hard face.

We did not see him again that night, for on our return to the house, our hostess, taking a brass candlestick and tallow dip, bade us follow, and we went up the old-fashioned staircase after her, feeling much as we used to when as small boys we were put to bed nightly by our mothers. We were left with a cold "good night," and found ourselves in a large bedchamber full of the scents of damp and decay. Though everything was neat and clean, yet all was somehow stamped with an indescribable funeral appearance. Gloomy and vast was the room, and its walls were hung with an old-fashioned dark-tinted paper on which were full-blown roses of dull brown color. Stains of long ago, caused probably by leakage of rain through chestnut shingles, appeared frequently on the wall. The rising wind was stirring the trees outside and a limb scraped and pounded the house in a way to lead one into the belief that a terrible gale was blowing. A colored print of Napoleon on a white horse looked grimly at us from over the gilded frame of an old-fashioned mirror, from the top of which a red house with blue trimmings and surrounded with yellow grass beamed cheerfully, as if to reassure us. Four prim rush-bottom chairs, the seats newly painted white, a tall, old-fashioned mahogany bureau, a four-post rope bedstead on which, dome shape, rose the two feather beds and comfortables, completed the *tout ensemble*.

We maintained a grim reticence, but, thanks to the sweet restorer, sleep, we soon forgot our troubles, until a thundering knock at the door dispelled our slumbers and a strong female voice announced that breakfast was nearly ready. We sprang from our beds eager for sport. Ben jerked up the green paper curtain, but no sun's rays gladdened the room. It was yet dark, I looked at my

watch; barely 4 o'clock. When had I been up before at that time? What had I sacrificed for this day's sport and the work piling up on my desk at home? I mustn't think of it, I should go crazy if I did.

We hurried and dressed and were soon down-stairs. A grateful scent of cooking met us half way. We went into the "best room" and sat down on the horsehair chairs to wait. We dared not open the front door to go out, nor enter the kitchen where she was, and so we waited, alternately slipping off and pushing ourselves back on the horsehair chairs. Had it been light enough we might have looked through the family photograph album, which occupied a central position on the mahogany table. We talked in undertones, and then only on topics that might not offend if overheard.

At last we were invited to enter the kitchen. Lige had already eaten, so as to get his chores done in time to go with us. His time would be ours for ten hours after we heard the bone mill whistle up the valley, and that blew at 6 o'clock. We hastily bolted our eggs and salt pork, drank the rye coffee, very weak at that, and were soon ready to go down to the barn to look after our horse. We were told not to "hender" Lige or he wouldn't get ready to go at 6. We concluded not to go to the barn, for fear of "hendering," but walked out over the dewy farm, and when far away discussed the situation. I regret to be obliged to say that we even considered the expediency of leaving at once, looking up a stream for ourselves and cheat the woman out of her prospective \$2, but the thought of poor Lige's disappointment was too much for our tender hearts and we concluded to go the whole programme.

At last full and clear we heard the whistle up the valley, and went back to the house. Lige was ready and had a white birch pole in his hand to which was attached a green grass line with sheet-lead sinkers. "You'll need a sinker," he said, "where we're going the water runs like Jehu," but I did not put on one for all that.

We were off at last. Oh the exhilaration of the moment. Out from a gloom and business life worse than we had at home we went into the doubly blessed roving life beneath God's wide dome of blue that stretched so wide reaching overhead. Lige began to thaw; and discoursed learnedly on fish and fishing. Was this the same man who sawed and churned last night? He apologized in a meek shamefaced way for treating us so meanly and for being married. How he come to get married he didn't know. She had evidently married him and now his cares and labors were taking him to the grave. Would it be wrong for him to run off and leave her? he asked, and where could he go to? We could give him no advice, no consolation, but told him to drop his cares and troubles for the once and have a good time. I am glad he took our advice and had one day of respite for which we paid.

We fished to our heart's content and came home hungry, and with baskets well filled. We ate our supper, paid our bills, gave Lige some cigars, came home, and though we think of him often we never visit him. Occasionally we see him drive by, baskets of eggs and a box of butter in the wagon, but his wife is always with him. Once I stood by the window as he went past, I caught his eye and nodded; I thought I detected an answering gleam, and I still think that as he flicked an imaginary fly from the old mare, the motion was a signal of good will to me—but I am not quite sure. ALBERT LEWIS.

A TWO DAYS' OUTING.

At last the time arrives and we are off, and after a railroad ride and a steep climb over a Connecticut hill road we come in sight of our destination, an ideal farm house, from which is had a beautiful view of the valley, with here and there a house nestled among the trees, the richly clothed Salmon River hills; and far beyond, to the westward, mingled with the azure of the sky, one can, on a clear day, catch the darker blue of the Berkshires.

My companion was Mr. John T., a gentleman in all that goes to make up that much abused word, a man who never shoots another's birds, who, if fishing in advance on a narrow stream, always leaves enough good water to enable his companion following to have an equal chance with himself, who believes that the rum bottle and the rod never will assimilate, and who, though middle-aged in years, is a boy in heart in all that pertains to the manly use of rod and gun. Would that his kind were legion.

The only drawback to the stream is that there are very few places where one can use a fly. It fell to me to make the first cast and scarcely had the squirming temptation touched the water when it was seized, but the extradition papers were in my charge and were speedily served on his lordship, and he soon reposed on the bottom of the creel. It was only an 8 in. trout, but it was a beauty, and hopes were high as the weather was perfect, a southwest wind and a cloudy sky, and we knew that in previous seasons many a lordly specimen had battled in vain for his life in the very section of the stream we were entering. So we waded on, taking here and there a fish, and often returning them to the water, for the brook seemed to contain plenty of fingerlings and very few that warranted keeping. On we went with varying success until warned by the watch that it was time to retrace our step.

On comparing creel we found that out of all we had taken only nine had been retained, and none of them would weigh over a half-pound. But 'tis not all of fishing to catch fish. Rather is it the sense of absolute freedom from the cares and worries of every-day life, the laughing stream, the intangible, yet subtle, aroma that floats on the air, with here and there a dash of spruce or hemlock.

Waking with the birds and with hope still in our hearts we started the next morning for a more distant and less accessible section of the stream, containing also the big pool, always good for at least a half dozen of the spotted treasures. But we soon saw that the day would be against us, as a cloudless sky and no breeze portended a sultry day. Still we bore in mind the early bird proverb, and, jointing rods, we set about our sport in a manner that deserved a better reward than we received. We had fished all the way to the head of the pool with the same unvarying reward—nothing. I had carried this pool in my mind's eye for a month previous to our pilgrimage, and I will describe it as it should have looked, but not as I found it. The whole fall is about 15 ft., composed of about fifteen steps, and as the water comes leaping from step to step it makes one mass of spray, which, struck by

the sunbeams, reflects the colors of the rainbow. The pool that catches and imprisons all the loveliness is oval in shape and dark and deep, with one side overhung by a high bank and shaded by massive hemlocks. Who can blame the spotted monarchs of the stream for making their home under its deep shade, from whence they dart with a tiger-like ferocity upon any luckless cricket that hurries by. This is the pool as I had it in my mind, but alas! the change since last I had seen it. The water barely rippled over the steps and the bottom of the pool could be clearly distinguished, except under the evergreen-lined bank. Walking down the steps we made three or four casts into the pool without a rise. This influenced my partner to move on down the stream, while I planted myself on the middle stair of the fall and concluded to "bide a wee" for one of the trout that I was almost sure lay under that bank.

Taking the one lonesome cricket from the bait box, I carefully impaled it on the lightest leader I had, and after making one or two preliminary casts to get length of line, I dropped it gently at the lower end and on the bank side of the pool and commenced slowly to reel in. I had perhaps reeled in 5 yds. when I got a rise that almost precipitated me into the pool, as my footing was anything but secure. He had fastened himself, however, and after a short struggle I had him exhausted at my feet in the pool below me. Now comes the foolish part of it. In the excitement of the moment, instead of walking down the steps and towing him to solid ground where I could have a good foothold, I attempted to pull him up to me where I stood and was just about to lay my hand on him, when with a flip of his tail he disappeared in the pool. How big was he? I never attempt to give the weight of escaped fish, but I will say that I should have had to have lifted the cover of the creel to get him into it. I fished that pool for the next half hour in the vain hope he or some of his companions would make me another call, but the reward was one 8 in. trout caught in the rifle just below the pool. Regaining my partner, who had caught but one above the limit, and the sun by this time showing brightly, we concluded to reel up and make for the house.

And now for the sequel: My host, commenting on our poor luck, said in a casual way that he guessed we would have better luck if one Rich had not been netting them below the mill dam, as he (Rich) had taken over 100 lbs. of trout and shipped them somewhere. Here is the whole thing in a nutshell. If Mr. A. C. Collins will write me I think I can give him the name of a man in that vicinity who will give him proof of the above statement. Anyway, we had a very enjoyable time, and returned home with hand and nerve steadier to take up the old routine of life where it was broken off. A. F. D.

INDIANS AND THE BIG GAME.

BEAVER CREEK, Wyoming, March 23.—*Editor Forest and Stream:* I notice in a February issue of FOREST AND STREAM an article headed "Market Hunters, Indians and Deer." My subject is hide-butchers, Indians, elk and antelope.

It is about 150 miles from the Shoshone Reservation on Wind River, to this place. This is their main hunting grounds, around the head waters of Green River, and also some of the tributaries of the Snake River. Only five years ago when I came into this country you could see antelope by the thousands. Now there are not many hundreds. Imagine 600 Indian hunters roaming over the country all summer and fall, killing all the game they possibly can, for the hides only, for they save very little of the meat comparatively. You can see their camps in every direction. When one party vacates a camping ground it is soon taken by another. So the same places are hunted almost continuously. Any one with sense and reason can foretell what the result will be, and that result will be in the near future.

The elk and deer will escape their slaughter much longer, as these range in the timber in the summer and fall, and high up in the mountains, where it is more difficult to go with their ponies, and where they cannot gain access with their ponies the game is perfectly safe from them, for they are not noted for their pedestrian qualities. If they cannot get there on horseback it is a dead certainty they have not lost any game in that direction. But in the spring when the elk work up from their winter range, the bulls separate from the cows, following up the mountains as fast as the snow will permit them, while the cows remain in the foot hills among the quaking aspen groves and in the willow bottoms along the streams, where they have their young, and there they remain until their calves are strong enough to follow them higher up into the mountains. If it should happen to be an early spring, so that the Indians can get over the Continental Divide from Wind River before the cows and calves move up, then the destruction begins, for after their winter's fast they are generally poor and weak and consequently stupid, not using the sagacity against danger that they use later in the season.

One instance came under my observation four years ago near the head waters of Green River. The Indians succeeded in getting over from Wind River in the early part of May. I was hunting for bear and was camped near four lodges of Indians (that is, four buck Indians and their families). I came into their camp one day and one of the hunters happened to be home and could talk and understand English pretty well. I said to him, "How many elk you kill here?" He said, "May be so twenty," counting by holding up all his fingers four times. "How long you been here in this camp?" "Six sleeps" (six days). I asked him then how many the other hunters had killed. "May be so all the same," meaning that they had killed about as many. I did not doubt his word, for on going back to my camp I met another hunter returning. He had a pile of skins on his pony and he was on top of all. "You have got a big lot of elk," I said. "Yas, me catch em heap elick." I counted them and he had six hides that he had got that day. They remained in the same camp three or four days longer, and then started to another camp to destroy more game.

Now we may safely claim that those four Indian hunters killed 100 elk in that one camp. Most if not all were cows. According to nature the most of those cows had or would have had calves. Besides this number they would wound and cripple others; for a large portion of the game they kill they never get the hides of, for they run off and die. Any one that knows the condition of game in the spring generally knows that the carcass is a poor excuse

for food and the hides are almost worthless. Yet the poor animals die all the same.

The Indian Agents claim that the Indians have a perfect right to hunt on unoccupied government land, and they certainly do it here, both on occupied and on unoccupied land without restraint. The laws of the State of Wyoming prohibit any one from killing for hides and also restrict to three a week. Whether the Indians come under the same law or whether the government considers them privileged characters I have not been able to learn.

One of the employees of the Wind River Agency was over here last summer looking after the interest of the Indians on their hunting grounds. He claimed that one party had claimed the right to deal with Indians, trading for their buckskin and hides on the reservation, and that he can ship them off openly. It seems strange to me that the Federal Government allows each State to make her game laws and then privilege some to break it, when the laws of Wyoming prohibit any one from buying or selling or have in possession any tanned or untanned game skins. If such is the case there is a kink somewhere that ought to be pulled out. MOUNTAINEER.

SAMUEL S. HAMLIN.

A PERSONAL acquaintance with Mr. Samuel S. Hamlin, whose death occurred at his home in Elmira, N. Y., Sunday, April 9, in the 76th year of his age, leads me to say a word in your columns regarding him.

Mr. Hamlin was a perfect representative of that class we younger men delight to designate as "sportsmen of the old school." Although a very busy man from his youth up to the time of his retirement some years ago, and a very successful man in a business way, he still found time to indulge his taste for field sports; and it was a rare treat to sit down with him and listen to his tales of long ago. He was a great admirer of FOREST AND STREAM and I think had taken the paper from its inception, and when he learned that I was an occasional contributor, I know he thought all the more of me. He was the Sam who figured so prominently in Dr. Up DeGraff's charming book "Bodines," that so delighted the fishing world a dozen years ago, and to Mr. Hamlin was the book affectionately dedicated by the author. Endowed by a sturdy New England ancestry with a strong constitution, advancing years failed to abate his love for the field and brookside, and with ample means and leisure at his disposal, he traversed a large part of the United States indulging his favorite pastime. Only a short time ago he was telling me of a recent successful turkey hunt in Virginia involving a long tramp, and his enthusiasm kindled like a boy's as he detailed each act of the day's sport to its final culmination.

The lakes of western New York were a great delight to him, and in his little steam launch on Canandaigua, he whiled away many happy hours with a few chosen friends. My first meeting with him was at Honeoye Lake where, in company with his favorite three nephews, a couple of bright autumn days were delightfully spent. It mattered not that the ducks failed to decoy, everything went well with us.

Mr. Hamlin was a conscientious, liberal, Christian gentleman. His acts of charity and kindness were legion, and he has passed away, leaving the example of a life well spent that none need fear to emulate. I only wish a worthier pen than mine might enbalm his virtues in FOREST AND STREAM. H. W. DE LONG.

DANVILLE, N. Y., April 14.

Natural History.

Song of the Western Meadow Lark.

Editor Forest and Stream:

I have not got Audubon's, Baird's, Coues's, or any standard work on ornithology, and would like to know if the meadow lark of this part of the West (northwestern Nebraska) is a different species from the meadow lark east of the Missouri.

In size and color I can see no difference between the meadow lark of my boyhood days and the meadow lark of Nebraska, but their song is entirely different. The meadow lark of eastern Iowa whistled one refrain over and over, and if there was not music in this song it was very cheering to hear on a March morning after a long, cold winter.

Our Western lark begins its song almost the same way, and then it sounds as though it was trying to sing with its throat full of water, and will whistle five or six short bars and stop. But it is forever singing, or trying to, both day and night. In June, when moonlight, it can be heard any hour of the night.

Why this difference of song in these birds, which as I said before, seem alike in both size and color, and only a difference of four or five hundred miles between them.

J. W. A.

[The Eastern and the Western meadow lark have been regarded as different species or as two varieties of the same species. They are similar in size and color, but the Western form is duller, paler and grayer than the Eastern. It is probable that the two forms grade into each other. The songs of the two are certainly different, as stated by our correspondent, who in eastern Iowa may have heard the Eastern form, and in western Nebraska certainly listened to the Western. In one of the New York magazines some years ago Mr. E. E. Thompson, the artist, had a very interesting paper on the "Song of the Western Lark."]

Pine Grosbeak in Minnesota.

ELY, St. Louis County, Minn.—Will say I find grosbeak here every year, the entire winter. This year they are not quite so numerous, but the males are more red than usual. Their feed here is the seeds from the cedar and spruce, with a goodly supply of buds from the aspen or poplar. Who has seen our crossbills? I usually see them here by the hundreds, but in all my travels this winter (and I am in the woods all of the time) I have seen but two of these hardy little fellows.

ONE OF THE UNRELIABLES.

Michigan Bird Arrivals.

DETROIT, Mich., April 11.—The robins put in their appearance here March 12, bluebirds March 6, meadow lark March 12, red-headed woodpecker March 11, song sparrow March 12, red-wing blackbird March 12, bronzed grackle March 12, Canada geese March 24, phoebe March 26 and killdeer March 12. B. SWALES.

A TEXAS COLLECTION.

SAN ANTONIO, Texas.—*Editor Forest and Stream:* In Texas a man may possess a ranch to which he can go and bring away with him a carload of everything that pertains to game. And such is the position of our friend S. B. Witchell, of this city. He is the happy possessor of a fine tract of land in the Nueces Cañon, some sixty or seventy miles west of this city. Nimrod of sacred lore may have been a mighty hunter in his time, but he did not know anything of Texas or the Nueces Cañon. This cañon is in itself the *ne plus ultra* for hunting. No part of this grand State can show finer hunting grounds; it may justly be styled the hunter's paradise.

Mr. Witchell is a great promoter of the art of taxidermy. In the accompanying photograph may be seen as the central figure a fine specimen skin of the Bengal tiger, a Mexican jaguar or *tigre*, from the Sinaloa Mountains, also an Asiatic leopard on the left and a black leopard at the bottom, a Texas-raised white Angora of silky softness, a monster pair of Texas steer horns, a Texas armadillo and a black Texas bear. Amid all this display stands the figure of Mr. Robert Hall, of Cotulla, Texas, now eighty-two years of age. He fought in all the Texas, Mexican and Civil wars. With all this Mr. Hall is strong and hearty, and acts as "Witchell's pilot." Mr. Witchell himself completes the group.

Another collection, and one which is by far the greatest curiosity, is a large collection of horns and antlers, horned frogs, alive and dead, well preserved in natural form and color, with a large variety of other animals. Mr. Witchell has large ideas of the commercial possibilities of the rattlesnake. He is now arranging for the manufacture on a large scale of an assortment of ornamental curiosities from rattlesnake skins, such as belts, ladies' bags, girdles, card cases, and neck scarfs with rattles for pins. I send you one of the rattlesnake scarf designs; probably it would attract much envious notice if worn on Broadway.

Mr. Witchell was awarded six highest premiums and two gold medals for his trophy displays at the Dallas exposition.

Speaking of snakes, the dormant winter stupor of the northern rattler is not part of his existence down here. I have found them while on my travels over the southwestern prairies and in the "brush" during December and January, moving about with as much, if not more, agility than in the midst of tropical summer.

One time, while I was connected with the Government service at Laredo, I was on a mission down the river. My guide, Wm. Cannon, who had been in the U. S. military service during the Mexican war, and who was familiar with every water trail, cow path or dirt road in the country, said to me: "There is a rattlesnake in that bunch of grass," pointing to a dwarfish mesquite bush and tall grass. We fastened our horses some distance away and, revolver in hand, approached the spot, where the music of the rattlers were now heard. Mr. Cannon found a forked stick, and bending down the grass pinned the reptile's head down and told me to fire into the open jaws. But I begged to be excused from that part of the performance, and taking hold of the stick I let Mr. Cannon do the execution. We took the rattles, which consisted of eleven rings, leaving the dead snake on the ground. The next day on our return we found the inverted skin of the snake hanging over the limbs of a bush, but nothing was seen of the body. Surprised at this, my guide told me that he had seen the tracks of Mexican unshod horses for some time in the road, and was convinced now that Mexican herders had passed; they had seen the snake and skinned it for the purpose of eating the meat, which they claim after the head is cut off is as fine a morsel as any eel.

At another time, when I was accompanying a train of some eight or ten ox wagons loaded with goods from Brownsville to the Upper Rio Grande, a dinner halt was made in an open prairie near some pyramidal shaped rock piles, fifty or sixty feet high, seemingly remnants of some eruption. The rocks were bare and weather beaten, but between the irregular shaped openings and crevices mesquite and cactus had grown. We were young then, and a desire for investigation was at once put into practical execution. Climbing and stumbling to within 25 ft. of the top, I stopped on hearing some singing noise not much different (as I thought) from that of a large grasshopper; and I started to investigate as to what was making the music. I kicked about with my heavy boots and spurs and pushed away the scrubby with the aid of my riding whip, and saw under one of the overshadowing rocks huddled into one large mass at least twenty large rattlesnakes shaking their tails while making ready for defensive positions. Introductory compliments were dispensed with and the descent by leaps and jumps from rock to rock was an act that would have brought applause in a well regulated circus. The return to the rock pile was indefinitely postponed.

Mr. Paul Stein, a druggist, and for a long time a resident of San Antonio, used to make it a practice to get all the live rattlesnakes brought to the city. He had a cage of strong woven wire with trap door, in which he would keep as many as six or eight large snakes at one time. By some contrivance he would get a snake out and grasping it tightly around the neck with the head above his thumb and first finger, holding it at arm's length away from him, he would call on bystanders to come and see his pets. Mr. Stein had rat and mouse traps continually in position to catch food for his snakes.

An amusing incident was told me by a man who was actively engaged in the westward building of the Texas & Pacific Railway in the early 70s. "It was in early morning just before dawn," said he, "our camp was all astrid and preparing to go to work when at a short distance

our attention was drawn by some unusual noise. It was the flopping of wings on the ground. Looking closely we could see an owl which had caught a rattlesnake by the tail. It drew the snake some 10 ft. into the air and let it drop, and this was repeated many times until the owl seemed to have tired out or disabled the snake, and then flew off with it. It was a curious sight, and is even now very vividly before my mental vision." SHORT.

TEXAS COYOTES.

ABILENE, Taylor County, Texas, March 15.—Your picture of the coyote reminds me to inform you that this animal, unlike the other wild carnivores, is greatly increased in this region. Two years ago I seldom saw one when in my saddle; a year ago I saw them often, and now I can hardly walk in the pastures without seeing several. I hear their serenades every night, and more than once of late they have let fly with their music in my yard, within a stone's throw of my bed-room. On two occasions lately, on looking out of my window about dawn, I have seen the creatures prowling about my premises. A few nights ago they entered the town of Abilene and killed and devoured two suckling calves in a gentleman's yard. Their increase is a subject of general remark.

Their great incumbency upon us is mostly due, I think, to the decline of the sheep business. A few years ago that business was a great industry in this country, and the flock-masters kept a sharp lookout for the wolves,

A TEXAS COLLECTION.

Messrs. S. B. Witchell, Robert Hall and trophies.

poisoning them by wholesale. Owing to the pressure of the Australians, wool declined till there was no profit in growing it, hence our flocks have been sent to the shambles and the occupation is practically abandoned. There being none left taking interest enough to poison the coyote, his strong recuperative powers are threatening to overrun the country with him for a while. At the same time his food supply is greatly diminished. The deer and antelope disappeared before the sheep, and he is now driven for his living to the uncertain chase of the jack rabbit or capturing the prairie dog by stealth, and pilfering in the towns and villages at night. I am persuaded that they come into my yard to steal my chickens, and they have surely caught a good many of them. One of my neighbors was fond of cultivating the turkey, and he had quite a flock of them which roosted on a fence near his house. The coyote recognized his opportunity in this flock. He cultivated them so well that my neighbor has not now a turkey to his name.

The coyote does not attack cattle, because he knows if he should do so he would have hundreds of fierce bellowing creatures upon him in an instant. He will, of course, pull down a suckling calf if he finds it unattended, but this is a treat he rarely enjoys. In a country where large carnivores are numerous, cattle are very watchful of their young.

In other days the coyotes I was accustomed to see were generally in good order, as we say of a fat hog or steer, but now he is lean and has a dejected look. I think his culminating point has been reached and that henceforth he dwindles away.

N. A. T.

LANSDOWNE, Pa.—*Editor Forest and Stream:* My congratulations to you on the success of the suit against Delmonico.

GEORGE D. B. DARBY.

SENSE OF DIRECTION IN ANIMALS.

BETHEL, Maine.—In a long experience of a hunting and trapping life in northern Maine, many curious facts, tending to show a direction sense in some animals are apparent and interesting.

The very able article by C. F. Amery, in *FOREST AND STREAM* of Dec. 29, 1892, on this subject, recalled many instances of the kind in our own observation in our old, long ago hunting life. Many wild animals have what we hunters used to call a beat; for instance, in setting a line of sable traps over mountains and along their sides, when we struck a track in the snow we set a trap, and in about two weeks we were sure to get a sable. They made large circuits of the region and were sure to come the same way again, even though there had fallen a foot of snow since the track was made.

So also with the fisher, although they traverse thick forest growth over mountain ranges and through dismal swamps, yet when they return to their former haunts they follow almost the same line of travel as when last in a given place, a trap set within a few yards of their former signs is almost sure to take them in a week or two. So of the fox, which lead the dogs a half day's journey from hill to hill over and around mountains and return near their starting point; also the hare when pursued will return to the very spot from whence they started; and bears which den in the deepest recesses of the forest, in cliffs of the ledgy mountains, and follow down to the valleys in spring time and perhaps roam

hundreds of miles during the summer in all directions, but mark their straight course back to the same mountain and very same den for the next winter's hibernation.

But the moose have direction sense above all other wild animals, they know longitude, we hunters used to say. They go from mountain to mountain in rainy or snowy weather, straight as an arrow, no matter how dark, when a man would be bewildered and lost in an hour. In the month of June bark will readily peel from almost any tree. At that time the moose will strip up long pieces of the bark of the willow and maple. Hunters observe these works of the moose, for where these signs are found they are sure to find the moose the next fall, and hunters follow these fall signs to the very yards of the moose on the mountains. They travel from mountain to mountain, the shortest way, through dense woods many miles, and through swampy valleys, while intelligent man has to climb trees to make discoveries of his course or use a compass. The fact is, moose know longitude.

J. G. RICH.

Acquired Habits of California Quail.

ONE of the best illustrations of modified habits acquired by change of environment is afforded in the following interesting statement of a correspondent of the *New York Evening Post*, who remarks: "Nothing in the varied bird life of the farm is more interesting than the modifications in the habits of the California quail, caused by the development of orchards. When the pioneers came to this district, all the quail were dwellers in the rolling lands about the rim of the valley, or in the rougher champagne country east, between the cañons. Great bands of cattle kept the valley pastured so close that quail found better living in the hill country. Still, they were the round-plumed valley species, not the slender-plumed quail of the Sierras, and when American hunters began to thin them out, scattered coveys sought the willow copses along the creeks, and the shelter of the acres of wild mustard. In twenty years more, every well-sheltered wheat farm had a few quail, grown very shy and cunning, who dwelt in the pastures and bottoms, and foraged in the fields of wheat and corn. The farmer lads often hunted them down to half a dozen pairs, or entirely destroyed their foothold on all river ranches, but the willows made so good a shelter that others came from the cañons. Then the orchard period came, and better protection for quail, so that they forsook the willows altogether, and took up their abode in the vineyards, the berry fields, and the nursery rows, becoming in a few seasons so tame that they now pick up grain with the chickens, and fly up into the walnut trees, beside the farmhouse, every night. Sometimes they display even a greater degree of confidence in the new regime than these matters imply, and hide their nests under the fuchsias and heliotropes in the garden."

Mongolian Pheasants are Good Swimmers.

FARMINGTON, Conn., April 11.—I find upon my return home from the South, where I have passed the winter, that my Mongolian pheasants have wintered most excellently; they are in fine condition and most beautiful plumage.

They seem very tough and to stand the severest weather without trouble. Most of the winter they remained out in the open pens, with but a few bushes to protect them from the snow.

During a large freshet they were caught in the high water and compelled to swim for nearly an hour before they could be caught and taken to a dry place. It seemed to make no difference, the next day they were as happy as eves.

They have not commenced to lay yet, but they are commencing to act as though they would in a very short time. I had to separate the birds, putting three hens and one cock in a pen. The cocks were trying to kill each other. They seem to be great fighters.

My impression is, from what I have seen of them, that they can stand our New England winters just as well as the ruffed grouse do.

N. WALLACE.

Game Bag and Gun.

"Game Laws in Brief," United States and Canada, illustrated, 25 cents. "Book of the Game Laws" (full text), 50 cents.

THE TAG SYSTEM.

As Found in Maryland.

BALTIMORE, April 12.—Editor Forest and Stream: I have but recently looked through your valuable work, Book of the Game Laws, likewise securing what additional data I could on game and fish protection in the United States, with a view of submitting for adoption that which is particularly applicable for the better protection of our Maryland game birds and fishes, we being about to form a State league for such purpose.

I was particularly struck with the absurdity of our many county non-resident laws, some of them exacting as tax an amount sufficient to make shooting prohibitory. This "tag system," as you term it, is a most pernicious one and should by all means be abolished. In forming our league we had expected to have recourse to our Legislature for assistance in securing such enactments as would strengthen us in the protection of our game. And while engaged in this good work we should, and probably will, enter a protest against the State and county non-resident laws, there being no earthly good accomplished by them. I have met but few men in favor of them, and the only plea they can make for their retention is, they act as a means of warding off market-gunners, and in the counties adjacent to our city prevent hordes of would-be nimrods from tramping through their fields and truck patches, pilfering and mutilating their property.

To the first plea I can only answer that market-gunners and pot-hunters are no respecters of laws. The damage wrought by would-be sportsman is slight if any. The only time he turns out in force is upon Thanksgiving Day, then indeed is he in his glory shooting black game and in fact anything feathered that may chance his way, not even ignoring a stray barn-yard fowl. I much opine to the suggestion of your correspondent "Sinkboat," who tells us that one county makes a non-resident shooting law, because its neighboring one has done so. No matter how they originated, we must see that they are repealed.

In some counties I know the law is a dead letter, but in others a set of loafers and little-minded mercenary sharks are always on the watch for sportsmen, many of whom go wholly ignorant that such laws exist, only to be pounced upon by the aforesaid shark, who is after his informant money, and cares not a whit about protection of game. Common sense should teach our country cousins that the gentleman in quest of game is a source of revenue to them, paying most liberally for all he gets, never killing birds or fish through mere wantonness, always ready to help them in the enforcement of just and sensible game laws. They should welcome a sportsman on every and all occasions, and be able to recognize him, even with half an eye. Those of them whose hearts are shriveled and contracted could resort to the trespass law and post their land, being assured a sportsman would shun it as though infested with plague. I myself am the owner of a farm, and one of the conditions under which I lease it is no sportsman to be refused access to its acres.

I trust soon to be able to inform you that the embargo has been lifted, the "Chinese Walls" are down, and that Maryland extends a hospitable welcome to all lovers of legitimate sport with rod and gun. MOUNT ROYALL.

"Marrying into the Tribe."

THE WHEATLANDS, Maryland, April 12.—Editor Forest and Stream: I cannot refrain from thanking you in the name of your many readers for your very humorous and witty editorial entitled "Marrying into the Tribe." Poor Sam Lovel, what an escape he made. But do you know that he was a fortunate man, in that he was a partridge shooter. If he had been fond of shooting wildfowl, not all the beauty of the fair dames of Dorchester county could have saved him, unless indeed he had won the affections of one of the belles of Hooper's Island, a part only of the Straits "deestrect," had he been unfortunate enough to pull trigger at any stray swan, goose or duck in the briny waters of Tar Bay, for there is another remarkable law in this county of Dorchester which may be called a local law within a local law. This delectable act says: "The bona fide residents of Hooper's Island shall have the privilege of shooting wildfowl for family use in the waters of Tar Bay," etc. As I know of one party who killed forty-four geese in one day, don't you think that he must have been an exemplary citizen, living up to our State motto, which may be rendered by a free translation, "Increase and Multiply." But I rather pity a man who has to have forty-four geese for dinner "for family use."

You will note that by this law, not only the rest of the county are prevented from shooting in the waters of Tar Bay, but also the rest of the inhabitants of the Straits district, under forfeiture of boats, guns, decoys, etc., besides a fine or imprisonment. This Tar Bay by the bye is a body of water lying above the open Chesapeake in part, Barren Island only landlocking in part the other portion of it.

An act of the same kind was framed, but not pushed to its passage some years ago, giving the inhabitants of one of the districts of Queen Anne county the same privilege in the waters of Eastern Bay, at the expense of the rest of the county. While the originators of these local laws might have thought they had an excuse for them in the fact that the portion of the peninsula was a good deal annoyed by market-shooters from the cities some years ago, the excuse, and it was a poor one, no longer exists, as there is no longer game enough in the peninsula to repay the market-shooters for coming here. And note the fact that the game has been killed off, not by shooters from a distance, but by residents. Is any other commentary wanted on the supposed protective features of such laws, especially as every county could have the same ample protection to property owners that we have in Talbot county? Our trespass law reads: "Any one who shall trespass with dog and gun upon any posted or advertised property, or who shall return to any property after being notified to leave, shall be subject to arrest and fined upon conviction, with imprisonment until the fine is paid," etc. I have forgotten the amount of the fine, but it is consider-

able. Is not this enough law to keep objectionable parties from trespassing without recourse to such unconstitutional measures as our local game laws? SINKBOAT.

A Wisconsin View.

SALT LAKE CITY, April 11.—Editor Forest and Stream: In a late number of your paper I saw several communications in regard to "tagging" or licensing non-resident shooters and fishermen. I gathered from the articles that you had lately published an editorial against such a practice which I did not see. You pronounce it un-American. So also is the crime that makes such a law at all proper.

In England the more game that falls to a gun in a day the greater the achievement, and such also seems to be the ideal sport of some Americans, and I claim it is un-American. I live in Wisconsin, once a paradise for a sportsman. We have yet some deer and some of the best fishing grounds in the United States. Years ago the game hogs, market-hunters, etc., flocked into our duck marshes and lakes both spring and fall from Chicago, St. Louis and from as far east as New York and Boston, shot ducks by the wagonload and shipped them to market, or in a few instances to their friends at home. Wealthy men from Chicago brought two guns each and a helper to load and handle the guns. Ducks are a mere memory now and so are the duck butchers—a rankling memory.

The deer slayer is still with us. He arrives on the ground a week or so before the season opens and usually has one or two deer to show at the end of the first day of the season. The deer will soon be gone and the deer butcher will join the duck butcher.

By years of intelligent labor and the expenditure of thousands of dollars the State Fish Commission has stocked hundreds of streams in the State with trout and bass, and this, with the natural supply, makes our whole State a fisherman's Mecca. In the spring comes the fish hog from the East and the South. Such fishing many of them never saw before, and they catch in many cases hundreds more than they can use, and those who are not bold enough to ship them out of the State, contrary to law, let them rot on the banks of the streams and lakes. Chicago is the great maw that swallows thousands of trout illegally carried out of the State. One party of Chicago fishermen, not being able to catch trout fast enough, hired the farmer boys in the neighborhood to fish for them, and in that way were able to carry home with them several hundred trout.

Now, if "tagging" non-resident fishermen will stop this kind of work I say put a "tag" on them, or, if necessary, put a ball and chain on them.

I should like to see a law in our State making it an offense with a severe penalty to kill or catch more than a certain quantity of game and fish in a day and to compel the non-resident shooters to wear a "tag" (or a red plug hat if necessary to make him known as a non-resident), and allow any officer of the law or town or county officer to search his luggage at any time while en route out of the State. Also put a heavy penalty on violations of the law by express companies.

This may sound pretty harsh, but I shoot considerable game outside of my State and would be willing to suffer the penalty in a foreign State if it would help save the game.

This does not apply to sportsmen, and no one of that class need feel offended. But if this happens to strike through the thick hide of a game hog he may take it as a prophecy of what he is going to bring upon sportsmen.

If any non-resident comes to me with the credentials of a sportsman I am at his disposal with my horse, dogs, guns and boats. G. A. BUCKSTAFF.

APRIL TALK ABOUT BEARS.

BETHEL, Maine, April 7.—Bears have mostly left their dens now, and are tramping about promiscuously by the side of brooks and swampy places seeking for any green thing, and keeping one eye open for early frog, and will, soon as the snow is gone, overhaul the rotten logs for ants and worms.

They are also sharp fishers, and will manage to secure a tempting string of brook trout long before we bipeds think of trying our luck.

I once came upon a large black bear quite suddenly, and found him stretched out on the shell of a large pine log which lay across a brook—several fish heads lay on the log, and upon examination I found the way he did it. There was a large knot hole through the shell of a log, and bruin thrust his foot through into the water—holding his paw still and open, and as the fish nibbled at his foot he would suddenly close on him and bring him up.

Should you meet a bear in the woods about this time of year, he would immediately rise on his haunches in great majesty and give an enormous snort, then he would whistle and champ his teeth, in such a manner as to make it necessary for you to pull your hat down on your head—but don't run—bears are apt to think you are calling them when they see you running from them, and have something good for them to eat, and they will follow you and try to keep up. Stand your ground and keep your eye on his eye—don't flinch, even if he should make a few lively jumps toward you on his hind legs. Stand and eye him—he is not coming clear to you—it is only to try your mettle—he is sizing you up, and will himself sneak off before long, although it is very tempting to make a rush yourself in the opposite direction.

The female bear with cubs is an exception, and caution and coolness are necessary in their presence.

"He that is able to run away
Will live to hunt another day."

A gentleman on his way from Anglers' Retreat down river, one fall, met a large cub bear; he had no weapon about him; he stopped in the path in the woods, and directly the mother bear and another cub came rushing along. The man, who was from the city and had never seen a loose bear, let out his voice the full bigness of his lungs, and at the same time spread out his umbrella, which he had with him, upon which the big mother bear stepped back a few paces and the cubs ran away. The old bear, however, gave a few extra jumps toward the man in a moment, and was on the point of embracing him, when, just in the nick of time, one of the guides came running down the road, being attracted by the cry, and Mrs. Bear gave a loud growl and suddenly left to see to her family. Only for the fortunate appearance of the guide at this juncture there might have been a first-class funeral.

Some say a bear cannot climb a tree small enough to

reach his arms around, but this is a mistake, for I once caught a good-sized bear in a heavy trap, and he climbed a fir tree thirty or forty feet tall and strung the trap over the top of it, which slipped down several feet and brought up on the limbs, although the tree was not more than ten inches through at the butt. The tree had to be cut down to get the bear.

I once caught a bear in a trap near the shore of a lake, and he climbed a tree that was separated in three parts and spread out, the crotch being some ten feet from the ground. On his trying to come down, the trap brought up in the crotch and let him down so his feet just touched a log underneath. I found him in this position. When his hindfeet touched the log he would give a jump and up he would go his length, and then down again. Thus he kept jumping and dancing, and every time he jumped he would scream loud enough to scare the owls out of the woods.

I was camping at the head of Mollychunkemunk Lake with my wife and two children one night during my fall hunt, and during the night we heard a bear bellowing at a tremendous rate every fifteen minutes during the latter part of the night. I was sure the old fellow was in one of my traps I had set up north some five or six miles, as the sound was like a bear in a trap, so as soon as daylight I started off to tend my traps. After an hour or two I reached my first trap, and sure enough it was gone, and such plowing up moss and tearing the trees was frightful to behold. I followed the signs as far as I could, feeling sure I had some large game worth looking after and that there was just enough danger in it to make it exciting, for, mind you, there is frequently another bear come to see what the row is about, and if you have caught a cub bear the old mother may be there and not a very desirable situation for one hunter alone.

I followed on, and the diggings and tearings led me to a fallen pine tree lying up some feet from the ground, and being perhaps 100ft. long. On to this tree the creature went, and on to it I went, my excited brain tuned to the highest pitch; I followed to the end, and could see no place where the animal had jumped off. I retraced my steps, keeping a sharp lookout on either side of the tree for a sign. When about mid-way of the tree I heard a scream near my head—such an unearthly scream, different from anything I ever heard before in my life—it raised my hair which fell to the ground. I jumped nearly or quite 10ft., turning partly around in the air, facing the music when I struck the ground, and looking up, behold! a large-sized bear hung in a tree by his hindfeet, his head nearly reaching my head as I passed under him. I got such a thorough scare that lasted me for two days.

The tree grew near a log and the bear reached one of the lower limbs and swung himself into it. He had not been in the trap long, and was very savage. J. G. RICH.

TACOMA'S RESOURCES.

IN our issue of Feb. 23 Dr. J. A. Beebe, of Tacoma, related the hunting and fishing resources of the vicinity of his home. A Northwestern critic of Dr. Beebe, in our issue of March 30, deposed that there was not such a plenitude of game and fish near Tacoma as had been stated, and he suggested that our correspondent there had viewed things through rosy glasses. Now Dr. Beebe sends us, as he says for our own satisfaction, a tabulated list, which is so interesting in its bearing on the points in dispute that we print it here:

TACOMA, Wash., April 7.—Editor Forest and Stream: I hate controversy and never knowingly incite it; and nothing could be further from my intentions than to try to cumber the pages of the brightest sporting journal in the States with a useless contention. I send you these little items of memoranda collected to-day after reading "El Comancho's" diatribe. I never before once thought of "keeping tab" on big game catches, and these figures were picked up in an hour among a few of my friends to whom I showed the Seattle gentleman's criticism. I do not ask you to give anything of mine space in this connection, as it is no earthly advantage to anybody to argue the matter. I send you this data as a personal defense to your ear alone, feeling safe in the fairness of your judgment. Every one in this country knows that nothing good ever comes out of Nazareth (Tacoma), and that the name is a red flag to a Seattleite. Maybe this explains the matter.

	Distance from Tacoma.	Electric car, Steamers, N. P. R. R.
1892	Miles.	
Sept. 20, Alex. Foreman, J. T. L. & Co., buck.	2 1/2	E. C.
Sept. 10, John Holgate, 2 days, 300lbs. trout.	28	Steamer.
Sept. 23, Prof. LeBoytean, 1 day, 65lbs. trout.	28	Steamer.
Sept. 23, John Leisure, 1 day, 38lbs. trout.	28	Steamer.
Sept. 23, Henry Latham, 1 day, 26lbs. trout.	28	Steamer.
Sept. 23, Dr. Beebe, 1/2 day, 13lbs. trout.	28	Steamer.
Oct. 20, Arthur Bridgeman, deer.	20	R. R.
Oct. 21, Henry Spence, deer.	20	R. R.
Oct. 21, Henry Spence, bear.	20	R. R.
Oct. 23, Dodge and Eberly, buck.	10	E. C.
Oct. 23, Five whales remained in harbor 4 hrs.		
Oct. 30, Dr. Beebe, buck.	12	E. C.
Nov. 8-12, Walt Willock, 4 deer (30 in season).	14	Steamer.
Nov. 10, Beebe & Bridgeman, 1 deer, 135 grouse	14	Steamer.
Nov. 10-11, Dodge and Denham, 2 deer.	8	E. C.
Nov. 13, Spence & Vandegriff, 7 deer (2 days).	20	R. R.
Nov. 10-13, Thurston Co. camp party, 5 deer.	8	E. C.
Nov. 25, Beebe and West, bear.	12	Steamer.
Nov. 29, W. Summers, cougar.	10	Motor.
Dec. 30, Ed Flannigan, bear.	4 1/2	E. C.
1893.		
Jan. 21, Henry Spence, cougar, 7ft.	20	R. R.
Jan. 21, Beebe, wildcat.	20	R. R.
Feb. 17, Small boy (12 yrs.), Tyee salmon.	1/2	R. R. wharf.
April 1, Ed Pettigill, 3 Tyee salmon.	4	Steamer.
April 1, C. E. S. Holmes, 3 Tyee salmon.	1/2	Boat.
April 2, Fred Edwards, seal.	1/2	Wharf.
April 4, Walter Fife, steel-head salmon.	1/2	Wharf.
April 5, Walter Fife, trout.	12	E. C.

Any item will be verified under oath by the parties named.

Fred Edwards killed a 56-pound seal at railroad wharf Sunday, 2d inst.

Fifty-pound wolverine shot Thursday eight miles south of the city.

Yesterday C. E. S. Holmes caught, nine miles from wharf, 6 salmon, aggregate 118lbs., and George Barber caught 19 trout nine miles from Court House, Tacoma. H. M. O'Brien 320 trout same day.

Messrs. Dodge and Denham, of the Rod and Gun Club, say that I may safely affirm that over 50 deer have been killed within twenty miles of Tacoma during the season.

"El Comancho's" picture of the forest is fairly accurate, but there are very nice sections where the conditions are not by any means so favorable. J. A. BEEBE, M.D.

A CALIFORNIA PRESERVE.

THE Directors of the Country Club, of San Francisco, Cal., have made an interesting report of the club's history for the year 1892:

The fishing in the club's waters, they say, was steadily good during the whole season. The Olema, Bear Valley and Alamillo streams have shown a greater abundance than in the years before the club's control. We have been rejoiced at the success resulting from the stocking of our lakes. In April, 1891, 14,000 Eastern trout were put in Trout Lake, and last year these fish were of the almost uniform size of 12in. in length and three-quarters of a pound in weight each, and, according to the natural rate of increase, we may look for them in the next fishing season of the length of 15in., and from 1 to 1½lbs. in weight. Trout Lake last July was for the second time stocked with 17,000 Eastern trout, and these fish are now 7in. in length. Bass Lake, which is located a short distance from Trout Lake, was stocked with black bass from Crystal Springs Lake in 1890, and from Menlo Park Lake in 1891. From tests made the past year, we are confident that the members will enjoy fine sport the coming season. Crescent Lake, also located near Trout and Bass lakes, was stocked last August with 30,000 landlocked salmon, and there would seem to be no reason for doubting that as good results will follow as in the case of the other varieties of fish.

Trout Lake has been stocked with 31,000 New Hampshire trout, Bear Valley Creek Dam with 19,000 rainbow trout, Black Bass Lake, Ocean Lake, Little Lake and Wild Cat Lake with black bass, and Crescent Lake with 30,000 landlocked salmon.

There have been turned out 30 Mongolian pheasants, 600 Arizona quail and 100 Chinese quail.

There has been little or no poaching on the preserve grounds during the past year. Pleasant relations have been maintained between the club, the neighbors and the preserve tenants. Our keepers have accomplished good work in the trapping of vermin, which does more toward increasing and protecting game than the invasion of many poachers. On March 1, 150 traps will be put out by the keepers.

GAME AND FISH KILLED.

	This season.	Total since July 4, 1890.
Quail.....	1,733	4,558
Snipe.....	473	2,076
Ducks—canvassacks.....	31	50
Mallard.....	13	83
Spring.....	10	144
Widgeon.....	62	217
Teal.....	25	172
Black jack.....	3	19
Black swan.....	—	1
Geese.....	—	3
Rail.....	95	191
Wild pigeons.....	3	11
Doves.....	4	79
Plover.....	4	17
Curlew.....	1	1
Yellow-legs.....	5	5
Robins.....	22	112
Rabbits.....	4	4
Beaver (previous to March 31, 1891).....	1	1
Brook trout.....	1,135	5,171
Eastern trout.....	284	334

Since Feb. 11, 1892, there have been killed on the preserve 1 bear, 3 coyotes, 48 wildcats, 87 foxes, 60 coons, 31 skunks, 84 hawks.

The preserve contains about 76,000 acres, with 60 miles of ocean front. The roads for driving are all good, and the scenery unsurpassed. There are numerous lakes and trout streams, and an abundance of quail, snipe and duck. The sea-fishing and salmon fishing in Tomales Bay are features.

NOTABLE SHOTS.—VIII.

MARLBORO, N. H.—In twenty-five years' experience of shooting ruffed grouse I have killed two birds at one shot on two different times. The first time, my old setter pointed under an apple tree, when two grouse swung around to the right and one to the left; shooting at the right first and then at the left I had the experience of killing all three birds without moving out of my tracks, a pleasure that rarely falls to the sportsman in a lifetime. I felt five years younger.

The other time the old dog roared some birds about one-fourth of a mile, when he established a point at the edge of some spruce. I saw a grouse run, and as she sprang from the ground I shot her down. While picking up the bird the dog pointed again in a hollow just beyond, where I found a dead bird.

I am glad the traveler Uncle Lisha has returned.

J. S. M.

CHICAGO, Ill.—Speaking of good shots, I made one last Monday. A flock of butterballs had decoyed, and as I ran up they took wing. I let the left barrel go and knocked two down, and with a quick second brought three more down, making a total of five out of the flock. I think there are more ducks this year than for many years. I also saw eight or ten large flocks of plover, whether golden or otherwise I cannot say.

FRED SHELTON.

VELASCO, Texas.—On the interesting subject of "notable shots" I have one to relate. While hunting jacksnipe about a month ago my pointer made a play at a bunch of sage bushes where I was not looking for game. When I told him to go in a quail and snipe got up close together and fell to my right barrel. This is the first time I have heard of those birds affiliating, as their haunts and habits are quite unlike.

M. P. M.

Tennessee Live Quail Exportation.

A CORRESPONDENT writing from Chattanooga, Tenn., says: The fact of the matter is that the true sportsmen in Tennessee are not scattered over the State enough and there are too few of them. Men who hunt for the love of the sport alone are mostly found in the cities, and although they can as a general thing get the influential members of the House of Representatives to aid them in their measures for game protection, yet they are outnumbered by the "hayseed" members from "Wayback," who imagine that people "up in their county" should be allowed to kill anything and everything in the shape of fin, feathers and fur "whenever they feel like it."

The great evil here is the exportation of live quail to other States, and in this matter sportsmen in other States are to blame, for if there was no demand there would be

no supply. Northern and Eastern clubs make a point every season of advertising for live birds and it is presumed they are used for field trials. Pot-hunters here and backwoodsmen, who care for nothing further in the line of work than distilling wildcat whisky, hunting deer at all times and netting quail, find ready customers for their birds in small store-keepers in cities and provincial towns who deal in anything they can see a dollar in. If FOREST AND STREAM would endeavor to put a stop to the importation of game birds, for the purposes named, in Northern and Eastern States the netting here would cease. If it is allowed to continue for a few years more a quail will be a *rara avis in terris* and be found only in odd places, or, perhaps, like the great auk, will become extinct.

Game Protector Barber.

ALBANY, April 10.—*Editor Forest and Stream:* I send you herewith an item clipped from the Warrensburgh (N. Y.) *News*. I send you this more particularly for the reason that Mr. Barber, the protector herein named, was the subject of considerable adverse criticism in the matter of an alleged attempt to kill a salmon at the Mechanicville fishway. I believed then and believe now that Mr. Barber was at that time intent upon detective work, as I know him to be thoroughly honest. I have not the slightest idea but that he intended to do precisely as he claimed in his letter to your paper. The *News* says that an item about the killing of two deer in South Johnsborough caught the eye of Protector Barber, who at once began an investigation:

He came to this place about three weeks ago and after making a few inquiries took a trip through Johnsborough and Thurman, ostensibly for the purpose of purchasing hard-wood logs. His eyes and ears were wide open, however, and by dint of judicious questions pried here and there he succeeded in accumulating sufficient evidence to warrant further proceedings. On Thursday of last week, accompanied by Constable E. T. Hayes, he went over the route which he had previously traveled as a hard-wood buyer and subpoenaed a large number of witnesses to appear before Justice Herrick at the Adirondack House in this village Friday afternoon. As a result of the investigation held at that time warrants were issued for the arrest of Pasco and Burch. It was shown by the evidence that one of the deer in question was shot by Pasco; that the meat was buried near the barn of Gilbert Pasco in Johnsborough, and that the skin was found in the possession of "Sam" Pasco. Burch was implicated in the affair by assisting "Sam" to carry the deer from where it was concealed. The evidence produced before Justice Herrick had been cleverly gathered, and was so conclusive that the culprits were glad to settle the case by paying the amount mentioned above. Mr. Barber's ability as a detective is beyond question, and would-be violators of the law in Johnsborough and vicinity will probably realize hereafter that although located in Greenwich he is able and intends to keep an eye on this locality. In his work of gathering evidence Mr. Barber was rendered valuable assistance by our local Viduo, Constable Hayes, whose skillful handling of several intricate cases has made his name a terror to evil-doers in this vicinity.

Mr. Barber was appointed upon my recommendation as game protector 10 months ago, and I have been to some pains to look up his record during that time. Since June 1 last he has convicted over 70 parties of violating the game laws; has collected over \$1,100 in fines; sent three parties to jail, and has now 12 cases pending with reasonable chance for success in nearly all of them. In addition to the foregoing he has during the past two weeks convicted four parties (including the two named in the clipping sent herewith) for killing deer out of season or having venison in their possession, and has collected fines to the amount of nearly \$400. The foregoing is taken from the records on file in the office of the Fish and Game Commission.

M. SCHENCK.

They Teach Caution.

CINCINNATI, O.—A correspondent in a recent issue of your valuable paper writes of accidents liable to happen to sportsmen by accidental discharges of firearms. In camp at St. Mary's Reservoir. Sam Marshall and I were sitting on a box in the center of the tent. Will Roberts, a hand I had brought with me, had picked up my shotgun, unnoticed by us, and was trying to force a swollen shell into the chamber when the gun was discharged, the contents passing between Sam and myself and through the side of the tent, leaving a hole about the size of a silver dollar. Again, while shooting mallards in a large cornfield, I was lying on my right side, my shotgun pointing toward my feet. There came a flock of mallards, and I grasped my gun, which happened to be cocked. The loud report and a hole in the ground about an inch from my right foot taught a lesson. At the bulkhead of the St. Mary's Reservoir one man held the scales for another to hang his gun on to be weighed. The man had forgotten to extract the loads and when the gun was hung on the scales by the trigger guard it was discharged, the whole load entering Berger's foot above the ankle, almost tearing it off. The victim now hobbles about on a wooden leg and is the jolliest soul around the bulkhead. Many of your readers will remember him.

F. B. MAGILL.

Foreigners Elude the Nova Scotia License.

YOUR council beg to call your attention to the fact that there are numbers of non-residents who arrive here by steamer as soon as the season opens for hunting. They have their guides waiting for them, then take the train and are off to some out of the way place to hunt without taking out a license. It has been suggested by many persons living in different parts of the Province that your society petition the Legislature at the coming session to make the license fee for large game \$50, an amount that no honest sportsman will object to pay. It takes most of the license money collected to send men to the woods to hunt up these strangers, and in most cases they are advised that some one is on their track and pack up and get out of the Province by a different route from the one by which they came.—*Report of Inland Game and Fishery Society.*

A Cortland County Preserve.

CORTLAND, N. Y., April 15.—*Editor Forest and Stream:* O. V. Kellogg yesterday made public announcement that he had become the owner, and had the exclusive right to shoot, fish and hunt upon 275 acres of land lying adjacent to this village. Mr. Kellogg proposes to devote the land and water contained in the above tract to the propagation and protection of fish, birds and game.

The Cortland County Sportsmen's Club is composed of two branches. One branch pays particular attention to the protection of fish and game and the other to trap-shooting.

The club is made up of bright, alert, big-hearted fellows and the future looks bright along the two distinct lines of endeavor noted above.

M. C. H.

Does Cold Affect Nitro Powders?

Editor Forest and Stream:

Looking over some old copies of FOREST AND STREAM I came upon an article on nitro powders and their loss of power under certain conditions. During the past January and cold weather a circumstance took place I could not then account for. In Illinois I would go with my beagles rabbit hunting. As the leaves and grass are gone I would have to shoot a fair distance shot. I did not kill or get my rabbit, as I would in November or December. I was using the same make and brand of cartridges as in the fall months, and the ammunition was satisfactory then. I do not want to go back to the old black powder again, but I think in extreme cold weather we shall have to. In the month of January I was often out with the beagles and gun when the thermometer was at zero and rabbits in my shooting coat would freeze. I carry my cartridges in my shooting coat pocket. They would be cold and then the gun barrels were very cold. Was this extreme cold not the cause of the nitro powder's want of force?

J. B.

Game at Park Rapids.

ST. PAUL, Minn., April 7.—There was some fun made of a letter from Park Rapids, Minn., describing the shooting in that locality. On a recent visit I found that the shipments of deer from that one station exceeded 500 saddles during the open season. I met at Osakis three brothers who shot there last fall and killed thirty-one deer, one bear and some three hundred pheasants or ruffed grouse.

A neighbor of mine with two companions also went there for deer, and killed in ten days eleven deer. Sportsmen who want to hunt deer next year had better make a note of this. Take the Great Northern train from St. Paul in the morning and reach Park Rapids in time for supper. The ducks are in here in great shape and the markets are overloaded. Still I find but few sportsmen that care to kill them in the spring. Everybody seems to be waiting for the trout season to open to "go a-fishing."

F. A. K.

Ontario Wildfowl.

BELLEVILLE, Ont., April 12.—Wild geese have been more numerous in this vicinity during the past two weeks. Many sportsmen have gone in pursuit of them, but without success up to date.

The salutary effect of the law against shooting ducks in spring is observable in the largely increased numbers of black ducks now to be seen in our marshes as compared with the time when spring slaughter was permitted.

R. S. BELL.

Preserve System in Maine.

NO MAN with eyes in his head can have lived in Maine for two years past without seeing the laws openly defied. * * * Now, if a near-sighted newspaper man can see and hear of all of these violations inside of two years, an alert game warden, sworn to defend the game of the State, should know of a great deal more, particularly if he lived near where poachers make their raids. Yet, take any twenty-five warden in Maine, and it is doubtful if they average to make one arrest a year. If they do the fact is carefully kept from the newspapers. And all this time the papers are full of accidents that occur to men who are committing illegal acts. Hamlet never found a more rotten state of affairs when he returned to Denmark to attend to his father's funeral, than exists regarding the game laws in Maine to-day. Meanwhile the man of means who will have hunting and fishing at any cost are gradually taking up all the good ponds and streams and forest land, and making them over into private "preserves." Only this week word reaches this paper that the land adjacent to Tunk Pond and the pond itself have been sequestered from the world and devoted to the exclusive use of a few men who have means to protect their rights. Hereafter no citizen of Maine can go on to that sacred territory without first getting a permit from the owners, who live out of the State. This is the natural result of lax and badly enforced laws. It is the poor man who wishes to live honestly that suffers; it is the wealthy who can afford to pay dearly for their luxuries who control all in the end.

As much as the writer dislikes these new English ways he believes that the game of Maine is safer under the care of game keepers or on a preserve than it is to-day under the feeble protection of Maine. The game of Maine belongs to the people of Maine, and not to the men who own the land. The people of Maine could have held it forever as their property had they legislated wisely and selected proper guardians. The people failing to do this the millionaire comes in and does the next best thing. The people of Maine can no longer fish and hunt in their old haunts; the rich men who control the land will come to Maine every year and take a good number of Maine residents to help them. The boy who moves out of Maine this year returns twenty years from now he will no doubt see the brooks in which he used to fish strung along with signs like this:

It may seem hard to him at first, but if he will follow the history of Maine's game laws and their enforcement and non-enforcement he will see that it is the natural result of the conditions that prevailed.—*Bangor News, April 7.*

CONGRATULATORY.

SYRACUSE, N. Y.—*Editor Forest and Stream:* We all "feel good" with you over the happy ending of the Delmonico case. You have won a splendid victory.

D. H. BRUCE.

NEWTOWN, Pa.—*Editor Forest and Stream:* It is an evidence of what a bulldog hang-on will do. I congratulate the FOREST AND STREAM most heartily. It has reason to be proud.

O. O. SMITH.

DETROIT, Mich.—*Editor Forest and Stream:* I have been jubilant all day over your Delmonico woodcock accomplishment. But for FOREST AND STREAM those contraband birds would have been as dead as Julius Caesar. Your resuscitation of them deserves to be sung in verse as was the saintly miracle performed by blessed Santiago, when he restored to life the Alcayde's defunct, beheaded and roasted rooster and its mate from the platter on the dinner table:

Cluck! cluck! cried the Hen right merrily then,
The Cock his clarion blew;
Full glad was he to hear again
His own cock-a-doo-dle-doo.

May FOREST AND STREAM with its revivifying powers ever come to the aid of the Protector Kidds.

J. H. S.

HARTFORD, Conn., April 8.—*Editor Forest and Stream:* Allow me to congratulate the FOREST AND STREAM for its grand work in getting the Delmonico case settled.

A. C. COLLINS.

Sea and River Fishing.

The Fish Laws of the United States and Canada, in the "Game Laws in Brief," 25 cents. In the "Book of the Game Laws" (full text), 50 cents.

OUANANICHE TACKLE.

It is not very difficult amid these surroundings to redeem the promise made FOREST AND STREAM for some details of the practical work and of the tackle and flies I have successfully used in ouananiche fishing.

A caribou head with snowy neck and thirty-five pointed antlers, shot on the Humber, looks down with superb disdain for the fate that hung him on the walls of my den.

Over the mantel is the tip of a "Wells" split-bambo rod, which was riven and twisted until its fibres hung like threads in landing on Pine Lake, with Dick Jessup, of Ontario fame, two black bass at the same time, one weighing 3½ and the other 3¼ lbs.

Up there is the little 4½ oz. rod which stabbed and landed the ouananiche at Cinquieme Chute, wielded by the dainty hand of the Lady Rose. Feast your eyes upon it! Rod, reel, line and cast, it only weighs 14 oz.

Yonder, amidst a galaxy, hangs in particular a fly tied on a 2-0 hook, which made Mr. Smith laugh until the tears came when we were exchanging views over the camp-fire on the Nepigon. Nameless, giant-proportioned, fashioned after no living thing—the creation of some girl in the factory. But still the fly that allured and stabbed trout after trout, four-pounders at that, at far-famed Pine Portage, with Louis Bouchard, no less famous as a guide, in the stern of the canoe. When every fly of distinguished make or name had swept the waters in vain, until Mr. Smith was ready to give a king's ransom for the prodigy.

Upon the floor lie a half dozen rods put together for a sibilant switch for inspiration. Upon my table lie so many fly-books that it shames me to think that I have not yet stopped laying up treasures wherein verily the moths will revel.

If, however, I should only speak of trite matters which all anglers know, I can only express regret and hope that some one not so happily situated may fall across these lines.

First and foremost, let us talk of the rod. A 10ft., 6oz. rod is, all things considered, the best adapted for work in the heavy waters in which the ouananiche lives. A heavier rod is likely to fail to yield pliantly and quickly in the frantic leaps of the fish, or apt to tear out the fly in the mad dashes through the rapids often 30 to 40 yds., sometimes fully 60 yds. As the ouananiche oftenest fight toward the angler, the rod should be held thrown well backward, with a large bow. In holding the fish in and preventing the dashes, more should depend upon the management of the reel than in any greater resistance of the rod beyond that inherent in the 6oz. split-bamboo. It still needs delicate touch and good judgment when to let the reel free or to hold the strain on the struggling salmon.

Let me not be vainglorious and unduly boast of my favorites as I speak of my own treasures. A 4½ oz. ash and lancewood rod with lancewood tip (Mr. Wood's design) is the favorite among favorites. It is very light and slender, pliant as a coach whip, but in good hands will stand all tests, afford keenest sport and excite deepest admiration. Indeed the wonder excited by its frail appearance when shown has given me a great deal of pleasure.

A Leonard 6oz. split-bamboo rod is one which I have put to severest strain right under the falls and found it maintain the line with that tension which holds the fly in the salmon's mouth thirty, ay, forty minutes, though it drop out, as I have seen it do over and over again, the instant the strain relaxed as the fish was netted.

For one who likes the quick, lively fight, I would not, however, advise a lighter rod.

How necessary the proper tension is, may be realized, when you find that the four-pound ouananiche will often only rise to a fly tied on No. 10 hook. I believe the 4oz. split-bamboo rod will afford the greatest sport and I have ordered one without windings for the trial. It is not likely that the fish can be quickly killed or that the rod may not be too light, but the fight will be evened up so as to make the rod do its best.

The reel should be multiplying, holding sixty yards (I believe in the Silver King) and, of course, a waterproof silk line, not larger than "F." The leader should be of the best salmon gut with not more than two flies tied about four feet apart. I take a six foot salmon leader, tie a loop on it so as to give the dropper an independent swing of about 18 in., and thus give the two fish plenty of room to play, with the strain direct from fish to rod. I warn you that the gut and tie must be of the best quality, for I have had it snapped like thread by two gamy ouananiche stabbed on one cast.

Frankly, I do not believe two 3lb. ouananiche can be brought to net on one cast at the same time. I, at least, have never succeeded, although many times have I stabbed two on the same cast and seen the line come back with

only a knot to mark where the leader had been tied.

When the *beau saumon* is struck he rises furiously in the air and the other (already stabbed) feeling the sting of the barb, jumps, so the spectacle is seen of two fish simultaneously madly leaping; then a quick snapping jar vibrating and shivering down line and rod, with its sudden relaxation, tells the story of both fish gone, seldom without both flies and leader. Few sights are more glad-some than the simultaneous leap of two ouananiche stabbed on the same cast, and few more dispiriting than their loss.

Lures, by which I mean artificial baits other than flies, may be successfully used. Notably phantom minnows of any size, and spinners or spoons in any form. Indeed the ouananiche seems crazed when so struck more than when stabbed with a fly, and a mad battle ensues in which the quarry is almost unmanageable until literally worn out.

Now as to flies. The *beau saumon* is fickle and capricious to the verge of disbelief. Last year at the Hotel Roberval, with 70 ouananiche weighing from 3 to 4½ lbs. stretched on the piazza as a practical demonstrative exhibit, I showed the flies which tempted the gamy fellows and saw incredulity written upon the faces of the anglers, equalled only by the quaint humor of the Indian guides laughing over the struggles of the fish to escape their doom after being stabbed by such flies. Flies of such like and form as are indeed only seen in the shopman's window.

There are times that the fish will rise all round with an utter disregard for the most artistic handling of your flies, indifferent alike to every combination of feather. You will see them in the clear waters furiously rush at the flies without at the final moment striking them, as if at the last instant they apprehended the counterfeit sought to be imposed upon them. They will rise to the fly in any way that it can well be cast. At times the flies should be

"Roberval"—a dedication to the Hotel Roberval. The body will be Nile green whipped with yellow silk cord and dark green tail; green wings with dark mallard over wing; hackles of green and gray hues. I hope to report the practical success of these theories.

All salmon flies tied on No. 6 to 8 hooks are worth carrying, in particular I recommend Jock-Scott, Silver and Blue-Doctor, Durham-Ranger, Cock-Robin, Thunder-and-Lightning, Admirals, Lion and Captain.

Among the trout flies I have successfully used are Professor, Grizzly-King, Conroy, Dark-Caddis, Romaine (which are dark green flies), Montreal, with jungle cock wings, Bees and Parmacheene-Belle.

Again I advise you to have your flies tied with a helper. Now as to the places or pools. I like "ledge fishing" best. I mean either on the rocky points jutting out from the shore or upon the reefs rising through the foam in the swirl and eddy of the rushing waters below the falls.

This gives one *terra firma* beneath him and enables the angler to give undivided attention to the rod and to mark the movements of the fish. I believe it is the best, if not the only way that the ouananiche can be landed on the light rods. Usually I select a place where I can work the flies against the current to a point where they would disappear in the surge and swirl of the falls and then cast back down the current, and when the rise came it was with such force and vigor that I seldom failed to hold the fish. Or get some spot where the flies would pass around a point or rock, and then in the eddy and boil of the waters the ouananiche would dart at the fly with a momentum that took the tip under the water ere one could realize the fight was on.

Often when you have failed in this method (or are tired of it) you will see the ouananiche rising through the patches of foam often as large as twenty to thirty square yards! Then let the guide take the canoe, lay in the bow

for a cushion a quantity of fragrant plumes and branches, nicely stripped from the large wood, go out and cast your flies upon the brilliantly gleaming snowy mass of bubbles. It is unalloyed pleasure to see how lifelike flies look as they pass upon the foam. You can make them jump, leap, fly, flutter or wearily drag—see them reflected in countless bubbles and enjoy the apparent intelligence of rod and cast.

The canoe dextrously managed by master hand circles around the white patch as you cast your flies whirling over and lightly falling upon a white mountain of yeasty foam. A dorsal fin clearing to the strained vision for briefest interval, the *beau saumon*, between the rise and stab. And then—and then.

Ere you know it the guide has squatted in true Indian fashion in the stern and you are on your knees. The tip of the rod pliantly yielding is bathing in the waters and the reel chanting a melody that is now a dirge to the sinking heart—then a

hymn of praise to the elated soul.

In the midst of the whirling, surging, angry flood, with the canoe dancing hither and thither like a cockle shell—now drifting down the flood so quickly that the shores seem like a fleeting panorama—now forced against a current that sweeps the foam to its gunwales, so angrily, so fierce, so turbulent, that the shores looked never so safe to your wistful gaze—around and down the torrent—around and against the current—up in the teeth of the waters, until the spray of the falls beats against your face and drips from your mustache. A mad rush straight toward the canoe, a sweep of the paddle, the canoe whirls round and goes down on the flood, the *saumon* dashes on and you breathe more freely. Up now with the rod, quick down with the tip as the *saumon* leaps, now in with the slack, let the reel free, in with the slack, and finally and at last—how long it seems in coming—in some quiet cove Josef Robinson (if you have been lucky enough to get him) is asking for the balance to weigh the conquered warrior, and you are wondering how he netted the *beau saumon*.

A word more. What is the best hour? I believe cloudy days are the best. Keep your flies idle and then get the hour or briefer interval just before the storm breaks, when the clouds are lowering and the mist from the falls is swept down upon the waters. When the insects flutter helplessly in the windy gusts and are beaten down upon the foam. That brief prelude when the scattering drops indicate the approach of the storm and the ouananiche seem imbued with electric life. Then the dashes for the flies are fiercest and the fish fights with an inconceivably savage ferocity. Then the fight goes on amid the drenching rain, to which you are oblivious, but which is more detested by your guides. Then you go back to your camp tingling with excitement over the last brush, though you are wet through and through. And you feel that you will indeed enjoy the last cigar in camp while *le petit saumon*, spitted with strips of breakfast beacon, is being prepared *à la brochette* for supper.

ROWDY ROD.

Where Rainier Looms.

SEATTLE, Wash., Feb. 22.—Editor Forest and Stream: Please find postal note for \$4 for renewal of paper. I wish to say that I like the paper much, and do not fear to have it in my family, neither am I ashamed to have it seen on the center table.

D. T. DENNY.

NOW FOR TROUT.

Fifth Equal Prize, Forest and Stream Amateur Photography Competition.

PHOTO BY DR. J. J. MILLS, POUGHKEEPSIE, N. Y.

allowed to sink a few inches and then flicked ahead a foot or two—then cast like salmon fishing—the long cast far out in the current with the dip, dip of the rod when the art is in the strike rightly following the rise, then casting upon the surface and making the flies leap or skitter upon the foam or eddies, when the grandest of all sights is seen, the leap of the ouananiche taking the fly fairly in the air with a savage ferocity inflicting a stab by the automatic action of the rod.

At the Fifth Falls (which I wrote up for FOREST AND STREAM, Sept. 8, 1892) I had three rods rigged up with different casts, one in hand and the others lying on the rocks. When the *saumon* rose at the flies but did not strike, I immediately took the flies from the water and laid down the rod. After waiting a few minutes I took up one of the other rods and cast with it for about five minutes and then picked up the rod having the fly at which the rise had been made, and seldom indeed did I fail to get the fish.

Under such circumstances the angler should have a variety of flies in the camp and not at home when seeking the ouananiche. The new-comer at the Island House, Grande Decharge, goes to Paul Savoir, the head guide, for judgment on the flies in the book! Times past numbering Paul will say, "Him no good. Some good last year—not now," so on through the book, condemning favorites, shattering hopes and rudely crushing many a hobby!

As a general rule the ouananiche seeks winged flies and will not rise to hackles. My favorite sizes are tied on No. 6 and 8 sprot hooks, a little extra winged and full-bodied, and above all tied on the best salmon, mind you, salmon gut!

Still, I carry flies tied as small as No. 12, although it is exceedingly difficult to net the fish because the barb is too small and tears out.

The sober-hued flies are the best and most reliable, yet, *mirabile dictu*, I have stabbed them on flies that made my guides shout, "Fooled the salmon!" What better can I do than quote Mr. Roosevelt? "One-half the most skillful fishermen assert that the fly need resemble nothing on the earth or in the waters under the earth!"

One thing in particular I have noticed which I intend to put in practice, that flies with green as the prevailing color were especially attractive and successful in luring the salmon. Tom Conroy is tying a fly on 6 and 8 sprot hooks under these ideas, which will be called the

WHERE THE OLD TROUT HIDE.

The rosy lips of morning kiss the blushing cheek of spring,
The first bluebird of summer is already on the wing,
The pussy willow heads are nodding in the gentle breeze,
The buds are swelled to bursting on the sappy maple trees,
The wine of life is mingled with every breath you take—
All nature is responding to the summons to awake.
And the resurrection lifts you like a mighty rolling tide,
As you early seek the deep pool where

The
Old
Trout
Hide!

How unwillingly you left them when last year's season closed;
How you labored for that big one, who only calmly dozed
In the shadow of the rock there, while he winked the other eye.
"Do you take me for a baby, to be tickled with a fly?"
How dignified and lazy as he came forth from his lair,
And smelled your scarlet-ibis and your royal-coachman there!
How every speckle glistened like a ruby in his side,
And you almost got to swearing where

The
Old
Trout
Hide!

There never was a fisherman, so I've heard the old folks say,
Who caught the biggest fish. Always sure to get away.
And it's just as true in trouting as it is in other things,
That blessings seem the brightest when they spread their golden wings
And soar where you can't touch them; but only stand and wish
That you had them in your basket, with the other little fish.
If wishes were but fishes, how your heart would swell with pride,
As you landed that three-pounder where

The
Old
Trout
Hide!

Yet after all the sportsman, though he doesn't catch his fish,
Catches all the life and sunshine that a happy heart can wish;
Old Mother Nature takes him and smooths life's wrinkle out.
So get your rod and basket, for this morning's made for trout;
You'll go back to your labor, to your dry and musty books,
In your soul a little laughter, of the laughter of the brooks;
In your heart a little singing, like the singing of a bride;
And you got your inspiration where

The
Old
Trout
Hide!

J. H. LA ROCHE.

IN QUEST OF BASS.

NEW YORK, April, 1893.—Last summer I determined to take a week from the office and spend it with the black bass. After diligent inquiries as to the location of the best fishing grounds I started for Lake Hopatcong, New Jersey. I found to my disgust no black bass were being taken. I was assured that there were plenty in the lake, but they would not bite at the most alluring bait offered. I remained three days, and was obliged to content myself with sunfish and minnows (I had not caught the former since boyhood days, when a bent pin and a piece of cotton thread was the most expensive outfit I used).

On the last day of my stay a gentleman caught a 5lb. pickerel, which so tickled him that he had it photographed. The photo was then handed around to prove that there were fish in the lake. That was enough for me. I left on the next train for New York. I was of course dissatisfied. I could ill afford the time, but finally determined to visit the Muskoka Lakes, and in due time was flying toward Canada. Leaving a \$5 bill on the Canadian side of Suspension Bridge as a guarantee that I would return my gun to the United States, and my gun in Toronto in lieu of \$25 for a license to shoot a few ducks (of which I did not see a single specimen), I finally arrived at Bella Falls Hotel, Muskoka Lakes. Here I made the acquaintance of two young gentlemen from Buffalo, N. Y., who proved very agreeable companions.

We caught in the eddies (below the falls, on the Muskquash River, an outlet of the lakes) a large number of what the natives called pickerel, but which were wall-eyed pike; these varied in size from 1lb. to 6lbs. in weight. My companions, like myself, had come to the lakes on bass intent, and were disappointed at not catching any. They said, at the hotel, the bass had been biting poorly that year, still, parties came in with strings I envied. We determined to try Clear Lake, at the end of a pull of three miles from the hotel, and a long portage through the woods. It was a windy, dreary day in September, the occasional light rains that fell had the effect of only slightly dampening our ardor, as under the burden of a heavy boat we slipped through the argillaceous soil; but we were after bass and did not mind a wet skin or Canadian mud if we could only hook a few. We were told by a farmer that as the wind was blowing heavy down the lake there could be no lee shore, consequently the bass would not bite; we, however, rowed over to a sunken tree, the roots of which were still fastened in earth, and we made fast to a branch protruding above the surface of the water.

While my companions were making fast I baited my hook with a live frog, and dropped it down beside the submerged trunk, allowing the frog to sink in about 12ft. of water, without a strike. I raised it to make another cast, when suddenly the line straightened out like a whipcord, and a few moments later a fine 2lb. bass leaped into the air, savagely shaking his head to dislodge the cruel torture. After playing him a little I succeeded in gently drawing him within reach of the landing net which was slipped under him.

My companions and myself now eagerly ran each of our hooks through the lips of a frog, and quietly dropped them into the pool. As before there was no strike until we attempted to withdraw them, when a simultaneous yell from us three Indians announced each had hooked a bass. It only required a fraction of time before those three cunning fishes had our lines hopelessly snarled; two of the bass got away and owing to our lines being tangled each thought the remaining bass was fastened to his line; as it broke from the water and shook the hook from its mouth, disclosed a 4lb. beauty, and our lines hung limp and lifeless. (It is suggested that I say the bass was a 5-pounder, but I am not going to have my veracity called into question for the sake of a pound.) It is needless to

say each of us claimed the honor of having hooked the big fish.

Regardless of the ominous clouds that were rising around us, we continued to fish, for the other two were selfish enough to refuse to draw in their lines; consequently, to the amusement of the bass, we continued to get our lines snarled with each other. I succeeded in landing another bass before the heavy shower that had been threatening us for some time drove us to the shelter of a near-by farmhouse.

We had landed five bass and lost fifteen. We vowed we would return to Clear Lake the next day and renew the contest, but the rain kept us indoors for the two succeeding days. It was now imperative to return home.

I have figured that my two bass cost me, exclusive of fishing tackle and loss of business while from the office, \$50 a piece, though, doubtless, I should credit a portion of that sum to the enjoyment derived from the trip, change of scene and a renewal of health.

While at Muskoka I ascertained that the fishing in Lake Nipissing is superior to any in Canada. As spring approaches an indescribable longing seizes me for the thrill of battle with the bass, and my thoughts turn longingly to Nipissing. My wife says I will finally bring up in Hudson Bay or at the North Pole, and suggests that I write to the readers of FOREST AND STREAM to direct me to some stream nearer home where I can get good bass fishing.

I have no time for experiments such as Hopatcong. I would prefer to go five hundred miles to where I would, undoubtedly, get good fishing, than go a mile from my office and fish an hour or two between bites.

E. J. TUCKER, M. D.

[See note of Lake Winnepesaukee, N. H., bass fishing in this issue.]

A Megantic Dinner.

SOME fifty members of the Megantic Fish and Game Club sat down to an informal dinner at the Hotel Brunswick on Thursday evening last. Dr. Heber Bishop being absent at the preserve, Mr. W. C. Prescott presided. The object of the meeting was to choose a nominating committee, and to give those who were not able to be at the annual dinner in New York an opportunity of hearing just how the club stands, and what it is proposed to do in the way of improvements. Mr. Prescott outlined the work of the past year. Numerous camps have been constructed, improvements made in the club house, and boats and canoes purchased, until to-day the condition of the preserve is very satisfactory. Mr. L. Dana Chapman, treasurer, showed in his report the following figures:

Total receipts.....	\$9,986.76
" expenditures.....	7,057.53
Balance, cash.....	2,929.22
Total valuation of club property.....	\$11,872.00
Cash balance.....	2,929.22
Due from members.....	2,900.00
Total.....	\$17,701.23
Liabilities.....	2,415.00
Balance.....	\$15,276.23

Mr. Chapman also earnestly advocated the building of hatcheries on the club's preserve. He believed that the fishing of the future is to be kept up by this means. The committee appointed to nominate twenty-five members from which the fifteen directors must be selected was: Chairman, A. W. Robinson, James Brown, C. A. Kilham, James H. Lake, Seth Perkins. These gentlemen will decide upon the provisional list. From this list the members are expected to select the board of directors by ballot. The annual meeting of the Megantic Fish and Game Corporation will be held on May 9.

After the conclusion of the business meeting speeches, songs and toasts occupied the attention of the members until a late hour. SPECIAL.

Proprietors of Water Resorts.

WE believe that at the present time illegal fishing is going on in all the lakes and bays in western New York. This illegal fishing will continue throughout the summer unless the authorities adopt different tactics and search for poachers with greater diligence. The game protector in this district seems to be an active and energetic official, but the difficulty is that he has, in the aggregate, a great amount of water to watch, and though some of the law-breakers think otherwise occasionally, it is a fact that he can be in only one place at a time. The fishing around Rochester ought to be unsurpassed. The lake, the river and numerous bays out to be full of fish. But as a matter of fact the fishing is poor because of the constant use of nets and other unlawful devices by those who care nothing for the game laws. It has always seemed strange to us that the proprietors of resorts on the lake and bays have not been vigorous opponents to illegal fishing. One would think that selfish considerations at least would cause every one of them to be a fish and game protector, for, of course, if the fishing were good the people would crowd to the resorts and patronize them liberally. It is to be hoped that during the coming summer every man who loves a day's outing with rod or gun, every person interested in a lake or bay resort, and every officer of the law will make a personal effort to prevent violation of the game laws.—Rochester Post-Express.

Salmon Fishing and Salmon Painting.

THE ice left the Penobscot River, in Maine, as far up as Bangor, last week. This opens the celebrated salmon pool again. But up to the date of writing no salmon had been taken. The season is late. The first salmon was taken last year from that pool April 12. Mr. Fred W. Ayer, who has the best salmon record of any sportsman who has ever fished there, had the pleasure of landing the first one. He has been in Boston and New York of late, but on the news of the ice going out he immediately started for Bangor. Mr. Walter M. Brackett, the salmon artist of this city, has just finished a most beautiful painting of a *Salmo salar* for Mr. Ayer. It is an excellent representation of a "fresh run" salmon of good size, and will pass admirably for a Penobscot salmon. Mr. Brackett says, himself, that he thinks it is the best salmon picture he has ever painted. The coloring, with the iridescence and the spots, make up a feature to delight the heart of any salmon angler of less means and success than Mr. Ayer, while the background of river, falls, rocks and mist is true to nature. The pose is easy, showing the magnitude of the fish to the best advantage. The picture may be on exhibition in Boston for a few days. SPECIAL.

Rough Traveling for Poachers.

CORTLAND, N. Y., April 15.—Editor *Forest and Stream*: The road of the illegal fisherman is getting to be a pretty expensive one to travel, as a number of local statute breakers have just found out.

Last week Geo. Salisbury paid \$100 for illegally catching fish in Otselec River. A. T. Dickinson and son, of Virgil, paid \$100 for violating the fish laws. Fred Turner and E. Thompson, of Truxton, paid \$28.88 each for a similar offense. For fishing out of season Eugene Smith paid \$25 fine and \$16 cost; Alf Smith and N. Vandemburgh forked over the same amount of fine and costs each, making a total of \$123 paid by these three worthies for the fleeting pleasure of slyly casting a line in Norton Brook. M. Driscoll, for catching suckers in Tioughnioga River parted with \$25. John Sager paid \$25 for catching trout in Factory Brook.

It is said that a number of other suspected offenders are so busy watching game inspector E. D. Crosley of this county that they are not getting their meals regularly. It's just this sort of straight up one side and down the other law enforcement business that is yearly increasing the game fish supply of Cortland county.

Seventy thousand brook trout fry have been recently deposited in neighboring streams. The fish and game club of McGrawville, through its hustling secretary M. C. Bean, got 10,000 of the above number.

Anglers were early on the move this morning, but as pretty nearly if not all the streams are running full of snow water no big catches are anticipated. M. C. H.

Effort in a Right Direction.

OFFICE OF THE ASSOCIATION, No. 1028 Arch street, Philadelphia.—Editor *Forest and Stream*: The Pennsylvania Fish Protective Association is aiming at educating the public earnestly to support the present fish laws, which now to a large extent are erroneously interpreted as operating in favor of and solely for the benefit of sportsmen from the larger cities. Such belief greatly wrongs this class of persons, discredits the intelligence of those who framed the laws, ignores the hard work faithfully and gratuitously done in the interests of all inhabitants of our State who ever use fish as food, and nullifies much of the actual result derivable from the outlay and labors of our State and National Fish Commission. Were it not for these laws, the propagation of fish by the State hatcheries and the labors of the fish organizations in behalf of stocking streams with various kinds of fish, those who complain "they are deprived of their right to catch fish" (at times and by methods most agreeable to them), would have no fish to "catch."

As an association we are glad to be able to report that angling is becoming popular, because of the increase in game fish that makes it possible, and because persons who once enjoy the pleasure as anglers of "catching fish in style," become converts in favor of fish protection, having learned there can be more pleasure in catching one on a hook than bushels in a net. M. G. SELLERS, Sec'y.

A Previous Salmon.

PORTLAND, Ore., April 8.—Editor *Forest and Stream*: Mr. J. J. Evans, who lives just above town, awoke about 2 o'clock last night to the fact that something unusual was transpiring at his boat, moored to the bank of the Willamette, a few yards from his house. Thinking that possibly some marauder was taking undue liberties with his personal property he dressed quickly and repaired to the river. Imagine his surprise when he found a fine salmon of about 15lbs. weight gasping in the bottom of his boat. It being close season until after sundown tomorrow evening he dumped his lordship back into his native element and returned to the house, not in the happiest frame of mind or disposed to congratulate the salmon on this manifestation of his earnest desire to get up higher. Mr. Evans's veracity is unquestionable.

This occurrence reminds me that three or four years ago, while the ferry boat was crossing the Columbia at Vancouver a large salmon sprang out of the water and upon the boat, where it was captured. There may be nothing unusual about these occurrences, but I think that they indicate that the salmon are either quite plentiful or decidedly energetic. S. H. GREENE.

Bait-Casting for Bass.

CAPE GIRARDEAU COUNTY, Mo.—Editor *Forest and Stream*: I subscribed for the FOREST AND STREAM a few months ago and have become so much attached to the paper that I feel that I cannot do without it. A number of local sportsmen to whom I have shown copies have expressed a decided preference for it over another journal of field sports which they are now taking; so you may expect some new subscribers from this vicinity. I have been very much interested in the articles on "bait-casting" by Mr. Abbott, of Chicago, and I write this letter in order to beg him to give through the columns of FOREST AND STREAM complete directions for the benefit of those who are unacquainted with that method of fishing. I have just purchased a split-bamboo casting rod and outfit for trolling, but I think bait-casting must be more effective as a means of securing fish, and what is of far greater importance in my estimation, more sportsmanlike. The fishing season may be said to have opened here last Friday, April 7, when about fifty black bass were caught at one place on White Water. PISCATOR.

Bass of Lake Winnepesaukee.

NASHUA, N. H., April 7.—Thinking perhaps a word about New Hampshire black bass might interest you, I inclose a photograph of four specimens I took with an 8oz. rod and line off Bear Island, Lake Winnepesaukee, between 10 and 12 o'clock, Aug. 22, 1892; these fish were weighed some three hours after they were killed and did not vary more than 2oz. from the figures on the cards—4lbs., 4½lbs., 5lbs. and 6½lbs.

One would suppose a person with that string of fish would wear a great big half-moon smile, but in spite of good luck, a sort of late-to-dinner expression will creep over one's countenance after being in a boat from 5:30 A. M. to 1 o'clock in the afternoon.

The aggregate weight of these fish is no unusual catch; in fact a friend and I took 84lbs. from these waters between 9 A. M. and 4 P. M., July 27, 1891; but I had never before been fortunate enough to take from northern waters four small-mouth bass in succession that would average as large as these. IRA F. HARRIS.

Waterloo Fish Protective Association.
WATERLOO, Ia., April 1.—The Waterloo Anglers' Club has merged into the Waterloo Fish Protective Association, which starts in with an active membership of fifty-five, which will be increased by at least a score more. At a meeting held April 4 the following officers were elected: President, C. F. Fowler; Vice-President, Geo. B. Rowell; Secretary, J. C. Hartman; Treasurer, W. R. French. A per capita assessment of \$2 was levied and the executive committee empowered to employ two wardens to watch the Cedar River and other streams within the county. This has been done and the first fruits was the arrest of a man Saturday for killing a pickerel. The fellow paid \$14.85 for his fish. We pay the men we have employed \$10 per week each, and one of them has been vested with police authority, so that he can arrest a violator on the spot. The club proposes to see that the fish laws are strictly enforced and will also co-operate with Fish Commissioner Griggs in restocking the Cedar each year. CLARK.

Might Develop Into a Kekoskee Story.
STUART, Iowa, March 20.—I am a reader of your FOREST AND STREAM, and I have not seen anything in it like my experience. This winter has been an extra cold one, and as the ponds and rivers have been frozen about 2ft. thick for two or three months, the fish have had no air. On the pond I saw a big fish close to the edge, where the ice was thin. I took a club, broke the ice where he was, and reached under and pulled out three fairly good-sized fish. I made the hole bigger, took a fence board, put the board in the water and swished the water. It dragged the fish out from under the ice. When one would come out I would put my hand under him and pull him out. If I dropped one it would stay where it dropped and I would reach under and get him again. I got 52 that way in about two hours. In the night I would go over with a lantern. The fish, little and big, would be up at that hole getting air. I got about 200 in three days. F. H. G.

Pere Marquette Waters.
SAGINAW, Mich.—The first of May I expect to be on Kenne Creek with the rest of the boys for trout. The Pere Marquette Club, owners of the above stream, hatched on our own premises this winter over 50,000 trout, and the water is literally alive with wild fry as well. There being so much food, they thrive wonderfully. In fact, the fish that have hatched naturally (otherwise the wild fish) are about double the length of those that we hatched artificially. I will have a record for you showing the loss in hatching and planting, for we counted the eggs in, counted the young fry out into our nursery, and will from there count the yearlings as we put them into the stream, so we will have "a tab" on the whole thing. This is the kind of weather, such as that, when in the olden times, as a boy, I used to have my eyes peeled for wild pigeons, but it has been many years since a flock has been seen. M.

Buzzard's Bay Fisheries.
A BILL sent to the Governor by the Massachusetts Legislature provides that, "No traps, weirs, pounds, yards or stationary apparatus of any kind for the taking of fish shall be set, used or maintained in the waters of Buzzard's Bay, or any harbor, cove or bight thereof, and the mayor and aldermen of cities, and the selectmen of towns bordering on said bay, shall have no power or authority to grant licenses to construct fish weirs, or to set, use or maintain any other stationary apparatus for the taking of fish in the waters of said bay, or any harbor, cove or bight thereof; but nothing herein contained shall be construed to forbid or make unlawful the maintaining of traps, pounds or weirs under licenses heretofore granted in accordance with Sec. 70 in Chap. 91 of the Public Statutes until the expiration of the terms for which said licenses were granted."

Finland Fishing.
DR. OSCAR NORDQVIST, referring to our account of angling in Finland, published March 9, reminds us that the saibling has never been taken by rod and line within his knowledge. The pike-perch, also, is not strictly a game fish in that country, although it is sometimes taken by bait or the spoon. The common European ide is the only variety of its kind in Finland and is one of the gamest of the fishes. The golden variety, so well known in the United States as an emigrant from Europe, does not occur in Finland. Dr. Nordqvist is now studying Canadian fisheries and will soon leave Canada for the World's Fair.

The Grande Batiscan.
MR. W. P. GREENOUGH, who advertises fishing privileges on the Grande Batiscan River in Quebec, has long been a contributor to FOREST AND STREAM, and if any one interested desires to know something more of the waters in point, we suggest a reading of Mr. Greenough's account of "Another Explanation" in our issue of Nov. 24, 1892.

Sullivan County Waters.
LIBERTY FALLS, N. Y.—The noted Mongaup trout stream is the best stream for trout fishing in Sullivan county. For pickerel Stevens Lake, 1½ miles, is excelled by none. E. A. G.

The Pennsylvania Railroad Co.'s Personally Conducted Tours to Washington, D. C.
No city in the United States gives so much in return for a review of its buildings and surroundings as Washington, and the month of May being the most delightful of all months in which to visit the National Capital, the Pennsylvania Railroad Company, with its usual foresight, has arranged for two personally conducted tours to leave New York on May 4 and 25 respectively, under the escort of a tourist agent and chaperon, each tour to include a period of three days. Tickets, including transportation, meals en route and hotel accommodations, only \$13.50 from New York, and proportionately low rates from all other stations. Application for information and itineraries should be made to the Pennsylvania Railroad Ticket Agents, or Tourist Agent at No. 849 Broadway, New York, or No. 860 Fulton street, Brooklyn. —Adv.

Fishculture.
Fishculture History.
Editor Forest and Stream:
* In your issue of March 2, under the heading "Trout Culture," Mr. Milton P. Peirce gives some advice on the subject in which he claims to have "several years' more experience upon the subject than any other American." Within the past few years Mr. Peirce has made this assertion several times, but none of the older fishculturists know of his early work. The records show that Dr. Garlick began trout culture in 1853, Ainsworth in 1859, Norris about 1863, Green in 1864, Stone in 1866, Mather in 1868, while Slack, Collins and other pioneers followed close after. Hon. Emory D. Potter, the friend of Dr. Garlick, never heard of Mr. Peirce until a few years ago, and none of the men named, who are all living except Messrs. Norris, Green and Slack, knew of any fishcultural work done by Mr. Peirce until he began carp culture some time after 1878. It is in order for Mr. Peirce to place himself right on this question, and show when and where he preceded the gentlemen named and where the records of his work are to be found. That careful writer and patient investigator, Prof. G. Brown Goode, makes no mention of Mr. Peirce in "Epochs in the History of Fish Culture," published in Trans. American Fish Cultural Association, 1881; nor does Prof. Malmgren mention Mr. Peirce among American pioneers in fishculture in his history of the art in all countries, published in the Bulletin of the U. S. Fish Commission, 1883. Mr. Peirce should, not for himself alone, but for the correction of history, give the facts, with the dates and authorities, showing his work in the field of fishculture, and then he will be accorded the place he vaguely claims as the eldest living American fishculturist. But, as he has not been engaged in trout culture for many years past, it is difficult to understand how he has had "several years more experience," etc. He is best known to the fishculture world as one who has decried trout culture in most all forms, in spite of the progress and the continued extensions of this branch of work from Maine to California, and who has also decried carp culture, except when carried on under his own perfected system. While I confess ignorance of the labors of Mr. Peirce in fishculture, although somewhat familiar with the history of the subject, no doubt he will make this all clear and show that I have overlooked some records and am not as familiar with the subject as I should be. The historians of fishculture have not assigned Mr. Peirce the place he claims and it is to be hoped that he will put such evidence before the historians of the future that his proper place among the early workers in the field of fishculture will be satisfactorily established, even at this late day. HISTORICUS.

The Best Line to Denver
From either Chicago or St. Louis is the Burlington route. Only one night on the road. Daily vestibuled trains, with Pullman sleepers, reclining chair cars (seats free) and Burlington route dining cars.—Adv.

Bicycle Sundries.
The Bridgeport Gun Implement Co. are in a position to manufacture bicycle sundries of every description. If you have a new patented article which you desire to have manufactured, correspond with them. Address all letters to the Bridgeport Gun Implement Co., 313 Broadway, New York.—Adv.

The Kennel.
Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

FIXTURES.
DOG SHOWS.
April 19 to 22.—Fifth Annual Dog Show, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 5 to 6.—Pacific Kennel Club, at San Francisco, Cal. Horace W. Orear, Sec'y.
May 30 to June 2.—American Pet Dog Club, Lenox Lyceum, New York. Marion E. Bannister, Sec'y.
June 13 to 17.—World's Fair, Chicago. W. I. Buchanan, Chief Dept. of Agriculture.
Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.
Sept. 5 to 8.—Hamilton Kennel Club. A. D. Stewart, Sec'y.
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y.

FIELD TRIALS.
Nov. 7.—International Field Trials. W. B. Wells, Sec'y, Chatham, Ont.
Nov. 15.—American Field Trial Club trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.
Nov. 20.—Eastern Field Trial Club's Trials, at High Point, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

Vote for a Clean Paper.
Editor Forest and Stream:
I desire to enter my protest against such matter as is constantly being given space in one paper or another treating on the supposed misdoings of others. The most of such stuff and vileness is entered under a *nom de plume*, but in some instances sufficient redeeming manhood is maintained and the writer makes himself known. Such goods as we have of late been measuring by the yard has in my estimation only one real purpose to serve, *i. e.*, to cover or avert suspicion of the writer's own misdoings. When a man is pure and honest he does not usually devote his time to discovering who is impure and dishonest. He rather shuns the latter class. "Birds of a feather flock together" is very fittingly applied here. Among so-called dog men I firmly believe there are a sufficient number to be a majority that are true and loyal sportsmen, and I am vain enough to believe I belong in that category. The point I wish to reach is, why does this majority tolerate the objectionable minority that is constantly backbiting and haggling and spitting and scratching, making the sport a nuisance instead of a pleasure and pastime to true sportsmen? Why would it not be a good scheme to establish and print a sheet at the expense of loyal fanciers and breeders for the express purpose of absorbing all such nasty stuff and thereby keep our legitimate papers that we take home clean and pure and fit for members of our families to read. I think it is high time that a firm stand be taken on this subject now, and would urge that those in the majority will express their candid views and rely upon the protection given to honorable men by honorable papers. H. L. KREUDER.
NANVET, N. Y., April 11.
[We thought it was about time that some one of standing in the kennel world called a halt on the "mud-slinging trusts." If a man is so hard-headed that he doesn't know when he knocks that member against a stone wall somebody should be kind enough to tell him of it and so prevent a funeral. The FOREST AND STREAM feels secure in its position and the course it has marked out, and that it has gained the confidence and esteem of the best men in the fancy is ex-

emplified by the above letter, which we know only voices the sentiment of a large community of dog men. As a matter of fact the kennel columns of FOREST AND STREAM are made up of material matter by human beings, for human beings. There are bipeds with disturbed vision who never see anything unless it is an error, mistake, slip, *lapsus linguae*, or inadvertence. A thousand and one good things are not only unappreciated and unnoticed, but actually and absolutely unrecognizable by them. They have not the capacity to see the good; they are blind as bats to excellence. They can recognize and enjoy only the fallible. They gloat over an unimportant misstatement, joy over trivial errors, and are satiated beyond the telling with bliss at a comma turned upside down. And, bless them, they think themselves born into the world with a holy mission to cry out in lamentation—not so say blackguardism, at the hopelessness of the condition of the man who lets the comma go inverted. They don the sackcloth, spread on the ashes, cry out to put the flags of the nation at half mast, and wade chin deep into a morass of lamentation because the FOREST AND STREAM kennel editor said a dog's tail was carried 49½ degrees when it was only 49°. If they actually excited in others the millionth part of the intense pain they themselves seem to undergo over this portion of a degree, the kennel world would go out in the blackness of oblivion and our kennels would be draped with crape.]

The N. B. C. Trials.
THE energetic president of the National Beagle Club has sent the following prospectus to the members for their approval. Mr. Kreuder has personally labored with this question, and that he has evolved a very fair schedule must be admitted. After the last trials FOREST AND STREAM advocated a champion class or classes, and now that there are so many first prize winners of previous trials such competitions can well be held and open competition be restricted to those that have not as yet attained premier honors. Mr. Kreuder has submitted this prospectus now that members may state their views, so that at the next meeting of the club the matter can be settled intelligently and in accordance with the views of the majority. The classes proposed are:
Open Class A.—For dogs and bitches, all ages, 15in. and under, that have not been placed first in any class at field trials held by N. B. C.
Open Class B.—For dogs and bitches, all ages, 13in. and under, that have not been placed first in any class at field trials held by N. B. C.
Derby Class C.—For dogs and bitches, 15in. and under, whelped on or after Jan. 1, 1892.
Champion Class D.—For dogs and bitches, all ages, 15in. and over 13in., having been placed first in any class at field trials held by N. B. C.
Champion Class E.—For dogs and bitches, all ages, 13in. and under having been placed first in any class at field trials held by N. B. C.
Absolute Winner Class F.—For first prize winners only of classes D and E.
Conditions.—Class A.—Entries close Oct. 5, 1893. Fee to start, \$10, of which \$3 forfeit must accompany entry, and balance to be paid prior to starting of class. First prize, \$50; second prize, \$40; third prize, \$20.
Class B.—Entries close Oct. 5, 1893. Fee to start, \$7, of which \$2 forfeit must accompany entry, and balance to be paid prior to starting of class. First prize, \$30; second prize, \$20; third prize, \$10.
Class C.—Entries close Oct. 5, 1893. Fee to start, \$5, of which \$2 forfeit must accompany entry, and balance to be paid prior to starting of class. First prize, \$20; second prize, \$10.
Class D.—Entries close Oct. 5, 1893, for dogs and bitches having been placed first at trials of 1890, 1891, 1892 or 1893, held by N. B. C. Fee to start, \$10, of which \$5 forfeit must accompany entry. For first prize winners of class A or C entries close during trials and before starting of class. Fee to start, \$10, which must be paid prior to starting of class. First prize, \$40 per cent.; second prize, 30 per cent; third prize, 20 per cent.
Class E.—Entries close Oct. 5, 1893, for dogs and bitches having been placed first at trials of 1890, 1891, 1892 or 1893, held by N. B. C. Fee to start, \$10, of which \$5 forfeit must accompany entry. For first prize winners of class B or C entries close during trials. Fee to start \$10, which must be paid before starting of class. First prize, 40 per cent.; second prize, 30 per cent.; third prize, 20 per cent.
Class F.—Entries close after classes D and E have been run off. No entrance fee. The winner to receive the club medal and title as absolute winner of 1893 trials. It is understood that making entries for this class shall be optional with owners or representatives of dogs eligible for competition. Unless two or more entries are made the class shall be declared off. All entries shall be measured by field trial committee before starting class A. Judges shall have power to withhold any prize for want of merit. No dog show. Trials to begin 10 A. M., Oct. 23, 1893.

We scarcely think that with the champion classes an absolute winner class is requisite or desirable. The title of champion for each division of height should be sufficient, as so many "ultra" winners will make confusion when the lucky owners do their advertising. Believing that open discussion is good for the cause we shall be pleased to publish any further suggestions that the beagle men may think fit to bring forward. Beagle men generally, we imagine, will be pleased to do away with the bench show part of the trials. It is unnecessary and a waste of time.

Death of Bloodhound Belhus, Jr.
Editor Forest and Stream:
My English bloodhound Belhus, Jr., is dead. Pneumonia carried him off after two days of illness, in spite of the fact that I had the best veterinary surgeon in Washington and did everything possible to save him. Dear Belhus would try to speak to me and ask for relief, which I was unable to give; and during his sickness his intelligence was almost human, and so pathetic that it brought tears to the eyes of all who witnessed his sufferings. He was undoubtedly the finest dog around Washington, and he leaves many who will miss him. If Belhus, Jr., was a fair sample of the English bloodhound in disposition, then brother sportsmen, I can tell you that they are truly a noble breed of dogs in every respect. Kind and affectionate and wonderfully intelligent. During the year that I owned Belhus I never heard him even so much as growl at a living thing, man or beast. He was a splendid trailer, and many pleasant runs have I had with him, sending a boy out with perhaps forty-five minutes' start, then following the dog on horseback. I feel that never again can I love a dog as I loved him. I am heart-broken, and do not think a nobler or better dog ever lived. After winning one more first prize he would have entered the challenge class, there being only one dog, Victor, who could win over him. I donated his body to the U. S. National Museum, where it is now being mounted and prepared for sending, with the Government exhibit, to the World's Fair. GEO. F. POLLOCK.
WASHINGTON, D. C., April 16.

The Pet Dog Club's Show.
Editor Forest and Stream:
The American Pet Dog Club held its monthly meeting at the residence of the president on Wednesday evening last and selected a partial list of judges, which included Messrs. James Mortimer, Charles H. Mason, Dr. Cryer and Harry Lacy. No allotment of classes was made, as it is intended that the most competent corps of judges ever selected for such a show shall be chosen and that there shall not be any reason for hurrying over the classes, as at some New York shows in the past. It is expected that many pets of great excellence that have never been on exhibition before will be at this show, for upward of a hundred promises have been received. These, with those owned by members of the club, a strong detachment of Boston terriers, cocker spaniels and other dogs generally used as household pets, will probably make up an entry beyond the capacity of the Lenox Lyceum, where the show is to be given on May 30, 31, June 1 and 2. E. H. M.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

The Fake List.

CHICAGO, April 15.—In again referring to the fake list of judges, a list of unsavory memory, made so by the peculiar circumstances of its shadowy production, it is a matter for keen regret that the fake list has produced such injurious results to the dog show interests of the World's Columbian Exposition. It is to be deplored that such a fake list was published. There is a vast gulf between journalistic energy and enterprise; and a mere bluff threat, which results only in a weak fake.

The Feeling of Exhibitors.

That the list and the manner of its begetting were most repulsive to a large and important part of the dog fanciers of this country, the protest against it, signed by a formidable number of well known and influential owners and exhibitors, positively attests.

Had there been no fake list published there would have been no protest. The two were simply cause and effect. Beside the direct manifestation, as shown by the protest, there are the incidental and related circumstances of widespread discontent, dissatisfaction and distrust of a management and of a paper which practices such novel methods.

The Expose.

In FOREST AND STREAM of April 6, as the readers will remember, the fake list was exposed and denounced as such. It was stated therein that it was published in a Chicago paper. That paper, the *American Field*, has replied, and with peculiar awkwardness has in general terms denied it, but specifically admitted it. This will be fully shown hereafter.

The matter of judges and their appointment was and is of great interest to the dog fanciers of this and other countries. To be first in publishing the official list of them would be an act of commendable journalistic enterprise, provided that the list were honorably secured. To publish a false list as a true list is a fake. It would be imprudent, however, for the chief of a great department to permit any one paper to have special favor in the news of department matters.

The Exposition is National.

Both by fact and assumption, there is warranted a belief that the World's Columbian Exposition is what its name implies. In its entirety, it is not run in the interest of Chicago or any city, State or country, nor is any department of it supposed to be run in the interest of any individual. Yet, according to the statement of the *American Field*, that paper has a most sweeping influence with the chief of the Agricultural Department, Mr. W. I. Buchanan; inasmuch that he discriminates in its favor against all other papers, in respect to important news of general interest. Mr. Buchanan offered to give a false reason in order that the *American Field* be protected from the injurious effects of its own blunder. This is from the editor of the *American Field's* own statement, which see quoted hereinafter. I simply refer to it as a statement. This exclusion of all other editors, exhibitors, owners, etc., is not in the spirit of the World's Fair or any department of it, nor is it a policy which will insure the success of the dog show.

How It Happened.

In a column of explanation and defense published last week, a remarkable effusion of labored matter, the editor of the *American Field* maintains that the list he published was the true list. He takes contradictory positions on the matter which may briefly be stated as follows:

(1) He earnestly claims that he is very "particular in his statements," and that its record of over seventeen years proves it. He then assumes that thereby he has secured the confidence of the public.

(2) He asserts that it would be very foolish for him to state as correct what he did not know to be correct, and which he would have to contradict in a week or two.

No one will dispute that it was foolish to do so. It was very foolish.

(3) He states that the list was the one given to him by Mr. Buchanan with the added information that such list had been sent to the Board of Control for adoption.

(4) He admits that he had never been informed that the Board of Control had actually adopted the list, but merely that it would adopt it.

(5) Mr. Buchanan's letter, informing said editor that the board had not adopted the list, arrived after said editor had published the list. Said editor says that this blunder, if anything was said about publishing the list, would be put in the light of "newspaper push and energy." In other words, knowledge which the editor had obtained through rank discrimination and which by a stupid blunder he had published prematurely, was by the chief of a great department to be worked over into a commendable action.

Why?

In this connection it may be pertinently asked why the editor of the *American Field* did not, on the following week, correct the untrue list? He had been informed by Mr. Buchanan that it was not the list, since it had not been adopted. He permitted it to stand through the intervening time till driven to an explanation by the *exposé* in FOREST AND STREAM of April 6.

Seventeen Long, Weary Years.

Does this go to show that "Our readers will bear witness for us that no journal published is more particular than the *American Field* in its statements, and its record of over seventeen years proves it?"

Previous good character is sometimes used as evidence in a plea for mercy, but never as conclusive proof of innocence. Considering the numerous wrangles which the *American Field* has had in recent weeks on questions of sportsmanship and of veracity, the same readers, to whom it appeals, would seem to be wrong persons for good witnesses. The "past seventeen years" are not relevant now. They are past. The *American Field* never published a false list of World's Fair bench show judges before in the past seventeen years. It will hardly be so eager to publish another in the next seventeen, let us hope.

The editor of the *American Field* questions our authority. Mr. Buchanan, on April 4, told me that the published list in the *American Field* was not the official list. That no official list had been made, nor would be made for some time thereafter. That the published list was one which he and Dr. Rowe had discussed. That he did not know the list had been published till some days after its publication. Is not that good authority?

In view of all this, does the following, quoted from the *American Field*, have a ring of sincerity or merely the sound of an incantation to heal a torn skin? "It is this very fact that the *American Field* satisfies itself always before making an assertion that it is correct that has secured for it the confidence of the public." Let us look further.

The Deadly Parallel.

March 25.
WHAT HE SAID.

"The following is a list of the judges and the breeds they will judge at the World's Columbian Exposition bench show," etc. (Here follows a statement of the names of the judges, breeds, etc.)

April 15.

WHAT HE SAYS HE SAID.

"We assert again that the list we published was the list selected by Mr. Buchanan and sent by him to the Board of Control for adoption."

In what particular does the set and unqualified statement

of March 25 resemble the statement of April 15? The former states specifically that "The following is a list of the judges," etc., the latter states that "the list we published was the one selected by Mr. Buchanan and sent by him," etc. Does that look as if "it is the very fact that the *American Field* satisfies itself always before making an assertion that it is correct that has secured for it the confidence of the public?"

Incidentally, it may be mentioned that in the very issue of the *American Field* in which that above statement was made, there appeared a column article, signed by the president, vice-president, secretary and treasurer of the late Michigan Kennel Club, complaining of the injustice done that club and the inaccurate statements concerning it in the *American Field*. So much for the tearful plea of sympathy by the editor of the *American Field* on account of his assertion regarding his past anxiety in respect to correct statements.

"Push and Energy."

The reader will note that the list was published in the *American Field* of March 25. The editor admits that he had it as early as March 14. Is that push and energy? He states the following as "the facts as they exist":

As happens very frequently when we have been kept up late on Tuesday night, on Wednesday we looked in the office for a moment or two only, to see if the paper was running on time, and did not give attention to letters or anything else, therefore we did not read until Thursday a letter from Mr. Buchanan saying that in consequence of the financial condition of the Live Stock Department, the list had not been adopted; and, although it would ultimately go through sure, it would be better to withhold the publication of it. We wrote Mr. Buchanan immediately, and explained that even had we got it on Wednesday, it would have reached us too late, as the paper with the list of judges was at that time being printed and mailed.

In reply, Mr. Buchanan wrote us that he was sorry the list had been published, but as it would go through the Board of Control no harm would be done, and if anything was said about our publishing the list, he would ascribe it to newspaper push and energy.

These are the facts, and Mr. Buchanan will corroborate our statements with the copies he kept of the letters referred to. If Mr. Buchanan, alarmed by the Detroit protest, withdrew the names, that is a different matter altogether, and has nothing to do with the genuineness of the list we published, for that list contained the names of the gentlemen selected to judge, and which had been sent to the Board of Control for adoption.

Why did the *American Field* have the list so long in its possession if it was the true list? That it was "exclusive" no one will care to deny. It was, in its way, both "exclusive" and refreshingly novel.

More "Push and Energy."

Mr. Buchanan stated that he and Dr. Rowe had discussed the list together. The list when published had no official existence. A very remarkable statement of Dr. Rowe is that Mr. Buchanan would ascribe the publication of the premature list to "newspaper push and energy."

What "push and energy" was there in having in possession two weeks or thereabouts a list of judges which was secure through official discrimination? Why should it be so ascribed when it was untrue? Was it in accord with the proud statement that "the *American Field* satisfies itself always before making a statement that it is correct, that has secured for it the confidence of the public?" Where is the high sense of honor in such a pitiful conspiracy to patch up a blunder? Is such becoming an editor who poses as being a true friend to doggy interests, an exponent of sportsmanship, a terror of evildoers, an advisor of the weak, a leader in progress, an accomplished gentleman, etc.?

The careful reader will see much between the lines of the *American Field's* true explanation.

The Admission.

The fact that a fake list was published is indirectly admitted by the *American Field*, and much more is acknowledged than ever was charged. It is fervently to be hoped that the Western editor, who on Wednesdays "looked in the office for a moment or two only to see if the paper was running on time," will look into facts hereafter and be a just and truthful editor in fact as well as in pretense. This perhaps is asking too much of a gentleman who has had seventeen years of unbroken anxiety as to the correctness of his utterances.

At this juncture, it may be said, in sober seriousness, that jealousies, deceptions and unpleasant discussions should have no place in the arrangements for the World's Fair bench show. No one paper should have a monopoly in any way. No one club should be the sole advisor. No one man should hold precedence over all others. It should be a show for the people. Every paper should in respect to it stand on equal terms. Every club which so desires should be heard. It should not be a medium to pander to selfish personal interests. Make it what it purports to be, a show for the people.

April 17.—I had the pleasure of an interview to-day with Mr. W. I. Buchanan in respect to the bench show of the World's Columbian Exposition. I learned then that there was no intention whatever to discriminate directly or indirectly in favor of any journal or person. The judges' list is intended to be satisfactory to exhibitors, and is now under consideration. Mr. Buchanan assured me that the recent protest was founded on a misapprehension of the circumstances, and that the publication of the recent alleged list of judges was premature. In the meantime, exhibitors who contemplate showing at the World's Fair can go on with their arrangements with perfect confidence in the management. Mr. Mortimer has begun his duties already, although he is still at Hempstead, L. I. His assistant will be here before many days to attend to preliminaries. Mr. Buchanan is heartily interested in having a successful show. The opinion which has gained footing with some owners that there are organizations or individuals which have greater influence than they should have, is erroneous. From now on, as news is of real value, Mr. Buchanan assured me that all the sportsmen's journals would be kept fully posted on bench show items of interest.

175 MONROE STREET, Chicago.

B. WATERS.

Cockers at Boston.

Editor Forest and Stream:

If there was any one thing that was unjust, outrageously so, it was the judge's decision in the other than black cocker class in the Boston show. A pretty bold statement, I admit, when we take into consideration the ability of the gentleman, and the trusts which he has held. But if the statement is bold, it is not, I suppose, by any means, for the act is close on its heels. Mr. Bell (the man who never takes a letter) had Randolph and Ned Ragland, the former a rangy, sway-backed cocker with a greyhound muzzle, which he got legitimately I suppose, who received vhc, and the other, Ragland, a canine conspicuous by his abbreviated pedigree, who with his "breeding unknown" marched off happy in the possession of c. While I do not claim to have a world-beater in Trotter, I do claim to have a dog that is better in a minute than a whole carload of Randolphs and Raglands would be in a week. I should never be heard from in this matter if the difference in the dogs was less obvious.

Worcester, Mass.

J. M. O'BRIEN.

We very much regret to hear that the well-known field spaniel Beverley Negus is down with spinal meningitis, paralyzing his hind parts. It is not likely this good spaniel will be seen on the bench again, and Mr. Foster has our sincere sympathy. He can, however, console himself in the possession still of another good one, Judex by name,

THE DENVER DOG SHOW.

NOTWITHSTANDING the seeming disadvantages with which a show held so late would have to contend, the Denver show was a success. It had 287 entries, of which a few were duplicates, and about 25 were absent. The show was held in the same building as last year—Coliseum Hall, on April 11, 12, 13 and 14.

Mr. John Davidson judged all classes and did his work expeditiously and well. There was no dawdling or posing for gallery effect. There was some delay on the second day in getting the classes into the ring, but the judging was finished on that day.

The quality of the dogs was quite good. Some of the breeds were excellent, notably Mr. Shallenberger's kennel of St. Bernards, the St. Patrick kennel of greyhounds, and quite a good exhibition of pointers, setters, collies, fox-terriers and other terriers.

The show was given a society feature and was patronized by the best people of the city. The weather was pleasant on every day but Thursday, on which day it snowed steadily till dark. This was most unfortunate, as that day was a special one, ladies' day. The attendance was very light till evening, when the people began coming in in a steady stream, and the silver dropping into the till made a steady clink, clink, clink, in the tones of which there is really much music. The club came out nearly whole on the venture, possibly a little behind. It is heartily to be hoped that it came out ahead, for the working members are earnest and game promoters of the dogs' welfare. They were most liberal, too, considering their resources, in making their prize list. All the special prizes were hung up without any string on them, and indeed some of them were made with a full knowledge and intention that outside dog men would win them. The prizes, furthermore, were all offered by the club. There was none of the undignified and beggarly solicitation to dealers and manufacturers for special prizes. There is no reason why such prizes should be asked or given. There were no specials offered for the best cross-eyed dog with a red collar, owned by John Smith, or one with similar conditions. The special prizes of \$200, \$65 and \$35, \$300 in all, for the largest and best conditioned entry were most liberal prizes, and deserved the strong support which they brought out. J. H. Naylor had about 80 dogs, B. F. Lewis 45, and C. F. Frenzer had enough to take third prize. The dogs were all in good condition, Mr. Lewis's especially so considering their long campaigning in the spring circuit.

By a misunderstanding the hall was rented on Monday night for the purpose of holding a ball. This prevented the dog show managers from getting possession till 3 A. M. on Tuesday, although they had rented it from Monday morning. The mistake crowded a lot of work into a very short time, yet the benching was all up early on Tuesday forenoon. The waxed floor was a source of constant annoyance. Although heavily covered with sawdust, the dogs on the first day slipped continuously at nearly every turn, the larger breeds sprawling out helplessly betimes. Some of the dogs were so fearful of slipping that they showed badly. On Wednesday it was less slippery and the dogs consequently showed to better advantage.

Several dogs at this show qualified for challenge competition, among them being the pointer Glamorgan, the setter Ben Hur of Riverview, the mastiff bitch Ethel, the Irish setter Blarney, Jr., the beagle dog Doctor and the collie bitch Louie Long.

The dogs were fed on Spratts' patent biscuits.

The managers of the club were most attentive and courteous. Among the most constant on duty were the secretary, Mr. F. W. Rand; the president, Dr. J. M. Norman, and Messrs. Hewitt, Bartels, Dingle, and others of the dog show committee.

Mr. C. H. Withington was a most industrious and attentive superintendent. Although new to the position he succeeded well, and with the experience gained can do well in a future attempt. The attendance was good.

MASTIFFS.—There was a fairly good number, nine in all, but the quality was inferior. Mode had a walkover in the challenge class. He is easily the best mastiff in the show, though sway-backed and light in loin. In open dogs Hector won over The Moor. The former has a coarse, badly-carried ear, narrow back, light body, loose, open feet, good shoulders and chest, coarse tail, mouth pendulous at corners. The Moor's ears are coarse and set too high, eyes show raw, too much wrinkle and dewlap, leggy, lacks depth of body, coarse tail. There were five bitches, not one of which was ordinarily good. Ethel easily won first in the class. She has been described in previous reports. The rest of the class was made up of undersized, poor specimens. Carlotta won second. There was but one puppy, Queen Bess, shown.

ST. BERNARDS.—Champion Aristocrat was alone in the challenge class for rough-coated dogs. He was looking a little thin in flesh. Saladin easily took first in quite a fair class of open dogs. He is an excellent mover and remarkably active. He was described in FOREST AND STREAM's Chicago show report. Second went to a large dog, Ben Lomond, Jr.; he was too thin in flesh, but ill-health, from which he had recently been suffering, was the cause of the thinness; he has a massive head, good back and body; his feet might be more compact and he is perceptibly cow-hocked, although he shows fair activity of movement. The reserve went to Don El Paso; faulty in pastern and hocks, not deep enough in muzzle and coarse in ear. The rest of the competitors in the class were small and faulty. Alta Berna easily won first in bitches; she is a remarkably sound, large bitch. A description of her was given in FOREST AND STREAM's Chicago report. Second went to Chugg, a good mover, light in muzzle, head too small, good legs and feet. The rest of the class was about average, with a few poor ones. There were five puppies. Prince, first, is high behind, out at elbows, cow-hocked, has a rolling gait and loose, open coat. Beauty, second, is light in bone, narrow in skull and has coarse ears.

In the open class for smooth-coats, Alton II, the Detroit winner, took first easily. He was too thin in flesh to show at his best. His forefeet turn out and are too open. He is perceptibly sway-backed. Sir Leo, second, has good skull and ear, lacks depth of muzzle and is not good in hocks. In the bitch class, Columbia Venus won over Fernwood Queen. The former has a small head, but otherwise is well built. The latter had about the same faults. Mr. Shallenberger had a very superior kennel exhibit of St. Bernards, and nearly all the St. Bernards shown were well bred, which speaks well for the popularity of the breed in the far West. Alton II took the special for the best American-bred St. Bernard, and Mr. Shallenberger won the kennel prize.

GREAT DANES.—There was much to criticize in the quality of the classes, but it may be summed up briefly by saying that they were each and every one poor specimens. Some of them had some remote features of great Danes, and numerous independent, unclassified features. There was but one entry in open dogs, and the prizes were withheld. In open bitches there were four entries, of which Neverzell was absent. Razzle was first, Topsy second, and Maida was third. To criticize them would be merely to expose faults in them from nose to tail. The prizes could have been withheld for want of merit.

NEWFOUNDLANDS.—Surpass, a faulty specimen; won first. There was but one other entry, Jumbo, and he was too lacking in merit to win, hence the prize was withheld.

BLOODHOUNDS.—The well-known Jack Shepard, shown in good condition, had a walkover.

BARZOIS.—There were three dogs and two bitches, all owned by Mr. Hacke. They were all extremely thin in flesh and in poor coat. All have been repeatedly noticed in the reports. Zloem won over Pospekt in dogs and Ormida

won over Viewga in bitches. They were again the subject of some discussion in connection with wolf-killing, though in a more dispassionate and favorable manner. In a conversation with Mr. C. Schaeffer, a wealthy ranch owner of Colorado who was identified with the wolf-killing contest last year, he told me that he had five cross-bred puppies by one of Mr. Hacke's barzois dogs, out of a deerhound bitch, three of which were good fighters and two were good helpers in a fight. Mr. Schaeffer ridiculed the idea of any two dogs successfully fighting a gray wolf. He does not believe that two dogs of any breed can kill a gray wolf. When the dogs make the attack on the wolf Mr. Schaeffer said that the hunter kills the wolf as soon as possible. Such is the sole purpose of the pursuit of the wolf. There is no intention to have a wolf and dog fight. The wolf is killed at the earliest moment to save the dogs from injury. Mr. Schaeffer thought most favorably of the barzois as wolf-killers if the dogs were properly trained for the purpose.

GREYHOUNDS.—The greyhounds were strong in numbers and remarkably good in quality. The St. Patrick Kennels being conspicuous in both quality and quantity. The only entry, Master Rich, in the challenge class, was absent. Eight faced the judge in the open dog class. Monk Bishop, a symmetrical, muscular dog, won first. He is good in head, neck, body, legs and feet, and has but few faults, not one of which is bad. His appearance is slightly marred by several bad scars, mementos of a collision with a barbed wire fence. Boomerang, a muscular dog, well made but somewhat coarse, won second. He shows a great deal of quality. The reserve went to Adonis, too heavy in muzzle and shoulders; good back and body. Van's O'Rell was given vhc. He is flat in ribs, light in bone, head good. In bitches, the famous Pearl of Pekin won first in a good class. She was not looking her best, having but recently weaned a litter of puppies. For this reason she was withdrawn from the competition for the special prize. Miss McGinty, second, is a trifle light in head. She has a well shaped, strong back, good quarters, shoulders, legs and feet. Irish Lass, the reserve, is also a good bitch, though a bit flat in ribs and might be better in forelegs. In puppies, Bon Bon, a remarkably fine turned puppy, easily won first. Bo Peep, second, was not so symmetrical or well built as the winner. All in all, the quality of the greyhounds would rank with the best in the country. Monk Bishop won the medal offered by the National Greyhound Club for the best dog or bitch, and the kennel special was won by the St. Patrick Kennels.

FOXHOUNDS.—But one was shown, an ordinary specimen with badly carried ears, some wrinkle, and poor head, lacking in foxhound expression.

POINTERS.—These classes made a good showing. In challenge class Count Graphic had no competition. There were six in the open dog class. Glamorgan won first over Boxer, both of which have been described before. Rock II. was the reserve. There were but four in the bitch class. Sall II., a well-known bitch, was in good condition. She won easily over Dido A., too fat, wide spring of ribs, ears too high. In puppies, Jumbo was first. Beppo's Dash was second. The former is coarse in head, ears not well carried, well shaped body, legs and feet good. There was no division of classes by weight.

ENGLISH SETTERS.—In the challenge class champion Cincinnati was absent, Toledo Blade was withdrawn and champion Albert's Nellie had a walkover. She won the special. There were five in the open dog class. Ben Hur of Riverview was in good condition, as, in fact, were all Mr. Lewis's dogs. Ezra Noble, a cobby dog, won second. The reserve went to Prince Rohan, plain in head, and too long in leg. In bitches, Nellie Breeze won first. She was in good condition. Easter Lily, second, has a good back, loin, quarters, legs and feet; she could have greater depth of chest and spring of ribs, and would have a better head if there was a more pronounced stop. Bessy got the reserve. There were but three in the competition.

IRISH SETTERS.—They were good in quality though hardly up to the high average of the breed. There was no entry in the challenge class. Blarney, Jr., won in the open dog class (6). Shamrock Bruce won second, the same position as at Detroit.

the challenge class. There were five entries in the open dog class, but Blackie and Jett II. were disqualified for being overweight. Pickpania won first. The remainder of the class was not noticeable for merit. The open bitch class numbered ten. Norah II. won first, second going to a fairly good red, Brownie, good in body, a trifle leggy and light in muzzle. The reserve went to Lake Shore Sadie. Not vhc. is appleheaded, light in bone and high on legs. Lady Dufferin got vhc. Pickpania, in a class of eight puppies, won first. Brantford Rufus, second, is light in muzzle and too high on legs. Captain, reserve, is an ordinary specimen. Jersey Cocker Kennels won the reserve. Their Bendigo took the special.

COLLIES.—Quite a good exhibit was made. Maney Trefoil had a walkover. He was not in good coat. In open dogs (7) Robin Gray, first, has a good head. His coat was good, but somewhat open. In fact, all the collies appeared to be shedding. Second went to a very superior puppy, Max. He is undeveloped. With maturity he will improve. In bitches

ENGLISH SETTER BITCH BESSMOND.
Owned by E. Raymond, Warsaw, Ind.

Louie Long won easily. She is now eligible to the challenge class, this being her fourth win. Spoiled Miss was second. Robin Gray won first also in puppies, and Max was second.

POODLES.—There were four. Berri, well known, won first in challenge class. Ben L. first in open. Second went to Beauty, a specimen which was more like a Maltese terrier than a poodle, and should have been transferred to the miscellaneous class.

BULLDOGS.—There was but one entry, Jack Spratt, and he was absent.

BULL-TERRIERS.—Sir Monte II. again met his old competitor, Crisp, and they were first and second in the order mentioned. Queen Lill, first, had badly cropped ears, which somewhat marred her appearance. Legs and feet excellent. White Gypsy, the Chicago winner, won second.

DACHSHUNDS.—Hundesport Bergmann, Lina K., Diamond Joe, and Milwaukee Jewel were placed first, second, reserve and vhc. in the order mentioned, the same positions as at Detroit.

FOX-TERRIERS.—Rosa Canina had no competition in the challenge class. In open dogs Rexford Spot, good in head, body and legs, excepting a rather large left ankle, won first over Belvoir Fan. Lady Roseberry won first in bitches, but was closely pressed by an lmos. old puppy, Chicago. Lady's superior development was all that favored her. Chicago is good in head and carriage of ear, has excellent legs and feet, and is as corkey a little terrier as the best. She won first in puppies easily, second going to Tombow.

IRISH AND SCOTCH TERRIERS.—Ashley Plug over The Colored Preacher; Bonnie Leech, the reserve. In bitches first and second went to Bessie and Salem Witch.

OTHER TERRIERS.—There was but one Dandie Dinmont shown, Meg R., soft in coat. In Skye terriers Florence May had a walkover. In Yorkshires, Minnie York was first, Tatters second. The latter was out of coat, but it has a remarkably good color, and would probably have been first but for the lack of coat. The reserve went to Dick York. In black and tans, Rochelle Oolah, third at Chicago, won first. Betsy won second. Bebe was the reserve. All are deficient in tan markings. Under ribs were an ordinary lot of apple-headed specimens.

PUGS.—Bob Ivy had a walk over in the challenge class. In open dogs Duke Howard won over Meddlar. In bitches, Princess May won over Kash's Ella.

BLENHEIM AND KING CHARLES SPANIELS.—Calumet Alice was first. King of Diamonds, a Blenheim, won second.

ITALIAN GREYHOUNDS.—There was not one of the three shown worthy of a prize. All were over size and coarse.

MISCELLANEOUS.—There was nothing of any merit in this class. Dame Ursa, a bob-tailed sheep dog, won first. Knight, a Japanese spaniel (so-called) won second. B. WATERS.

LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, S. S. Badger's Hector; 2d, W. P. Riggs's The Moor. Bitches: 1st, B. F. Lewis's Ethel; 2d, D. Cross's Charlotte. Reserve, Mrs. C. Goulding's Chatty. Very high com., D. L. Stiles's Butch. Com., Mrs. C. Bock's Countess. Puppies: 1st, J. S. Kelly's Queen Bess.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, A. C. Shallenberger's champion Aristocrat. OPEN—Dogs: 1st, A. C. Shallenberger's Saladin; 2d, Mrs. F. E. Shepherd's Ben Legend. Jr. Reserve, Myrtle Hill Kennels' Don El Paso. Very high com., Dr. E. P. Hershey's Fernwood Ralph and D. Fletcher's Silver King. High com., J. J. Huddart's Fernwood Count and J. S. Ferguson's Chang, Jr. Com., Mrs. F. E. Shepherd's Melrose. Bitches: 1st, A. C. Shallenberger's Alta Berna; 2d, G. W. Whitmore's Chugg. Reserve, E. Jones's Nellie J. Very high com. (2) and com., L. Yardley's Nell J. and Bess J. and Nellie Q. High com., Myrtle Hill Kennels' Charity. Puppies: 1st, L. Yardley's Prince J.; 2d, Mrs. W. W. Williamson's Beauty. Very high com., E. W. Merritt's Maximilian M. Com., Mrs. J. S. Ferguson's Royal.

ST. BERNARDS.—SMOOTH-COATED—Dogs: 1st, C. A. Pratt's Alton II.; 2d, Miss M. E. Cook's Sir Leo. Very high com., H. S. Waldo's Victor. Bitches: 1st and 2d, A. C. Shallenberger's Columbia Venus and Fernwood Queen.

GREAT DANES.—Dogs: Prizes withheld. Bitches: 1st, C. H. Withington's Razzle; 2d, Peter Ternes's Topsy. Very high com., Mrs. F. S. Robbins's Maids.

NEWFOUNDLANDS.—1st, John Condon's Surpass; 2d, withheld.

BLOODHOUNDS.—1st, R. G. H. Huntington's Jack Shepard.

BARZOIS.—Dogs: 1st, 2d and very high com., P. H. Hacke's Zloem

Pospelt and Odinor. Bitches: 1st and 2d, P. H. Hacke's Ormeda and Viewga.

GREYHOUNDS.—Dogs: 1st and 2d, St. Patrick Kennels' Monk Bishop and Boomerang. Reserve, C. J. Cashar's Adonis. Very high com., Dr. Q. Van Hummel's Van's O'Rell. High com., J. H. Gower's Lord Severettie. Com., G. H. Moore's Duke. Bitches: 1st, 2d and reserve, St. Patrick Kennels' Pearl of Pekin, Miss McGinty and Irish Lass. Very high com., Dr. Q. Van Hummel's Verdure Clad. High com., C. W. Phillips's Modjeska. Com., G. H. Moore's Hiawatha

Stella. Puppies: 1st and 2d, St. Patrick Kennels' Bon Bon and Bo Peep. Reserve and com., G. H. Moore's Moore's Flash and Duke.

FOXHOUNDS.—Dogs: 1st, T. C. Bradford's Major.

POINTERS.—CHALLENGE—Dogs: 1st, Dr. J. R. Daniels's Count Graphic. OPEN—Dogs: 1st, L. A. Biddle's Glamorgan; 2d and high com., Dr. J. R. Daniels's Boxer and Signal. Reserve, G. Connell's Rock II. Com., C. M. Hampson's Black Prints. Bitches: 1st, T. Donoghue's Sall II.; 2d, J. C. Harrington's Dido. Reserve, Dr. J. R. Daniels's Duchess. Very high com., Mrs. S. Wilbur's Fanny. Puppies: 1st, H. E. Chubbuck's Jumbo; 2d, Dr. J. R. Daniels's Beppo's Dash.

ENGLISH SETTERS.—CHALLENGE—1st, Washtenaw Kennels' champion Albert's Nellie. OPEN—Dogs: 1st, F. G. Taylor's Ben Hur of Riverview; 2d, L. Shuster's Ezra Noble. Reserve, H. E. Chubbuck's Prince Rohan. Very high com., O. P. Weisgerber's Gah's Point. High com., C. A. Murphy's David Hill. Bitches: 1st, Washtenaw Kennels' Nellie Breeze; 2d, R. W. Doilyns's Easter Lily. Reserve, J. H. Hunter's Bessy. Puppies: 1st, Washtenaw Kennels' Nellie Breeze; 2d and high com., J. Jones's Dodo and Xantippe.

IRISH SETTERS.—Dogs: 1st, T. Sharpless's Blarney, Jr.; 2d, D. L. & A. Carmichael's Shamrock Bruce. Reserve, R. C. Broughman's Omaha Patsy. Very high com., Mrs. F. S. Flint's Terry. High com., K. A. Pence's Bob Plover, F. E. White's Tom Moore. Bitches: 1st, Dr. S. G. Dixon's Lady Cleveland; 2d, W. H. Beazell's Kildare Winnie. Reserve, W. H. Hill's Desmond's Hebe. Puppies: 1st, 2d and reserve, F. E. White's Maid of Erin's Duff and Jesse Fremont. Very high com. and high com., W. H. Fetta's Champ and Gypsy.

GORDON SETTERS.—CHALLENGE—1st and reserve, Dr. S. G. Dixon's Duchess of Waverly and Ivanhoe. OPEN—Dogs: 1st, Dr. S. G. Dixon's Duke; 2d and reserve, Highland Kennels' Highland Kent and Highland Rex. Bitches: 1st and very high com., Highland Kennels' Highland Vola and Highland Carmencita; 2d, Dr. S. G. Dixon's Princess Louise. Reserve, Mrs. Emma N. Bein's Topsy II. Puppies: 1st and high com., Highland Kennels' Highland Kibride and Highland Blanche; 2d, Theo. F. Bates's Spring. Reserve, Gus F. Bein's Count Noble.

CHESAPEAKE BAY DOGS.—1st, D. L. Mechling's Punch; 2d, J. Lansing's Vic.

IRISH WATER SPANIELS.—1st, E. G. Fink's Trouble.

CLUMBER SPANIELS.—1st, Master Summers' Weston's Bustier.

FIELD SPANIELS.—Dogs: 1st, Tim Donohue's Newton Abbott Torso; 2d, John Smith's Coup's Gyp. Bitches: 1st, F. Van Dorn's Dandy; 2d John Smith's Dorothy.

COCKER SPANIELS.—CHALLENGE—1st, Jersey Cocker Kennels' Bendigo. OPEN—Dogs: 1st, Jersey Cocker Kennels' Pickpania. Reserve, Lake Shore Kennels' Nick Ott. Bitches: 1st, Jersey Cocker Kennels' Nora H.; 2d and high com., A. W. Pancoast's Brownie and Ditton Brevity. Reserve and high com., Lake Shore Kennels' Lake Shore Sadie and Blackie Van. Very high com., G. H. Moore's Not and Jersey Cocker Kennels' Lady Dufferin. Puppies: 1st and 2d, Jersey Cocker Kennels' Pickpania and Brantford Rufus. Reserve, H. K. Hellis's Captain. Very high com., J. H. McTague's McTague's Cherry and Lake Shore Kennels' Lake Shore Sadie. High com., F. Van Dorn's Beppo.

COLLIES.—CHALLENGE—1st, Carlwrie Collie Kennels' Maney Trefoil. OPEN—Dogs: 1st and very high com., J. Purse, Jr.'s, Robin Gray, Clyde and Sandy; 2d and reserve, Carlwrie Collie Kennels' Max and Psycho. High com., Mr. Winthrop's Tom. Com., W. J. McDonald's Oscar. Bitches: 1st and 2d, Carlwrie Collie Kennels' Louie Long and Spoiled Miss. Reserve, J. Purse, Jr.'s, Princess Shiela. Puppies: 1st and reserve, J. Purse, Jr.'s, Robin Gray and Sandy; 2d, very high com. and high com., Carlwrie Collie Kennels' Max, Puritana and Iris. Com., Mrs. W. W. Taylor's Frudy.

POODLES.—1st, L. A. Biddle's Berri; 2d, Mrs. J. Hanson's Beauty.

BULL-TERRIERS.—Dogs: 1st, Chautauqua Kennels' Sir Monte II.; 2d, Luzboro Kennels' Crisp. Reserve, C. A. Lee's Dennis. Bitches: 1st, J. W. Fry's Queen's Lill; 2d, Chautauqua Kennels' White Gypsy. Reserve, F. L. Dever's Burston Kit. Very high com., C. W. Waterman's The White Wasp.

DACHSHUNDS.—1st, 2d, reserve and very high com., W. Loeffler's Hundesport Bergmann, Lina K., Diamond Joe and Milwaukee Jewel.

BEAGLES.—1st, Shrewsbury Beagle Kennels' Doctor; 2d, Omaha Beagle Kennels' Prince. Reserve, W. G. Harding's Hawkeye.

FOX-TERRIERS.—CHALLENGE—1st, C. F. Frenzer's Rosa Canina. OPEN—Dogs: 1st, Highland Kennels' Rexford Spot; 2d, Argyle Kennels' Belvoir Van. Very high com., J. Henderson's Jo Jo. Com., W. D. Todd's Shot. Bitches: 1st, Toon & Symond's Lady Roseberry; 2d, Leinster Kennels' Chicago. Reserve, R. E. Fishburn's Venus II. Very high com., C. F. Frenzer's Lizzie. High com., F. M. Shouler's Tuggy. Com., W. N. Thompson's Gipsy. Puppies: 1st, Leinster Kennels' Chicago; 2d, A. Rhys's Tommy. Reserve, W. T. Thomson's Colin McEae. High com., D. Whyte's Vandel. Com., J. T. Curzon's Quito.

IRISH AND SCOTCH TERRIERS.—Dogs: 1st, R. Elliott's Ashley Plug; 2d, Chesterford Park Kennels' The Colored Preacher. Reserve, A. F. Hertzler's Bonnie Leech. Bitches: 1st, A. F. Hertzler's Bessie;

POINTER SPOTTED BOY.
Owned by Mr. Chas. Proctor, Union City, Ind.

Omaha Patsy, the reserve, has not a clean cut head but is a fairly good dog. Three competitors were present in the bitch class. Lady Cleveland was the winner of first. She was in good condition. Her muzzle is somewhat pinched, body well ribbed and fairly good symmetry. Second went to Kildare Winnie; is light in muzzle and bone, not first rate in pasterns, body well ribbed, good loin. There were five puppies. Maid of Erin, a small bitch, won first. She is better in forelegs than Dakin, winner of second, and has better symmetry. Dakin shows a trifle of coarseness comparatively. Jesse Fremont, the reserve, ordinary.

GORDON SETTERS.—Duchess of Waverly won in the challenge class over Ivanhoe and Leo B. Duke won in open dogs. Highland Kent, second, is deficient in short ribs; he stands over on left pastern, poor tan, good body, back and fair symmetry. Highland Rex, reserve, shows coarseness. In bitches, Highland Yola, shown too thin in flesh, won first. She is light in muzzle and might be straighter in forelegs. Princess Louise, second, is light in bone and plain in head. There were four puppies, which were not noticeable for superior quality. Dr. Dixon won the kennel special and Duchess of Waverly won the special for best dog or bitch.

CHESAPEAKE BAY DOGS.—Two were in number. The winner, Punch, is quite a good dog. Vic, second, shows age and is common in quality.

SPANIELS.—Irish water spaniels had but one entry, Trouble, an inferior specimen. Bustler was the only Clumber spaniel shown. In field spaniels, Newton Abbott Torso and Coup's Gypsy, first and second in open dogs, were the only competitors. The latter does not possess the best of legs and might be better in coat. There were two open class bitches, Dandy, first, is high on legs, short in body and pinched in muzzle. Dorothy has a narrow muzzle and a trace of a topknot. There was a fairly good exhibit of cockers. Champion Bene Silk being not for competition, Bendigo had a walkover in

"READY FOR JUDGING."

2d, Toon & Symond's Salem Witch. Very high com., A. F. Hertzler's Topsy. Puppies: 1st, A. F. Hertzler's The Rattler.

DANDIE DINMONT TERRIERS.—1st, A. Rhys's Meg R.

SKYE TERRIERS.—1st, Thos. Kirkpatrick's Florence May.

YORKSHIRE TERRIERS.—1st and reserve, Dr. N. E. Oliver's Minnie York and Dick York; 2d, Mrs. B. Smith's Tatters.

BLACK AND TAN TERRIERS.—1st and 2d, J. Fred. Rommell's Rochelle Oolah and Betsy. Reserve, Mrs. L. R. Forrest's Bebe.

TOY TERRIERS.—OTHER THAN YORKSHIRE—1st, G. H. Moore's Topsy Bird; 2d, W. O. Brinker's Tony. Reserve, C. H. Faxon's Midget.

PUGS.—CHALLENGE—1st, W. H. Cryer's Bob Ivy. OPEN—Dogs: 1st, Lake Shore Kennels' Duke Howard; 2d, Edgar Adams's Meddlar. Reserve, W. H. Bacon's Jay Bacon. Bitches: 1st, Toon & Symonds's Princess May; 2d, W. H. Bacon's Kash's Ella. Puppies: 1st, Ed. Triplett's Judy; 2d, Denver Florist Co.'s Charlie Westlake.

BLENHEIM AND KING CHARLES SPANIELS.—1st and reserve, A. M. Goldsmith's Calumet Alice and Calumet St. Cyr; 2d and high com., G. H. Moore's King of Diamonds and Queen of Diamonds.

ITALIAN GREYHOUNDS.—Equal 1st, G. W. Whitmore's Snowflake and G. H. Moore's Della. Very high com., G. H. Moore's Deppo.

MISCELLANEOUS.—Equal 1st, Denver Florist Co.'s Jumbo (Sussex spaniel), and Chas. Rosser's Dame Ursa (bob-tailed sheep dog). Very high com., Wm. D. Todd's Knight (Japanese spaniel).

Mr. M. L. Caswell, of Waltham, Mass., is concerned over the loss of his English setter Queen Monarch, by Foreman-Grace B. The bitch strayed or was stolen from her home, Belfast road, Augusta, Me., April 1. Any one who may hear of such a bitch will do a sportsmanlike kindness if they will inform the owner or this office, and a liberal reward will be paid. The bitch is in color a belton, with black markings on head, one side all black, black ears, and one tusk broken from upper jaw on the left side. She was to be bred to Breeze Gladstone, her period of oestrus being nearly due.

DOG CHAT.

Bedgebury Lion Coming.

Following so close on the heels of His Lordship's advent in this country, the news of the purchase by the Retnor Kennels of such a noted bulldog as Bedgebury Lion will afford another sweet morsel of gossip for the bulldog men. There are few men interested in bulldogs who do not remember Bedgebury Lion's sensational debut at Olympia in 1889, when he defeated British Monarch as best in the show. Since then his career has been one series of triumphs gained at the very best of the English shows, and in only one instance was he defeated, and then by His Lordship at the South London show in November, 1892; he, however, has had the satisfaction of beating His Lordship three times before and once since at Cruft's show in February last. Mr. Trenor L. Park endeavored to purchase this dog as a puppy and before his debut, but Mr. Beresford-Hope, his breeder, realizing that he had at last, after many years, succeeded in breeding a good one, desired, naturally, to share some of the fame that would attend the career of such a dog, and so refused to sell.

Bedgebury Lion is white with a brindle patch on cheek, was whelped Aug. 16, 1888, and weighs 50 lbs. He is by Alder, man out of Lydia, by Bandy out of Nell, by Sancho Panza out of Daisy; Bandy, by Billy out of Mr. Hinton's Rose; Alderman, by Bruce II. out of Daisy II., by Tiger out of Slut; Bruce II., by Gamster out of Sly. His winnings are: In 1889—1st, open and puppy, Olympia; 1st, open, Brighton and Southampton. In 1890—1st, open, Bath Bulldog show; 1st, Agricultural Hall and Aquarium Bulldog show; 1st, challenge, at Tunbridge Wells, Brighton and Crystal Palace (defeating British Monarch at latter place). In 1891—1st, challenge at Cruft's, Bath Bulldog show, Southampton and Crystal Palace. In 1892—1st, challenge, Cruft's, Bath, Islington, Aquarium and Crystal Palace (defeating His Lordship at Cruft's, Bath and Islington), and was placed second to His Lordship at South London in November. In 1893—1st, challenge, Cruft's, beating His Lordship, and at Bath. These winnings do not include specials, which would swell the list to nearly 100. Bedgebury Lion will arrive with Mr. Park on May 1. The Retnor Kennels are to be congratulated on their purchase, and the Bulldog Club should also receive due congratulation, for to its energy is no doubt due the present excellence of the bulldog classes at our shows and the *esprit* of its members. The Retnor Kennels are situated at Morristown, N. J., and are principally known in connection with bull-terriers, of which breed they own such well-known dogs as Dusty Miller, Enterprize, Diamond King, Winning Wagtail, etc.

Irish Setter Red Rose.

The Irish setter bitch Red Rose (champion Biz—champion Lady Clare) has been bred lately to Kildare Beverly (champion Elcho, Jr.—champion Ruby Glenmore) and the result of this mating will be looked forward to with interest. Red Rose has produced more high class Irish setters than any bitch living, and a short record of her breeding will no doubt be of value to those interested in the breed. She was first bred to Barney O'Shea (Rory O'More—Nora O'More) and had two litters by that dog, neither of which were up to the standard. Next she was bred to champion Elcho, Jr., and the result of this mating was the famous trio, champion Kildare, champion Seminole and Beau Brummell, in the challenge class, the only ones of this litter that have been exhibited. Red Rose was not bred again until she was served by her son Kildare, and had three dogs and six bitches by him. Two of the dogs of this litter were stolen and are supposed to be dead, and two of the bitches were spayed and one was killed. The remaining four have been shown, viz., Duke of Kildare, the dog, won first prizes in both novice and open classes at the last New York show and has but one more win to make before entering the challenge class. Challenge Queen Vic also won in both classes at New York this year, and continued on through the circuit without suffering defeat, and has been pronounced one of the best Irish setter bitches of the day. Belle of Kildare won second to Queen Vic in the novice class at New York and in the open at Baltimore. The last of these four, Queen of Kildare, has been shown only once, when she easily won first. This was truly a remarkable litter. Rose was next bred to Sarsfield (champion Garrover—Curren Bell II.). But three of the puppies lived. Rose Sarsfield, in the challenge class, is the only one of this litter that has been shown, and her record is well known. Next she was bred to Darby II. (Chieftain—Nelly X.) and a grand but small litter of puppies was the result, but unfortunately they all died before maturity. She was bred last to Mr. Fowler's Duke Elcho (champion Elcho, Jr.—Maid) and her ten puppies are now nearly a year old and are said to be developing finely, none having as yet been shown, though all of them are doing excellent work afield. A remarkable feature of Red Rose's breeding powers lies in the fact that although she has been bred to dogs of various types she has uniformly thrown puppies of the highest order, and which have, without exception, possessed valuable field qualities.

Dogs in Maine.

The last Maine Legislature made a change in the laws relating to dogs over four months old. Under the new law every dog owner must obtain a license at the office of the city clerk. The license fee is \$1.15 for dogs and \$3.15 for bitches. The owner of a dog is required to keep a collar around the neck of his dog marked with the owner's name and registered number or be subjected to a fine of \$10. The Mayor, within ten days from May 1, is required to appoint a constable whose duty shall be to kill all dogs that are not licensed and collared, and the said constable shall draw a fee of \$1 for every collarless dog he kills. To make the constable have a just appreciation of his office a penalty of not less than \$10 and not more than \$50 is provided for the willful neglect of this duty on his part. Maine is a prohibition State, and therefore its people are fruitful in resources, but with a constable that gets a dollar for killing and is docked ten for not doing so, the canine paradise reserved for dogs from Maine, we fear will soon be crowded.

Death of Ch. Beaumont.

Mr. James B. Blossom's champion Gordon setter Beaumont died April 11, of pneumonia, after an illness of only four days. Previous to this he was well and playing with the younger dogs. By many judges he was considered the best and most typical Gordon setter living, and by some the best of which we have any record. Among Gordons he occupied the position of champion Elcho, Jr. among Irish setters. His list of winnings is very long, commencing in Great Britain, where he became a champion, and rounding up his triumphs with the gold medal at Olympia in 1887. He was brought to this country in 1888, and by his list of winnings our readers will see how he was prized at the bench shows. He was very stylish and excellent in the field.

San Francisco Dog Show.

We have received the premium list of the third annual dog show to be held by the Pacific Kennel Club at San Francisco, Cal., May 3 to 6. The prizes in all classes are \$5, \$3 and diploma. In pointers and Irish setters challenge classes are made with a \$5 prize. Puppy classes are provided, but unless the entries in a class number five, in which event prizes of \$5 and \$3 are provided, diplomas only will be given. The special prizes are numerous and range all the way from a quarter dozen shirts and a pair of "pants" to \$15 cash for the best

trick dog. The Pacific Fox-terrier Club and St. Bernard Club offer cups, the former giving ten and the latter six. Mr. George Raper judges all classes. Entries close April 29 with C. A. Haight, secretary, 628 Market street, San Francisco. The show promises to be the best ever held on the coast, the coming of the English judge lending additional interest to the occasion.

Fullerton.

Fullerton, grand courser that he is, cannot be said to be gifted with the homing instinct nor with an over sufficiency of brains. What greyhound? Directly he finds his brains he runs cunning. The *Stock-Keeper* (Eng.) quotes an interview a *Star* reporter had with Col. North, Fullerton's owner, respecting the dog's tramp and subsequent recovery. Col. North said: "The man who caught him was a rural postman by the name of Richards. I have paid that man £40 of the £50 reward promised. Poor Fullerton was in an awful condition when brought here on Saturday last. His bones were sticking out through the skin, and altogether the poor dog showed what a rough time he had been through. Why, he had been turned away from doorstep and barn, kicked and cheived as if he were the mangiest cur in creation. He tried pulling up at a barn, he was cheived from there; then he was kicked out of a public house, and ultimately he came to sleeping on doorsteps. An awful fate, you will say, for the most popular and petted dog in England. The poor fellow must have lived on himself during those seven days of vagabondage. He was found at Limsicott, some twenty miles from here 'cross country. The postman picked him up out of pure charity and kindness. He saw the poor dog limping along the high-road, footsore, weary and obviously half-starved, and took him in tow. A groom of Mrs. Thomson's happened to be driving along at the time, and spotting the dog, cried out to Richards: 'Why, that's the dog Fullerton!' Richards didn't know Fullerton from any other dog, and the groom said: 'Come, I'll give you half a crown for your dog.' The lad chimed in with the offer, and then the groom honestly enough told the lad all about the dog. Fullerton's delight when called by his name was quite pathetic." When asked how the dog was, Col. North remarked: "Well, he's recovering from his terrible experience—that is all that I can say. The dog was as weak as a cat when brought here. We didn't ask him to walk. He was brought up here in a cab from the railway station. He is getting round now, but of course it will take some time to recover from the effects of his seven days' starvation. His bones were sticking out through his back. I doubt if the poor fellow had a decent meal or even an approach to one all through that week. Anyhow, we've got him now, and we don't intend to lose him."

Gordon Setter Trials.

The first English Gordon setter field trials were held April 5, on the Hatfield estate, owned by Lord Cranbourne, in England. Dr. J. H. Salter and Mr. George Lowe acted as judges. Only five Gordons came to the front, but these afforded satisfactory work. The entries, most of them, according to the *Stock-Keeper*, were dogs well known on the show bench, and their work conclusively proved that a show dog can also be a good field dog. In the stake for Gordons not exceeding 20 mos. of age, there were two entries only, Mr. R. Chapman's Heather Jane and Mr. E. Bishop's Ranging Kate. After rather unsatisfactory work Ranging Kate won. In the All-Age Stake Mr. R. Chapman's champion Heather Nap and Mr. R. T. Tatham's Brooklyn Romp, a winner at last year's Kennel Club show, were put down together and had a long trial. The judges could not decide the heat and the dogs were given a rest while Mr. Bishop's Jessie B. ran a bye. Then the brace ran again, but judges not being able to split them, Jessie B. was given first and Heather Nap and Brooklyn Romp divided second money. The weather was fine, but owing to the scarcity of rain there is little cover and scent lay bad. The trials were voted a success in spite of the poor scent, game being plentiful, and it was decided to hold another meeting next year.

Collie Club Show.

The Collie Club held a specialty show at the Westminster Aquarium, London, April 5, 6, 7, and though it was scarcely a notable success owing to indifferent arrangements, 110 entries were gathered together. There were several interesting competitions. Mr. Fowers was the judge. In the veteran challenge class old champion Eclipse and Sly Fox fought their old battle over again, and victory rested finally with the latter, who is said to be the fresher of the two, but inferior to Eclipse in collie expression and character. In the class for dogs that have won four first prizes, three cracks paraded, champion Southport Pilot, Sefton Hero and Great Gun. Sefton Hero won, though *Stock-Keeper* inclines rather to Great Gun, who carries the better ear and moves better than either of his opponents, and in expression and collie character he also is very good. Sefton Hero excels in coat, but carries his ears a little too forward. This dog afterward took the special for best in the show. Lady Christopher, another winner, is said to have gone wide in front. Of course there has to be a "coming crack" in such shows, and the one that made his debut this time is Lord Clivebrook, shown by Mr. W. H. Day. He is a black and white, of good size and excellent make, with a good, sensible, old-fashioned head on him, and "a simply perfect coat—in fact he is one of the best young sheep dogs seen out for some time."

Lexington (Ky.) Show.

The Blue Grass Kennel Club, of Lexington, Ky., do not intend to be left in the "cold," or rather we should say "dust," having in mind the sample found in Lexington, Ky., at the show of 1891, but will hold a show Aug. 30 to Sept. 2, being the dates assigned to them by the A. K. C. The show will be held in the Tattersalls Pavilion, than which, Mr. Roger Williams tells us, no better building for such a purpose is to be found in the county. A liberal premium list will be arranged, and those who visited the show in 1891 know that the occasion will be made an enjoyable one for visitors.

Rather Hard.

We found this in a Providence journal: "Boston has a dog show and is filled with pride because of its modest success. Her citizens had begun to fear lest the power of organizing victory over any adverse circumstances had departed forever from among them."

Collie Lost.

A collie answering to the name of Stanley has strayed away or was stolen from his home in Seventy-seventh street. The dog is black on back, changing to a light tan on lower part of body, white on head and had on a small brass-studded leather collar. Any one hearing of or seeing such an animal will do a kind action by notifying this office.

Grand Rapids Show.

The Grand Rapids Kennel Club are beginning to think another dog show would be advisable, so held a meeting April 5 to make preparations. They will go it alone this year, holding their show in September apart from the West Michigan Fair. Another meeting will be held June 7.

A Monster Dog Show.

It is rumored that the Rhode Island State Fair Association

have in contemplation a dog show that will excel anything of the kind yet held in the country. They will erect a building having an area of 18,000 square feet specially for the dog show. Messrs. Fred E. Perkins and David S. Collins are said to be at the head of the movement, and application has been made to the A. K. C. for membership. The prizes are to be larger than any yet given.

The Pacific Kennel Club seems to be a progressive body and to have placed itself during the past year on a solid foundation. At a meeting held April 5, with the new president, Mr. Briggs, in the chair, several new members were elected. Better still, the treasurer reported \$612 in the treasury, with \$450 as a guarantee fund for the show, so that club will open their doors on May 3 feeling comfortable regarding expenses.

The Mascoutah Kennel Club, of Chicago, show that they are still alive to the interests of the dog by offering cups at the World's Fair show to the value of \$500. Medals will also be offered by the club. From what we can gather the special prize list at the World's Fair show will greatly exceed anything yet seen and will require considerable attention from the management.

Another straw showing the authenticity of the "Jate" judges' list comes from Dr. Derby, who was slated for mastiffs. He has written Mr. Buchanan that professional duties will prevent his leaving New York at the time of the dog show.

The first meet of the new Monmouth Hunt Club took place at Lakewood, N. J., April 11. Among the riders was Mr. Fred Hoey, the fox-terrier man, mounted on the noted hunter Warwick. The run was over the aniseed trail and laid over a good country, giving plenty of stiff jumping. These are the hounds lately imported from England and of which James Blute is the huntsman. They gave a good account of themselves and instead of running into reynard at the finish they landed on a haunch of beef suspended in front of the Lakewood Hotel. It is not stated who got the brush.

Mr. James L. Anthony has resigned as an officer of the A. K. C. and also from Pointer Club.

Luther, when studying, always had his dog at his feet.

Several fanciers intend crossing the "pond" this summer. Mr. H. A. Harris, owner of Mermaid, Raby Palissy and other good dogs, will run over after the World's Fair show, and so will Frank F. Dole. The owner of the Chestnut Hill Kennels, Henry Jarrett, will also, probably at the same time, pay a visit to his English friends.

In the European edition of the *Herald* appears the following letter which, though it has a vein of humor, must find an echo in the hearts of many true dog lovers: "Editor of the *Herald*: In reading of the Nice Society for the Prevention of Cruelty to Animals, I am constrained to ask if it includes cruelty to dogs inflicted by society ladies. I am one who believes that a dog's life is made up of the joys and sorrows growing out of chasing his feline adversary up trees, being pelted by the stone throwing boy, getting scratched, having his ears cropped, taking part in the rat pit, the hunt, the chase, etc. I also believe that whoever fondles a dog from its birth, dresses, combs, washes and feeds it like a child, and causes it to become inflected with dyspepsia, gout, etc., and so destroys its nature that it no longer enjoys raw meat, fleas, cat fights and all the cognate joys which make up a respectable and natural dog's existence, is guilty of a crime against nature and of excessive and uncalled for cruelty, which should be severely punished. Will you kindly inform a constant reader what is the position of the Nice society on the foregoing points? I am one of those who believe that a dog is a dog, not a child to be aired by nurses, fondled by unnatural women and made incapable of enjoying the pleasures that God created a dog to experience.—R. W. T., (Cadiz, Spain, March 11, 1898)."

Correspondents who write for prescriptions for sick dogs should be particular to give street and number.

Mr. Henry Lacy, the noted English black and tan terrier breeder, intends visiting the World's Fair dog show and will bring Rhode's Oban, winner of 23 first and 4 specials; Rhode's Una, winner of several firsts, and a Russian wolfhound that has also been in the money.

Mr. Pierpont Morgan has built a range of excellent kennels at his place at Cragston, N. J., for the good lot of collies he is getting together. Mr. Armstrong, the manager, tells us that some further importations are being thought of. It would not surprise us to see Rufford Ormonde wend his way to the Mosquito State.

During the Boston show the blind children of the Perkins Institute as usual paid a visit to the dogs. Much regret was expressed that Helen Keller was not among the visitors this year. Wednesday and Thursday delegations under the care of Mr. Wade visited the show. The children were allowed to fondle the dogs, and the bulldog His Lordship and Wellesbourne Charlie were especial favorites.

A "Burnleyite," which means in common parlance a man from Burnley, Lancashire, England, is, according to the *British Fancier*, coming to the land of the dollar. He brings with him two well known fox-terriers to *dazzle* our eyes. Our contemporary further asks what *apology* the Burnleyite offers for his freak. In the absence of further information of the dogs' names we must conclude that the italicised words will convey some information to fox-terrier men as to their identity.

Dr. Lougest, Mr. Wiggins tells us, has not bought the two St. Bernards, Lady Judith and Judith's Ruth. So probably it was Bessie Blaine and Peg Woffington, the rough pups, that the Doctor purchased.

Mr. J. McMillen informs us that his Boston terrier Dolly won first in under 20 lbs. class at Boston, the Boston Terrier Club first prize for that weight and also the medal for best bitch in show. Referring to the catalogue we can find no mention of a prize given by the Boston Terrier Club for terriers of the above weight.

According to the *British Fancier* the Woodlawn Park Kennels have secured a crack collie bitch. This is Scottish Gem, who is said to have created a sensation at Dumfries, where she won four first prizes. She is said to be a well bred bitch, and will considerably strengthen the Saratoga kennel, which is now becoming so strong in several breeds.

A number of communications on kennel matters have been received during our absence at the different shows this spring, and we must claim our correspondents' indulgence for not having been able to attend to them before.

The local show held in Columbus, O., by the Fanciers Club, recently has created a great interest in dogs in that locality, and Mr. Pitts writes us that they will hold a good show next year under A. K. C. rules. There were about 181 entries and what is more satisfactory to the management, the club cleared \$400. There is also some talk of the State Fair people taking up the dog question and holding a show in the fall.

By the way, we should think, since the new cropping rule comes into force in the English Kennel Club, cropped dogs having to some extent lost their value, that it would be now or soon a good time to secure better Irish terriers than we have at present. This game breed is becoming more popular every year over here.

The celebrated Irish terrier Bishop is dead. Death resulted, it is said, from a kick or blow causing an internal rupture, the dog dying after forty-eight hours' illness. Though this young dog made his debut last year only, he has since scored fifteen firsts and specials. He was owned by Mr. Fred Breakell, who at one time refused \$500 for him.

Mr. A. E. Pitts, whose late love was the pug, of which breed he has owned some good specimens, has lately gone in for a longer faced sort, having purchased from Mr. C. S. Hanks the Russian wolfhound Zlobelis, and expects to go largely into the breed as soon as he can devote more time to them.

Dr. J. Frank Perry, we understand, has purchased a controlling interest in the *Fanciers' Journal*. Henry Jarrett has been made treasurer, and Mr. C. H. Mason, having succumbed to the inevitable, will be kennel editor. Directors are Dr. Perry, Charles T. Thompson and Henry Jarrett.

The complaint of the Spaniel Club in behalf of Mr. Oldham against Mr. P. J. Keyes, of Ottawa, has been referred back by the A. K. C. to the Spaniel Club with the advice that that club bring the case before the Canadian Kennel Club. We are in a position to assert that the whole affair, as we surmised at the time, has arisen out of a mistaken sense of what Mr. Keyes wrote. Mr. Keyes was merely speaking figuratively when he said that "the dog owned by Mr. Bell could win at New York." Mr. Keyes did not even have Mr. Oldham in his mind at the time, nor is he sure that he knew he was to judge. We think that Mr. Oldham is quite willing to accept this view of it.

Among the new business offers this week in our kennel columns we notice Geo. Meister has Gordon setters for sale; John A. Balmer, English setters; J. T. Mayfield, English and Irish setters; Geo. Douglas, cocker spaniels; Edward Booth, choice St. Bernards; C. G. Browning, cocker pups; W. H. Child, trained English setter; J. E. Woodland, English setter; Anton Ballin, smooth St. Bernard; Jacob Hope, dogs of all breeds.

Mr. La Rue's letters, in which he informed us of the sale of Dame Bang to Mr. W. W. Peabody, Jr., Cincinnati, O., and Revelation to Mr. Wm. Hawkins, Monterey, Mass., have been in type some time, but owing to the demands on our space must, with others, lie over another week.

Flaps from the Beaver's Tail.

TORONTO, CAN.—I am sorry to hear that Mr. Wm. Brodie, whose short residence in Canada has brought him many warm friends, is about to leave us to again take up his abode amid his native heather. Mr. Brodie brought out several winners here which otherwise would probably have languished to fame unknown. He promises to keep your correspondent in touch with doggy matters in the old land.

The wire-haired fox-terrier Dark Eye will be placed at stud by his new owner, Mr. A. A. Macdonald, who will offer as an inducement to the owners of brood bitches, at the Toronto show of 1894, the tidy sum of \$100 for the best fox-terrier, 20 months or over, sired by Dark Eye or his smooth dog champion Blanton Trump.

An executive meeting of the Canadian Kennel Club will be held on May 3. The business to come up is as follows: Selection of dogs for the World's Fair and matters relating generally to the Fair. Communications regarding Mr. Geo. Bell's conduct. Encouragement of field trials. Matters referred from the A. K. C. Revision of the constitution. General routine business.

The Bowmanville St. Bernard Kennels have disposed of several of the Prince Bute—Maypole imported (in utero) litter. One, Lord Mountspeer, has gone to Mr. C. Hilbert, Gretna, Manitoba. Another, Sir Oliver, to Mr. Chas. Henderson, Parkdale, Ont. The pick of the lot, a dog said to be a wonder, is being retained for stud purposes.

The Toronto Kennel Club has decided to hold a two-days' show, May 13 and 13, in the Granite Rink, a large, well-lighted, sanitary building, situated in a good part of the city and most suitable in every way. The show will be open to Ontario, perhaps Canada, and where six or more entries are made in a class, the money will be returned to the first and second dogs. Few preliminaries have as yet been arranged, but the judges will be Messrs. George Bell, spaniels, St. Bernards, greyhounds, great Danes, mastiffs, all terriers except fox-terriers, foxhounds and beagles; A. D. Stewart, fox-terriers, bulldogs, pugs and miscellaneous classes; J. Maughan and E. Tinsley, setters and pointers.

Mr. George M. Hendrie, of Detroit, the president of the City of the Straits Kennel Club, was the lucky winner in Mr. Stewart's raffle, and is now the owner of My Fellow.

The partnership existing between Mr. W. B. Palmer and Mr. J. Kennedy did not last very long, as they will each again "paddle his own canoe." Mr. Palmer retains Obo III. H. B. DONOVAN.

That Baltimore Trouble.

Editor Forest and Stream:

The several allusions to the trouble between Mr. Bell and myself which have appeared in your kennel notes must tend to create the impression that I was and am in the wrong. The writer of these allusions is not in possession of the facts, for he would then support my position.

Mr. Bell, while nettled by my putting back one of his dogs at Baltimore, threatened me with exposure of past misdeeds in the public press unless I changed the award. I could by considerable stretch make allowance for this under the excuse of a "burst of passion." But after having as much as two nights to sleep on it and cool off he was still repeating a whole breath story to the effect that he had called me to my face a — and that I had not resented the profane and obscene epithet. Do you wonder that I declined to treat with him direct, but placed the matter in the hands of Mr. Diffenderfer, after refusing to accept an apology for only the "burst of passion" business.

What was demanded and with much reluctance and word paring acceded to was an apology and acknowledgment that he never used such an expression, or in other words that the story and every repetition of it was a deliberate falsehood.

JAMES WATSON.

[For the first time we have been put in possession of the true facts of this case, and we must concede that, owing to circumstances, Mr. Watson was in great measure justified in carrying the case to the A. K. C. In the first instance, though the way that the president, revoking Mr. Terry's proper action, handled the affair afterward led to confusion. Also, that there was no excuse for Mr. Bell's telling others, the FOREST AND STREAM representative included, that he had used obscene expressions to Mr. Watson when he never had. We do not wish in any way to screen Mr. Bell, but rather think that his conduct and the conduct of any one who insults the judge should meet with instant punishment.]

Canadian Dogs for the World's Fair Show.

Editor Forest and Stream:

In last week's issue you print the copy of a circular lately sent out by Dr. Wesley Mills to the members of the executive committee of the C. K. C. Having published the president's circular he kind enough to publish my reply to it, which I annex hereto. A. D. STEWART.

Dr. Wesley Mills, Montreal:

Sir—I beg to acknowledge receipt of your circular of March 30. In answer to it I have to say that although I was present at the meeting of the executive committee, held last September in Toronto, at which the five members of the C. K. C. were chosen to judge at the coming trial show, and although I indorsed the scheme which at that time appeared to be a feasible one, I have since come to the conclusion that a mistake has been made, and if it is possible at this late date to make a change, I think it should be done.

I may say, speaking generally, that I think the committee made a mistake in deciding to hold the trial show at all, and unless the present feeing changes materially, I fear that comparatively few dogs will be sent to Toronto to be passed upon by the C. K. C. judges. I say this because I have heard personally and by letter from many of our most prominent breeders and exhibitors, and from nearly all of these come objections in one form or another.

Some object to the limit placed upon exhibitors which prevents the showing of more than four dogs in any one class. Others object to paying express charges on prize dogs which are well known to the exhibitor, and which, if they are to be sent to the trial show, will be chosen without being sent to the Toronto show at all. Others have bitches in whelp or nursing puppies; some have dogs sick or out of coat; others have young stock which they do not wish to exhibit until they are brought into the ring at Chicago; and some have puppies which although now poor looking may in four or five weeks have so improved as to be worth entering.

These are serious objections and worthy of consideration, but they are as nothing compared to the assertion of some prominent breeders who allege that they have positive assurances from Hon. W. I. Buchanan, of Chicago, that Canadian dogs will be received at the World's Fair show, whether selected or approved by the C. K. C. judges or not.

I have written to Mr. Buchanan to ask whether there is any truth in these assertions, but so far no reply from him has reached me. I beg to point out, however, that if dogs entered by Canadian exhibitors, that the World's Fair show are to be received outside of the number selected by the C. K. C., there can obviously be no use in holding the trial show.

I find also that a very strong feeling exists (and in this, as you know, I have always shared) against allowing any of the judges to pass upon the merits of their own dogs, and many exhibitors are in favor of engaging one (or two) competent and outside judges to select the dogs, as being more likely to act impartially in making the selections than Canadian judges could be expected to do. I do not say that I agree in this feeling, but I point out that the feeling exists and is well worth considering.

I also find an almost universal feeling against allowing you to act as a judge, and you will pardon me if I say that in this feeling I share. I have no objection to your acting as a judge, but I have no objection to the Canadian judges, and I have no objection to the judges who are one of the number. Your performance in the judging ring at Ottawa last year was "the last straw which broke the camel's back," and no one who saw the farce or heard of it could ever have confidence in your abilities as a judge again. I did not object to your name when you proposed it yourself at the committee meeting in Toronto, because I had not seen your judging, and because I thought that those who were entered at your judging were prejudiced in favor of the dogs you performed for three days at Ottawa I changed my mind, and I now object most emphatically to your being allowed to pass upon the merits of any dog.

As far as I am concerned personally I am not making a single entry for the World's Fair show, as my kennel has been dispersed and I have no dogs at present, and I care little therefore who the judges are. I have no objection to the judges, but in the interest of the exhibitors, and for the honor and good name of the Canadian Kennel Club, I must object with all the force with which I am capable to your being allowed to act as judge, believing that your retention in that capacity would utterly ruin the show and prove a source of lasting discontent.

A. D. STEWART.

P. S.—If, as I hope, Mr. Buchanan should decide not to accept any Canadian dogs, and if the dogs selected by the C. K. C. the entries at the coming trial show may be larger than I expect at the present time, but this will be simply because the exhibitors have no other alternative than to send their dogs, and not because they have any faith in your ability as a judge.

That Fake List of Judges.

AND now the Chicago editor who rushed into print in his eagerness to tell something he did not know persists in his declaration that that "fake" list of World's Fair dog show judges was correct. And this in the face of Mr. Buchanan's direct statement to the FOREST AND STREAM's Chicago office that the list published by the Chicago man was simply of names under consideration; that no official list had ever been made or would be made for a week or two. Not only that, but in the face, too, of positive declarations in person to the kennel editor of FOREST AND STREAM by no less than six of the alleged judges that they had never been notified of their selection nor given an opportunity to accept the position if they would; and of the positive declaration of another—the seventh—that he could not accept if he should be asked. It's all very funny, but the funniest of it all are the Chicago man's contortions, now that his foolish fix has been exposed to the derisive gaze of the world. The moral: When there is Chicago news to be given it will come to the FOREST AND STREAM from our Chicago representatives on the ground.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. B. G., Norwiche, Conn.—I have a spaniel 8 months old that has a bunch on under side of its neck nearly as large as a hen's egg. It came on suddenly, is not sore and seems movable; is hard to the touch. What is it and what is a remedy? Ans. I suspect a puppy with a similar bunch, and after it died I cut the bunch open and it was meaty (locked like a kidney), and it had a vein through it, which when cut bled very freely; ran out in a stream, in fact. What is the cause? Ans. Probably an enlarged gland. Remove the hair and apply tincture of iodine to the lump daily.

Rex, Pittsburgh, Pa.—I have a pointer 8 months old. His four large teeth in front are starting to decay near the gum. I feed him on rolled oats bolted down like mush. Will he get a new set? Are the rolled oats injurious to the teeth? Ans. Wash the mouth out daily with carbolic lotion (1 to 30). Give meat (cooked and raw) in addition to present diet. Give the following:

- ℞ Ferri et quinin, cit..... 3 ss
- Tr. nucis vom..... 3 i
- Aq. ad..... 5 vi
- Mix. Give one tablespoonful three times a day.

Yachting.

THE various suggestions offered by Lord Dunraven as to flags on buoys and similar minor details of the races are mostly practical and to the point; but if he is at all familiar with the history of the races for the Cup within recent years, he should know that the various regatta committees of the New York Y. C. have proved themselves fully capable of dealing successfully with all minor details of starting, timing and marking courses. This part of the work has been well done in the cases of Genesta, Galatea and Thistle, and will probably be as well done this year. The courses have been marked by large flags or balls of one color, the starting guns have been timed accurately and the signals which accompany them have been displayed promptly and correctly. The finishes have been accurately timed, an extra vessel being on hand in case of any possible delay of the judges' boat. After witnessing every Cup race in 1885, '86 and '87, we fail to recall a single instance in which complaint might be made against the immediate

management of the races. In the case of the Thistle races there was a complaint on the part of a few because the races were not started in a calm at the announced hour, and also because of a windward and leeward in place of a four-sided course; but these complaints had no better foundation than the irritation of defeat. This year the club has agreed to start the races at any time when one competitor desires it, so that all possible cause of complaint on this ground is removed.

LORD DUNRAVEN's suggestion of an earlier date for the races is a very good one, and will doubtless be carried out if the new defenders are completed in good season; but much depends on the New York Y. C. cruise. If all four boats are seen in good form in the many races of the cruise, the trial races for the final selection of a defender will be a mere formality and quickly disposed of. If, however, it happens that some of the four are not in perfect form on the cruise, or that time is needed for alterations and then for a careful series of trials, the final selection may not be made before the latter part of September. Both parties would naturally prefer the earlier date, and the Cup races may yet be sailed by Sept. 15.

THE Atlantic Y. C. has promised, through Com. Banks, a valuable trophy for a race of the four 85ft. cutters, the date and details not being yet decided on.

At City Island.

Now that the sun is getting up earlier and going to bed later; now that the robin and blue-bird are back in their as yet leafless haunts, busily active in securing a favorite perch in a tree that the balmy south wind will soon kiss into greenery, my soul is filled with that insatiable longing for the sea that curls all desires into one feverish wish to be at sea. Never is the voice of mother Ocean so rich in pleading tones; never are her waves so blue, or her stretches of azure so enticing, as when the scepter of rude winter has fallen, and brave young spring comes with light step and radiant mien to rule and enrich the kingdom of the dethroned and departed tyrant.

To be once more afloat! But ere we can feel the canvas-crowned fabric swaying and tossing beneath our feet to the rhythmic movements of the restless waters, we must worry through this month of sand-papers, scraping and painting. Days of strained backs, blisters and paint-bedaubed fingers. When the sound of the creaking iron as well as the voice of the turtle are heard in the land, and the scent of the varnish mingles with the perfume of the early violet, April, the month of repairs, of selling and buying, and of contracting large bills, glides not too soon into the merry launching month of May.

It is my pleasure at this time of the year to steal a day from the busy grasp of toil, and leaving the dusty, noisy haunts of business behind, take a curious mind and light heart away to the waterside, where the yachts perched high on shore are being overhauled and rejuvenated. Old friends they are, many of them, whom it is a pleasure to meet and greet again. To sit in the shadow of their sides and talk over their histories; to recount the triumphs that made glorious their youthful days; to tell of their fought battles, and victories won in countless ways on many waters.

My last pilgrimage was to City Island, and there with two who love the yacht, was spent a day that somewhat atoned for what we yachtsmen suffer, when fettered in the icy gyves of winter our wide domain is a forbidden realm. City Island has had in the last few years, what to me, is an undesirable brightening up. It is no longer the quiet place that it was in the old days, when the nearest railroad station was a good six miles away, and the handiest way to get there was by water. The clam and oyster were then the sole topics of conversation, for outside of the ship-yard no other means of gaining a livelihood was known to the lanky islanders in those primitive days. But that cursed invention that has destroyed rustic simplicity the world over, refused to spare this gem of the Sound, and now City Island is just like any other place distant twenty-five cents worth of riding from Manhattan.

As a place for yacht clubs and yacht builders it has no rival on the North Shore. It is accessible both by land and water, and boasts of one of the best anchorages along the coast. Before long several of our struggling yacht clubs will be turning an eye on the park lands that border the inner channel, and petitioning the city to let them make good use of the shore. The two bays that flank the neck would make good boating water, much better than the dirty Harlem river, and there is room for all the oarsmen and canoeists in Christendom. While wandering from yard to yard I jotted down a few notes as to what is going on, that may be of interest to the curious, who are not so lucky as to have a day to spend among the repairers and builders.

Dagmar—formerly Titania—is almost finished, and ready to launch. I honestly say, that she is improved in appearance, as my dislike of the full bow is deeply ingrained, and besides I never could see any beauty in that abbreviated foremast rig. She may be a speedier vessel, but that is a question to be answered next June. For her owner's sake, it is to be hoped that the costly metamorphosis will not be barren of agreeable results. If he will accept the advice of a man who has seen more than one spar go, he will have a spare bowsprit and foremast on hand, for if experience is of any value, I am bold enough to back me up with the prediction, that if the Dagmar is raced, she will need one or the other before the season is over. Her shrouds are set up with turnbuckles; they look rather light for the work expected of them, but then, you know, the equalizing of strains is a science with our modern designers.

The Clara, Bedouin and Jessica are lying beside her in the same yard, and the latter is for sale. In the matter of better accommodations for boats and crews, the yard is well supplied with length in this country, and a man who is looking for something to live in will find her just what he wants.

Wood is still busy on the two steam-yachts. The one for Mr. Coggeswell is almost ready for launching, and will I hear go overboard shortly. She is a wonderful piece of designing, and a splendid specimen of what the firm is capable of turning out. The planking on both boats is the finest job I ever saw. The hulls are covered with life aloft enjoyable. Asbestos suits and sponge head coverings will be fashionable summer wear in the engine room. Some would-be-experts are of the opinion that the yacht is too short for the power. But then, who designs or builds to satisfy experts?

In the Byles yard the roomy cruiser Pelican belonging to ex-Commodore Connolly is fitting out. She will be dressed in white this summer, a seemingly change and one that will improve her appearance. The Burgess cutter Mops, just ahead of her, is also putting on a fresh coat of white. The steam yacht Ola has a new pilot house, and looks decidedly better for it; the addition having somewhat mended the fancied resemblance to a street-car, that made her so easily recognizable last season. The sloop Fleet laid up here has been sold. The fo, one of the first of the small ones to be in commission, is hauled out for a bottom painting.

Mr. Centro's Medusa has been in the hands of the Hawkins people for some time; she has a new stem, topsides and rail. A splendid ship the Medusa, and not at all like her owner's first venture in the cutter line—the Vindex, that is drawn up close by. The Vindex enjoys the distinction of being the only yacht in these waters that has Cincinnati for a home port—a port that she can never sail to. The old schooner Una that smashed into a steamer last fall is out here, and her exposed bow timbers are a study. She was launched when light construction was unknown, and consequently the wood was not spared. Taken as a whole, things are not as brisk as one would expect on the island, but a week or two of sunshine will wake the yachtsmen up and the boats will take to water by twos and threes. T. F. D.

We have received the rules and allowances, etc., of the Y. R. A. for 1893, published by Harrison & Sons, London, containing the revised measurement rules, the list of members and yachts, the measurements of the yachts, and minutes of meeting. The most interesting portion of the book is the summary of decisions of the Council in protested cases, notably the Dacia—Natica match last fall. The evidence and diagrams make these decisions quite valuable in similar disputes.

The new steam yacht Impatient, designed by H. E. Dautzenbaker, of Philadelphia, and built by S. F. Bannan, Holly Oak, Del., was successfully launched on April 13. She was built for Mr. W. M. Singery, of the Philadelphia Record to replace the steam yacht Restless, lately sold to Western owners. She is of oak throughout, 51ft. over all, 7ft. 6in. l.w.l., 12ft. 6in. beam, 6ft. hold, with quadruple expansion engines 7, 10, 14 and 20in. by 10in.

Sailing is the appropriate title of a new yachting paper edited by Mr. W. Q. Phillips, of Toronto, the first number of which has just reached us. The paper is a weekly, and will be devoted to yachting and canoeing in Canada, and particularly to yachting on Lake Ontario. The first number promises well and we wish it all success.

HOUSE-BOATS AND HOUSE-BOAT LIFE.

(Concluded from Page 323.)

II.—The Stationary House-Boat.

Our article last week dealt with what may very properly be called the auxiliary house-boat, the residential features being supplemented by motive power, either steam or sails, with the view of frequent change of moorings. The term stationary is not quite correct in the

GROUP OF HOUSE-BOATS, SAN FRANCISCO BAY.

sense in which we now apply it to the other class of house-boats, as one striking advantage of such a home over a fixed habitation on shore is the ability to change one's neighbors and surroundings at will. We have used the word in default of a better to distinguish the large class of house-boats which have no means of motion of their own, except the very primitive ones of oars or poles, but which must depend on a towing-boat of some kind, a hired tug, or a friendly steam launch, whenever they wish to shift their moorings.

We do not propose to attempt to decide the vexed question as to which is the true house-boat and which possesses the greatest number of advantages, but instead we shall let the advocates of the Thames type speak for themselves. The following article, before alluded to, was written for the *FOREST AND STREAM* by Mr. Frank Weston, a Boston architect, and first appeared in the issue of Jan. 27, 1887. Although Mr. Weston has endowed his craft with masts and rigging, it will be seen that he is not an advocate of the sailing house-boat.

In England the house-boat has of late years multiplied so rapidly that its genus can now be met with snugly moored against the banks of nearly every picturesque lake and navigable river, or swinging to an anchor in quiet coves and cozy inlets of the sea wherever a sheltered harbor and pleasant surroundings can be found.

But the pleasure and luxury of life on a house-boat, its freedom, comfort and healthfulness, and its immunity from the host of cares and annoyances which beset the summer cottage owner, or hotel boarder on shore, are not yet thoroughly appreciated or even understood in this country. Occasionally a returned traveler from England brings with him the story of a brief sojourn on one of these pleasant floating dwellings, and treats his hearers to an enticing description of the morning plunge into the sparkling waters, the sun bath on the upper deck, the keen appetite and the tempting breakfast, with the summer breeze playing through the cabin windows; the morning smoke under the deck awning, the row in the launch up the river, the lunch at the neighbor's in the next house-boat, the return with the tide and the ladies at the oars, the perfect cooking of the dinner which awaited them, the enjoyments of the musical evening which wound up the pleasures of the day, and the deep and dreamless slumber in the luxurious stateroom preparatory to kindred enjoyments on the morrow.

In his eager rush from place to place the Europe-trotting American does not, as a rule, see much of all this; but occasionally one more fortunate or wiser than his fellows comes back with a story like the above, and puzzles his hearers with the query: "Why has not the house-boat been introduced into this country?"

The house-boat, as its name implies, is a house and a boat in one. Like other houses and other boats, it is costly or otherwise according to its size and fitting and the means and desires of its owner. For a few hundred dollars a single man who finds pleasure in "roughing it" can own a house-boat, in which he can compass his simple enjoyments in a thoroughly satisfactory way. Add to the above figures until they become say a couple of thousands and a house-boat can be procured in which a gentleman and wife will find in saloon, stateroom, bath room and domestic conveniences, completeness and even luxury, which cannot be duplicated for twice that expenditure on shore, while to the fortunate few who can contemplate the addition of yet another cypher, can be insured a floating palace which, for its purposes, no yacht at three times the cost can compare.

Though comparatively costly in the first building, for it would be unwise to construct it in any but the best manner, the house-boat has many features of economy which are denied the summer dweller on *terra firma*. No costly lot of land has to be bought to build it on, and the maintenance of fences, walls, lawns, terraces, fruit, flower and kitchen gardens do not figure on the expense account. In domestic management the house-boat is freed from the wasteful tyranny of the Bridgets. The peaceful serenity of the house-boat mistress is not disturbed by any questions involving the issue of "Sundays out" or the desirability or otherwise of Bridget's "young man," for all the work on board is usually done by men, and from stemhead to rudderpost the genus Bridget has no necessary place.

In small house-boats, one man to act in the role of cook, steward and general utility is sufficient. A larger boat may make advisable the addition of a boy to wait at table and "help round," but even in the family house-boat of say four staterooms besides the saloon and domestic offices, two good men will not only do the work with ease, but if kept too busy with the tender to and from shore, will find lots of idle time upon their hands.

In furnishing the house-boat, the expenditure necessary for furnishing an equivalent house on shore need not be exceeded, and in "running" the house-boat the same rule will apply. Perhaps the last remark is not sufficiently strong, for in point of fact, the intelligent service of the men on board, as against the almost invariable incompetence of hired "summer help" on shore, will, in the majority of cases,

family. Here the man performed all deck duties, while the wife, with her husband's occasional assistance, took charge of the kitchen and entire "indoors," and this house-boat lays to an anchorage under the lee of a small island some little distance from the shore, a steam launch is added to the man's responsibilities.

Another house-boat, one of the smaller kind, has for its occupants and owners, two clerks, than whom no more enthusiastic house-boaters can be found. A convenient inn on the river bank furnishes their meals and guards their property while during the day they are attending to their business in London, and as these clerks (who are, by the way, very jolly and exceedingly hospitable fellows) attend to their own bed making, dusting, and other domestic duties, they avoid the ex-

pense of hired help and live a life of exceeding independence and enjoyment. In their case economy and contentment evidently go hand in hand.

But even house-boats (though always economical in the sense that small expenditure gives comparatively large returns) can be conducted in a costly manner. The writer calls to mind one case, a large

ON THE THAMES. HOUSE-BOAT AND ATTENDANT STEAM LAUNCH.

and exquisitely appointed vessel which usually summers (or used to) in the romantic regions of the north of Scotland, to which a domestic staff of eight adults and eight boys is attached. The business of the boys is to look as pretty as possible in their natty man-o'-war uniforms, and to row the owner, his family and his guests from place to place in the handsome eight-oared galley in which all such excursions are made.

When the boys are not at this duty an admirable course of study improves their minds and fits them for the more serious duties of the life before them. The boys themselves are selected from the street waifs of Edinburgh, Glasgow and other cities, and the wise extravagance of their employer may, and probably will, save eight souls from prison or worse. With such a numerous retinue, a servant's house-boat is a necessity, and one is in this instance moored well out of earshot of the other; at night the servants, save one man on watch, withdraw to their own boat, where ample sleeping accommodations are found, and where the large cabin used by the boys as a school room gives them facilities for the social evening which ordinarily winds up the pleasant duties of the day, for one of the unwritten laws of house-boating is that everywhere, above and below deck, in the saloon or in the servants' quarters, at all times and under all circumstances, Happiness, with a big H, shall reign.

It would not be surprising if, to the minds of those who may be here gathering their first information on the subject, comparisons between house-boats and yachts should present themselves, but the truth is, no such comparison can fairly be instituted. As a house-boat the yacht is of necessity both incomplete and unsatisfactory; while as a yacht the house-boat proper has no claims to consideration at all. The desire or the need for the one cannot possibly be satisfied by the possession of the other, and although the enjoyments pertaining to each are of close relationship, that very fact establishes an *entente cordiale* and emphasizes the absence of any competition as to merit or desirability.

The majority of yachtsmen find their chief pleasure in sailing, in moving their craft from place to place by the agency of wind or steam, and more especially of the former. Of these an influential minority own vessels of sufficient size to "keep the sea," to cruise from port to port and to risk the chances of wind and weather. On

board such vessels the spaciousness and completeness of the below deck accommodations and the convenience of the appointments enable one to live and reside with considerable comfort.

But even on the largest yachts the "domestic," so to speak, arrangements are not of a nature which admit of such craft being devoted to family uses for any extended periods without considerable discomfort of a certain kind and some inconvenience. On small sailing craft, the designs for which ought not to be influenced by any considerations whatever, save those of speed and safety, the sacrifice of the former probably and of the latter most certainly, must always attend an endeavor to combine small tonnage, great speed and disproportionate below deck accommodations. Yet strangely enough the endeavor almost invariably continues to be made, and a craft as unsafe as it is uncomfortable, and therefore wholly unsuited to family yachting, is the result.

From this it naturally follows that yachting is mainly restricted to the sterner sex, and the married yachtsman is compelled to consent to temporarily "shelving" his family ties, duties and pleasures, or else has to forego enjoyments in which those who are nearest and dearest to him cannot conveniently share.

To the married man then, the man with a family, the institution of the modern house-boat should surely commend itself. It literally bristles with those good qualities which appeal to him most strongly. In its perfect safety the fond mother and father are relieved of anxieties which on other pleasure craft often take the keen edge from their enjoyment. Its roomy and well-fenced deck affords ample and secure playground for the children, where they can indulge unrestrictedly in the healthful use of limbs and lungs in the open air, and at the same time be assured the most absolute immunity from undesirable associations. As a house it can be in every way as complete and convenient as a dwelling on shore, and in some respects (no fatiguing stairs for instance) it can be even superior; while as a boat, not even the largest yacht—when at anchor—can be considered in any particular a more satisfactory abode.

The house-boat has many features peculiar to itself and not shared by other pleasure craft. One of these is its inability to move from place to place without outside assistance. To some this might appear in the light of a deprivation, but by the genuine house-boater it is regarded as a privilege. And such indeed it is, for stability of location as well as stability of model all go to add to the enjoyable features of the "house" part of your craft without detracting from those of the "boat." The ability to change the location of your house when it is desirable to do so, and the lack of temptation to do so unless it is desirable, are items which have a very direct bearing on your comfort and enjoyment. Your naval architect, free from all problems involving centers of effort or sail-carrying power, has given you a form of hull in which great initial stability and prodigality of cubical contents have been most successfully combined. And your interior architect taking up the thread where his brother dropped it, has so divided, apportioned and decorated the space at his command, that it has become in arrangement a very marvel of convenience, and in design and adornment a realization of beauty in a

way which would not have been possible had the exigencies of boiler space or other means of self-propulsion entered into the calculations.

And the moving of the house-boat is not, after all, a matter of much difficulty. A skilful utilization of wind and tide and the assistance of a couple of men in a rowboat are often all that are necessary, except when great distances or too swiftly opposing currents have to be traversed and in such cases the ubiquitous towboat will take your hawser and bear you with rapid ease to your destination at an expense which, comparatively speaking, may be termed trivial.

But, it may be urged, to live on a boat and not be able to sail would be as incomplete as to live on shore and not be able to ride or drive. Before arriving at any such hasty conclusion there are many things which should be taken into consideration. At one moment (if such a conclusion has to be admitted at all) it is only a question of compensating advantages, and no houseboater will for a moment allow there is opportunity on that point for argument. You cannot but concede that, were you living on shore, you would not take your house for a ride or drive, but you would order your horse or your carriage. So, on the water, you do not take your house-boat for an outing, but if you wish to row you take one of your tenders. Should the breeze be propitious and sailing be the direction of your desire, your staunch, swift and uncapsizable single-hander hugs impatiently and pleadingly at her moorings near by. And what a boat! No example of an endeavor to crowd a quart into a pint measure is she. You have on your house-boat every accommodation you require for your residence, every comfort, every opportunity for ease. Your sailboat on the contrary is your opportunity for healthful and enjoyable work. Absolutely uncapsizable, a beautiful combination of the elements which insure safety and speed, what can compare with the pleasure of sailing in a craft like this, the tiller in your hand, and perhaps your own little boy at the sheet, proud of his responsible post and alert for your slightest order? As you speed away with a free sheet, your house-boat, with the absence flag flying at the cross-trees, looks fully as beautiful to your eyes as does your friend's big schooner, which has just come to an anchor outside you in the deeper and rougher water, and when, after a run to leeward, you haul on the wind for your homeward reach and your boy takes in the sheet until you stop him with a gruff "belay," you give her a good rap full and lay the lee rail well down to the water with no fear as to what may happen to pots and pans below, no smoke from galley fire to blow into your eyes, and no anxiety as to the cook's comfort, or the welfare of the soup, the joint or the pastry, for you know that on board that other craft which rides on an even keel over yonder your cook is busily happy, with your savory dinner sending its enticing odors from oven, pot and pan, and that if this breeze holds you will be there in less than half an hour to attack it.

"W. B.'s" HOUSE-BOAT, SAN FRANCISCO BAY.

show a marked advantage in favor of the purse and temper of the house-boater.

One of the pleasantest of the larger English house-boats is owned by a retired East India merchant, and has, or had for its crew, three coolies. One is monarch of the kitchen, another looks after the "below deck" and the third is responsible for the "on deck" arrangements from entry port to signal halliards. This boat lies moored stem and stern so close to a bold bank in a lovely river that a swinging draw-bridge reaches from entry port to shore.

In another case of which the writer has very pleasant memories, a family house-boat with three staterooms, the service is most excellently rendered by a man and his wife, old and trusty servants of the

And then as you dispose your knees beneath the cabin table and enjoyably begin to assuage the pangs of your ravenous appetite, your memory may perhaps revert to many a jolly, even if uncomfortable, meal "underway" in your bygone yachting days. Assuredly as you contrast the now with the then, your infinite content with the present will not be diminished, and later, with a little choice Margeaux to moisten the post-prandial Havana, you will lay comfortably back in your easy chair, or loll on the transom cushions while your eyes wander with lazy content over your surroundings. There is ample roominess in your cabin, but that does not in the least detract from its air of coziness; and there are vases scattered about and filled with fragrant buds; while living ferns and flowers are growing in the hanging baskets and filling with perfume the ozone-laden air which enters through the cabin windows. And the last benison of the expiring day, the flood of sunshine which comes slantingly through the skylight, kindles the rugs on the floor with more vivid colors, lights up the open piano, glides the fireplace, flashes from the mirror, glorifies the pictures which are hung upon the wall, and laughs its approval of the ornaments on the mantelpiece, the knick-knacks scattered around, and the thousand and one accessories to comfort and enjoyment which, however out of place and impracticable on board a yacht, are in place,

to give a promenade and lounging place all the way round. From the roof at each end boat davits should extend to allow the tenders to be hoisted up for the night, which will prevent their getting alongside and making night hideous by bumping. Note—An ark is a sort of big bass drum and the slightest contact produces a sound in the stillness of the night "fit to wake the dead."

Under the eaves there should be a tank to hold water for the culinary department and another for the washstand, or one tank can easily be made to serve for both. These are filled by bringing a barrel of water alongside and pumping the water up into the tanks. On rivers and lakes of course this would be unnecessary. It is only on salt water that the barrel is requisite as an intermediary. The interior may be fitted up as elaborately or as plainly as fancy (or the purse) dictates. A good general plan is, a large living, dining and smoking room. From this a passage leads to the after gangway, having on one side the kitchen and pantry, and on the other a small room for a servant if one is kept. In some of our arks the "Jap" (all the ark servants are Japanese) goes ashore after the dishes are washed, and is seen no more until the next morning in time to get breakfast. While the "ark-nauts" are away, swimming or boating, or only loafing, the Jap puts things to rights, making beds, sweeping out, etc. These beds usually

architecture, but no two of them alike. In the evening the air is vocal with the twang of the mandolin, or the plunk of the more plebeian banjo, while the summer girl and her temporarily best fellow tune their voices in (more or less) melodious concord. Big hanging lamps throw their light through stained glass windows, and are reflected in the phosphorescent ripples as we row by on our way to visit a friend or sit on the verandas idly blowing the after-dinner cloud.

When one grows sleepy, the tender is hoisted up at the davits, the lights put out, we tumble into our bunks, and, lulled by the scarcely perceptible rocking of the ark, and the gentle lapping of the wavelets alongside, sleep as if that were our manifest destiny.

The accompanying plans show the sizes of the California ark, and may be useful to intending house-boaters in other localities.

I have not attempted to go very deeply into details of construction, as that is a matter upon which any local shipwright or even house carpenter can furnish all desired information.

The smaller of these arks is calculated to accommodate two with some degree of comfort. The float is 8x16ft., the house 8x8, the quarter-deck, where smoaking is allowed, 6x8.

If built of inch stuff 1ft. wide with the seams covered with ornamental battens 3in. wide, the house will require only three roof timbers

AT MOORINGS.

CABIN PLAN.

A, Saloon, 12x17, with piano, sideboard and transom sofas. B, Guests' stateroom, 8x12, with berth, sofa, 2 wardrobes and washstand. C, Family chamber, 10x17, with double bed, 2 sofas, 2 wardrobe bureau and washstand. D, Reception room, 6 1/2 x 8 1/2, with sofa. E, Stairs to entryport. F, Bath room, 5 1/2 x 8 1/2, with w. c., washstand and bathtub. G, Store closets under entryport. H, Corridors. I, Stateroom 7x11 1/2, with 2 berths, washstand, wardrobe and sofa. M, Galley or kitchen, 8 1/2 x 9 1/2. N, Entry to galley. O, Servants' quarters, 4 berths. P, W. c. Q, After hatch. R, Icehouse. S, After deck. T, Forward deck

DECK PLAN.

A, Entryport. B, Cockpit. C, Steps to deck. D, Deck, 17ft. wide, 70ft. long. E, Monitor tops to skylights. F, Steps down to forward deck. G, Whaleback over hatch. H, Galley entryport. I, S, After deck (stores under). T, Forward deck (stores under).

THE WESTON HOUSE-BOAT.

practicable and eminently satisfactory, on board your well-appointed house-boat.

Just at the time when this article was first suggested, we received the following letter and the accompanying sketches and photos from an old and valued correspondent, a San Francisco yachtsman and a member of the house-boat colony of that city, his tiny craft being the second one from the right in the picture, with a yawl-rigged boat, the Muggamma Chuddee, beside it. The same small house-boat is shown in another view, with her owner and family and aforesaid Muggamma Chuddee on the beach. The letter:

Editor Forest and Stream:

While the FOREST AND STREAM has turned its attention to almost everything within its province with great impartiality—barring of course a weakness for cutters—there is one class of vessel that I think has not received all the notice its merits entitle it to. The merits and demerits, advantages and faults of the "hundred tonner" and "half rater," the canoe and the "sneak box" and the punt have all been discussed at length in the columns of FOREST AND STREAM, but as far as my knowledge extends the gentle, retiring and unobtrusive "ark" or "house-boat" has been singularly neglected. Being one of those who go down to the seaside in arks, it occurs to me to put in a small wee plea for this kind of aquatic property.

Some sort of description of the "house-boat" will, I suppose, be the proper thing at this juncture. Firstly, it consists of a float or flat-boat from 16 to 60ft. long (this and all other dimensions and details of this craft are governed by the length of the proprietor's purse) and from 8 to 40ft. wide, and from 17in. to 4ft. in depth. This is built entirely with an eye to strength and durability, and with no pretensions to model; the sides straight, the ends sloping at an angle and the deck perfectly flush and level. Upon this floating foundation is erected a structure about 8ft. high at the eaves, and from 6in. to a foot higher in the center. There should be no ridge, but the roof should extend in an easy curve from side to side and be covered with painted canvas like a steamer's deck. This will shed water like a duck's back in the heaviest rain storms. The eaves may be carried out over the sides and ends for shelter if desired, and the deck should be so carried out

consist of a couple of bunks in each corner of the main room as wide as an ordinary double bed, with spring mattresses and all the modern improvements, curtained off and affording accommodations for eight sleepers if necessary.

As to the cost of this affair, it, like the dimensions, is a matter to be regulated by the financial ability of the projector. I know one that cost complete, considerably less than \$200, and another whose owner didn't get off much under \$3,000. One of the best we have was built by the owner and his friends (clerks in stores) in their spare time. It took a good while to do it, and I'm not at all sure her owner ever will stop work on it, but he and his friends have been living in it all this season. An ark can be just as simple and plain, and just as elaborate and as ornate as you please, so long as the "boat" part is well built, tight, and strong all its well: that is the *sine qua non*, there must be no skimping of material there. The spikes must be long enough to hold the planks, and the planks thick enough to hold the spikes and the caulking.

Now as to the uses of the ark, they are diverse, but governed, of course, largely by the environment; one may be towed up some quiet stream where the fishing is good, or where milk and eggs are within call, and left in charge of madam and the young ones, who can amuse themselves rowing, swimming, or doing nothing, while paterfamilias lies him to the neighboring railway station on his way to the city and slavery. As the headquarters of a hunting party the ark may be moored in some quiet bay or creek, or on some lake far enough from shore to avoid the blood-thirsty mosquito, but near enough to allow one to place himself in touch with civilization through the medium of the telegraph and railway whenever it becomes necessary.

My own ark is moored in a beautiful landlocked cove about five miles from the city, half a mile from the ferry, and a quarter of a mile or so from the yacht club house, and under the shelter of a high promontory which effectually protects us from the trade winds, and the summer fogs, which roll in like a dense curtain through the Golden Gate, almost every afternoon. This protecting bluff is covered on its lee side with a dense growth of "tejon" and scrub oak, from amidst which peep out dozens of more or less pretentious villas; anchored about me in all directions are some twenty arks of various styles of

and a frame of 2x8 scantling at deck and eaves to nail the top and bottom of the siding to, and a piece tying the corner posts together to prevent the roof over the quarter-deck from springing; the roof covered with light canvas and well painted will not leak in a deluge. This thing can be sculled at a respectable speed if it becomes necessary to move to avoid paying "ground rent" or taxes, or meeting your creditors.

The other structure is intended for the use of any number up to eight, being double the length and width of the first. Her strength would have to be proportionately increased, while the finish, appointments and cost may be carried to any extreme prompted by your purse or experience. Her framing would have to be much more elaborate than in the case of the smaller one, being, in fact, not unlike that of a small house.

I will not attempt to give any estimate of cost, as figures based upon the market here would be of little or no value to the majority of your readers.

SAN FRANCISCO, CAL.

The following letter takes us from San Francisco to Florida:

Editor Forest and Stream:

I inclose sketch of a boat or scow that I used on Indian River a few winters since. Of course it is quite different from the house-boat seen on the Thames, about Kingston and Richmond, but then the cost was no comparison.

On reaching Daytona, Fla., I at first thought of buying or chartering some cabin boat and living on her through the winter, but I remembered the sleepless nights and contracted quarters on such a craft when in Florida years before, and concluded to try a new plan.

Securing the services of a good house-carpenter (boat-builders want their own way) I selected some well seasoned hard pine at the local saw mill, and in a week's time we had a scow 24x8, all caulked and bottom covered with tar, and a house high enough for head room 7ft., of thin stuff plowed and matched, roof slightly crowned, covered with drilling and two good coats of paint, making it weather proof; windows and doors I bought ready made at a small cost. I then pur-

chased at the local stores an outfit of bedsted (full size) mattress, covering, etc., together with an oil-stove and a few cooking utensils, groceries, etc., I was all ready to move into my new quarters. Of course the boat was the subject of much adverse criticism from the natives, and I was the recipient of no end of advice, but I had built boats before and was used to that sort of thing.

For a tender I bought a well-proportioned little skiff or "flatie" about 14ft long. She was easy to row, and by putting in a small centerboard and rigging up a spritsail, I found I had no occasion to use the oars when there was a breeze, which was almost every day. The nights were usually calm except during a norther. I was fortunate in securing an old mushroom or mud anchor and some fathoms of chain, enough to hold the craft in any situation I was likely to be anchored.

To abbreviate, I found the boat a great success, anchoring far enough out in the river to insure quiet. I spent a few days at each town along the river, dropping down with the tide gradually, as far as the Inlet, from this to Mosquito, some 12 or 15 miles. I was towed by one of the small steamboats running between Daytona and Titusville, at a moderate cost.

Mosquito Lagoon is pretty wide and exposed, so I worked down to the Haulover Canal with a favoring north wind and through into Indian River, and across to Titusville. Here I anchored some two weeks, and securing an old spar and piece of canvas I rigged up quite a respectable mast and square sail, and bolting a lee board on each side, I found with any kind of fair or quartering wind my houseboat was as manageable as some catboats. I steered with a large oar on a pin over the stern.

From Titusville I cruised the entire river almost, as far as St. Lucie and Eden, stopping as long as I felt inclined at the various places en route. I was obliged to return North unexpectedly and sold my en-

kept a little dark. This well should have a cover or lid and should be placed where it is least in the way.

The shanty-boat can be moved with very little trouble in water not less than 6in. by fastening the stern of your skiff tightly to the front end of the shanty-boat, leaving no slack, as this has a tendency to draw your skiff back at every stroke of the oars. Now, get into your skiff, and by long, steady strokes your boat will glide along faster than you have any idea of.

In the winter, when I shoot ducks over the air-holes in the ice, I put

in the last few years—being an idle man. Consequently, I was very well acquainted with love and marriage—as mirrored in these precious productions—and talked fluently on the subject, though little versed in society small-talk.

Suddenly, I know not why or whence, only that it was my fate, I felt a wild desire surge up in me to make love to this woman. I tried to stifle it—I might as well have attempted to stay the flow of Niagara. My tongue seemed to separate itself from me—to begin a separate existence. In a dazed way I listened to what it said, as though it was

A FLORIDA HOUSE-BOAT.

tire outfit at almost first cost to a man clearing a piece of land for pineapples, who, I learned afterward, hauled the boat on shore and made it a permanent residence.

Regarding the cost, as near as I can remember, boat all complete, tender, anchor, sail, etc., cost about \$150. I am sure my expenses for groceries and other eatables were not over \$1.50 or \$1.75 weekly. Fish, oysters, oranges, etc., cost nothing, visitors being usually allowed to help themselves to oranges lying on the ground in most of the groves. Occasionally the mosquitoes were troublesome, but I had a good net and never lost my sleep on their account. I would add that the boat was divided into two rooms, forward being the reception and sleeping room, and aft the kitchen and general repair shop.

Any one wintering on Indian River will get more comfort from this plan than living at a hotel or cramped up on a sail boat or yacht. The scow dived but tin. Perhaps after a year or two she might have settled deeper in the water, but not much.

E. D.

The following description of a hunter's "shanty-boat," which comes to us from Cincinnati, is likely to prove useful to many of our readers, as it is easily constructed at a very small cost:

Editor Forest and Stream:

I notice in the columns of your valuable paper that the houseboat or shanty-boat (as it is more commonly called) has come into question. For the benefit of those who can afford to spend a few weeks shooting

it on runners and take it within 100yds. of the air-hole. If there is a little snow on the ice I cover the entire boat, windows and all, with white muslin, which makes the boat almost invisible. Then after covering myself with a bed sheet I take a small stool with me and walk to the edge of the air-hole and place my decoy on the ice; I would only have to get about 10ft. from these to be unseen by the ducks.

I have killed many ducks in this way, the most of them being gold-eyes and geese, the latter I only used for feathers. If I got cold I would only have to go to the boat to get warm and would be back in five minutes. When the day's shooting was done I would take out my skiff, which was also on runners, and slide off into the water and gather in my game.

When spring began to show I would strip my boat of her muslin and take her to some secluded spot near the mouth of a creek, for these creeks afford good feeding grounds for the pintails and mallards in the spring, when the ice is breaking up. When the shooting was over and I wished to return, I would put my skiff inside of the shanty-boat, lock her up and give the key to some near farmer, paying him a little to go through her occasionally. When the next season came she was all ready. I always build my own boats. DUCK-HAWK.

Our various correspondents have depicted the pleasures of a houseboat life in glowing colors, but there is an obverse side, and in justice to those of our readers who may be tempted to become "arkonauts," we cannot do other than describe it to them through the following pathetic tale from the *Lock to Lock Times* by Mr. F. Whelan Boyle, of

"THE FATAL HOUSE-BOAT."

It was just four years ago, the second month of a lovely summer. June had supplied a foretaste of a gorgeous July. I was fond of boating; indeed, I was more than fond of it—it was a passion with me, and at this time of year I almost lived upon the water, punting about by myself generally, or lazily lolling in the stern of a little skiff of which I was the owner, skipper and crew.

I had heard of Henley, of course. I had pictured to myself the delights of the regatta week, but never till then did I think seriously of sharing them. At last I had made up my mind that I would go, and for one brief week enjoy the water carnival.

Once at Henley, surrounded by the life and color which in July makes it an elysium where those favored of God may disport themselves, I was carried away by the airy joyousness of the place. I declare after a few hours I felt positively happy, and when I met Jones of St. Johns—we had been at Cambridge together—I shook his hand quite cordially. He asked me where I was staying. I happened to be putting up at a quiet little hotel a few miles from the town.

"What?" said Jones when I told him, "Why, you miss half the fun, my boy. A houseboat is positively the only thing here. I tell you what. We have a vacant berth in the Winkle; Brown—you remember Brown of Trinity—has disappointed us; come and take his place and I promise you we will make you jolly."

I went on board almost immediately, if indeed it can be called going on board, a craft that has little in common with a boat except that it floats. The Winkle was one of the handsomest establishments on the river—a veritable little palace, and yet not so little, neither, for there were twelve of us on board, and we were by no means crowded. We were as well constituted a party, myself excepted, as any hostess could wish. Six ladies of various ages were complemented by six men, also of various ages. Two of the former were married, one being the mother of Jones, whose father was also on board. Two Misses Jones and two other young ladies completed the fairer portion of the party. The men were of the regulation pattern—just the same as one would expect to meet—and they did not interest me. I wish to goodness they had. Why did Providence place on board that fatal boat five utterly common-place men, with no ideas beyond stocks and shares or a good dinner, and half a dozen young women—not beautiful—but, still, women. It was evening—a lovely summer evening, deepening into night—than which nothing I know is more delightful. Numberless Japanese lanterns shed a soft light upon the river. The strains of a piano mingled with the more decided tones of a banjo, and a rich tenor voice chanted a nigger melody from a boat near. We were all on the roof, dinner being but just over, in *solitudes a deux* for the most part, as far as the limits of a houseboat deck admitted of solitude.

I sat at the feet of the younger Miss Jones, who was gracefully distributed over the surface of a commodious deck chair. When I say distributed I mean the reader to understand that the younger Miss Jones—Bessie as her name—was of somewhat large proportions. I was smoking, Mam'selle Bessie liked it, she said, and so did I, for though I was an inveterate smoker that particular cigar seemed sweeter to me than any I had ever consumed. We talked of various things, of the river and boating, of course. Then we proceeded to discuss the latest novel, one with a purpose, if I am not mistaken. Marriage was its theme. Naturally, we discussed marriage. I had read most of the yellow-backed absurdities which had been published

a strange voice; heard, appalled, the flood of amorous words I was compelled to utter. So did Miss Jones—that is, at first. Whether she had had more experience in this kind of thing than myself I cannot presume to say. Anyhow, after the first burst of passion, of which I was the unwilling mouthpiece and hearer, she smiled demurely, muttered something about "so sudden" and began softly to stroke my hair.

I was horror-stricken; and when my fiendish tongue said in a low, seductive whisper, "Will you be mine, dearest?" I almost shrieked.

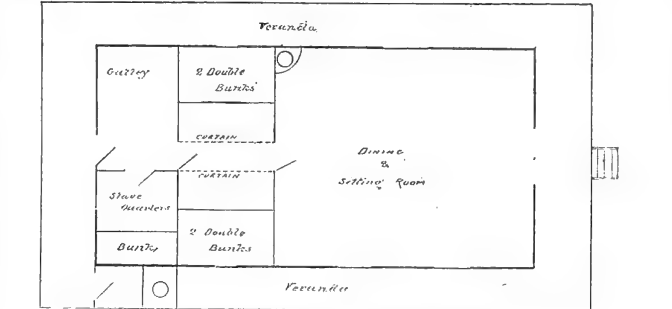

She said she would. She confessed that her young heart (her young heart, indeed! She was thirty as surely as she was a woman) had gone out to me from the first moment we met. It was very sudden, though, and I had better wait a month or two before I spoke to papa.

I would have said—if my tongue had permitted me—that I would cheerfully wait, not only a paltry month or two, but a year or two, or a century or two. As it was, I murmured in a regretful voice, "So long!" and bid her good-night.

How shall I describe the horrors of that week? If it had ended at the younger Miss Jones it would have been bad enough, and though it might have indicated incipient insanity, I should not have been past

SAN FRANCISCO HOUSE-BOAT, No. 1.

SAN FRANCISCO HOUSE-BOAT, No. 2.

LIFE ON A HOUSE-BOAT.

1. Archibald Fitzplutter studies Thames scenery from his houseboat. 2. He is awakened one night by hearing a sepulchral voice in his sleeping apartment. 3. 'Tis but the harmless voice of the coalman, who has been delayed on his journey and arrives after dusk. 4. Fitzplutter, who is rather nervous, aimlessly fires up the chimney. 5. The chimney being rather foul, the result somewhat astonishes the "coaler." 6. A cry of vengeance is lifted, also the coals. 7. And they are shot down on Mr. Fitzplutter, who has a painful impression that he is taking part in one of Brock's benefits.

each fall and spring and wish to get all the possible comfort and pleasure out of it at a very little expense, let me say, build a shanty-boat on the lake on which you are accustomed to shoot. I have spent six winters in one of these boats on the St. Mary's Reservoir, O., and find it the most comfortable way of living where one does a great deal of shooting. My boat is 18x28ft, inside the cabin with a deck of 4ft. at each end, also a door at each end, and a window on each side. This boat is fitted up with four bunks, a cook stove, pantry, leaf-table and stools. There is plenty of room under the decks to put decoys, etc., when your boat is locked up.

A shanty-boat is not complete without a well. This should be 2x1ft. and 2ft. deep. Slops, etc., can be thrown through this which will immediately settle at the bottom of the water. It will rarely, if ever, freeze in the coldest weather. I have also taken some fine fish for food through the well in my boat; they can not see into the boat if it is

A HUNTER'S SHANTY-BOAT.

all hope. But it was far, far worse than that. I seemed to be consumed with unmeaning love for every female creature with whom I came in contact. I say seemed, for I felt none of it. I could not believe for five minutes alone with a woman without expressing an extravagant passion for her, and deluging her with sickly sentimentalities.

The second day I proposed to the elder Miss Jones, who accepted me (there couldn't have been much confidence between the sisters), and to the two other young ladies, who didn't. The third, still unsatisfied, I laid siege, in tongue alone—for I was as innocent of wrong as any man—to Mrs. Jones, and suggested elopement. On the fourth I was kicked out of the boat during the progress of an important race, and my luggage thrown into the river. On the fifth, as I was on my knees vowing all kinds of love to the chambermaid at the hotel where I had gone on my eviction from the Winkle, my father entered the room and led me gently away.

I have never spoken to a woman from that day to this. As long as there are women in the world I must never re-enter it. I bear no enmity against the sex, far from it, but I believe that if I were to meet with the man who introduced me to the amorous atmosphere of that fatal houseboat in some quiet corner my madness would take some other and more violent form than that which now distinguishes it.

Mosquito Fleet Y. C.

The annual Fast Day race of the Mosquito Fleet Y. C. was sailed on April 6 over the following course: Around a flagboat off the Marine pier, leaving it on starboard; around a mark off the middle shaft, leaving it on the starboard; thence to finish; five miles. There were ten starters, the times being:

	Length.	Elapsed.	Corrected.
Katydid, J. F. Small.....	15.00	2 08 45	0 83 45
Tantrum, F. D. Perkins.....	14.11	2 10 56	0 55 51
Transit, S. N. Small.....	14.09	2 15 13	0 59 58
Annie, E. H. Rich.....	14.08	2 16 36	1 01 16
Tuxedo, O. B. Greenlaw.....	14.03	2 17 20	1 01 45
Bubble, J. B. Bullard.....	14.11	2 24 00	1 02 06
Bother, L. P. Helsier.....	14.10	2 27 24	1 02 14
Iota, J. T. Powers.....	14.00	2 27 59	1 14 50
Cutty Lark, M. M. Torrance.....	14.08	Withdraw.	
Princess, S. Ware.....	14.10	Withdraw.	

The judges were Thomas A. McGuire, W. O. Elliott, W. F. Berry, and James Bertram.

The Seavanhaka Cor. Y. C. has chartered the steamer *Albertina* for the use of its members on the day of the naval parade, April 27, the boat to leave the foot of Twentieth street, North River, at 10:30 A. M. The club has started a class of instruction in "First Aid to the injured," under the direction of Fleet Surgeon J. West Roosevelt.

Tarpon Springs Y. C.

TARPOX SPRINGS, Fla., April 1.—Some weeks ago the Edgewater Y. C. got up a regatta and invited the Tarpon Springs Y. C. to participate. Our boats accepted, went down to Dunellen and won each of the four prizes. Last week our regatta committee held a meeting and made arrangements for a union regatta, to be sailed on the Gulf of Mexico April 8. The day was perfect and the steamer Ellen made it easy for the townspeople to go down and see the regatta. As Com. Phinney was still confined to his room the Silver King and Imp were out of the race unless some friend sailed them, but Mr. Clemson had the Silver King rigged and found a crew to sail her to victory.

The preparatory whistle was blown at 10 o'clock P. M.: five minutes later the starting whistle informed the boys they must start within 5m. Rear-Com. Noblit, as usual, rushed the Lucie B. over the line first, followed by the Silver King, the balance of the boats going over well-bunched together.

It was a beat to the first flag and Capt. Roberts quickly showed the boys what the Silver King could do by rounding first; then with sheets broad off he pushed her around the buoy, jibed over and rounded the starting point, making the first 4-mile run 5m. quicker than the Lucie B., who was well ahead of the balance of the fleet.

The wind had hauled to northwest and the tide began to run out strong, yet, strange to say, the sailing master of the Winnie Davis was the only man to notice the change and took such advantage of the tide and wind as would give him the second prize, much to the disgust of the others, who had badly beaten the Winnie Davis on the pier-head before the race started. The result shows that talk is cheap and the best judgment wins.

The Silver King has been called the Boston bean-pot, but if her shape does not suit people she seems able to show her stern to all the boats on the west coast, both large and small. The result of this regatta proves that you can't most always sometimes tell who will win the prizes until the returns are in. Before the start the owner of one boat was so sure that with Capt. Cook and 10m. 38s. allowance he could win first prize that he kindly offered to refund the prize he was to win back to the club, but at best he could only get his boat into fourth place, and lost that prize by fouling the stake. Summary:

Silver King, Phinney	16.09	1 11 30	3 01 42	1 50 12	1 43 41
Cynthia, Smith	21.06	1 13 00	3 13 00	2 00 00	1 59 28
Lucie B., Noblit	17.11	1 10 22	3 07 52	1 57 30	1 52 41
Topsy, Clemson	15.10	1 11 28	3 15 52	2 04 14	1 56 13
Winnie Davis, Handy	18.07	1 12 12	3 07 38	1 55 26	1 51 25
Mercury, Rubelmann	19.06	1 14 16	withdrew		
Dennis, Disston	14.03	1 11 45	3 16 30	2 04 35	1 54 02
Gregg, Gregg	19.09	1 13 38	3 10 25	1 55 55	1 54 25

First prize, Silver King; second, Winnie Davis; third, Lucie B.; fourth, Gregg. Regatta Committee, Phinney, Disston, Noblit, Knapp, Clemson. Judges, N. S. Patten, L. T. Safford. PAYSON.

The Cup Races.

The following letters have passed between Lord Dunraven and Mr. J. D. Smith:

MARCH 25, 1893.
DEAR SIR: I have the pleasure of acknowledging the receipt of your letter of the 9th inst. The conditions for sailing the matches for the America's Cup are quite satisfactory, and the only suggestion I have to make is that perhaps six hours is rather a short time for completing a leeward and windward race. I may take this opportunity of pointing out the desirability of distinguishing the stakeboat or marks by some large flag, which should not be an ensign or any other flag likely to be flown by any tug or vessel watching the races.

As regards dates, I should be very willing to curtail the time necessary in trying the yachts competing to defend the Cup or for preparing the selected vessels for the races, but I would point out that if the first race is not sailed until Oct. 5 it will be getting very late in the season for the voyage home by the time the Valkyrie can be fitted out for sea. As you will have the whole summer before you, I should be glad if your committee can see the way to fixing the date for the first race about the middle of September, or as soon after as convenient.

I hope I may be able to get across in time to see some of your regattas and trial races, which will be interesting. Thanking you and your committee for your most kind offers of assistance, I remain yours very faithfully,
JAMES D. SMITH, Esq.

Chairman Smith sent the following reply: NEW YORK, April 12, 1893.

MY LORD: I beg to acknowledge the receipt of your favor of March 25. The suggestion you made therein will receive the consideration of the committee. I have the honor to remain your obedient servant,
JAMES D. SMITH, Chairman America Cup Committee.

THE EARL OF DUNRAVEN.
The work on the four Cup defenders is progressing very satisfactorily now. The Paine boat is nearly half platted. The Stewart & Binney boat will go ahead rapidly now that the steel for keel and floors has been received, as the frames and deck beams are all bent. The Rogers boat, whose beam is now given as 24ft., with a draft of probably 15, is plated, riveted up and decks are partly laid, so that she should be ready for launching in about 10 days, or a couple of weeks earlier than first proposed. The Morgan-Iselin boat is in frame.

YACHT NEWS NOTES.

Com. Colt, owner of the schooner Dauntless has been sued by Arthur B. Clafin for \$7,400 for alleged damages to the steam yacht Puzzle, chartered by Com. Colt in October, 1889. The owner of the Puzzle claims that the yacht was run aground, damaged and finally abandoned at Punta Rassa, Fla. Com. Colt, in denying this charge, claims a sum of \$6,100; \$2,600 paid for charter, \$8,800 for repairs and \$700 for a yacht to complete the cruise in after the Puzzle proved unseaworthy. At the request of Com. Colt Judge Barrett has commissioned E. Q. Locke, at Key West, Fla., to take evidence.

Lieut. Wm. Henn has written to the London Times in eulogy of the Life Saving Service of the United States, as well as lighthouse service. Lieut. Henn had occasion to make a practical test of the Life Saving Service off the Florida coast two or three years since, and in the present letter he shows that he is neither forgetful nor ungrateful.

The new edition of "Manning's Yacht Circular," in addition to the usual large list of yachts for sale, contains a very complete run to the water routes between New York and Chicago, with charts of the lakes and canals, tables of distances and full information as to tolls, pilotage, lockage and anchorage at Chicago.

Random, steam yacht, designed by Geo. F. Lawley and built by the Lawley Co. for F. B. McQuesten, was launched on April 13.

The date of the Knickerbocker Y. C. open regatta has been changed to Wednesday, June 14 in place of June 17.

Onedra, steam yacht, E. C. Benedict, sailed from Nassau for Havana on April 6.

Canoeing.

American Canoe Association.

Com. W. H. Cotton offers as a prize for a special race to be sailed at the meet in August a set of silk signal flags, to be competed for under the following conditions: Open to general purpose or cruising canoes; distance, 3 miles; time limit, 2 hours; sail limit, 55ft.; ordinary single drop centerboard or leeboards for open canoes; open canoes to be classed as cruisers.

American and Canadian railroads have arranged a rate of fare and one-third for return; canoes and duffle up to 150lbs. in the United States and up to 200lbs. in Canada free, as baggage.

The Year Book is half printed and will shortly be issued. It will contain a very good portrait of ex-Com. Winne. Miss E. Pauline Johnson has written a poem specially for the 1893 book.

The Cataract C. C., of Kingston, had an enthusiastic meeting last week for election of officers. The boys seem determined to win what they can to make things pleasant at the meet. A large camp may be expected.

The new and fast steamer Empire State will run from Clayton to camp daily, leaving Clayton at 10:30 A. M., and returning will leave camp at 4:30 P. M., doing the 15 miles in one hour.

Au Sable River, Mich.

SAGINAW, Mich., April 7.—Editor Forest and Stream: In "Canoe News Notes" in the FOREST AND STREAM of March 16 Mr. H. A. Batsford recommends the Au Sable River, of this State, for the canoe trip. The writer with one or two companions, contemplated this trip for the past three seasons, but were deterred by reports of logs in the river, which, it was said, would in all probability bring the trip to an ignominious end. Will Mr. Batsford kindly say, if he can, if there is any danger from this source, and, if so, at what season or part of the season it is greatest? Our object would be the scenery, canoeing and the ride down a rapid river, in this case from Grayling to the mouth. Any information from the gentleman above referred to or from any one who may be posted will greatly oblige
THOS. SMITH.

CANOE NEWS NOTES.

THE meeting of the Associated Canoe Clubs of the Passaic River was held on April 12 at the Arlington C. C. house, the following delegates being present: L. Crowell and E. C. Shepard, Arlington C. C.; G. P. Douglass, Lanthe C. C.; W. H. Smiley, George Manley and T. E. Perley, Orange C. C.; T. Frost, Hoboken C. C., and D. W. Bain, Rutherford C. C. Frank McLees of Rutherford was elected chairman of the association for the coming year and William H. Smiley of Orange secretary. The Jersey City C. C. tendered its resignation as a member of the association. It was decided to hold the annual meet at Dundee Lake from May 27 to 30 inclusive. The following committees were appointed: Regatta Committee, T. Frost, Chairman, Hoboken; G. Manley, Orange, and B. R. Roome, Arlington. Camp Site Committee, D. W. Bain, Chairman, Rutherford; G. L. Crowell, Arlington, and G. P. Douglass, Lanthe.

The St. Lawrence River Skiff, Canoe and Steam Launch Co. will have an extensive exhibit in the Fisheries building at the Fair, including eight boats as follows: Scarecrow (Vol-au-Vent); Genie, special sailing St. Lawrence River skiff; Grade, a St. Lawrence River fishing skiff; Lake Champlain square stern rowboat, English Thames rowboat; yacht tender; Ahdeck, "general purpose" sailing canoe; Canadian paddling canoe. All have silver or gold-plated special fittings, and some have imported white and red silk sails. The Scarecrow has a polished brass fin-plate and rudder, and her decks and cockpit are of fine mahogany.

A meeting of the Eastern Division was held on April 12 in Hartford, at which it was decided to hold the division meet at Haddam Island, from June 16 to 19 inclusive, the races taking place on June 17. The regatta committee includes Raymond Appollonio, E. H. Barney and F. P. Sherwood.

A. C. A. Membership.

EASTERN DIVISION: John T. Richards, Gardiner, Me. ATLANTIC DIVISION: Israel P. Libbey, Washington, D. C.

Rifle Range and Gallery.

RIFLE NOTES.

Don't forget the meeting of delegates, which takes place to-morrow evening (Friday, 21st) at No. 12 St. Mark's place. All shooting societies are included in the call.

The Independent New York Corps will visit Chicago and the Fair in the week ending July 6. On July 4 the society will give a banquet to the Chicago shooters.

The Independent Corps has decided to cast its influence in favor of the United Eastern Schuetzen Bund. This act makes the possibility of the grand festival in 1894 more of a certainty.

If the three members of the Harlem Club who have expressed a desire to meet three of New York's best marksmen would consent to chip in for a trophy, they could no doubt get on a match that would test the relative merits of both aperture sights and their holding ability. What do you say, Harlem?

The Miller Rifle Club closed its winter gallery shoot for class medals last Wednesday. The winners for the season are as follows: First class, D. Miller; second class, F. Kloepping; third class, A. Stadler.

The Greenville Rifle Club is unfortunate in having several of its members on the sick list. Jas. Dodds is down with pneumonia, and his friends are much worried as to his condition. Only three members met for the Friday night shoot on the 14th inst. C. H. Chevant made 245, W. C. Collins 242, C. Boag 242.

Mr. C. B. Bishop, of the New York Revolver and Pistol Club, left New York last week for an extensive trip through the South.

The German-American Rifle Club, with headquarters at C. Horney's, No. 122 Hamburg avenue, Brooklyn, will hold a prize shoot on April 23 and 24. The programme calls for 13 prizes, ranging from \$15 to \$2, three tickets for \$1, two best to count.

Expert Shooting.

THE three days' rifle tournament held by the Harlem Rifle Club at the headquarters, 2,100 Third avenue, was brought to a successful close on Monday night, the 17th inst. The Harlem Club, while not large in membership, is fortunate in having a few energetic and progressive leaders, who find their greatest pleasure in the use of the rifle, and when the cares of an active business life will permit their hours for recreation are devoted to this sport. The scores of the shooters competing for the club prizes show remarkable excellence. The 6 shots in the scores of Henry Holges and M. Dorrier were all on the circumference of a lead pencil. In the case of Mr. Dorrier's it required a glass to decide whether the shots were centers (25) or not. As we remarked in our "Rifle Notes" last week the riflemen who visited the Harlem Club during the tournament were treated in a most hospitable manner. The gentlemen of the reception committee made a most elaborate outlay in the way of refreshments. That their labors were appreciated goes without saying. All the prominent shooting societies in and about New York will be found represented on the prize list, which is appended. 3 shots per ticket, possible 75, 2 best to count, 2m. bulleye, ¼ in. center. All ties divided, prizes ranged from \$30 down to \$2:

H. Holges	75 75—150	C. G. Zettler	71 73—144
W. Rosenbaum	74 75—149	M. Ellis	71 73—143
J. Bodenstab	74 74—148	V. Krayer	70 72—142
C. Hutench	74 74—148	G. W. Plaisted	70 72—142
M. Dorrier	74 74—148	J. Rehban	69 71—140
B. Walther	73 74—147	H. Zettler	69 71—140
J. A. Roynen	73 74—147	L. Vogel	68 71—139
F. Fisher	73 74—147	C. E. Bird	68 71—139
G. Zettler	72 74—146	E. Kelbie	68 71—139
F. Ross	73 73—146	V. Horn	69 70—139
E. W. Busby	72 73—145		

Turtle Bay Club.

THE Turtle Bay Club had its annual Thursday night shoot at the club's headquarters on the 16th inst., under the leadership of Capt. Geo. E. Jantzer. The members continue to roll up good scores. The following scores were made by the members present, 10 shot scores, 3 scores to count:

George E. Jantzer	243 245 246	W. Steine	228 237 240
J. Oclis, Jr.	242 245 245	J. Oberle	229 236 238
H. Walter	240 245 247	J. Kramerer	228 236 239

Miller Rifle Club.

THE members of the Miller Rifle Club met at headquarters on Wednesday night, the 13th inst., and had a lively contest for the medal, presented by Captain Fisher. David Miller succeeded in making the winning score in this week's competition.

The scores are appended; 10 shots, possible 250: Capt. E. Fisher 243, D. Miller 241, F. Kloepping 239, P. Lieht 230, M. Kruse 231, M. Suhl 237, M. Meyers 236, E. W. Dewey 230, J. Flugh 230, H. Vanderheyden 229, W. Prine 227.

Zettler Rifle Club.

THE weekly gallery shoot of the Zettler Club on Tuesday evening, the 11th inst., was fairly well attended. The shooting of the members was as usual well up toward the possible. The scores are appended below: M. Dorrier 240, Henry Holges 249, R. Busse 245, M. B. Engel 245, C. G. Zettler 243, G. W. Plaisted 243, B. Zettler 242, Gus Nowak 242, S. Heintz 235.

Empire Rifle Club.

THE members of the Empire Club held their regular Tuesday night medal shoot, at the St. Mark's Place range. The scores appended in their order: Wm. Rosenbaum 240, Chas. Zettler, Jr. 240, W. Miller 235, A. Rosestrauss 238, H. Yettler 238, M. Meisenholder 235.

Harlem Rifle Club.

THE regular Friday night (April 14) shoot of the Harlem Club was held at headquarters, No. 2,100 Third avenue. The following scores were made, 10 shots, possible 250, distance 75ft.: C. H. Hutch 248, J. A. Boyken 245, J. Bodenstab 244, V. Krayer 244, W. H. Cochran 241, E. W. Busby 236.

Rifle in Milwaukee.

THE Milwaukee Rifle Club's practice over the 200yds. range last week resulted as follows:

Stanhope	76 75 75—229	Story	75 70 71—216
Campbell	70 78 72—220	Petit	67 50 72—198

BADGER.

The Revolver Championship.

WITH both Messrs. Petty and Heintz ready and anxious to battle for the possession of the Wipans trophy and the revolver championship at the agreed date on Thursday last, the match did not come off. Through a misunderstanding the official targets did not reach the shooting gallery, and so after a fair wait some very pretty practice targets were made. The shooting displayed fully justified Mr. Petty's prediction that he was going to reduce the record both for single shots, for strings of 6 and perhaps on the grand total of the 18 counting shots. The delay in the regular championship record is to be regretted, particularly as it came about through no neglect of the contestants, but rather to their serious annoyance. Another day fixed and a care to have no repetition of the blunder will add another chapter to the story of the Wipans trophy and open the way for another of the line of challenging applicants.

Beideman Rifle Club.

BEIDEMAN, N. J., April 15.—The following shows the weekly scores of the Beideman Rifle Club, week ending to-day, conditions 100yds., strictly off-hand, standard American targets:

J. S. Wood	6 7 8 9 9 6 8 9 8 7—76
A. J. Yergey	9 6 4 4 10 9 10 9 8 7—77
A. S. Gardiner	8 5 9 7 8 7 5 7 8 7—73
W. Gilbert	6 4 7 4 5 9 8 5 9 4—61

N. GILBERT, Sec.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

April 25.—Connecticut Trap-Shooters' League, second tournament, at New London.

April 25.—Eastern New York Trap League tournament, under auspices of the Amsterdam Gun Club.

April 25-27.—Third grand tournament of the Wilmington Rod and Gun Club, Wilmington, Delaware. C. C. Kurtz, Sec'y.

April 27.—White Plains (N. Y.) Gun Club, live bird and target tournament.

May 2-3.—Independence (Ind.) Gun Club tournament. Added money.

May 2-4.—Williamsport (Pa.) Gun Club annual tournament.

May 3.—West Shore Gun Club tournament, at Syracuse, N. Y.

May 4-11.—Ohio Trap-Shooters' League tournament, Columbus, O.

May 10-11.—Interstate Manufacturers' and Dealers' Association target tournament, at Passaic, N. J.

May 9-12.—Saratoga Springs (N. Y.) Gun Club tournament; \$2,000 cash guaranteed.

May 16-17.—Manufacturers' Trap-Shooting Association, Lansing, Mich.

May 16-19.—Michigan Trap-Shooters' League tournament, at Lansing, Mich.

May 17-18.—West Newburg Gun Club spring tournament, at Newburg, N. Y.

May 20-21.—Anaconda (Mont.) Rod and Gun Club tournament.

May 21-22.—Anaconda (Mont.) Rod and Gun Club tournament.

May 23-25.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added to purses. Also valuable merchandise prizes.

May 23-25.—Minneapolis (Minn.) Gun Club tournament.

May 23-25.—Nebraska State Sportsman's Association, Omaha, Neb. F. O. Parmlee, Sec'y.

May 25-26.—Putney (Vt.) Rod and Gun Club tournament.

May 30.—Eastern New York Trap League tournament, at Canajoharie, N. Y.

May 30.—Moxleywood vs. Union Gun Clubs, team contest at live birds, at Springfield, N. J.

May 30.—Sportsmen's Gun Club tournament, at Wilkingsburg, Pa.

May 30-June 1.—Iowa State Sportsmen's Association, Clear Lake, Ia.

June —.—Sportsmen's Association of the Northwest, annual tournament at Victoria, B. C.

June 5-10.—Illinois State Sportsmen's Association, Chicago, Ill.

June 12-16.—New York State Sportsmen's Association tournament, at Rochester. H. M. Stewart, Cor. Sec'y, 412 Ellwanger & Barry Building, Rochester, N. Y.

June 20-21.—South Dakota State Sportsmen's Association tournament, at Vermillion, S. D.

June 28-29.—Summer tournament of the Peekskill Gun Club, Peekskill, N. Y. H. B. Wygant, President, Peekskill, N. Y.

July 3-4.—Portland (Ore.) Gun Club tournament.

July 4.—Eastern New York Trap-Shooters' League tournament at Amsterdam, N. Y., under auspices of Riverview Gun Club. Rob't M. Hartley, President.

July.—Manufacturers' Trap-Shooting Association tournament, at St. Louis, Mo.

August.—Manufacturers' Trap-Shooting Association tournament, at Indianapolis, Ind.

Sept. 26-29.—Pennsylvania State Sportsmen's Association tournament at Harrisburg, Pa. B. M. F. Worden, Cor. Sec'y.

September.—Manufacturers' Trap-Shooting Association tournament, at Columbus, Ohio.

Oct. 19-20.—West Newburg Gun Club fall tournament, at Newburg.

October.—Manufacturers' Trap-Shooting Association tournament, at Baltimore, Md.

DRIVERS AND TWISTERS.

CLEVELAND, O., April 10.—We are desirous of forming an idea of the improvement in the skill of trap-shooters of the country, and at the same time revive the good old style of shooting from five unknown traps, one man up, and in order to obtain these results we offer four prizes of \$25 each to be contested for one each month during the season of May, June, July and August. The conditions of the contest are to be as follows: The race is to be a team race of four men to a team, all to be bona fide members of the same regularly organized gun club, 50 bluecocks per man, thrown from 5 expert traps, one man up at a time, unknown traps, as indicated by a trap-pulling indicator, known angles, traps to be set and contest to be governed by American Shooting Association rules as revised by C. W. Dimick. To the contest making the winning team may have its choice of \$25 in cash, a set of 5 expert traps or a set of Paul North's electric trap-pulls. Prizes will be paid and scores published as soon as possible after the end of each month. All scores to be signed by each contestant, by referee and judges and mailed to us.

THE C. TARGET CO.

(per Paul North).

The Williamsport (Pa.) Rod and Gun Club publish an attractive programme for their seventh tournament, to take place on May 2, 3 and 4. The shooting each day will be at both live birds and artificial targets. Target events will be started at 9 A. M. and the live bird events at 10 A. M. each day. The live bird events will be in order as follows: 5 birds, \$5 entry; 25 birds, \$20 entry; 5 money; 3 pairs, \$5 entry; 7 birds, \$7 entry; 10 birds, \$10 entry; and a \$2 miss-and-out. The target events on the first day will be three at 10, one at 12 (walking match), one at 10 singles and 5 pairs, three at 15 and two at 20 targets. Second day, three at 10, four at 15, one at 5 pairs, one at 20 and one at 25 targets. Third day, three at 10, one at 10 singles and 5 pairs, one at 12, two at 30 and one at 25 targets. In the six regular events each day there will be four money prizes and in the four extra events five money prizes. There will be three average prizes each day. Keystone and Kingbird targets will be thrown from expert traps at Walter Shooter's City Hotel on Pine street, where a reduced rate has been arranged for Mr. Shooter is an active member of the club and knows how to treat sportsmen in order to keep them in good form.

The Putney (Vt.) Rod and Gun Club held its annual meeting on April 14 and elected the following officers: President, H. G. Eversley; Vice-President, F. E. Robertson; Secretary, W. E. Ayer; Treasurer, A. J. Ayer; Captain, L. L. Crosby; Directors, L. L. Crosby, C. B. Willard and F. R. Penber. The regular shooting season was opened yesterday and weekly contests will be held. A sliding handicap has been arranged so that all shooters averaging 70 per cent. or better are allowed 10 birds, and for every 10 per cent. less than 70 per cent. a shooter is allowed 2 extra birds. This is intended to place all on as near an equal footing as possible. The winner of this contest is to receive a silver cup. The members are all striving to make the tournament of May 2, 3 and 4 a decided success, and will endeavor to please all who come. On Fast Day, April 6, the club went to Orange, Mass., for a social shoot, and were well received. The club has obtained from the State Fish Commission 10,000 brook trout fry which they share in the brooks this summer. They intend to see that a competent fish and game warden is appointed, who will suppress all violations of the fish and game laws.

BALTIMORE, April 15.—Having noticed in FOREST AND STREAM that

The Manufacturers' Trap Shooting Association had located one of their shoots in Baltimore, October, 1893, and assuming, as we had an application before the board, that our club was to have that shoot, I wrote to the secretary of the association asking the date to be fixed for the first week in October. I have a reply from Mr. W. Fred Quinn, treasurer, saying the association was at a loss to know how to best AND STREAM got the note that a shoot was to be held in Baltimore in October, and that the committee have not decided on any locations for their shoots after the one to be held in May at Lansing, Mich. The members of our club are much interested to know definitely, and at an early date, whether or not the club is to get the shoot, so I shall be pleased to hear from you on information on this subject. I would encourage the club to get the shoot, as it will be a great benefit to the Standard C. G. of Baltimore. [Concerning the above, we received our list of dates from John Parker, the association manager. Mr. Parker did not state whether the October tournament would be given to the Standard or Baltimore gun clubs.]

A match shoot at 25 live birds each, 35yds. rise, between Henry Langstaff, the well-known snipe shooter and general wing-shoot; an 18-year-old amateur named Maier, and a Mr. Haskett, was shot on the edge of the meadows at the foot of Chestnut street, Newark, N. J., last week in the presence of a large crowd of friends. When the tenth round had been shot it was apparent that the result lay between Langstaff and Maier. The former had missed two and Maier only one. At the twentieth round they were a tie with 17 kills each, and up to the 25th bird neither had any advantage. Langstaff went to the trap, fired and missed a hard bird, and Maier went to the mark and scored a kill, winning the match. F. Farrelly was referee and Peter Langstaff judge.

New Yorkers are strongly in favor of the suggestion toward running live bird events each day during the State shoot in June. There are a large number of shooters in the State who could not be prevailed upon to shoot at artificial targets, and at former shoots they have been obliged to either remain at home during part of the tournament or else walk about the grounds with their hands in their pockets until "live bird day" came around. This year it is hoped that they will be enabled to take part in each day's sport.

There will be a "lively time at Frenchtown, N. J.," on Friday, 21st inst., according to the heading of a card sent us by that gentleman, expert and boniface, William C. Appgar, the major-domo of shooting affairs in and about the above picturesque village. Shooters will congregate at Appgar's Hotel and will find 500 "clinking" good birds on which to try their skills. The events in order will be at 4 birds, \$5 entry; 6 birds, \$6; 8 birds, \$8; 10 birds, \$10; and 10 birds \$10. The fun will begin at 9 A. M.

The Rosslyn Fishing and Gunning Club, of Alexandria, Va., was chartered on April 11. J. W. Owens, of Washington, is president, and T. G. Smith secretary, and Mr. S. G. Brent, of Alexandria, is named as agent of the club. Its purposes are said to be to promote social intercourse among its members and for maintaining a library and reading room. The capital stock is to be \$1,000, divided into shares of \$5 each.

The grounds of the Passaic City Rod and Gun Club at Passaic, N. J., will present a handsome appearance during the shoot of the Interstate Manufacturers' and Dealers' Association on May 10 and 11, when ornamented with the tents of the subscribers, which are pitched on the high ground near the club house. The grounds themselves are one of the most picturesque locations in the country, and the club house is a neat affair.

The New London Gun Club will engineer the second monthly tournament of the Connecticut Trap-Shooters' League to be held at New London next Tuesday. The programme comprises seven 10-target events, three 15-target events and one at 20 targets, beside the 3-man team race, 30 targets per man, for the championship of the league and cash prizes. Event No. 8, at 15 targets, entry 30 cents, will be for contributed merchandise prizes.

Edward Banks, the well-known Altoona correspondent of the *Harbinger Telegram*, and one of the cracks of the Altoona Rod and Gun Club, has assumed a position on the staff of the *Altoona Gazette*, and will give special attention to the shooting department. It is safe to say that the sport will receive a boom in that section of Pennsylvania, and that any news which escapes the "four eyes" of "Ned" will not be missed.

The following scores were made in three 5-bird sweeps, \$5 entry, shot on Class's Morristown grounds on April 12: Simmons, 3, 4, 5; Leonard, 3, 4, 5; Stein, 1, 2, 3; Class, 4, 4, 5; Rudolph, 2, 4, 5; M. E. Gomery, 2, 3, 4, 5. The club will begin a sweep at 25 targets, \$3 entry, two money's, Montgomery broke 20, Smith 18, Blake 16, Simmons 17, Leonard 14, S. ein 10 and Rudolph 17.

The amateur by whom are meant those who rank from 75 per cent. downward—should turn out in force for the "Jack Rabbit" events at Wilmington. Remember that you get 10 cents for every target you break. If you break 6 you get 50 cents; if you break 6 under the old system you get nothing.

George McAlpin, formerly one of the best known and most expert live bird and target shots in Virginia, has entered the office of the Equitable Life Insurance Company of this city, and has taken up his residence in Bayonne. He was at one time a member of one of Richmond's crack cavalry tilting teams and won many prizes at this sport.

OSKALOOSA, Ia., April 11.—The Oskaloosa Gun Club will hold a three-day shoot on their grounds, open to the world—May 2, 3 and 4. Live birds and and bluebirds will be used. On May 4 Mr. C. W. Budd, champion of Iowa, and Mr. Rexroat, of Illinois, will shoot a 100 live-bird race for \$100 a side.—C. V. HOFFMANN, Sec.

The Rochester Gun Club have elected the following officers for the ensuing year: President, D. Darling; Vice-President, J. A. Bear; Secretary, G. Doty; Treasurer, Herman Krohn; Directors, M. E. Gerry, H. Kuhl, Paul Prieb. The club will begin practice soon and some improvements will be made to their grounds.

Howland Gasper, the young trap shot of this city, has invented and patented an ingeniously contrived dial annunciator for use in hotel offices. The dial is connected with the call bell in each room and registers each call made.

New Jersey will be represented at the Knoxville shoot by E. D. Miller, T. H. Keller, Chas. Smith, Neaf Appgar, M. F. Lindsey and R. H. Breintnall. "Uncle Billy" Sigler and Eddy Collins may also make the trip.

The following are the officers of the Pekin (Ill.) Gun Club: President, H. A. Reuling; Vice-President, Charles Mack; Secretary and Treasurer, Julius Jaekel; Financial Secretary, James Haines, Jr.

The West Shore Gun Club held its weekly shoot at Syracuse, on April 11, each shooting at 50 targets. Montgomery broke 36, Duguid 35, Leferer 35, Luther 28, Duncan 20, Martin 18.

Lewis C. Platt, Jr., secretary of the White Plains (N. Y.) Gun Club, will hold an open-target tournament at live birds and bluebird targets on April 27, and assures a good time to all who attend.

Live bird shooting is at an ebb in Georgia. The shooters throughout that State have so little trouble to find good game shooting that they care little for the shooting of pigeons from the trap.

The combined tournaments of the Michigan State League and the Manufacturers' Trap-Shooting Association, to be held in Lansing, should be one of the representative affairs of the season.

The team shoot at live birds between the Union and Maplewood Gun Clubs will take place at Springfield, N. J., instead of Maplewood, N. J., as previously stated. The date is May 30.

The big exhibition tent and contents of the Manufacturers' Trap-Shooting Association will be taken to Chicago during the Illinois State shoot in June.

The third monthly team contest of the New Jersey Trap-Shooters' League is taking place to-day on the Independent Gun Club grounds at Plainfield.

Jersey will send a strong contingent to Wilmington next week. They will start from home on Monday, so as to be in time for the first gun-fire on Tuesday.

The Cold Springs Gun Club, of Buffalo has elected Wm. Scott, President; Jacob Koch, Vice-President; Geo. McArthur, Secretary, and Wm. Daw, Treasurer.

The Johnstown Gun Club will engineer a shoot of the Eastern New York League next Tuesday and anticipates a big turn-out of shooters.

"Snapper" Garrison wants another "go" at Phil Daly, Jr., being dissatisfied with the result of the recent Red Bank match.

Berkeley Oval, the home of the Oval Club, is destined to be one of the greatest trap-shooting grounds in the vicinity of New York.

C. A. Bogardus and Thos. Malone are matched to shoot at 100 live birds each for \$500 a side, at Rockford, Ill., on May 27.

"Herr Bilderbach" and "Harry-lire-a-hall" Hartlove will look after the pleasures of the visitors to Wilmington.

FOREST AND STREAM will make its headquarters at Willis's Hotel during the Wilmington shoot. Call and see us.

Al. Heritage is formulating plans for a three days' shoot to be held at Marion.

Saratoga shooters are making big preparations for their May tournament.

Col. Courtney, with a full stock of Leferer guns, will be at Knoxville.

"Boker" W. G. Clark, of Altoona, will be at Wilmington.

C. H. TOWNSEND,

MANUFACTURERS' ASSOCIATION.

Second Tournament at Greensboro, N. C.

GREENSBORO is a very pretty city, situated in the central part of North Carolina, and is known as the City of Flowers. A great deal of interest is taken in trap-shooting here, not only by the trap-shooters themselves, but the merchants and citizens in general. Several ladies graced the tournament by their presence, coming out after dinner and remaining all day. The outside shooters present were E. C. Hall (Ward), the popular president of the Baltimore Gun Club, of Baltimore, who attended the Savannah shoot and liked it so well that he came here also and shot all the way through; H. B. Lemcke, the well known trap shot of Savannah, and president of the Independent Gun Club, arrived in time to take part in the second day's shoot; Wm. Tell Mitchell, of Lynch's Station, Va., the well known live bird crack; Wm. Wagner, of Washington, who makes hosts of friends wherever he goes, and W. F. Summerson, a popular sportsman, of Staunton, W. Va., arrived together Monday night. Charlotte, N. C., was well represented by six of their representative shots, Col. J. T. Anthony, A. R. Stokes, John Carson, Geo. A. Howell and W. H. Justice, Wilson, N. C., was also here in full force, Messrs. R. C. Briggs, C. E. Moore, W. C. Gorham, J. W. Gardner and Wm. Wall, came only to stay one day and see how a modern tournament was conducted, and left Tuesday night very much pleased.

The gun club here is composed of enthusiastic shooters and thorough gentlemen. Among its most active members are Geo. J. G. Glenn, Pres.; E. L. Gilmer, Sec'y and Treas.; J. P. Jordan, H. L. Lee, G. Daniel, C. W. Tate, E. W. Tate, Geo. Fitzsimmons, J. L. Joyce, J. W. Fondra. The worker and hustler here is E. L. Gilmer, one of Greensboro's rising young citizens, to whom thanks are due for the kind interest and generous assistance he extended to make the tournament a complete success.

One of the features of this shoot was noticeable; there was not one load of black powder fired. The surplus first day was \$98; first money, \$34.30; second, \$20.58; third, \$13.72; fourth, \$14.70; fifth, \$3.82; sixth, \$5.58. As in Savannah, all interest of the tournament was centered in the one-man up events. Everybody was pleased with programme and spoke in high terms of the management.

Scores of First Day, April 11.

Extra sweep, 5 targets: Mitchell 4, Summerson 3, Stokes 2, Anthony 2, Howell 2, Carson 2, Jordan 1, Daniel 5, Todd 2, Gorham 0, Fonda 1.

Second Day, April 12.

The weather to-day was cold and cloudy, with occasional showers of rain, but it did not dampen the ardor of the shooters in the least. The most interesting event of the day was the championship race for the M. T. S. A. trophy, emblematic of the individual State championship, which was won by Garland Daniel, of Greensboro. Mr. Daniel had not been in the first was not looked for as the winner. Mr. Lee and Mr. Jordan were close seconds. If Mr. Lee had shot as good a race in the start as he did at the finish he would have won, and only for one of Mr. Jordan's shells going clear through his gun, which threw him completely off, he would have been in it also.

The last event was a special team race between Charlotte and Greensboro, which was won by Greensboro. The surplus-to-day was \$82.20; first money, \$32.20; second, \$19.52; third, \$12.88; fourth, \$13.60; fifth, \$8.28; sixth, \$5.52.

The tournament closed by all the shooters giving three cheers for the association and its manager, John Parker. The McAdoo House was the headquarters for the shooters, and, though somewhat crowded, Mr. and Mrs. McAdoo exerted themselves to their utmost to make their stay a pleasant one.

This tournament has been the means of organizing at least two new gun clubs in North Carolina. Blue rock traps and targets and North's electric pull were used. As in Savannah the club has purchased an electric pulling outfit.

J. L. Fonda made some wonderful shots with his second barrel in the last 20-bird race, breaking one target at least 70yds. all to pieces, using No. 8 shot and wood powder.

No. 1, 10 targets:	
Mitchell.....111111011-9	Howell.....111111111-10
Stokes.....100110101-7	E. W. Tate.....111

Sweepstake, 10 targets: Fonda 10, Daniels 5, E. W. Tate 8, Justice 8, Mitchell 10, C. W. Tate 9, Gilmer 8, Anthony 7, Wagner 7, Jordan 7.

Appreciation from Greensboro.

GREENSBORO, N. C., April 13.—To the Manufacturers' Trap-Shooting Association: The members of the Greensboro Gun Club desire to express to you our appreciation of your kindness in having favored us with one of your shoots. The programme was pleasing to all participants, being a decided improvement over the usual programmes in which many shooters have lost interest. We also desire to congratulate you upon having such a competent and popular representative as Mr. John Parker to manage your shoots, his management being perfect. We feel confident your programmes will become very popular. (Signed) J. D. Glenn, President; E. L. Gilmer, Sec'y-Treas.; J. F. Jordan, Captain; H. L. Lee, G. Daniels, C. F. Joyce, George Fitzsimons, C. W. Tate, E. W. Tate, R. E. Causey, J. L. Fonda.

GREENSBORO, N. C., April 12.—Manufacturers' Trap-Shooting Association: As a member of the Greensboro Gun Club and as a citizen of this city, I wish to return thanks to your association for the very pleasant and successful shoot which has just closed here. To your worthy representative Mr. Parker is due the credit of conducting the shoot in such a manner as to give universal satisfaction. He merited and received praise from those who attended as well as those who took part in the shoot. As the winner of the beautiful trophy which you offered for the best shot in North Carolina, I wish to acknowledge my personal gratitude. I shall treasure it among mementoes which are talismanic of seasons of sport and pleasure. With best wishes to your association, I remain, very respectfully,

GARLAND DANIELS.

THE WORLD'S FAIR SHOOT.

There Will Be One—Definite Plan Arranged—Cause of the Delay—Proposed Association Abandoned—Trap-Shooting Injured in the Meanwhile—Biting Comment from the West.

CHICAGO, Ill., April 15.—Worn out and disgusted by the delay in organization and action of the World's Fair Trap Shooters' Association, and by the lukewarmness of those who should have been the friends of a movement whose only animus was a friendship for the trap-shooters and the sport of shooting at the trap, the members of the executive committee of the Illinois State Sportsmen's Association, at a meeting held Wednesday evening, took the matter into their own hands, appropriated the title of "World's Fair Shoot" for their own programme for June, resolved to help this open tournament to the extent of their ability, left the proposed association without a title and without its main reason for existence, and delegated to it the option of completing its organization or not, as it may later see fit. That any further action will be taken by the members concerned in the proposed association is highly improbable. That Chicago will in some small degree maintain her honor and offer the trap-shooters of the country a shoot of unusual size and of unusual financial attractions is upon the other hand now a practically assured fact.

In the meantime, the delay, the discussions, the backbiting, the little jealousies, the paltry bickerings which have come up in connection with the attempt to hold a big and harmonious shoot have unquestionably hurt the sport of trap-shooting and broken the integrity of the trap-shooting body alike in Chicago and in the country at large. That this should be the result of an effort absolutely unselfish and disinterested is deplorable in one sense, but in another highly fortunate. It shows the shooters the uselessness of a friendship which is false, the puerility of an effort which is lukewarm, the babyishness of a spirit which waits for an easy reward dependent upon other men's work. This lesson is a good and useful one. Meanwhile the trap-shooters at the World's Fair shoot will not shoot for \$30,000 added money, nor for \$3,000. They will shoot in sweeps the value of which will depend upon the attendance. This attendance will be invited in a practical way later to be announced in the Illinois State programme.

There is no reason in the world for supposing that the World's Fair shoot as now determined upon will not be a great and successful tournament. The hour and the place establish that. Therefore, let all shooters, in and out of Chicago, forget their differences and unite in good manly fashion, without jealousy, without envy, without unpleasant memories, to hold a little carnival of sport whose first quality shall be that of harmony and good fellowship. They can afford this, once in 400 years. If they do not have so much money to shoot for, they will know where to put the blame; but regret at this should be buried in the pleasure of a meeting which, it is to be hoped even now, will be one typically representative of a large branch of the sportsmanship of America.

THE LAST ASSOCIATION MEETING.

It will be borne in mind that only about \$1,900 of the stock of the proposed World's Fair Association was pledged. The laws of Illinois require all the stock to be subscribed before the organization of a stock company can be completed. To open books for subscription would mean that \$30,000 of actual stock would have to be placed, piece-meal, little by little, all over the country, before this organization could be completed, and before a wheel could be turned toward holding a shoot. If \$24,999 were pledged and the cash up, this company could not elect an officer or spend a single dollar, because it would not have complied with the law. It is folly to suppose that on a mere guess the stockholders would save time and get to work immediately for a plenipotentiary tournament, to be held by a body known to whom, at a date left undetermined. The only practical plan was that proposed by Mr. Donald at the meeting of Jan. 12, which was accurately reported nowhere but in these columns. Mr. Donald has organized several successful stock companies, and his voice of guidance was a practical one. Mr. Donald explained the necessity of an accommodation plan for the purpose of saving time and getting to work immediately. The Secretary of State is indifferent whether a shooter is a trap shooter or not. The trap shooters, however, do not choose to be governed by anything but the voice of their associates. To this end, the wise motion prevailed that those shooters actually present should express their wishes, the same to be the guidance for the accommodation holder. Votes to this end were taken. This was all there was to the so-called "illegal" action, which a shameless misrepresentation condemned in several columns of vague rant about the matter.

Mr. Organ said at the meeting of Jan. 12 that he could place the remaining stock, but he later failed to do so, for good reasons, and then a deep and peaceful calm settled on the affairs of the association. A good many of these Chicago people don't care to go ahead and put up money for a shoot which is likely to do nothing but abuse in return. They are not so much interested in the shoot as they are in the original subscribers declared that they didn't care to go on if their unselfish work was to be called selfishness. An affair of this kind, with little or no financial profit in it, is very hard to hold together at best. It takes very little to cool down so indifferent an interest and the indignation of the few grew into a coolness on the part of the many. The coolness grew as the delay went on, the stock being still unpaid.

Things were in this state when Mr. Percy Stone came on the executive committee of the Illinois Association. Mr. Stone also is a practical business man and has organized two or three stock companies, notably the Standard Lumber Co., of Chicago, whose rating the curious may find in the commercial agencies. Mr. Stone said, briefly, "I can place that stock and have that association running in just eleven legal days from now." It being the wish of a few to see the shoot go on and come to a successful fulfillment, a meeting was held and the secretary of the original meeting was instructed to issue notice to all the subscribers of stock for a meeting to be held Wednesday, April 12, at 8 P. M., at the Sherman House, Chicago. The subscription of stock was as follows: R. B. Organ 10 shares, F. C. Donald 10 shares, J. W. Knox 1 share, John J. Kleinman 1 share, W. L. Shand 10 shares, E. Bingham 10 shares, E. Hough 1 share, C. O. Heikes 10 shares, A. Drake 1 share, F. R. Bissell 3 shares, C. B. Dicks 10 shares, W. H. Cobb 10 shares, R. Merrill, of Milwaukee, 10 shares, H. B. Meyers 10 shares, W. N. Low 10 shares, P. A. Place 3 shares, L. M. Hamline 10 shares, J. E. Price 1 share, Chas. D. Gammon 20 shares.

Notices to the above were duly sent out by Secretary Shepard. Mr. Stone was on hand and ready, at his word, to complete the subscription of the stock. Had there been any adequate backing by the Chicago signers the association would be a legal fact to-day, before it the problematical future which it always had, but with it the approval of sensible men who believe in work, not visionary talk. As it was, however, there responded to the call only a few, Mr. R. B. Organ, Mr. W. L. Shepard, Mr. C. Donald, Mr. P. F. Stone, Mr. J. M. J. Eich and the writer. Among these are some very busy men who could not afford to waste their time. These promptly declined to further try to do anything for shooters which shooters would not try to do for themselves.

Mr. Stone declined to place the stock under the circumstances, and there the matter ended, just when it was upon the point of a successful issue.

THE EXECUTIVE COMMITTEE MEETING.

There were present, it so happened, nearly all the working officers of the Illinois State Sportsmen's Association, to wit, Mr. Organ, president, Mr. Shepard, secretary-treasurer, and for the board of directors Messrs. Donald, Eich, Stone and Hough, only Mr. Edbrooke being absent. The president at once called a meeting of the committee, Mr. Donald, chairman of the board, taking the chair. Action was then taken as above announced. The formal motion was as follows: "That the Illinois State Sportsmen's Association announce a World's Fair Shoot, to be held under the auspices of the Illinois State Sportsmen's Association, to be given immediately after the tournament of June 1898, and to continue two weeks or longer, open to the world." This was carried after long and patient discussion, wherein it was resolved to aid this open shoot in every way possible in order to make it a success. Further business was transacted as follows: A proposition from Mr. Fred. Erb to do all the retrieving at the State tournament with his dogs was declined. It was decided to make the club team championship trophy a solid silver cup, value \$100. The secretary was instructed to refuse the dues of the Carman Gun Club so long as young Babcock should be a member.

A communication was read from Messrs. W. Fred Quimby & Co., of New York, requesting the privilege of erecting a tent upon the grounds, for the purpose of displaying guns, etc. It was moved by Mr. Hough that the privilege be granted. Seconded by Mr. Eich and carried.

The secretary was instructed to write to the Cleveland Target Co. that the executive committee concurred with Mr. John Watson in the matter of using the bluerock target in the tournament. The meeting then adjourned.

A FAIR STATEMENT.

This is the last step taken in the matter of the World's Fair shoot, and so far as I know the above is a perfectly fair statement of all the different steps preceding this. I have been at pains in recounting some of this, for it is due the shooters of the country that they should know all the steps and all the facts, and know the open full and free of Mr. Stone's weak sister, who is a natural dissatisfactor and being deprived of a grand World's Fair shoot with many thousands of dollars up for prizes. I do not think such a statement can be found in any paper but FOREST AND STREAM.

A FEW OPINIONS.

It would be quite wrong, I believe, to throw cold water on the World's Fair shoot as it now stands, or to call it in advance a failure. All forms of sport, those of the rifle, the rod, the sail—every branch of field sports indeed—will have prominent celebration here this summer. So also will the sport of trap-shooting. The World's Fair shoot will be a great one. Still there are many who think that a bigger shoot could have been given by a stock company. I think this, though I question very much whether a successful shoot could have been held so late in October. Suppose we admit for the sake of the argument only, what is not really the case, that the World's Fair trap shoot is a failure. The question naturally arises, What was the cause of the failure? In my humble opinion the "failure" is chiefly to be charged to the most unbusinesslike delay in completing the legal organization of the proposed association in exactly the way that was originally proposed. Others think that men won't work for other men for nothing, and that the movement was fore-doomed to failure. Still others think that the men who ought to have some fun and a red flannel rag for their tired sore throat—think that the abusive editorials of the *American Field* had something to do with it. Curious, in a journalistic way, as to what could make a newspaper man commit a piece of foolishness so injurious to his own interests. I was interested in a few expressions of opinion I gathered during conversations on Wednesday last.

B. J. Morgan, President I. S. S. A.—"I can tell you the bed-rock reason why Doc Rowe wrote that editorial. You don't any of you know, but I do. It was because I appointed the FOREST AND STREAM representative on my executive committee."

F. C. Donald, of Ex. Com.—"Original and unconquerable asininity made him do it."

M. J. Eich, of Ex. Com.—"I can't see why Dr. Rowe should feel that way, but let it go. I don't want to stir up these things up."

E. W. Tate, of Ex. Com.—"Fshaw! What difference does it make?"

W. B. Leffingwell, of Clinton, Ia.—"I was very much surprised to see the editorials in question."

W. L. Shepard, Sec'y I. S. S. A.—"It is a shame that gentlemen should be so misrepresented as we were in the *Field*. I would sign a protest to that effect."

W. H. Mussey, of Chicago.—"Would the third vice-president have taken the presidency if it had been the chance? Well, now, would a duck swim? If Rowe didn't, it would be the first thing he ever didn't take that didn't cost anything."

These were all with whom I talked that evening, but there is a general and robust objection in all trap-shooting circles hereabout, at least, to the false and injurious statements made in this editorial comment of the paper. I have referred to it, I never, in all my newspaper experience, saw so wretched and absurd a newspaper blunder. The paper which is false to its own constituency is driving nails into its own journalistic coffin. To do this it certainly has my free consent, indeed my hearty approbation in it. This is a free country, and a man can bury himself if he wants to, and not even be remembered very long. Such journalistic mistakes bring their own rebuke and make their own comment. After they are made it is hard to retrieve the lost ground, for the shooter's faith and confidence in a paper are gone, and its motives discovered to be really personal, mean and spiteful. The day of that paper speeds thenceforth rapidly to its waning. Much of the truth of this, and much of the popular resentment the editor of the *American Field* seems, now too late, to realize, for he resorts to the old country journal dodge of "dummy letters," all of course, approving the wisdom of his policy in glowing terms. One of these, I have a pleasure in quoting, is from Detroit, and is written by a "Veteran Sportsman," who forgets to give his name. This "Veteran sportsman" is a mighty close cousin, methinks, to old Vox Populi. "Veteran Sportsman" refers to the FOREST AND STREAM representative, I am told, as an "adolescent screed." I presume "adolescent Swede" is what he meant, anyhow it is better English. The A. F. never was very strong on English, except of the fall fence sort. Now, if this is a person of the name of the mind you, Detroit, who will kindly send me his name and address, I don't know but I might be able to make him a pleasant call some day. He might like to see the adolescent screed—Swede, I mean.

The fact is, this Veteran Sportsman sits at the same desk with Nicholas Rowe—"Doctor" N. Rowe. "Doctor" Nicholas writes a glowing editorial with one hand—usually with his left hand, I am legally forced to believe—and with the other hand he writes a hearty approval of said glowing editorial. It is a very commendable effort that the "Doctor" comes out strong. Here is where he doth indeed get in his work. "Veteran Sportsman," "Constant Reader," "Old Shooter," and all the others, long-time friends and acquaintances, hail to ye! Ye come out of the more earnest hand of the two. I wonder if the innocent readers of the country know how much bogus advice is poured into their throats by a paper padded full of dummy names. That such dummy letters are used unsparingly on the *American Field* I am in a position to know very well. They are tolerated as a method in reputable journalism. They are not used on FOREST AND STREAM.

OTHER PAPERS.

Other papers condemn the course of the *American Field* as injurious to a movement which would be beneficial to sport and beneficial to the reputation of Chicago. The *Chicago Evening Journal* (daily), an old and conservative paper, roundly scores the "sore-heads" who tried to kill this shoot. The *Sportsmen's Review* prints a well-written editorial on the "Dog in the Manger," which says the self-important "Doctor" hard and rudely along the spine. Others, dailies, are now inquiring about the case and more comment may follow. The press of the nation is proud of Chicago after all and does not wish to see her name besmirched. An effort to kill one of her enterprises is an attempt to besmirch her name. There has been a bit of a war on my mind, for some reason or other, as I was writing down Mr. Donald's remark about "unconquerable asininity." I don't know as much about the "association of ideas" as I used to when I studied philosophy in school, but the story goes.

A QUANT LITTLE BURRO STORY.

It happened this way. A party of us were out bear hunting, up in the mountains of New Mexico. Night came on, we went into camp. Picketing our pack animals near by, we made a fire, cooked supper, ate it and spreading our blankets near the fire, lay down for a brief season of that happy content known only to hunters and those of easy consciences. We had malice in our hearts toward none except the bear family. The thought of fear did not enter our minds. There seemed nothing to molest us. We had lain quietly thus for a time, our minds fixed on the plans for the following day, and little dreaming of any intrusion. All about was quiet. The fire burned snapping and merrily. We were happy.

All at once there came an apparition, a demon of fright. A huge gray form of commanding height appeared upon the circle of the firelight. Two great eyes flamed forth upon us. A roar whose like none of us had heard before broke the echoes all about us into crazy fragments.

It was an awful moment. Thoroughly frightened, each man of us grasped his rifle, sprang away from the fire, and sought the nearest tree. We took to the woods. We were scared. What was it? What could it be? That voice, how terrifying. Was it grizzly, mountain lion, or royal Bengal tiger? Providence alone knew. It was a new one on us.

We stood around, trembling and anxious, for some time. We did not know just why we were scared, and we couldn't seem to find out. At length, as we gazed nervously toward the spot whence had issued that prodigious, weird, wild, uncanny, indescribable sound, there was a rustle of the leaves, and there appeared within the lighted circle a familiar form. Diminutive, with long ears, with no great personal charm, but a nerve that surrounded him like a Renaissance halo—he recognized him, it, well, the cause of our unreasoning fright. It was Jack, one of our burros!

Our royal Bengal tiger had no stripes. He wasn't built right for a tiger. Our unknown terror of the mountains had a game leg and a sore ear. It was very mortifying, to think we had been scared by this. Still, it came so unexpectedly, we hardly could be blamed.

When we came in from out in the woods, Jack brayed again in welcome, but we were sore angered with him, and would none of him. We led him back where he belonged, with sundry facilities of his progress, fore and aft, which latter he so laid to heart that he never thereafter, to my knowledge, again tried to break in upon the society of gentlemen.

We never could tell what made Jack break in and holler in that way, but we allowed it was because he felt kind of lonesome. We had always treated him as a pet. We always fed him, and watered him, and scratched his back, and kind of jolled him along, you know, because he was useful, in his place, and not a half bad sort of burro, considering the advantages he had had. The trouble with him was that, we being a trifle short of burros, he misconstrued us and got so blame conceited and stuck on himself that he thought he was running the whole ranch. He would do anything. In his moments of desire for human companionship he would break right into camp. I don't doubt that he sincerely thought he owned that camp. He didn't.

NO COMPARISON OF THE TWO.

At this stage of the game I know right well what a good many people are going to think. They think I am going to say that because some of the members of the World's Fair Trap Shooters' Association were scared away by the loud, wild wail of neglected egotism, I am going to draw a parallel between that scene and the scene in camp, and so come on to say, in good stereotyped journalistic fashion, that the editor of the *American Field* was the ass who caused the unnecessary fright. Those who think thus are much mistaken. I am going to do nothing of the kind. I disclaim all intention of being so disrespectful, nay, so unjust. I shall draw no parallel and make no comparison. Indeed, there is no comparison between these two animals. Moreover, I trust that I have not lived openly so long as now to be accused of having forgotten a friend, no matter how humble, albeit misled, that friend may have been. There were worse burros in the world than Jack.

On the other hand, so far do I feel from instituting a comparison here, I can call up many respects in which these two are altogether dissimilar. I once knew Jack to kill a goat. He was a good shot with his left hind leg. No one ever accused "Doctor" Rowe of being a good shot with anything, and he never killed a head of big game in his life. There is no comparison here, you see, though I confess I am left a little open to the charge of others. I don't know, if it should come to a comparison, but I have said there should be a comparison, and none is necessary. Yet again I am troubled in my mind as to that posing as an authority. But then, Jack didn't. I must be just to a friend.

CERTAIN SIMILARITIES.

It is true, I confess with considerable shame, Jack could not cast a fly, or a bobber, or a worm, or a fish if it jumped into his boat, but in this the best the editor of the *American Field* could get out of him would be a tie, for he can't do any of these things himself. I don't think Jack ought to pose as an authority on any of these things.

Jack couldn't break a dog without kicking it. He couldn't pole a boat, or row one, or paddle one, or shoot on the wing, or stalk a deer, or skin a muskrat, even. Still, he didn't write about these things, or pass up articles on the wings of others. I don't know, if it should come to a comparison, but I have said there should be a comparison, and none is necessary. Yet again I am troubled in my mind as to that posing as an authority. But then, Jack didn't. I must be just to a friend.

No, there are too many dissimilarities to be making any comparisons here. For instance, if it came to going across country after the hounds, Jack would be in it, and the "Doctor" wouldn't. Jack saw many a hare come out of the brush in New Mexico. The editor of the *American Field* never saw one coursed, anywhere, in his life.

THE STAR BURRO OF THE SETTLEMENT.

Indeed, barring his intense and obtrusive egotism, for which I always felt that our mistaken kindness was largely to blame, Jack, the star burro of our settlement, was no means a bad fellow, and a good comparison. Why, there is no comparison, I repeat, where, all other matters of sportsmanlike accomplishment being as in this case a practical tie, one animal yet surpasses the other so clearly in honesty, in sincerity, in robustness of character, in virile purpose, and in all that makes one worthy of a friend. Authority? Guide? Mentor? Leader? Counsellor? Bah! The game is played out. The imposition has gone far enough.

For writing this I may be called bitter. I don't feel bitter. I feel plenty sweet and good. But I have the same right to bitterness which every man who attended that association meeting had, every one of whom was insulted by the lying editorials of a man who, having no claim on earth thereto outside of his own vanity, sets himself up as an authority and oracles on matters in which he is really nothing but a preening ignoramus. Should such statements seem bitter to the editor of the *American Field*, or to "Doctor" Nicholas Rowe, he can resent them as he likes, but he should remember that he was the first to offer the attack. The FOREST AND STREAM representative sought no office in these matters, nor did he feel any jealousy. It was his wish to work with the *American Field* and all other papers in perfect harmony, for the good of the World's Fair shoot. The records of the meetings will show this clearly. I have raised no hand against the majority. With that my allegiance ceases. Against a spiteful egotism which takes the form of falsification and which is injurious alike to myself and my friends, I can raise hand prompt and sure enough.

COME TO THE WORLD'S FAIR SHOOT.

Meanwhile Chicago is still doing business at the old stand. Come out and see our new Illinois State rules. We shoot ten-gauges and twenty gauges at the same distance out here, as per the wise notion of this same oracle, by the way. Still, there are a few of us left. We are going to try to hold a little shoot here, if we can get permission. We will have a few J. Watson pigeons and several kegs of bluerocks. We won't have \$30,000 to shoot for, as we hoped and as we should have liked, but we will have a little something, and there will be a welcome, if we can get permission to have a welcome. We will try to have a pleasant time, and there will be much to see. We can't have any international championship shoot for big money, as we hoped, but we will open a few 10 bird sweeps, \$1, if we can get permission. Chicago is the only city in the world having the two-handed editor, which is a third vice-president, which writes with both hands, and bust with its off-hand. It also is the parent of the new Illinois State rules.

Come to the World's Fair shoot, boys. Come in from out in the woods and gather again around the fire and be comfortable. Of course this was rather awkward, but we didn't know that—that this was going to do it. Come on in, don't be afraid of this. It won't hurt you. Besides, we're going to take it out and leave it where it belongs—in the darkness, whence it emerged for reasons buried too deep for discovery in the inscrutable char of nature.

The dog-in-the-manger spirit has always been held the type of senseless malice, but even the dog in the manger can be speedily forgotten. Come, and if we can't eat corn we'll eat hay.

175 MONROE STREET, Chicago, fourth floor, first desk to the right. Later—Additional complications may arise from scarcity of pigeons in June. John Watson reports birds hard to get and dreads inadequate supply. FOREST AND STREAM will advise the shooters of the country fully and fairly as to this, so they may know what to expect at shoot. E. H.

Wheeling vs. Columbus.

WHEELING, W. Va., April 8.—I close you the scores of team shoot between the Sherman Gun Club of Columbus, O., and the Island Gun Club of Wheeling, W. Va., which took place at Columbus on April 5. The day proved to be pleasant, though the shooting was made somewhat difficult by a tricky wind. The sweepstakes were well patronized, the entries running as high as \$3 and not less than \$1 in any match of the day. The six members of the Island Gun Club were received and treated with unbounded hospitality by the Sherman Gun Club and the Columbus boys will ever hold a warm place in the hearts of the West Virginia shooters who were fortunate enough to be present. The absence of Dr. Geo. M. Waters, the prime mover and major domo of shooting affairs in and about Columbus, was greatly regretted by all and was the subject of sympathy, as the doctor was confined to

Mr. Grinnell's Indian Books.

BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

THE COMING WEEK.

AS WE write there sounds in our ears the booming of heavy artillery down the Bay. The caravels, modeled after the frail barks in which Columbus crossed the ocean, and the war ships which, to-day, will take part in the naval parade near this city, are arriving, and the great guns of the forts at the Narrows are belching forth their salutations to the navies of many nations.

Before another week shall have passed and another issue of FOREST AND STREAM have met the reader's eye, the great Fair, which for more than a year has occupied so large a share of the world's attention, will have been opened by President Cleveland and will be in full operation.

The occasion is a momentous one, and to all the nations of the earth it has a profound significance. Here on this soil, first made known four hundred years ago, the poor and the suffering of all races have been made welcome and have found a home. The broad fields and forests which stretch from ocean to ocean and from the Great Lakes to the Gulf, feed, clothe and shelter by their products not only the sixty millions of our own people, but also a considerable portion of the civilized world.

The United States now extends to visitors from all the nations of the world a welcome to her shores—a welcome never equalled for its magnificence and its cordial earnestness. The youngest of the nations, proud of the achievements of its short life, has something of the enthusiasm of youth as it stretches out its hand to the older peoples of the globe.

The fair at Chicago will attract to that great city a vast multitude of visitors from all quarters of the globe, but of these by far the greater portion will be our own people, and among them will be many thousands of the readers of FOREST AND STREAM. Such visitors will naturally turn with especial interest to the exhibits which have to do with the form of sport of which they are especially fond, and in these departments they will find much that will interest them. The manufacturers of guns, ammunition, fishing tackle, boats and canoes will all be glad to show their most improved implements and inventions; the FOREST AND STREAM's exhibit in the Anglers' Pavilion will display a remarkably interesting selection of sportsmen's literature, and in the Boone and Crockett Club Hunters' Cabin will be found a typical Rocky Mountain hunter's home presided over by an old-time mountain man.

ALL ornithologists, and all bird lovers, whether they be ornithologists or not, will feel gratified that the Audubon monument has been completed. The family portraits which accompany our account of the dedication ceremonies will interest many of our readers, but of even greater value are the reproductions of the early drawings of the naturalist. These, with the plate engraved from his great work, mark three stages of the artist's development and show the steps which led from attempts more or less rude up to the perfection of art seen in the "Birds of America."

A SUGGESTION.

WITH the advancing spring comes the opening of the boating and the fishing season, and those who have not done so, are looking to their tackle and to the equipments of their boats and getting them in shape for use during the warm weather.

In thus renewing their outfit they must apply to the manufacturers and dealers of such goods, whose advertisements are to be found in our columns. In these days a newspaper would look very oddly which did not have any advertisements in it, and in these departments of outdoor sports, as well as in others, FOREST AND STREAM has a goodly list of advertisers.

To the best of our knowledge these dealers are all reliable as regards the articles they have for sale and honest in their business methods. Our advertising columns are never open to any we have reason to distrust. We believe this list to be the best and most complete to be found anywhere, and we are told that it is often consulted by others than our regular subscribers as giving the fullest information to be had anywhere in regard to the specialties named. We feel sure that all who are in need of the articles advertised can thus have their wants supplied in the most satisfactory manner and at as slight a cost as is commensurate with the quality of the goods.

We know that the majority of our readers are in touch with our advertisers, and this friendly relation should be extended as much as possible, for this is for the manifest advantage of both buyer and seller. A considerable portion of our readers, however, live at a distance from the centers where the finer grades of sportsmen's goods can be obtained and must of necessity send long distances to secure them, while many articles of the highest merit can be bought from only one or two supply points.

In writing to advertisers this caution is to be suggested. As a rule dealers are willing and glad to answer questions put to them by persons wishing a closer knowledge of their wares than can be obtained from an advertisement, but these dealers are always busy men, whose time is valuable, and they should not be troubled by unnecessary or foolish questions.

He who consults an advertiser, therefore, should make his letters brief and to the point, asking his questions so that they will be understood and if possible so that they can be concisely answered. In reply he will be likely to receive just the information he desires.

LAST YEAR'S CANADA FISHING.

THE Twenty-fifth Annual Report of the Department of Marine and Fisheries of Canada, presents some interesting facts concerning the fishing during 1892.

On Cape Breton Island the rivers yielded very little sport in the first part of the season owing to the drought in July. Salmon were plentiful in the sea adjacent to the river mouths, but the streams were low and the fish entered them in very small numbers. For the same reason the trout fishing was poor and the anglers were sadly disappointed.

A change was made in the system of employing fish wardens. Special guardians are engaged temporarily at times when their services are needed, and the permanent force has been dispensed with. The wardens devote a portion of their time to patrolling their districts and make weekly reports. The cost of protection has been reduced by this means and the plan so far has proved satisfactory.

In the Nova Scotia district, comprising the counties of Cumberland, Colchester, Pictou, Antigonish, Guysborough, Halifax and Hants, salmon were reported more numerous than for several years past, both in the fishing season and the spawning time.

The New Brunswick trout brooks and lakes were visited by many sportsmen and no decline in the number of fish was observed. Salmon were found to have increased moderately in Charlotte county. The run in the St. Croix River was larger than usual, and many salmon passed through the Magaguadavic fishways into the streams above.

In Quebec the north shore of the Gulf of St. Lawrence, between Moisie and Godbout, attracted the greatest number of salmon, this region appearing to be favorite ground.

In 1892, for the first time, a close season was established in Manitoba for tullibee, goldeyes, pike, mullets and muscalonge. Tullibee (a kind of whitefish) are protected from Oct. 5 to Dec. 15, and the rest from April 15 to May 15. These close seasons are supposed to correspond with the spawning seasons of the fish. The gold-

eye is better known to FOREST AND STREAM readers as the toothed herring. Manitoba fish have been destroyed in large numbers in the drains connecting swamp lands with Lake Manitoba. The fish ascend the channels when the waters are high, and when the flood subsides they are left to decay on the meadows. Screens are to be constructed at the mouths of the drains to prevent the ascent of fish.

In many lakes of the Northwest Territories, according to Inspector Gilchrist, fish were slaughtered in immense numbers. The fishery overseers were few, the means of travel limited to horses, and the distances to be traversed are great. Assistance will be given in future by the mounted police as special guardians. During September and October trout are killed in incredible numbers, and now that the streams between Calgary and Kootenay River are accessible by rail, it is highly probable that these streams will soon be as barren of trout as Bow River is now. Hundreds of fine trout were left to rot on the banks of Old Man's and Kootenay rivers during the season by so-called sportsmen who fished for count. Even the fingerlings of the small mountain streams fell into the hands of the human sharks.

It seems as if Satan and all his emissaries had conspired to exterminate the salmon wherever it is known. Inspector John McNab visited Section Lake, in British Columbia, to investigate the alleged killing of baby salmon by the Indians of the locality. He found that during the migration of the young fish from the lake to the river, on their way to the sea, they are caught in traps and wicker baskets in immense quantities. We have verified this statement, as some of the captured fish were sent to a representative of FOREST AND STREAM for identification. They were chiefly the red salmon or blueback, the most important kind in Fraser River.

In that region the offal from the canneries and the refuse from saw mills are vexing the souls of the guardians of salmon. Truly these noble fish have a bitter struggle for existence, and unless the power of the law is enforced in their behalf, the waters that now teem with them will soon fall into the category of fishless rivers.

SNAP SHOTS.

In another column we print a most extraordinary statement of a surreptitious change made in a game bill before the Colorado Legislature. A single letter in the bill is said to have been altered, and so the whole purpose of the act was defeated. This seems hardly credible, but if it is true, the Colorado Legislature stands in great need of looking after by the many good and true sportsmen and game protectors resident in that great and growing State. There is no doubt that public sentiment in Colorado is earnestly in favor of wise game laws properly enforced, but this sentiment must manifest itself beyond the possibility of a mistake, before the butchers and game and fish hogs will cease their efforts at tampering with the laws. Colorado enjoys the rare distinction of having still a few buffalo running wild within her borders and her rough mountains and tangled forests still shelter mountain sheep, elk and deer in numbers. Her citizens cannot afford to see this game destroyed in season and out of season through the miserable selfishness of butchers and skin hunters.

The Wisconsin Commissioners of Fisheries have fallen into line with a protest against permission being granted persons who receive fish from the State to create preserves and refuse to permit the public access to the waters in which the fish have been planted at public expense. They recommend "the repeal of the law which enables persons to have a monopoly of streams stocked by the State."

The Chattanooga Times is deserving of generous credit for its services in securing much needed protection for the deer of Tennessee mountains. Early in the session of the Legislature it began an agitation for a better law than the old one, and under the leadership of the Times a bill to that effect has been made law, notwithstanding the vigorous opposition of the moonshiner elements.

No game or fish bills of any very general interest became laws in this State during the last session of the Legislature, but a number of amendments to the forestry, game and fish laws were introduced, and some of these passed and received the Governor's signature. We shall give an abstract of these in a short time.

The Sportsman Tourist.

DANVIS FOLKS.—III.

Among Old Friends.

It was with devout thankfulness that Uncle Lisha and his wife found that the time which had seemed so long to them had wrought few changes among old friends and familiar scenes. If they could but have taken up the broken thread of their far-spent life in the old brown house and shop, the measure of present contentment would have been full. Yet they inherited, in some measure, the adaptability to change which has come through restless generations of pioneers, to the Yankee race, and they were content to be the welcome inmates of the Lovel's hospitable home.

It was pleasant to be so near the old home, and it comforted them to know that human life had quite gone out of it when they forsook it. The capricious November weather having fallen into an unexpected mood of mildness on the day after their arrival, they walked down to the old place and found it little changed since they had last seen it, except by the air of complete desertion that pervaded it.

They pushed open the unlatched door and entered with an awed sense of being the ghosts of their former selves, yet apparitions that would affright no one, nor scarcely disturb the squirrels that hoarded their stores in the garret, nor interrupt the woodpecker's tattoo on the gable clapboards, nor awaken the woodchuck from his long nap under the flooring of the shop. Upon this floor, that was indented with his own and innumerable other heel-marks, the old cobbler saw the rubbish of leather scraps almost as he had left it, but for the blue mold that had gathered on it, quite overpowering with mustiness the odor of tannin and wax that once pervaded the dingy little den.

Thence the two went into the house part, in which their married life had begun, where children had been born to them, where they had toiled and grown weary and rested, whose low-browed rooms were hallowed by days and years of happiness and sorrow and the slow healing of bereavement.

In the kitchen, from the blank fireplace, with its ashes of the last fire they had kindled there already showing a green film of moss, the crane stretched out to them its naked, sooty arm, whether interrogating or supplicating seemed not clear to them. Out of the smoky ceiling the empty iron hooks reached toward them as if asking the old burdens of crooknecks and dried apples. Amid them the empty stovepipe hole stared down at the unworn patch of floor the winter stove had covered, in silent reproach. Their own hushed voices sounded hollow and unnatural.

In vain they strove to rehabilitate the rooms in imagination with their old furniture; they could not make them homelike nor bring any warmth of their old life to dispel the pervading smell of unused, unpainted wood, except once when Aunt Jerusha opened the kitchen cupboard and there came out of it a faint, embalmed odor of loaf cake and gingerbread that made them both hungry.

Groping in the furthest corner of the upper shelf for some forgotten relic of the old life, her fingers touched some soft, yielding fabric, and then drew forth a rudely-fashioned little rag doll, whose ink-marked features had almost faded into the dingy hue of the homespun linen face. With fond, speechless wonder they looked upon it for a moment, and with one accord went over to the east window, where, with eyes dimmed with something more than age, they saw the scarlet sumach bobs shining out of the wilderness of the little hillside graveyard through the haze of the calm autumnal day. For a brief space the deserted house seemed again to be their home, and the scurry of the squirrels overhead, the patter of a little child's feet. Thankful to leave it with the impression of such a presence, they went out, closing the door reverentially behind them.

They went down the tangled, untrodden path to the little gate, that was still held shut with a chain weighted with a rusty plow-point. Here they were suddenly confronted by Gran'ther Hill, as erect as when they had last seen him, though leaning a little more heavily on the staff that so often emphasized his words.

"You tarna ol' critters," he whistled hoarsely through a smile as grim as toothless jaws could show, while he stretched forth a cordial hand to them. "Be ye a tryin' to resurreck yourselves, or what be ye duin' a hantin' raound here where ye'd ortu staid? Didn't I tell ye, Lisher Peggs, 'at the rattlesnaikes 'ould chaw ye, an' the fever 'n' aig 'ould shake ye, an' the Injins 'ould skelp ye till ye'd wish't ye'd staid where ye was? Hey? Didn't I? Didn't I know? An' don't ye know now 't I knowed? What?" as Uncle Lisha attempted to explain that he had not been beset by any such enemies. "You tell me th' didn't no snakes bite ye? You couldn't feel 'em a chawin' yer ol' so' luther hide. But they did. An' I'll bate it killed 'em, erless they got sick o' the taste on yer, which I shouldn't blame 'em none. Yis, ye did hev fever an' aig, an' didn't know it 'm the nat'ral rattlin' o' your ol' bones. An' ef the Injins didn't skelp ye 'twas cause they got sick o' the job an' gin it up. Take off yer hat an' lemme see what luck they hed a peelin' yer ol' bal' skelp. Wal, then what did ye come back fer? Seddaown on that lawg 'f ye haint got 'bove sech settin'. They du say the' haint no lawgs on them perraries, an' tell me," and he seated himself on an elm trunk that years ago had defied Uncle Lisha's efforts to split it, and, with an impatient gesture, waved his friends to a place beside him.

Aunt Jerusha dusted a place for herself with her checked copperas and white home-made handkerchief, while Uncle Lisha carefully parted the tail of his coat and sat down.

"Ahem," he cleared his throat to explain. "The fact on't is, I got sick on't an' so did Jerushy."

"You—got—sick—on't!" cried the veteran with ineffable contempt, "an' sneaked off. Wal, I'm 'shamed on ye, fer disgracin' yer State. A Green Mountain Boy a-gettin' sick on't an' a-sneakin' back hum'. Why, man alive, don't ye s'pose we got sick on't tu Ben'n't'n an' almighty sick on't, tu, wi' the Hessians a-pepperin' on us, an' the sun a-blazin' daown hotter'n Tophit? But we didn't sneak off. No, sir, we stuck her aout, an' we licked 'em. That's haow we done in them times."

"Lemme see," said Uncle Lisha, searching his memory for some missile to cast at his contemner, "haow was't tu Hubbart'n? Yis, an' tu Ticonderogue when Burgwine come?" triumphantly hurling a second question before the first had fairly struck.

The veteran glared at him a moment before he growled hoarsely, "Lisher Peggs, be you a nat'ral borned idjit, er don't ye know nothin'? Don't ye know 'at Hale sneaked off wi' his rig'ment, an' left Warner an' Francis tu stan' the hull bilin' o' Hessians wi' the'r'n, an' they was tew many fer us tu stan' agin, an' we hed tu run in spite o' Warner's cussin', which it was nigh 'baout as hot as the Hessians' firin' an' Francis was daown, an' Warner run hisself, an' when Seth Warner run 't was time fer most folks tu scratch gravel. Hubbart'n, hump, 'f I'd staid there I'd ben killed, an' who'd there ben tu fight tu Ben'n't'n? An' 'baout Ti," he continued more calmly, "why, ye see, Sinclair let 'em git their cannern top o' Sugar Loaf, 't wain't none o' my duin's, an' then the' wain't nothin' for 't but tu clear aout, er get took, an' the' haint no use o' that."

"Jes so," said Uncle Lisha, beaming triumphantly on his adversary, "an' no more the' wain't no use in us a-stayin' aout West an' dyin' jest aout'n stinkin' pride. An' so we gin up sensible, jest as you did tu Hubbart'n an' Ti."

"An' ye done almighty well, Lisher, so ye did," said Gran'ther Hill, heartily, "an' I'm glad ye hed sense 'nough tu. But," he added, emphasizing each word with a tap of his staff on Lisha's shoulder, "don't fergit I tol' ye so."

"Day fore yeste'day," Uncle Lisha said, turning the conversation into a pleasant channel, "we come past o' Fort Ti, an' it most seemed 's 'ough I could see you an' Ethan Allen an' 'mongst ye, a marchin' up to 't in the gray o' the mornin', an' a-takin' o' it, though it don't look wuth a-takin' er a-keepin' naow."

"An' by the Lord Harry, you'd ort tu see us," cried Gran'ther Hill, who at once began for an unnumbered time the recital of the exploit, in which he took greater pride than in any other wherein he had borne a part. "It's many a year sen I seen the ol' fort," he said in conclusion, long before which his listeners had grown restless, "an' they say it has gone tu rack an' ruin, which it is a shame tu the nation we took it for an' gin it tu. But this grubbin', tradin' generation haint no pride in things 't was id in the days when the' was men. They'll brag on 't Fou'th o' Julys an' 'lections as ef they'd did it the selves, but they haint no pride in nothin' but makin' money an' gittin' 'lected, an' all fence sheep pasters an' onderpin haousen wi' the' gran'ther's gravestones 'f they're handier 'n cobblestuns an' querries, damn em."

"Le's grup tu Samwil's," said Uncle Lisha, breaking the silence that followed this outbreak of indignation. "He's got some cider 't's turrible good for the time o' year," and he arose to lead the way.

"You don't say?" cried Gran'ther Hill, getting to his feet with wonderful alacrity. "Wal, I guess I will, for I be got kinder dry talkin' an' it seems as 'ough a mug o' saound cider 'ould tech the driest spot."

In his haste to put this cure for thirst to proof, he was presently leading his companions, stepping out briskly to the air of "The Road to Boston" performed by the violent outputting and indrawing of breath that now served for the whistle long since mustered out of his toothless jaws. The quick step soon brought them to Sam's door, with Uncle Lisha scant of breath and mopping his brow with his handanna, though Aunt Jerusha had borne the forced march wonderfully well.

The veteran beamed upon him a grim smile of doubtful approval. "You must ha' ben a good sojer, Lisher," he said. "You don't keep step wuth a soo markee, but ye never could ha' run ef ye'd a wanted tu."

Entering, they found Sam stretching yesterday's fox-skin upon a board, while the baby, between his knees, played with the dangling brush.

"Mornin', Cap'n Hill," said Sam heartily, and Huldah came out of the pantry, brushing flour from her hands on her white baking apron and offered one, rosy through its dusty bloom, to the ancient guest.

"Take a seat, Cap'n Hill," she said, shoving the great splint-bottomed chair toward him and cuffing the feathers of its patch-work cushion into hospitable softness. "How 's all the folks up tu your haouse? your son's wife an' the child'n, be they well? Sed daown in the rockin' chair, Aunt Jerushy, an' Uncle Lisher, you take t'other arm chair. They're well, be they?"

"Well? Wal, I guess they be by the rumpus they make, wus'n a hull tribe o' Injins. M'rier stan't it better'n I could er would. By the Lord Harry, I wish't I c'd bring up them young uns. Fust thing I'd skin 'em. Gi' me that boy o' yours, I know he's a boy by his actions a touselin' that aire fox-tail; 'f 'twas a rhuster feather, he might be a gal. Gi' me that aire boy Huldah Pur'n't'n, an' I'll make ye suthin' tu be praoud on. See the leetle sar-pint wrastle that fox-tail, an' smell on 't's ef 't was a posy. He's got hunt in him, I tell ye, jelluck a haoun' pup. It's tew bad tu hev him grow up a tarna, unmannered, consaited fool, all young uns does nowdays, but he will 'f he haint gin tu me. I don't know o' nob'dy else left fit tu bring up a young un, tu lick 'em an' larn 'm 's they'd ortu be."

"I do know, Cap'n," said Sam, smiling proudly on his first-born and dragging him a little to and fro by the brush, still grasped by the chubby, dimpled hands, "I guess we don't want him skinned jest yet, he haint prime."

Gran'ther Hill acknowledged the joke with a chuckle. "Don't ye wait till he sheds his fur, er the cub won't be wuth shucks. Come 'ere, bab'," and he took from his pocket a steel tobacco box, bright with wear in spite of a mottle of rust specks. "Come 'ere an' see the pooty-pooty," shaking the box, which with its inclosed bit of hard nail rod tobacco made an inviting rattle.

The baby's blue eyes grew round with pleased wonder and he tugged at the fox skin to take it with him to the newly offered toy, but when he could, not crept back between his father's knees.

"Jullook o' that," cried the old man, "he won't leggo a fox skin for terbarker in a box 'at was in Ben'n't'n battle, an' was hit by a Hessian bullet, an' saved my laig, ef it didn't my life." And he exhibited a dent in the cover. "I tell ye that boy's a borned hunter. What ye named him, Sam? Gin him a good, short, hones' name aouten no go, between, er hev ye named him all the names o' all yer relations, 'cordin' tu naowdays fashin? Aour young uns was tellin' o' one o' them Noakes boys 'at goes tu school, 'at when the master ast his name up an' answered, 'Guy Azro Joab Jethro Uncle James Ferris Noakes.' What ye think o' thet fer a name? One good solid chunk o' fust name was 'nough fer Geo'ge Washin't'n an' Ethan Allen, an' Seth Warner an' Josier Hill, by thunder. But I most fergot my ar'n't. Naow, what I

want 's a mug o' cider tu m'isen my mortal clay, which I've dried up a gabbin'."

"I gin him a invite, thinkin' he'd be welcome," said Uncle Lisha in an apologetic undertone.

"Why, sartainly," said Sam; "Huldah, won't you get me a pitcher whilst I light a light?"

"I didn't need no invite on'y tu know you hed it. When cider haint free plunder tu neighbors, all the good ol' times must be gone by." He smacked his lips as he heard from the cellar the squeak of the tap, the responsive rush of the cider into the pitcher, running up the gamut from emptiness to fulness in a hospitable tune which, he remarked with satisfaction, was not cut short when the tap was redriven, by a hollow sound portending drouthiness in the immediate future. After tasting the proffered glass with an approving smack, he withheld his lips to bestow the ambiguous compliment that every Yankee is in due politeness bound to give his host's cider in every season from its sparkling youth to sour age.

"That aire 's mighty good cider for the time o' year."

Warmed with a second glass, he looked over its rim at the baby still playing with the fox skin. "A reglar borned hunter, julluk his father. I'd ortu take an' bring 'em both up an' larn 'em tu shoot, fer the'd ortu be some hunters a growin' up. Hunters makes sojers, an' the'll be need on 'em sometime. It does beat all nat'ur what cussed foolish ideas folks hes come tu hev about huntin' bein' low daown an' goo' fer nothin'. Don't they know 't huntin' was half folkses livin' in ol' times an' larn't 'em tu fight Injins as well as other varmints? When I was a boy, a boy went a huntin' 'ssoon 's he could kerry a gun, an' hed tu rest it agin a tree tu shoot, an' when the time come he was all ready tu be a sojer. Look a' Ethan Allen an' Seth Warner an' Peleg Sunderlan' an' Remember Baker an' Bob Cockrun an', straightenin' himself in his chair and striking his breast with his fist, "wal, I won't call no names, but look o' the hull bilin' o' Green Mountain boys, ev'ry man jack on 'em a hunter by spells. Be they men fer these creetur's tu stick up the'r new fashined noses at? Look a' the boys, yis, an' the' growed up young fellers, naow. Don't half on 'em know een'd of a gun f'm t'other, an' turn aout tu trainin' wi' sticks an' brooms. S'pose the' come a war, where'd we be? Er jest a wolf? I wish't tu the Lord the' would a wolf come an' kinder wake up the blasted folks. Guess they'd find aout the's some use in knowin' haow tu shoot a gun."

"I'm half thinkin', Cap'n Hill, the' is a wolf hengin' raound on the mountains. I've seen some signs 'at looks that way," said Sam, fastening the stretched skin with the last nail.

"Sho'. Th' haint nuther," Gran'ther Hill growled incredulously, "you wouldn't know wolf sign 'f you'd seen it."

"Wal, mebbey," Sam admitted, "but I more'n half b'lieve th' is."

"Wal, ef th' is, someb'dy's sheep 'll ketch it 'fore spring, fer the' haint no deer. Ef he'd on'y kill tew or three o' Joel Bartle's, wouldn't th' be a weepin' an' wailin' an' a-gnashin' o' teeth? An' him a-thinkin' a man wi' a gun on his shoulder 's goin' stret tu Tophet. Er 'f he'd kill an' ol' breedin' yoe fer yer father, Huldah. He's turrible sot agin huntin', an' thinks the devil owed him a gretch an' paid it in a huntin' son-in-law. My sakes, wouldn't it set 'em a-hummin'?" He cackled a dry, cracked laugh as he looked out the window across the fields to the quiet home-steads and imagined the commotion into which the advent of a wolf would throw them. Suddenly the chuckle ceased, the senile mirthfulness of his visage faded into a blank stare of consternation.

"I swear," he whispered hoarsely to himself, but so loudly that other ears were reached, "ef there haint heth Pur'n't'n womern a-comin' wi' her gal a-towin' o' her. (I wish 'twas the womern 'at got lost, an' they hedn't never faound her). Wal, I got tu be a-go-in'," he declared, and rising in flurried haste departed in spite of all hospitable entreaty, with as much precipitation as he had quitted the disastrous field of Hubbardton. ROWLAND E. ROBINSON.

INDIANS AND THE BIG GAME.—II.

BEAVER CREEK, Wyo., April, 1893.—*Editor Forest and Stream:* Three years ago there was a hide butcher's paradise from twelve to forty miles below here on Green River; but like the old adage, what was fun for the boys, was death to the frogs; and it was sure death to the game here. It was an unusually hard winter. The snow commenced early and lay deep on the ground, consequently the elk and deer were crowded in a much smaller space of country than usual on the winter range. Then the slaughter commenced and continued until the poor creatures could move back toward their summer range. If we had had another similar winter succeeding it, I think the elk here would have been in the same predicament as the buffalo on the plains to-day.

No one took any steps to prevent it by law with the exception that the railroad company was prohibited shipping to a certain extent. But popular feeling was so strong against the hide butchers that it had a tendency to check the destruction. Besides the seasons have been favorable for their protection, and if they could be protected from the destroyer in the future, all would be well.

I passed over the ground in the spring, after the hide slaughterers had got through with their work. The scene that was presented before me would make most any true sportsman feel like hanging somebody. There were dead elk carcasses in every direction, many with their hides taken off, and plenty that had not been used even so far as that. Large numbers had been killed on the river while it was frozen over. When the ice went out it left many lying along the bank, while bunches of carcasses had dammed up the sloughs in places. It was reported that one party alone had taken 600 hides. One person told me he knew of the same man selling over 1,000; of course he bought from other parties.

One man boasted to me what a fine killing he had made on a bunch of elk, and tried to impress upon my mind what a fine shot he was. I saw the place where he killed them. The carcasses still lay there. He ran a bunch between 40 and 50 head out of the willows on the river bottom on to the side of a hill into the deep snow in March; and there they were at his mercy. He did not have any. They were far enough apart to get the hides off, and that was all. He claimed to have killed about 800 the same way. At that time of year and being a hard winter, the hides were almost worthless, and to make them more so they were thrown on to the snow with the flesh side up, so that they were all curled up to about the size of a open newspaper.

Besides the Indians and hide butchers they have another scheme for extermination, and that is by capturing alive and shipping them to game preserves east and west of here. It may be a benefit to those points where they go, but it will not preserve the game in this section. Last season two car loads were shipped East. One went to Austin Corbin's game preserve in New Hampshire. I believe it was a success to those concerned, and this winter Tom, Dick and Harry are after elk calves, running them in the snow with snowshoes, horses and dogs. Where they catch one and save it they kill two or three more, and their main object is to get all the females they can. If those preserves are not supplied in two or three years I am afraid they will have to go somewhere else for their supply, for the game will be scarce here.

Where the game has not been disturbed too much it has done excellently this winter, for up to this time the weather has been very moderate. The mountain sheep range I have never seen better; hundreds of acres blown bare above timber line, with plenty of grass upon it. The feed on the elk, deer and antelope ranges is also plenty.

MOUNTAINEER.

“PODGERS’S” COMMENTARIES.

SAN FRANCISCO, April 15.—All hail to you! All honor and credit to the FOREST AND STREAM for its victory over reluctant District Attorneys seeking how not to do it! Three cheers and a tammany for this triumph! and to the FOREST AND STREAM do we return “much thanks” for its dogged perseverance and never-let-up persistency in the woodcock case. You cannot, shake your gory locks and say we did not do it, for you did, and your proverbial modesty shall not screen you, and if my credit was good for a bran new tile anywhere in Broadway, the editor and even the head-ing of the paper should have each one. I have lived to see one case of prolonged avoidance brought to book and the supremacy of the game law made manifest. If I was given to celebrate joyful occurrences in the flowing bowl, much I fear there would be a case of severe headache in the morning, for I have just read on the editorial page of the FOREST AND STREAM the announcement of the end of the Jarndyce and Jarndyce woodcock case and the payment of the fine.

Four hundred and fifty cold dollars, eh? Rather an expensive supper that! and the host paid the bill. Woodcock bills are proverbially long, and this one is no exception. Who will tender the entire staff of the FOREST AND STREAM a woodcock supper (in season) to commemorate the victory? I will engage to pay the man to wheel the editor home at the close of the proceedings, as I don't think I would be in a condition to do it myself, if present. There are times and occasions when man may be justifiable in losing the use of his legs, and this would be one of them, but at this distance I should have to do it by proxy, and no doubt I could find one on much less provocation to do some tall artistic work in red paint.

We do not have woodcock on the Pacific coast, but all sportsmen here have felt much interested in the case and rejoice in the victory of the FOREST AND STREAM in the face of the determined opposition it had to overcome; but at last success has crowned its efforts, and in the words of the poet we say, “Bully for you!”

I am greatly obliged for the suggestion of your contributor, the “Doctor,” how to suppress a man who will persist in making puns on unseemly occasions, *i. e.*, by going into an explanation of his puns and thereby knocking him out. But how about it if the puns have no point to be explained? The Doctor's friend must have been an exception if he made any that had. To fire puns at a man when he is all anxiety to fire at ducks is of itself a flagrant offense, and justifies expending a couple of cartridges on him and thereby make him see the point—of the gun, at him. No right-minded jury would bring in any other verdict than justifiable pun-ish-meant.

I notice that there is a growing tendency on the part of contributors to bear, deer and double shot stories to enlarge the sphere of the marvelous—not that I would for a moment insinuate that any sportsman or writer for the FOREST AND STREAM would exaggerate. But don't you think we are being called upon to hoist in some very wonderful modern instances? It has been remarked that truth is stranger than fiction, and allowing the evidence, the wonder grows that truth is so wonderful. I never take up the FOREST AND STREAM nowadays that I do not expect to read of such exploits in the way of chance shots as to make one wonder whether the cow counties have all been heard from and if all the double shotters have got in their work, and if it is not time for the treble and quadruple fellows to tune up the lyre and sing of their exploits. Shall we not go back now to the beginning and open the chapter with the sworn to yarn of the fellow that by mistake left his ramrod in his gun in shooting at a long row of pigeons sitting on a limb, and spitted an even dozen?

I have not shot a cartridge away in two years, having been so discouraged at the wonderful shots that are being made. For what, and where, will us old timers be who have ever been content to get one bird to a barrel, and not always doing as well, when we read in every FOREST AND STREAM of doubles and two of a kind to each barrel, end on, athwart ships and at every other angle of the compass. It has a tendency to make one feel he was born too early when things were in a primitive state and our boyhood days were associated with the guns of our fathers—flint-locks, then percussion, then breech-loaders, and lastly hammerless and magazine weapons.

When promenading down Broadway I have often stopped to look in the window of a certain gun store and stood a quarter of an hour admiring a double barrel flint-lock, put there, doubtless, to show what our daddies used and how we have progressed. The gun in question is beautifully finished and one can fancy with what pride its owner exhibited it to his shooting friends, and what talk there was of the Squire's new “shotgun”, as all were then called, and by the rifle shooters “scatter guns.”

As I say, I am discouraged and believe I will leave my trio of double-barrels in their cases, for what chance have I, a very ordinary shot at best, to knock over three or four birds “stern to” in a straight line, and unless I can “Where am I at” in these days?

I see that “Piseco” has retired from the competition and does his shooting by proxy. I can sympathize with him in his preference for piscatorial pursuits, and there is where I feel myself the equal of any fellow disposed to tackle me on that weakness. Shooting I cannot claim as my strong point, but when it comes to fishing—well, I won't boast. I well remember “Piseco's” contributions

from Alaska, and his fishing there, and have often hoped to meet him, for I see in him a kindred spirit, one who prefers the rod and reel to the hammerless.

The last issue of the FOREST AND STREAM that has come to hand is a good number; not that all are not good, but this is particularly so.

Mr. Thos. H. Farrell's article on the Mongolian pheasant is especially interesting and instructive.

The article on “Suckers,” by Leonard Hulit, carries me back to my boyhood days and many a ducking when standing on a rolling sawlog with a spear (grains) watching for them to work up the stream below the old saw-mill, and when making a dart for them usually with such earnestness as to follow the spear overboard, with the consequent ducking, which counted for nothing if I secured the fish. There were two kinds, one of which we called shad suckers, and were considered very good table fish, and really did have a flavor very similar to the shad.

My experience in suckers did not end with my boyhood days. I have encountered them all my life and always had a longing desire to put the grains into them, but they generally reversed that game on me. It would have been very satisfactory to have had the species under water and devised some means of keeping them there. I rather think the majority of readers of the FOREST AND STREAM are very familiar with the suckers in great variety.

There are many other good things to review in this last number, but I perceive I have already taken up more than my share of your space. But don't forget my suggestion to start in on “remarkable occurrences.” It would not do, I suppose, to head the column “Munchausenisms.” I won't suggest that, as I may come in myself with a “yarn” some fine day. You might call it our column for “Things that Happen Out West,” “Out West” being exceedingly indefinite, has to stand a multitude of sins as it is, and a little more of the same sort would not hurt much.

THE OLD AUDUBON TOMB.

Natural History.

MAINE'S VANISHING GAME.

BANGOR, Me.—As “M.” of East Saginaw, Mich., has very sensibly discussed the wild pigeon question in FOREST AND STREAM of April 13, let me add a few words about the wild pigeon of Maine. When I was a small boy, thirty years ago, and used to carry a surveyor's chain in the woods of Maine, wild pigeons were fairly plentiful. On an average I would see from two to three flocks, of from fifteen to fifty, every late summer and autumn day I was out. Then they grew fewer year by year, until about 1876 or 80, a man might hunt for weeks without seeing a pigeon. I had made up my mind that, like the dodo and the great auk, the wild pigeon of Maine at least was extinct. In the fall of 1888, however, I saw several above Moosehead Lake. Again in 1889 and 90, I found still more in Washington and Hancock counties, and in 1891 several flocks of from ten to twenty-five were seen in Holden and Eddington within ten miles of Bangor. Last year I failed to find any, though several Bangor gunners reported seeing them.

Now comes the “nub” of my hypothesis. As soon as the wild pigeons fell off the blackbirds began to gain in numbers. Every year the flocks grew; they invaded the orchards, they pilfered the cornfields and haunted the treetops in flocks of from 100 to 500 for weeks. The boys shot, snared and trapped them, and the farmers “shooed” them with maledictions; but still they came and kept coming more and more. Early in the eighties I left Maine, and, save for short visits, did not live here for six years. On my return in 1887 the horde of crow blackbirds had diminished. The flocks were smaller and fewer to the flock; and many of them were winter residents, living in the deep arbor vitae swamps through the coldest weather, and coming out lively in the spring. Thus they have diminished in numbers year by year, until this spring I have not seen more than 100 in all my wanderings.

So from casual and very much localized observations I conclude that pigeons and blackbirds are like rival circus companies, and all reciprocally, each taking an innings for from ten to fifteen years, and then giving place to the others. Of course, there is no logical connection between the two facts. Blackbirds and pigeons belong to widely distinct classes in ornithology, and all they have in common are their gregarious habits. Of the two the pigeons are far more prolific, I believe, and would naturally stand a better show in the struggle for supremacy.

But the pigeons, while swifter of wing, are not so alert as the blackbirds, particularly during the migrating season, at which time, the old residents say, the slaughter of pigeons was terrible.

Our spruce partridges are nearly all gone now; our ruffed grouse are losing ground every year, as also are snipe and woodcock, while our upland plover come later and go earlier as the seasons pass. The Messina quail will not stay with us, Bob White refuses to be naturalized, and all bird life which a sportsman likes to squint at over a breechloader is growing less plentiful and more shy. What is a Maine gunner going to do? A few deer, less caribou, and least moose still linger miles out of our reach. Foxes and rabbits are plentiful, but our hounds and beagles are killed for chasing deer. Must we all get popguns and peg away at the English sparrows, the only imported bird that has yet succeeded in America?

TOM FORD.

The Devil of the Woods.

READERS of the natural histories and woods people generally will doubtless be interested in the following letter from Manitoba by Mr. Thos. Johnson, in regard to the habits of the wolverine:

WINNIPEG, March 22.—I inclose you a cutting that may interest you. I have made quite a study of this animal (wolverine) and found that the title of “glutton” and its reputation for eating enormous quantities of food are erroneous. We had one in captivity here, when I had every opportunity of observing its tendencies in that direction, and I also know a good deal about it in its wild state. I have no doubt that the reason every authority I have read have fallen in the error of thinking it a voracious eater is its habit of despoiling everything it can get at in the shape of food besides what it eats up entirely. Every kind of ingenuity had to be used to prevent this by trappers and others when traveling in a district where wolverines were known to have been. The deposit from this creature has a very offensive odor.

It is not only guilty of this selfish habit of stealing or spoiling all you have in the shape of eatables, but its bump of destructiveness is simply awful. I don't wonder at the squaws shuddering when you mention the name of what they term the little “black devil.” Their tenacity of life is also marvelous. Mr. Matheson, the Hudson Bay Company's factor at Patportage, told me that he once lassoed one and tying the other end of the rope to his saddle he galloped for some miles without its having any apparent effect, and he had to shoot it. An old Ojibway squaw was in the store when Mr. Matheson was telling me his story and having asked her some questions about wolverines (through an interpreter) I had repeated to her Mr. Matheson's story, at which she got off the first Munchausen story that I ever heard an Indian tell.

She said that one of the band she was with caught a wolverine and desiring to torture the animal they skinned it alive. The day was very cold, about 40° below zero, so cold that the Indian's hand got numbed and Mr. Devil in Black skinned across a river they were near, and she said would certainly have escaped them had he not fallen down the opposite bank—frozen!

The pelt makes a most excellent robe, especially for parlor foot-ropes. One quality it possesses I don't know of in any other robe; you can dance or stamp on one all day and by giving it a shake it looks new again.

Come up here and I will show further particulars about wolverines that will make you think with me that his Satanic Majesty has either his double or his son in the woods of British North America.

The clipping in question has not the name of the paper appended, and can not be credited, but reads as below:

THE WOLVERINE.

Naturalists have disputed the classification of this animal since the days of Linnaeus, who placed it in the bear family and named it *Ursus luscus*, a majority, however, have pronounced the wolverine of North America and the glutton of Siberia and northern Europe to be one and the same. On this continent the wolverine is known by several names, the Hudson's Bay bear, the carcajou, the quick hatch and *le diable des bois*. The last is the most appropriate of all, for certainly no more fierce and devilish creature exists than the wolverine. The Indians and hunters abhor the beast. He is their *bête noir*, their spoil sport; immediately that a line of traps are nicely placed, along will come a wolverine and spring every trap and steal the baits. He never gets caught, he is far too cunning for that. Should he come upon an unguarded camp in his travels he devotes all his energies to destroying everything in and about it. Provisions, clothing, blankets, even the tent and tent ropes are cut, torn and destroyed in pure maliciousness. A wolverine is known to have destroyed six bags of pemmican and nine sacks of flour which were cached by a C. P. R. engineering party, scattering the contents all over the ground. This appears to be a relentless hatred of man and all pertaining to him.

He is a formidable looking customer and one that one would be shy to encounter in the open. About the size of a prairie wolf or red fox, but shorter and stouter in build, short muscular legs ending in large paws armed with enormous and powerful claws, which seem out of proportion to the size of the animal, a small bear-like head, with small beady eyes and prick ears. A mouth, which is continually distended in a snarl which shows two rows of gleaming teeth suggestive of lacerated flesh and crunched bones. His color is dark brown almost black on the back and belly but several shades lighter on the sides, his tail is long and bushy. The fur is soft and is highly prized on account of its color and fineness as well as for its rarity.

It is seldom that the wolverine is captured alive, in fact it is difficult to get a shot at one at all so extremely cautious is he. Traps and dead falls are open books to him and it is only by exercising the greatest ingenuity that the hunter can secure a wolverine pelt.

The Zoological Gardens, London, England, boasted the possession of a live specimen of the glutton a few years ago. Of course naturalists say that the wolverine is a glutton and *vice versa*, but if the description given by Rev. Mr. Wood, of the “Zoo's” glutton is a true one it was not a wolverine. The reverend gentleman, after describing the animal's appearance, remarks that the “expression of the face is rather pleasing than otherwise.” Now, the expression on a wolverine's face is that of a fiend, but perhaps Mr. Woods belongs to that class of persons who are easily pleased.

As far as the writer can learn there is at the present time but one wolverine alive in captivity, and that one is in Winnipeg. It was captured with infinite trouble when a kitten—would you call it?—near Whitecourt, on the C. P. R., by Bob Meyers, the well known trapper and hunter.

The gentleman who owns it took it in charge at the time of its capture and did all that kindness could suggest to tame the wild little creature, but in vain, it was as savage then as if full grown, and no effort has succeeded in training it in the slightest degree. It is said that some of the Eastern zoological gardens exhibit wildcats or lynx as wolverines, and many persons confound these animals with one another.

Mr. McDonald, of the Albion Hotel, is the proud possessor of the “only wolverine,” and he takes great pleasure in showing his pet to visitors.

E. HOUGH.

Meeting of the Canada Institute.

AT the meeting of the biological section of the Canadian Institute, Toronto, on Monday, April 17, the following gentlemen were elected as officers of the Natural History Society for the ensuing year: President, John Maughan; Vice-Presidents, G. G. Pursey, C. Armstrong and Arthur Harvey; Secretaries, I. B. Williams and S. Hollingsworth; Treasurer, Arthur Harvey; Curator, James Noble; Members of Council, J. Maughan, Jr., E. V. Ripon and James H. Flemming. A very interesting lecture on the “Osteology of Birds” was given by Prof. R. Ramsay Wright. He introduced his lecture by pointing out some of the differences of the modern classification of birds from the systems adopted by the older naturalists, and then proceeded to point out various points of resemblance between the skeletons of birds and reptiles, and showed how, in the gradual evolution of birds from reptiles, the various bones have been changed and modified. He took up successively different parts of the skull, neck, backbone, wing, leg and foot, and illustrated the subject with diagrams and numerous beautifully prepared specimens from the university museum.

AUDUBON MONUMENT CEREMONIES.

The ceremonies connected with the dedication of the Audubon monument took place yesterday in Trinity Cemetery in the afternoon, and at the American Museum of Natural History in the evening. The hour set for the opening of the exercises was 3:30, and by that time a large number of spectators and invited guests had gathered about the monument, which stands in Trinity Cemetery, between Tenth and Eleventh avenues, and directly opposite the gate which opens from 155th street. On the platform which was reserved for invited guests were Dr. Morgan Dix, representing Trinity corporation, the Misses Audubon, granddaughters of the naturalist, and many members of scientific societies in and near New York, among whom were Dr. H. Carrington Bolton, Dr. Eggleston, Mr. D. G. Elliot, Dr. J. A. Allen, Prof. Bickmore, Mr. William Dutcher, Mr. L. S. Foster, Dr. C. S. Allen, Geo. E. Ashly, Clark Bell, W. Beutenmuller, E. P. Bicknell, Prof. A. Brineman, Hon. Addison Brown, Prof. C. T. Chandler, Frank M. Chapman, Hon. Edward Cooper, Hon. Chas. F. Daly, Prof. C. A. Doremus, Jonathan Dwight, Jr., Thos. A. Edison, Hon. Hamilton Fish, Hon. Abram S. Hewitt, Prof. Walter Holladay, Prof. T. W. Hooper, Dr. O. P. Hubbard, Hon. John Jay and many others.

Invitations to the ceremonies had been issued to members of the American Ornithologists' Union, members of the Scientific Alliance of New York, of the American Museum of Natural History, subscribers to the fund, officials of neighboring colleges and scientific societies, and a few city officials.

Dr. Thomas Eggleston made a brief address, in which, on behalf of the contributors to the fund, and especially on behalf of the New York Academy of Sciences, he expressed his gratification at the completion of the monument, and turned it over to the Rev. Morgan Dix, representing the Trinity Cemetery corporation. It was then

JOHN WOODHOUSE AUDUBON,
His Youngest Son.

unveiled by Miss Audubon, a daughter of the naturalist's eldest son, Victor Gifford. Dr. Dix spoke feelingly but briefly in accepting the monument.

The monument is a monolith, terminating in a Runic cross, of North River bluestone, which stands on a pedestal of the same and this upon a granite foundation. On the northern face of the pedestal is sculptured a bust of the naturalist in very high relief, with the name Audubon in raised letters beneath it. On the east side are carved hunting implements, guns, a game band and powder horn; on the west side a palette and brushes, and on the south face is an inscription:

ERECTED
TO THE MEMORY OF
JOHN JAMES AUDUBON
IN THE YEAR 1893
BY SUBSCRIPTIONS RAISED
BY THE
NEW YORK ACADEMY OF SCIENCES.

At the base of the shaft on the north side is the text from the *Benedicite*:

O, all ye Fowles of the Air, bless ye the Lord; praise Him and magnify Him forever.

Above this, running up to the cross are carved a number of figures of different birds. On the south side of the shaft are figures of mammals, a bison, an elk, a beaver, and others, and beneath them, at the foot of the shaft, another verse from *Benedicite*:

O, all ye Beasts and Cattle, bless ye the Lord; praise Him and magnify Him for ever.

The height of the monument is about 16ft., and the whole effect is very graceful, pleasing and artistic.

In the evening at the American Museum of Natural History Mr. D. G. Elliot pronounced an eloquent address, in which he said in part:

"Should we desire to see the beginnings of ornithology we must look for them in the period when our old earth was yet young, when that strange creature, more bird than reptile, more reptile than bird, which left its remains in the slab of Solenhofen, the *Archaeopteryx*, winged its feeble flight over the unfamiliar landscape of the Jurassic age. Evolved from wholly reptilian ancestors, this, so far as we know, was the first creature provided with wings composed of feathers which could bear it up in the atmosphere. There were no artists upon the earth in those days to transmit to us the portraits of animals then

living, but nature has carefully preserved these creatures in stone to remain forever, objects for our wonder and our admiration. Unknown ages rolled along and man appeared on the scene, but in the evidence of their exist-

J. J. Audubon

ence the pre-historic races have left behind them no relic of stone or bone or ivory containing any representations of birds. Only when we reach what may be deemed modern times do we meet with colored portraits, although it is now more than three thousand years since artists painted their portraits. A fresco of six figures taken from a dome in Egypt, and now in the museum at Boulak is so fresh and depicted with such marvelous fidelity of form and coloring, that four of these figures can without hesitation be referred to two species living in the old world to-day, one of which has a very near relative in our own land, and known to many as the brant of our western prairies. There were probably most learned and excellent naturalists among the learned people on the banks of the old Nile, but their names have been lost in the overthrow of their nation, and it was not until the fourth century before Christ that the first serious ornithological author appeared in the person of Aristotle. He was followed in the first century of our era by Pliny the elder, and then we come to the sixteenth century before we find any at all familiar to us. The seventeenth and eighteenth centuries produced a host of naturalists, some prominent in ornithology, and it was toward the close of this century that he appeared upon the scene in honor of whose memory we are assembled here this evening.

It was at the resurrection period, the most beautiful season of the year, when all the groves were echoing with melody issuing from countless feathered throats, and the air was redolent with the perfume of the flowers, that on the 4th of May, 1780, in the then French province of Louisiana, on his father's plantation, John James Audubon was born. A few years after his birth Mrs. Audubon accompanied her husband to San Domingo, and there perished during the insurrection of the negroes. The elder Audubon returned to France with his family, and the naturalist's son was sent to school, but young Audubon spent his time in the fields and woods collecting objects of natural history, and made about 200 drawings

of birds. Declining to enter the army of General Napoleon, his father sent him to America to look after some property called Mill Grove, which he had near Philadelphia. Here he led an idle existence, and most of his time was occupied in hunting and fishing and drawing. In a description of himself written at this time, he says: "I had no vices, but was fond of shooting, fishing and riding, and had a passion for raising all sorts of fowls, which source of interest and amusement occupied all of the time."

He would wander over little known portions of the land, intent only upon the discovery of some new feature of the capture of some specimen already known but not yet added to his collection. In after years, looking back upon this happy period of his youth he says, "Why could I not have kept to this delicious mode of living?"

One morning he entered the residence of his neighbor, Mr. Wm. Bakewell. He was shown into the drawing-room where a young lady rose to welcome him. This was his introduction to Miss Lucy Bakewell, his future wife, who proved to be a most fitting mate to such a man as Audubon. Affectionate, patient, sympathetic, entering with her whole heart into her husband's pursuits. Self-sacrificing, ever ready to encourage him when oppressed by disappointments, jealous of his reputation, cheerfully submitting to any privation, enduring without a murmur long separations from husband and children, and accepting at times the uncongenial labor of teaching to gain means to advance the publication of his book, she was a type of that woman of whom it is written, "Her children shall rise up and call her blessed," and whatever wreath shall be twined for the brow of the naturalist, sprays from it must be taken to form a similar crown to adorn the head of his faithful devoted wife.

He was married in April, 1808. Later he entered into partnership with his brother-in-law under the firm

MADAM AUDUBON.
His Wife.

name of Audubon & Co., and after passing through many experiences and vicissitudes, on the 26th of April, 1826, he sailed from New Orleans to Liverpool, and reached his destination on the 20th of July. In Edinburgh he met Mr. Lizar, who offered to bring out the first part of the "Birds of North America," and on the 28th of November he was presented with proof of the first plate. He now issued his prospectus of the "Birds of North America." There being no text to his book he began to prepare an ornithological biography, in which he was assisted by Mr. Wm. McGillivray. In three months the first part was finished and offered to some publishers, none of whom would give a shilling for it, and he issued it himself. In the autumn of 1839 the "Birds of North America," the most magnificent ornithological work the world has ever seen, with the ornithological biography, being finished, he came back to America.

In the spring of 1849 he started on his last expedition to visit the Yellowstone River to procure material for his work, the "Quadrupeds of North America." Two years afterward appeared the first volume of this great work. The other two were prepared mostly by his sons, Victor and John, the last one appearing in the year Audubon died. In this hasty sketch of the naturalist's life I have touched upon some of the most important and interesting incidents of his career, exhibiting in various lights the impulsive, peculiar disposition of the man, which urged him often to enter upon impracticable and unwise undertakings, and yet perverted him never from the steadfast pursuit of his material. He was born to accomplish a certain task, and no matter what the condition of his life may have been, nothing could divert his mind from the subject in which his whole heart was wrapped, nor any privation discourage from following the study of his beloved birds. He was a woodsman, not a scientific naturalist according to the idea prevalent to-day. As an artist and pupil of David we must judge him, and the master's influence is frequently seen in his plates.

As a naturalist we must not judge Audubon by the standard of to-day any more than we ourselves shall be measured by that employed by naturalists half a century hence. He was an ornithological artist, not a scientific naturalist, and no one appreciated this fact and was more ready to acknowledge it than the simple, frank and enthusiastic author of the "Birds of North America." He never made pretenses to be more than he really was. He never claimed to be anything higher than a lover of animals, but in this road he occupied the foremost place and has gathered imperishable fame. He was a painstaking observer, a field naturalist, who, daunted by no difficulties, penetrated the unknown forests, encountered with cheerful courage unknown perils, privations, hunger, cold, storms and heat to procure specimens which afterwards were made to live again in the pages of his great work. He was the type of that class of naturalists whose

THE AUDUBON MONUMENT.
Unveiled Yesterday.

labors produce the means by which his more scientific brothers are enabled to reach definite conclusions.

There is not much left for me to tell. Audubon returned from his last expedition in October, 1843, and immediately began to work upon his "Quadrupeds of America," the first volume appearing two years later. He lived on his place now known as Audubon Park, at that time far removed from the bricks, dust and grime of the great city which he could never tolerate. The first volume of the Quadrupeds was his last work. He retained his simple habits, passing much of his time in the woods or at his easel, but he was now verging toward three score and ten, and while he loved all his pursuits, was as eager as ever, the number of his accomplished years had tempered the ardor of his energetic spirit, and the fire of his youthful passion was gradually lapsing into a fitful glow. "My life was peaceful and happy, surrounded by all the members of my dear family, enjoying the affection of numerous friends and possessing sufficient share of all that contributes to make life agreeable, I lift my grateful eyes toward the Supreme Being and feel that I am happy."

One day he discovered that he could not adjust his glasses so as to find a focus upon his canvas, and from that moment he began to fail. The devoted wife who had always been his main stay throughout his checkered career now never left him, read to him, and during his walks about the grounds which stretched to the banks of the Hudson, was always at his side, but the once erect, lithe and agile figure was now lost in the feeble form of an aged man. Toward the last another shadow fell upon him and his mind

failed, and his eye, noted for its brightness, became dim, and during the remainder of his stay on earth, like a little child he was led by the hand.

On the 27th of January, 1851, the summons came, and as he lay upon his bed surrounded by his family his eyes regained their luster, as though they penetrated the valley

THE GREAT AUK.

American Felidae.

SAN LUIS POTOSI, Mexico.—In a recent number of FOREST AND STREAM a correspondent from the Rio Grande country argues that there is, or was, a large cat in that section, which is neither the puma nor the Mexican tiger. I think he is undoubtedly mistaken.

I have used every means at my command for the last four or five years to get the run of the Mexican fauna, and so far as I can learn there are only two large cats. The tiger (*Felis onca*) or jaguar is the larger. I have never heard him called jaguar, though it seems to be a Spanish or Indian word. Can any one give its origin? Here he is spoken of always as *tigre*. He lives in the thickets of the hot country, and is not much of a fighter. Almost any dog will tree him, and he then offers an easy shot. Indians often still-hunt him with an old smooth-bore and at night. The lion or cougar or puma (*Felis concolor*) is exactly the same here as all over the continent. His range is wide and his size and color vary slightly with his habitat. He is dangerous when crowded, and often makes it warm for dogs. Besides these we have two or three species of the ocelot—possibly they are only varieties—and the two kinds of lynx.

Mr. E. W. Nelson, of the Department of Agriculture, is in Mexico working up the animals. He will have an interesting report to make when he is done. AZTEC.

THE decision of the Secretary of the Interior, revoking the permits lately granted to private persons for cutting off 50 per cent. of the timber land of Montana, was an important one and a wise and beneficial one. The wilderness is going fast enough.

QUAIL IN PENNSYLVANIA.

THOMPSONTOWN, Pa.—*Editor Forest and Stream:* There are some cases in which words are inadequate, for example, in commendation of the clean, decent, courteous FOREST AND STREAM. But then it don't need it. Again other kinds of words fail to characterize the combined cussedness of the Legislature of Pennsylvania, as exhibited in the recent proceedings on the game laws. In my opinion the formulated bill was about as near the best that could be prepared, to suit every one, yet a member told me that one afternoon during its consideration it seemed to him that half the members of the House had an amendment to offer. Most ridiculous of all, an amendment passed to stay quail shooting for three years.

Why such an amendment was offered is incomprehensible unless through ignorance, on the supposition merely that the past winter was fatal to quail life. I know that, during the winter, a general howl went out that quail had perished by wholesale, as they did during the winters of 1848-49, 1856-57, 1866-67, which were the only winters which wrought total destruction. Very many of the intervening winters were very much more severe than last winter, and yet the quail survived.

I was out during and after the zero weather and after the snow drifts, and found the quail strong and abundant. Since spring has opened I find the quail more numerous than a year ago, when they were more plenty than any year since 1876. I have the same information from friends in other parts of the State, who use the same means of informing themselves that I do, and are similarly interested, making protections and feeding when necessary. A three year stay may result in an abundance of quail this and all of the three years, and a total destruction when the stay is off. If any part of the State is without quail, it is more from the lack of natural shelter than from the weather. The migratory or semi-migratory habits of quail from sheltered portions of the State is sufficient to restock sections where the birds have been destroyed. I find by actual count within the past ten days four times as many quail on my own land as were left Dec. 15, 1892.

Will the rabbit shooters respect the quail law any more than they have done heretofore after Dec. 15, while the rabbit shooting was allowed?

I presume the information of town and city sportsman, if not simply guessed at, was derived from farmers who are supposed to know all about the game upon their land. Such information is very unreliable, as any shooter has frequently found out while getting permission to shoot, as all regardful sportsmen will do. The land owner is very likely to aver that there are no birds on his place. One ludicrous case occurred to me. I stood facing the farmer, who stood upon a high porch, assuring me that I could hunt, but would find nothing. Suddenly he said, "Your dog is snake-charmed." Turning around, I found Blanche, daughter of Bismarck, rigid at a bunch of old-fashioned shrubbery not thirty feet from the house. From eighteen to twenty birds got up, and while retrieving a rabbit jumped out and tumbled over. I had a splendid day on that farm. For years I have not asked whether there is game, only for permission to shoot.

JUNIATA.

WITH A YOUNGSTER IN THE WOODS.

HAVING agreed to go as guide with a party on a moose and caribou hunt, I thought I would take in my own moose and caribou hunt on the same trip. My grandson, Naty C. Fogg, who is only fifteen years old, and who has acted as a guide at my camps the past season, and having had the best success in fishing and hunting of any young guide that I ever knew, I was thinking all the while that I would let him go with me on my moose and caribou hunt; but did not mention to him my intentions. As soon as he was sure that I was going he began to quiz around, and finally said to me, "What's the matter with me going with you on your hunt?" But I did not answer him decidedly at first; I wanted to find out how anxious he was to go, as I knew such a trip would be rough on a boy of his age.

We finally agreed to start for Patten on Dec. 12, and the party of sportsmen were to join us the last of the week. The point I was going to take the sportsmen to was Gowdnehung Lake, fifty miles to the west of Patten, and there were lumber camps within five miles of the lake. After engaging a team at Patten to take the party along when they arrived, we started on to the Trout Brook farm, thirty miles from Patten. Here we found about a foot of snow and a sharp ice crust on it, which made it almost impossible to still-hunt. We stopped here the remainder of the week, and, not hearing from our party, on Sunday I told the boy that he had better go to Mr. Dudley's camp, which was within five miles of the lake we were intending to go to, and stop there until I came. He went in company with some men that were going to work at the camp. The next day I concluded that the party was not coming, and I took my hunting sled, that I had made while waiting for the party, and started, getting to camp about 2 P. M. When I got to camp the cook told me the boy had killed two caribou, and had been in for his dinner and gone back to finish dressing and take care of them. When he came in he told me his experience in the hunt. He had first found their trail, and the crust made such a racket with his snowshoes on that he took them off and followed in their path. As he came out into the old tote road he heard a rustling, and out came six caribou into the road and ran from him, and he opened fire on them and shot several times before they rounded a turn in the road. And when he came round the turn he saw two that were hard hit and had given up the race, but as his gun was a .38-40 he had to shoot them again. They proved to be two cows, and he counted six ball holes in one of them.

We were not prepared for camping out unless the party came, as everything was left for the team to bring with the expected party, but we got a single blanket, some pork and bread and some tea, and an oyster can to boil it in, and a woodsman's tin plate for a spider or fry pan, so the tin plate and oyster can were our cooking tools, and

we started on our snowshoes with each of us with a small pack on our backs for Gowdnehung Lake.

I knew that there was an old logging camp standing on the shores of the lake where we expected to stop a couple of nights. We found the camp all right, but with no doors or windows nor any place to build a fire. We tore up the floor, so as to build a fire on the ground, and then made a large hole in the roof for the smoke to go out, and made us a place to sleep, or rather stay, with the old boughs that were in the berths. But when we built a fire we soon found that the smoke hole we made was of but little use. The wind coming from the lake would whirl down the smoke hole and fill the camp full of smoke. We shed lots of tears that night. I got but little sleep. The boy managed to sleep most of the time. If it had not smoked I could not have slept, for I had to keep watch of the fire as there was danger of the camp taking fire and burning us up. As soon as there were any signs of daylight the oyster can was filled with water and the tin plate, with a split stick for a handle, was filled with slices of pork for frying. One dipper answered for both of us. The bread we had was frozen hard as a rock, but we thawed it before the fire and dipped it in the pork fat and drank our tea. Then we were ready for a cruise.
